TRAPPING IN ARKANSAS.—West Point, White County, Nov. 18.—As the fur season approaches the enthusiastic trapper naturally thinks of his traps, and if possible selects a field of operation, then is soon off for a winter's sport. His feelings are often so eager to get into the woods that he would not mind springing a few weeks from the record of time. But to the point. My campaigning the present season will be confined to the western portion of the White River swamp, wherein, owing to its natural features, mink, coon, skunk, opossum and a limited number of other animals, the good advantages these animals enjoy here are sufficient to secure them from the molestations of intruders, unless a little steel trap warfare is waged, as the overflow does not admit settlers and the country is comprised of almost impenetrable cypress brakes and heavily timbered ridge lands. These brakes afford them splendid facilities for denning and safe retreats in time of danger. Coon and mink seem quite abundant, and by good work one could make it very profitable in taking them alone. An occasional otter could be captured if the waters of the small lakes, creeks and sloughs were deep and free from the danger of boating thereon. It must not be understood that there are no beavers here, for in the eastern part—across the river—of these bottoms large families can be found, but this probably includes the valuable part of the furrier's fauna. Furs taken in this locality before the middle of November seldom show prime, so the trapper must confine himself to nature's prescribed limit of about four months. The success that has crowned the efforts of the writer as an amateur trapper so far is extremely favorable, and the game may well be said to be woods could fare profitably. Should any of the trappers, or hunters have inclinations towards these haunts we are willing to furnish them any information in our power and extend to them a hand of welcome should they venture. WALTER D. CHILDRESS.

DETROIT.—Nov. 19.—A merry party of hunters consisting of Messrs. Murray and Pierce, of Niagara Falls; Poole, of Buffalo; Hill, of New York; Moore, of Toledo, and E. H. Gillman and John E. Long, of Detroit made this a glorious day for the sportsmen of this city. The party started for a fox chase, and about 9 o'clock this morning started for the river into Canada for the purpose of a day's English enjoyment. At Windsor they were joined by a party of Canadian Nimrods, took hacks for the real starting point—Chaffell's—about 6 miles down the river. Arrived there deer tracks were discovered, and there was much rejoicing at the unexpected doubling of the promised sport. The day was simply magnificent. Chaffell's dog Harkaway was the first to give tongue, and the pack took to the water and away went everybody in hot and eager chase. Within an hour a deer was brought to bay and shot by the jolly Murray, when Poole and Pierce rushed in and captured the head as a trophy. At 11 o'clock Gillman and Long started a fox, and after a long chase he was laid out by a shot by Mr. Hill, the New Yorker, who will take the brush home. The party arrived here about 7 o'clock, and as I write in sound of their voices and the clinking lemonade glasses, I hear many an enthusiastic fragment of the recital of the day's doings. While in Windsor to-day seeing the hunters off in behalf of FOREST AND STREAM I noticed a quartette of unimpeachably pure-blooded Dandy Dimonts, the property of Alex. Crawford, a well-known amateur fancier. The little fellows were cap tivatingly cute and drew a big audience wherever they went prancing along after their proud any happy owner. G. P. G.

A NEW GAME PROTECTIVE SOCIETY.—New York, November, 1880.—We hope you will give the following communication your favorable consideration, and we earnestly invite you to join us in our endeavors to put down poaching. The "Game Protective Society for New York and Vicinity" is organized for the protection of game (including game fish) and insectivorous birds, and to put down poaching of every description in the vicinity of New York. During the months of September and October particularly, the country is overrun with gunners killing everything in the shape of a bird, and the fruits are running out of the city and full of poachers. We propose to have cards printed giving a list of game seasons, the fines also, offering a reward of at least \$25, payable on conviction of the offender, provided the penalty exceeds the reward. These cards to be posted in all the different stations, stores, post offices, etc., and in the baggage and smoking cars of the roads running out of New York, L. I. City, Jersey City, etc. We also shall endeavor to stop the sending of snared and trapped game to the city, and do every thing we can with the aid of the proper authorities—to arrest and punish poachers. Not only sportsmen but farmers

"Rex," owned by Mr. F. H. Fuller, and which he, "Ruffed Grouse," is breaking, when he states that "Rex" is a pure Laverack by Lathrop's "Dick," out of Lathrop's "Luna." "Ruffed Grouse" ought to know that there is not a drop of Laverack blood in "Rex" or any of his ancestors. "Rex" is by my "Dick" out of my "Luna," and is a wonderfully promising pup, but dog men who know "Dick" and his pedigree will smile indeed to hear him called a Laverack. Every one well posted knows that the number of "pure Laveracks" in this country can almost be counted on the fingers. "Dick" and "Luna" are pure natives, and I hope "Ruffed Grouse" or any one else writing about my dogs, will never hereafter undertake, either through ignorance or perversion, to "turn away the current of their blood." E. H. LATHROP.

[From a Staff Correspondent.]

# THE NATIONAL FIELD TRIALS.

FREE FOR ALL STAKES

\$500. \$250 to first; \$150 to second; \$100 to third. \$10 forfeit; \$15 additional for starters; closed Nov. 15th, 1890. The drawing was as follows:

- J. J. Snellenburg's Thunder against A. H. Moore's La Guy.
- A. H. Moore's Luna May against J. H. Whitman's Pride.
- J. R. Stacy's Bellow III. against P. H. Bryson's Gladstone.
- D. C. Sanborn's Count Noble against J. R. Henrick's Skip.
- J. R. Henrick's King Dash against A. Lansing's Max Harloway.
- Montview Kennel Clubs' Lincoln against A. H. Moore's Count Fred.
- A. H. Moore's Lass o' Gowrie a bye.
- L. D. Rumsey's Bella withdrawn.

YINOENNES, Ind., Nov. 18.—At a meeting called to-night on account of snow, six inches having fallen and now lying on the ground, the trials were called off.

## EASTERN FIELD TRIALS.

THE second annual field trials given by the Eastern Field Trials Club will begin at Robin's Island next Monday morning. The ground, as we have already stated, has been well stocked with birds, and there is little reason to apprehend any trouble on that score. The list of entries is a large one, including many of the crack dogs of the country, and should the weather be propitious there is every prospect of a good week's work.

Several extra prizes have been secured by the club, and to the first prize, already assigned in each stake the following are added: Nursery, 2,000 Winchester shells; puppy, English gun case; all-ages, a Fox gun; brace, an arm-chair. A silver cup will be given for the best pointer.

The entries for each stake will remain open until the evening previous to the day upon which it is advertised to be run; and the stakes will be run in the order named last week.

Paymaster L. H. Billings having been, by reason of his official duties, compelled to decline to act as one of the judges, his place will be filled by another, elected by the committee in the several stakes. Mr. F. N. Hall will serve as official scorer. The club will take a special train from Flatbush avenue, Brooklyn, at 8 o'clock on the day previous to the opening of the trials. The route to Robin's Island is via Long Island Railroad to Cutchogue.

Trains leave Hunter's Point for Cutchogue daily at 8 A. M., four hours' ride; and 8:30 P. M., a ride of three hours; fare, round trip \$4.35. Stage and ferry from Cutchogue.

THE COCKER CLUB.—Nov. 21.—*Editor Forest and Stream:* In last week's issue of your correspondent, "Leam," asks me to accept the secretaryship of the embryo Cocker Club, to which request I gladly accede. My friends know me well enough to know that I am willing to do anything in my power to forward the interests of my favorite breed, and it is with great pleasure that I note the intended formation of this club. Our friend "Leam," myself and two or three others, have long thought such a step necessary, and I hope that every person interested in this breed—whether owning specimens or not—will join us in our attempts to forward its interests. A membership of upwards of fifty is anticipated, but I hope that our anticipations will fall far short of the reality. "Leam" has put the objects and purposes of the club so plainly before your readers that there is nothing for me to add now. Intended members will oblige by communicating with me, when I will furnish them with full particulars. GEO. D. MACDONALD.

1,182 Chestnut St., Elizabeth, N. J.

THE DOG POUND.—The dog pound was officially closed Saturday. During the season there were received in that institution 8,655 canines, of which 8,513 were drowned and 142 redeemed, or released by order of the Mayor. The amount received for the redemption of dogs was \$252. The amount realized from the granting of dog licenses from the 1st of January to November 1 of this year is \$9,115. The total amount paid to the city for dog licenses since 1877, when the ordinance first went into force, is \$43,200.

## THE SETTER.

[Reprinted with the express permission of the Author and through the courtesy of his publishers, Messrs. Cassell, Petter, Galpin & Co., New York, from Yero Shaw's "Book of the Dog."]

WE are decidedly of the opinion that field trials have done more toward improving sporting dogs, and have to see them more extensively held all over the country. They have in some degree, if not perfectly, the merit of combining the element of public competition with those practical tests so desirable in the judging of sporting dogs. In these field trials the setters have hitherto managed to hold their own uncommonly well, and up to the year 1880 no pointer has succeeded in winning the Grand Challenge Cup which is given by the Kennel Club to be run for annually by dogs belonging to its members. Any member may run any dog he chooses, either pointer or setter, and it was decided when the cup was first offered that it should become the property of any member who should be fortunate enough to win it three times, but not necessarily in succession, or with the same dog. To the astonishment of the sporting world Mr. G. De Landre Macdonald has accomplished the feat with Ranger, a black-and-white setter. This grand dog, though

not himself a perfect model of beauty, has by carrying off the Challenge Cup upon three occasions stamped himself as the setter of the day, and has moreover shown what is behind him in the matter of pedigree by begetting many first-class specimens of the breed.\*

With reference to Ranger's marvellous behavior in the field, we extract the following from a report of the field trials which appeared in the *Westminster Journal*, April 25th, 1879.

"In alluding to Ranger the writer says: "He made what is so much to the public taste at these trials—a sensation point. When running down a large grass meadow with Darkie he rushed with marvellous speed to the bottom, against which appeared a large embankment. The dog suddenly found himself hurled by the impetus of his going into the midst of a twelve-foot river that ran between the embankment and the grass field in which he was running. The impetus with which he went threw him to the opposite side. Crawling up the bank half dazed with the shock, he scented some birds, and immediately coming to life again, dropped. The birds then rising he plunged back into the river, swam across, and shook himself in the face of the judges and spectators. Anything more unique or sensational in the matter of field trials has not been witnessed before, except when he won the all-aged stake at the Kennel Club field trials, when, rushing down the hill, he suddenly winded birds, and stopped, and the impetus of his going caused him to make a somersault in the air, when he landed on his back, and as stiff as starch. His four legs were seen in the air, and his neck and head turned round in the direction where the birds were soon put up about a foot from his nose."

Ranger, in addition to his Challenge Cup triumphs has won the following stakes: Reynold Stakes, Shrewsbury, 1874; Clampton Cup, Shrewsbury, 1874; Champion Cup, Shrewsbury, 1877; Shrewsbury Stakes 1877; Hawkstone Stakes, Shrewsbury, 1879; East of England Stakes, Ipswich, 1879; Trechill Stakes, Devon and Cornwall, 1878. Such performances, even unaccompanied by the fact that he has won the Challenge Cup outright, stamp Ranger as undoubtedly the best dog of his breed which has hitherto appeared.

To recommend the setter as a companion dog to the non-sporting philo-kuan may be to invite a sneer from many a knight of the trigger, but nevertheless there is much to be said in favor of these dogs in the character of mere companions. There is no more elegant dog than the setter, the outline of a well-made specimen are eminently beautiful, and his every movement most graceful. The coat is beautifully soft and rich, the feathers especially being of a fine silky texture, and the colors and distribution of them generally striking and picturesque, as they are soft, refined and lovely. In intelligence the setter has few equals, so that he soon accommodates himself to circumstances, and is so easy of control that he readily becomes a companion that can thoroughly be trusted, for his intelligence is great, and he seems to think for himself, and make the pleasure of his owner his sole delight. In temper they are almost invariably reliable, and their affections become deep and lasting. And added to all these qualities there is an air of refinement and superiority about him, inherited from a long line of blue-blooded ancestors, that commands him to all.

Those who keep but few setters to shoot over themselves should never fail to make friends and constant companions of them; the mutual understanding and trust arising from this doubles the pleasure of the sport, and in the possession of his dog, and adds to his success in the field.

We had Mr. Macdonald's Ranger with us while Mr. Barber was sketching him, and although we met as strangers we were soon friends, and parted we firmly believe with mutual regret. Never have we seen a dog who so readily accommodated himself to circumstances—he seemed at once to be as much at home in London as he is in the stubble or the heather, and took his seat in a hansom cab as naturally as though to the manner born.

One word of caution only in respect to keeping setters as companions. We should always advise having them broken to game, although there may be no prospect of using them; because if unbroken dogs were bred from an unbroken line, while their beauty and general intelligence might be sustained, they would lose the aptitude for their natural work.

As stated at the commencement of this article, it is an unquestionable fact that, whatever the source was from which the modern English setter sprung, there are several distinct varieties of the breed, and yet in the texture of the coat, even when they are themselves offshoots of older types, which in their turn originated from the setting dog, either by breeding and selection, or to the judicious admixture of foreign blood. It may therefore be as well to draw attention to some of the most famous of the old breeds, as well as make allusion to the most fashionable of the modern ones, before proceeding further with the subject.

Reference has already been made to the Welsh setter, a breed practically extinct, and whose loss is so greatly to be deplored that supreme efforts should be made to restore it before all hopes of doing so are vain. Mr. William Lort, of Fron Goch Hall, Montgomeryshire, who has before been quoted in this chapter, has kindly given us some valuable information concerning this variety of setter, which is in purport as follows: The coat of the Welsh or Llandloes setter, or at all events of pure-bred ones, is as curly as the jacket of a Coltswood sheep, and not only is it curly, but it is hard in texture, and has unlike that of a modern fashionable setter as it is possible to imagine. The color is usually white, with occasionally a lemon-colored patch or two about the head and ears. Many, however, are pure white, and it is unusual not to find several whelps in every litter possessed of one or two pearl eyes. Their heads are longer in proportion to their size and not so refined looking as those of the English setter. Stems are curly and clubbed, with no fringe on them, and the tail swells out in shape something like a horse's tail. This breed is more useful than any spaniel, for it is smart, handy, with an excellent nose and can find with tolerable certainty at the moderate pace it goes. It usually has the habit of beating close to you and is not too fast, being particularly clever at cocks and snipe, which they are no more likely to miss than is a spaniel. With so much to recommend them, we cannot help repeating that this is a breed well worth saving from extinction, especially as it is so hardy and far less liable to disease than the modern fashionable dog. Some excellent specimens of this variety have been in the hands of Mr. Charles Beck, of Upton Priory, Nuclefield, and he said that they stood hard and briery dignities, when he worked them in Wales, better than any breed he could procure.

There was also a liver-and-white strain of setter which was

\*The pedigrees of Ranger III. and of Ranger are given at length by Mr. Shaw.

well known in the north of England, especially in the Carlisle district. Though this dog was coarse and lumbering, it has been argued, and as often denied, that the famous Laverack blood is tinged with that of this variety. However, this will be more fully referred to almost immediately, when the Laveracks are touched upon.

As regards the strain of jet-black Welsh setters is now low and gone forever. It was a blood that was to be found in many parts of the Principality, and as a strain was second to none. Unfortunately, though jealously guarded by its owners, their interest in it gradually lessened, and it finally has disappeared entirely.

The Anglesa setter, as it was once called, did not spring, as might be supposed, from the island of that name, but from Beadesert, the residence of the Marquis of Anglesea, where it was carefully treasured. They were of character a light, active, very narrow breed of dog, with no chest, though deep in ribs. They were rather leggy and possessed the habit of standing with their fore-legs and feet close together. This breed of dog was constitutionally delicate, but as long as they stayed, showed great pace in the field. In color they were mostly black-white-and-tan, and in coat, though not so smooth and flat as a modern setter, the Anglesas were not nearly so curly as the Welshmen described above.

To arrive more rapidly at the leading strains in 1880, we now come to the magic name of Edward Laverack, a gentleman who has done more to bring this strain in all his glory before the public than any other has ever done or is likely to do. Mr. Laverack, who was an ardent sportsman, for half a century was engaged in improving the English setter, and with most flattering results. The corner-stone of his breeding-staff was a pair he first obtained from a clergyman named Harrison, who resided in the neighborhood of Carlisle. That he conscientiously followed the principles of strict in-breeding is amply proved by a reference to the pedigree table of Laverack, which it will be observed, that Mr. Laverack's best blood is represented on the one side; and the success of his system is clearly demonstrated by the position his strain occupies in the estimation of modern setter breeders. In short, most of the leading strains are either pure Laveracks, or else they partake largely of the Laverack blood. The formation of the Laverack setter, to quote his own words, is as follows:

"Head long and light, not snake-headed or flewed, but a sufficiency of lip; remarkable for being very strong in the fore-quarters; chest deep, wide, and arched; the shoulders, carrying the breadth of back to where the tail is set on; immensely strong across the loins; shoulders very slanting or oblique; particularly short from the shoulders to where the hind-quarters meet. A setter should not rise or be too upright in the shoulder, but level and broad; tail set on in a line with the back, rather drooping, scimitar-shaped, and with plenty of flag. Legs remarkably short, and very short from hock to foot; feet close and compact, thighs particularly well bent or crooked, well placed and close under the body of the animal, not wide or straggling."

"Color black, or blue-and-white ticked; coat long, soft and silky in texture; eyes soft, mild and intelligent, of a dark hazel color; ears low set on and close to the head, giving a round development to the skull. There is another variety of the same strain called the lemon-and-white Beltons, exactly the same breed and blood. These are marked similar to the Blues, except being spotted all through with lemon-colored instead of blue, and precisely of the same form and characteristics. They are good, hard, and true dogs, and speak of the words of Mr. Edward Laverack must surely be treasured by setter breeders and the only unsatisfactory part in them to our mind is the total absence of any allusion to liver-color. We cannot see how he can reconcile himself to ignore all reference to this liver-color since, in the following letter to Mr. Rothwell, an old friend and fellow-breeder, he distinctly admits that there is a strong dash of liver blood in the Laverack setter. The letter referred to runs as follows:

"[Copy.] "Broccoli Cottage," "Whitchurch, Shropshire." "DEAR ROTHWELL: I am glad to hear your bitch has given birth; save me a Blue. All five are true bred, and all take after the sire, Blue Prince. The liver-and-white will be quite as handsome and white as any. He strains to Princes, viz. Prince of the border, a liver-and-white; he strains back for thirty years to a change of blood I once introduced—the pure old Edward Castle breed—Conny Camberland liver-and-white, quite as pure and as good as the Blues. You may have heard me speak of the handsome setter he ever saw. 'Niot; he was the third, and a clipper. Pride's dam was my old blue-and-white, with tan cheeks and eyebrows. Why I reserved Pride was to breed back with him and my Blues. He is invaluable, as by him I can carry on the Blues. I have a demand on you for a bitch, and you must sell, but they are the best, and I guarantee all I send bred by me. Yours truly, E. LAVERACK."

May 23, 1874."

There is a possibility that Mr. Laverack, knowingly or otherwise, had introduced some of the blood of the liver-colored setters we have alluded to as being in the neighborhood of Carlisle into his breeding, and that he was, we understand, and therefore it might not have been worth his while to make a special reference to it. But be this as it may, one thing is very evident from the letter, and that is that Mr. Rothwell, who bred many dogs for Mr. Laverack himself, was unaware of any such taint, or this letter would not have been written. Its present publication may be a consolation to breeders of this kind of dog, as the appearance of a liver-colored whelp will convince an owner who has read these lines that it is not necessarily a serious sinister in the pureness of its pedigree as a Laverack. The reader could in fact be a great deal said upon this subject of the liver color, which Mr. Laverack here remarks upon as being likely to appear now and then in pure-bred dogs of his strain. A tendency to throw back is of course inevitable in every breed of animal, and it is greatly to be regretted that in his work Mr. Laverack threw no light upon the origin of his breed. In fact, in his description of the setter, he only alludes, in referring to his strain, to black, or blue, and lemon-ticked ones. This reference to the part of Mr. Laverack would seem to imply that, though he did not attempt to deny the fact that there was liver blood somewhere in his strain, he was not particularly anxious that this should be generally known, and consequently kept even his *Vidua Aethiops*, Mr. Rothwell, in the dark about it until some puppies of the color appeared in his breeding operations, when he hastened to assure the latter gentleman that such an event was by no means impossible.

It would appear, further, and only from the above letter, but from other which passed between Messrs. Laverack and Rothwell, and which subsequently came into our hands, that the latter gentleman, who appears to have had the free use of any of Mr. Laverack's stud dogs, was in the habit of giving Mr. Laverack puppies as the latter required them; and also that the great breeder himself was kind enough to sell Miss Rothwell's whelps for her. We do not consider ourselves that there is any harm in such a thing being done; but the

practice is unfortunate, inasmuch as it opens the door to ill-natured remarks on the pedigrees of dogs, and is a practical illustration of the dangers to which breeders are liable. What we particularly allude to is the chance that is run of the authenticity of pedigrees being disputed afterwards. If it could be proved that certain dogs were actually bred by Mr. Rothwell and not by Mr. Laverack. We do not impute any deception to either of these gentlemen, but it is possible that persons who purchased pure-bred Laveracks from himself might describe them as bred by him, when in reality Mr. Rothwell deserved the honor.

Another and generally unknown fact in connection with the English setter-hooding operations of Mr. Edward Laverack is beyond a doubt, and that is, that in the year 1874 he was practically "out of" his own blood. Whether the fatalities to which he so pathetically refers in the following correspondence were in any way accelerated by the excess of inbreeding to which he had resorted we cannot say, but it would seem that for some years his stock had been dying off in a manner which was surprising to the great breeder himself, and caused him to draw upon the kennel of his friend Mr. Rothwell for dogs to supply his customers. The following extracts from some of Mr. Laverack's letters may be read with interest:

"BROTHWELL COTTAGE, Whitchurch, Salop.  
"Dear Mr. Rothwell: I received your letter relative to the puppies. When old enough to take from the nest, I have a hamper, and send as directed above, and advise you prior to order I may send to station for them. Keep them till six weeks old. I shall be able to sell your daughter as many as you can spare; and when sold will send either you or Miss Rothwell the money.

"June 17, 1874."  
"Yours truly,  
"E. LAVERACK."  
"BROTHWELL COTTAGE, Whitchurch, Salop.  
"Dear Mr. Rothwell: I regret very much to inform you that the three puppies you sent did a week ago in distemper, after rearing them all straight, and they really became beautiful, and showed a deal of quality. They were all three beside by an American at 15 guineas, to be sent in March. But what is still worse, I have lost six more dogs, two brood litters 15 months old, which I refused to sell at fifty guineas piece, and four more young dogs, all cut off in distemper and loss. I have been in a great deal of trouble and expense (a life's), I fear I have or shall lose the breed, as I have only one old brood bitch left, I fear too old to breed. The only dog I have left except her is Prince, your very truly,  
"E. LAVERACK."

"There is no date to the above letter, but the post-mark on the envelope is November 13, 1874.

"BROTHWELL, Whitchurch, Salop.  
"Dear Mr. Rothwell: \* \* \* I am quite disheartened with the loss I have sustained—nine. Six were such as I never saw for beauty, and the three that came to you had greatly improved. I have only two dogs left—viz., Prince and Archer, which I have had here three years, and only reared one dog out of 30. As I took this place apparently everything I could wish, and built an excellent kennel, and have a free range of fields, my dogs being out of seems a fatality, as no expense is spared. \* \* \* I will bring over several letters from and send relative to dogs, and if I approve of your young ones I may perhaps get you a customer.  
"Yours, most truly,  
"E. LAVERACK."

"March 24, 1875."  
Such letters clearly show the difficulties under which Mr. Laverack labored at the close of his career, and have no doubt been instrumental in earning the pure-bred Laverack Setter, a reputation in certain quarters for being delicate and hard to rear. On the other hand the success of crossing the Laverack blood with other bloods is proved by the success of Mr. Ranger, and our opinion there is a great probability of the English setter deteriorating if modern breeders stick too closely to their own blood.

Amongst the number of great setter breeders may be mentioned those of George Jones, of Osooty, who was a great light at the first institution of dog shows, and showed Rap. Mr. Jones glorified in the Laverack blood, which he grafted on his own stock, and cheerfully acknowledged the benefits great setter men and good friends to Mr. Laverack. They said to have given the latter 4100 for four unbroken puppies, which was then a very long price to give for dogs of such a tender age. Nor must the names of G. R. Rogerson and the Rev. Francis Adey be forgotten by lovers of the setter. Mr. Statter, too, will always be remembered in connection with this breed. His great kennel is very near the top of the tree in setter circles, and though his numbers are not all pure Laveracks, their owners smile that the more of this blood the better pleased he is. Mr. R. L. Purcell-Llewellyn, of Lincolnshire, is one of the greatest Laverack breeders of the day, and spares no trouble or expense in perfecting his strain. In consequence he has many grand specimens, though many breeders say that his bitches are better than his dogs. Lord Waterpark's handsome, heavily-flecked setters, which appeared at a very early Glasgow dog show, were, and have been, much admired. They are believed by many to be closely allied in blood to the original Laveracks, and their appearance certainly justifies the supposition.

The kennel of Mr. William Lort, now of From Goch Hall, Llanllugan, Montgomeryshire, is also one which must always be regarded with respect. To quote the words of Mr. Laverack himself:

"Mr. Lort has also a beautiful and excellent breed of setters, descended principally from the strain of the late Richard and Widdington, Ashfield, Leicestershire, and, I think, an old friend of mine, and who share with me for many years in the Highlands. They are black-and-white and lemon-and-white; long, silky coats, hard enduring, and good rangers.

"Mr. Lort, from judging so constantly at dog shows, has given this fine strain but little chance, and they are not known as they ought to be; but from what I am told, and believe to be the case, there are no better. \* \* \* Setter breeders are under the greatest obligation to this gentleman for his unflinching courage to improve the setter, and he spares no time, trouble, or expense."

Such praise from one who, like Mr. Edward Laverack, is the recognized father of the modern setter, is a sufficient guarantee for the quality of Mr. Lort's strain, whilst his popularity as *fleur-de-prince* the leading setter authority now alive, is quite beyond a doubt. Mr. T. B. Bowers, of Woolton, near Liverpool, is also a noted setter breeder, and glories in his admiration of the Laverack blood. Mr. John Thorpe, of Newcastle, whose name is well known to the more of this chapter, has several good specimens of the breed, and is a successful exhibitor at most of the leading shows. The great Shropshire kennel of Mr. Dainty Collins contains some of the best blood we have, being mostly pure-bred Laveracks. Sir Frederick Graham, too, has made his mark as a successful breeder; and both Lord Down and Mr. Barclay Field have been fortunate to produce successful field trial

winner. Nor can the name of Mr. George Lowe's Tam o' Shanter be omitted from any list of the leading setters and sires of the day.

[TO BE CONTINUED.]

## FIELD TRIAL RULES.

THE RULES OF THE ENGLISH KENNEL CLUB, AS GIVEN IN VERO SHAW'S "BOOK OF THE DOG."

1. Management of a Meeting.—The management of a meeting shall be entrusted to a committee in conjunction with Field Stewards, the latter of whom shall be appointed by the committee before the trial commences. The secretary shall draw up the regulations by a majority of those present, subject to an appeal to the committee. No steward shall vote during a meeting in any case relating to his own dogs.

2. Election of Judges.—The judge, or judges, shall be elected by the committee, and their names shall be announced as soon as possible after their election. When a judge, from ill-health or other unexpected cause, is prevented attending a meeting or finishing it, the committee shall have the power of deciding what is to be done.

3. Description of Entry.—Every subscriber to a stake must name his dog at or before the draw, giving the names of the sire and dam of the dog entered, and also, in puppy stakes, the name of the dog owner. The secretary shall publish on the card the names of those who are subscribers, but do not necessarily under these conditions. These nominations shall not be drawn, but must be paid for.

4. Disqualification.—For Puppy Stakes, the names, pedigrees, marks, and distinguishing marks of the puppies shall be detailed in writing to the secretary of a meeting at the time of entry. Any puppy whose age, markings, and pedigree shall be proved not to correspond with the entry given shall be disqualified, and the whole of its stake forfeited to the fund.

5. Definition of Puppy.—A dog is to be considered a puppy that was whelped before the 1st of January of the year preceding that of its completion.

6. Payment of Stakes.—All money due for nominations taken must be paid at or before the draw, whether the stake is all or not, and although from insufficient description or any other cause the dogs named may be disqualified. No entry shall be valid unless the amount due for it has been paid in full. For all produce and other money due, the secretary may declare in writing to the secretary: the nonpayment of the money due for the entry money of the time fixed for that purpose is to be considered a declaration of forfeiture. The secretary is responsible for the entry money of all dogs whose names appear on the card.

7. Alteration of Name.—If a subscriber should enter a dog by a different name from that in which it shall have last been known in public he shall give notice of the alteration to the secretary at the time of entry, and the secretary shall place on the card both the old and the new name, and the effect of the alteration be not given the dog shall be disqualified.

8. Prefix of "N".—Any subscriber taking an entry in a stake, and not prefixing the word "names" to a dog which is not his own property, shall forfeit to the dog's claimant of the stake. He shall not be entitled to demand a dog, or to write to the secretary of the meeting the name of the bona fide owner of the dog named by him, and this communication is to be produced should any dispute arise in the matter.

9. Death of Subscriber.—The death of a subscriber shall only affect his nomination if it occur before the draw, in which case, subject to the exceptions stated below, it shall be void, whether the entries have been made or not, and any money received for forfeits or stakes shall be returned. If he has parted with all his interest in the dog, he shall be held to be the owner, and shall be paid for, and drawn in ignorance of his being no longer alive, such entries shall not subsequently be disturbed. When dogs who have been entered in produce stakes change owners with their engagements, and with their consent, the secretary shall be notified, and the dog shall be run in these stakes, shall not be prevented from doing so by reason of the death of the former owner.

10. Power to Refuse Entries.—The committee or stewards of any meeting may reserve to themselves the right of refusing any entries they may think it to exclude from the competition, and may refuse to the satisfaction of the Committee of the Kennel Club that he has misconducted himself in any way in connection with dogs, dog shows, or dog trials, will be allowed to compete in any trials.

11. The Draw.—Immediately before the dogs are drawn at any meeting, and before nine o'clock on every subsequent evening during the continuance of such meeting, the time and place of putting down the first three dogs on the following morning shall be decided. A card or counter, bearing a corresponding number shall be assigned to each entry. These numbered cards or counters shall then be placed together and drawn indiscriminately. This classification, once made, shall not be disturbed throughout the trial, except in the case of a dog who has been disqualified. The Dogs whose position on the card has been altered in consequence of guarding or of byes must return to their original position in the next round if guarding does not prevent it.

12. The Stakes shall be run in the order they are given in the programme, and the whole of the competitors, or their representatives in the various stakes may agree otherwise—in which case the order may be changed, with the consent of the Stewards or Committee.

13. Guarding.—When more than one nomination in a stake is taken in one name, the dogs, if bona fide the property of the same owner, shall be guarded throughout: this is always to be arranged, as far as possible, by bringing up dogs from below to meet those which are to be guarded. If guarding is not, however, to deprive any dog of a natural bye to which he may be entitled, either in the draw or in running through the stakes.

14. Byes.—A natural bye shall be given to the lowest available dog in each round. No dog shall run a second such bye in any round unless he is unopposed. When a stake is entered to by any other natural or accidental, his owner or nominator may run any dog he pleases with him.

15. Postponement of Meeting.—A meeting appointed to take place on a certain day, may, if a majority of the Committee and Stewards (if appointed) order the meeting to be postponed from day to day; but if the running does not commence within the current week all nominations shall be void, and the expenses shall be paid by the subscribers, in proportion to the number of nominations taken, except in the case of a dog who has been disqualified, the original entries shall continue binding if the meeting is held at a later period of the season.

16. Running in Order.—Every dog must be brought up in its proper turn, without delay, under penalty of being disqualified. If a dog is brought up out of order, its opponent shall be entitled to claim the trial—and shall, in that case, run a bye. If both dogs are absent at the expiration of a quarter of an hour, the judge or judges shall have the power to disqualify both dogs, or to fine the dog.

17. By Whom a Dog is to be Hunted.—An owner, his keeper, or deputy may hunt a dog, but it must be one or the other; and when once the dogs are down, an owner must not interfere with his dog if he has appointed another person to hunt him. A dog may speak, whistle, and work him by hand, as he thinks proper; but he can be called to order by the judges for making any unnecessary noise, and if he persists in doing so they can order the dog to be taken down, and he will be out of the trial. If a dog is ordered to be purposely interfered with or excited, or an appeal can be made to the judges; and if the opponent's dog points game, the other dog is not to be drawn across him to take the point, but if not backing of his own accord, must be brought round behind the other dog. Dogs must be run together, and must be kept on the walk within a reasonable distance of one another. After a caution, the judge or judges may have the power to disqualify the dog whose keeper persists in neglecting this rule.

19. Control of Dogs Competing.—The control of all matters connected with the dogs under trial shall rest with the judge or judges of the meeting, assisted in cases of peculiar difficulties by the stewards.

20. Wearing Collars.—All dogs, when necessary, shall wear collars—the red for the highest dog on the card, whose place shall be on the left, the white for the lowest dog, whose place shall be on the right side.

21. The Judge or Judges.—The judge or judges shall be subject to the general rules which may be established by the Kennel Club for his or their guidance. At the termination of each trial, he or she shall immediately proceed to give his or her decision, either by word of mouth, or by the exhibition of a colored card, corresponding to that worn by the winning dog. No recalling or reversing of that decision shall be afterward given on any pretext whatever.

22. Length of Trials.—The length of a trial shall be determined by the judges or judges. When a dog is so situated that decided superiority has been exhibited by one of the contending dogs the trial should end.

23. Injuring a Dog.—If any subscriber or his servant shall, willfully or by carelessness, injure or cause to be injured, an opponent's dog during a trial, the owner of the dog so injured, shall (although the trial be going against him) be deemed the winner of it, or shall have the option of allowing the other dog to remain and run out the stake, and in such case shall be entitled to half its winnings.

24. "No Trials" and "Undecideds."—"A no-trial" is when, by accident or other unforeseen cause, the dogs are not tried together. An "undecided" trial is where the judge or judges consider the merits of the dogs equal. If either of the dogs drawn to run owners must at the time declared which remains in, viz., "a no-trial" or an "undecided" may be run again immediately, or at such a time during the meeting as the judge or judges may direct. If it stand over until the next day it shall be the first trial run.

25. Withdrawal of Dogs.—If a dog be withdrawn from a stake on the field, its owner, or some one having his authority, must at once give notice to the secretary or stewards. If the dog belong to either of these officials, the notice must be given to one of the others.

26. Impugning the Judge.—If any subscriber openly impugns the decision of the judge or judges on the ground, he shall be forfeit not more than £5, or less than £2, at the discretion of the majority of the stewards.

27. Stakes not Run out, and Arrangements Made Thereon.—When two dogs remain in, or before the draw, the stakes shall be considered divided if they belong to the same owner, or to confederates; and also if the owner of one of the two dogs induces the owner of the other to draw him for any consideration; but if one of the dogs is drawn to the disadvantage of the other, or if, or from any cause clearly affecting his chance of winning, the other may be declared the winner, the facts of the case being clearly proved to the satisfaction of the stewards. The same rule shall apply when more than two dogs remain in at the end of a stake, or in the case of a dog who has been disqualified in his first three or more dogs, of which two or more belonging to the same owner, these latter shall be held to take equal shares of the total amount received by their owner in the division. The terms of the division shall be decided by the secretary, and the money given to induce the owner of a dog to draw him, must be declared to the secretary.

28. Objections.—An objection to a dog may be made to the secretary, and must be made at the time of putting at any time within ten days of the last day of the meeting, unless the objection is in the hands of such steward or secretary the sum of £5, which shall be forfeited if the objection prove frivolous, or if he shall not bring the case before the next meeting of the Kennel Club Committee, or give notice to the secretary previous to the expiration of ten days to withdraw the objection. The owner of the dog objected to must deposit equally the sum of £5, and prove the correctness of his entry or case. All expenses in consequence of the objection shall be borne by the party against whom the decision is given. Should an objection be made which cannot at the time be substantiated or disproved, the dog may be allowed to compete under protest, the secretary or stewards retaining his winnings until the objection has been withdrawn, or heard and decided. If the dog objected to is disqualified, the dog who has been objected to shall have been entitled shall be divided equally among the dogs beaten by him, and if a piece of plate or prize has been added and won by him, only the dogs which he beat in the several rounds shall be entitled to share in it.

29. Defaulters.—No person shall be allowed to enter or run a dog in his own or any other person's name who is a defaulter for either stakes, forfeits, or bets in connection with field trials or dog shows, or for any money due under an arrangement for a division of winnings, or for penalties regularly imposed for the infraction of rules by the stewards of any meeting, or for any payment required by a decision of the Kennel Club, or for subscriptions due to any club entitled to acknowledgment by the Kennel Club. As regards the term "defaulter," it shall be understood to include any person who has been disqualified in connection with a dog, or who has been added to the list of defaulters by the secretary of the Kennel Club within six months after the bet becomes due. On receipt of such complaint the secretary shall give notice of the claim to the person against whom it is made, with a copy of this rule, and he shall not pay the bet or appear in the trial until he has satisfied the claim, and the claim is successful, he shall be considered a defaulter.

30. Ineligible Persons.—Any person who is proved to the satisfaction of the Kennel Club Committee to have been guilty of any of the following offenses, shall be considered ineligible to enter or run a dog in his own or any other person's name during any subsequent period that the club may decide upon. 1st. Offenses in connection with any dog that is considered by the judges or stewards to compete by reason of a bet, or "heat," or having any contagious disease, or any other cause which clearly interferes with the safety or chance of winning of his opponent, such dog shall be disqualified. 2nd. In the foregoing rules the term "dog" is understood to mean both sexes.

## KENNEL NOTES.

SALES.—Colonel—Mr. N. Elmore has sold to Mr. D. H. Stevens, of Riverton, Conn., the English hare hound dog Colonel, by Victor, out of True, November 18.

BRED—Bunnie—Mr. Daniel Kelleher's Leagle bitch Bunnie, by Ranger out of Lacy, was bred to Mr. N. Elmore's Flute, by Ratler out of True, November 18.

NAMES.—Bridget—Laverack.—Thos. Meyer, of Jersey City, claims the name Rose Laverack for his beautiful pure Laverack bitch pup. Born July 14, 1880; bred by John C. Higgins, Delaware City, Del., out of Petrel II., by Young Laverack. Color, lemon belton with lemon ears. *Coyotes*—The Lachine Kennel claims the name of the Coyote bitch, which was bred to the dog by Wildair out of Cora. *Eileen*—Mr. A. G. Fleischman, of Belleville, Ont., claims the name Eileen for his red Irish setter bitch pup, now six months old, presented to him by W. H. Linn, of Illinois.

REMARKS.—The name of the dog, which was sold to the pup, was six months old (Rolls-Queen) to Master Frank Wain 1st.

DEATHS.—At the Lachine Kennel, on November 21, the black cocker dog pup Aladdin (Wilder-Kennel) was found dead. He was managed to creep out of his kennel, and could not get back, so was found dead. *Philly*—Mr. H. H. Allerton's dog, a black and tan pup, died from convulsions. Purchased from the Lachine Kennel—Dr. A. B. Clayton, of Chatham, has lost, from distemper, his field trial setter bitch Fausta, Leicester-Rose.

WARRIORS.—Bridget—Robbins, of Wethersfield, Conn., and Irish setter bitch Bridget Plunket, whelped Nov. 12 thirteen pups, eight of them dogs, by his Dick Hatterick. Bridget has had but five litters, and has had sixty-six pups. *Jessie*—Mr. Hermann Koller's English setter bitch Jessie whelped Oct. 25, by her five of them dogs, by Champion Dick. All are healthy and strong.

—It is impossible to remain long sick or out of health when Hop Bitters are used.

Tyler.....	21	20	20	19	17	19	21
------------	----	----	----	----	----	----	----

Richard.....	18	15	17	17	21	19	17

Brown.....	18	20	17	19	19	22	21
Chuz.....	18	14	—	—	—	—	—

Special prize for best aggregate on the day's shooting was won by Tyler.

Rice.....	143	Barber.....	145
Brown.....	129	Tyler.....	131
Warner.....	141	Perry.....	124
Bacon.....	141	Richard.....	124

The weather throughout the shooting was unfavorable, but in spite of the wind, which at times diverged the bullets from six to eight inches from their true line of flight, the skill of the marksmen overcame it in a great degree, and the scores made are the best ever recorded. A year ago the highest average was eighteen, the honors going to Mr. Bacon, of Jamestown, New York. It will be seen that there is a marked improvement in the scores made last week. The following is the summary of the scores of the marksmen who shot out the matches in which they entered without withdrawing after several bad shots, as was the case in a number of instances:

	Shots.	Score.	Average.
N. B. Tyler.....	30	481	16 0-24
W. C. Rice.....	24	476	19 5-6
Wm. Brown.....	24	464	19 1-3
W. A. Hinchard.....	21	394	18 6-21
L. L. Bacon.....	15	291	10 2-5
H. V. Perry.....	13	279	13 3-5
T. Warner.....	15	275	18 1-3
E. Hawdon.....	10	194	19 2-5
S. Chuz.....	4	66	16 1-2

Pat Barber shot in nineteen matches, three of which were drawn. His average on the balance was 20 1-16, which would have been reduced had his full score been shot out. The honors of the tournament belong to Mr. Tyler, who won the special prize on Thursday, besides making the highest aggregate count and average shooting in all the matches. His competitors were among the most noted experts in this section of the country, who did their level best to change the result without avail, and a number drew out of the tournament at the end of the second day, thus virtually confessing that the gait was too fast to be agreeable.

HAMPTON, Oct. 13.—The annual matches of the Victoria Rifle Club took place to-day on the club ranges. The weather was more favorable than might have been anticipated, although at times the light was difficult for accurate sighting. The attendance of competitors was very fair. Next year it is intended to try and secure ranges on the line of the street railway, where four targets at 800, 900 and 1,000 yards can be had. This would enable the club not only to hold first-class matches, open to the province or Dominion, but would also make it possible to hold the return international match with the Amateur Rifle Club of New York, a most desirable end to have in view.

As usual the matches were divided into the Snider and small-bore series, the former at 200, 500 and 600 yards, and the latter at 900 and 1,000 yards. In the former, A. Miller, of the Thirteenth Battalion, came out easily first with the excellent score of 89, winning the Snider rifle presented by Lieut. Col. Gibson, and the Snider gold medal for the year, which last year was won by Col. Gibson with a score of 92.

In the small-bore match the competition was keen and the score very fine. Mr. F. Schwarz made 96 out of a possible 100, being a slightly better score than Col. Gibson's 90 out of a possible 105 last year. Mr. Schwarz put together in his ten shots at 1,000 yards one finer and nine consecutive bullseyes, making 49 out of a possible 50. He was warmly congratulated by his old fellow shots on being announced as the winner of the small-bore medal for the year. Of the nine small-bore scores given below, all but two were made with the Remington Creomoon rifle, and both the medals were awarded to shooters with the Remington arm.

The Dominion Rifle Association and Ontario Rifle Association medals, which the club usually award to the highest grand aggregate of the whole day's shooting, were taken respectively by Mr. James Adam and Mr. Schwarz. The prizes were partly in kind and partly in cash.

The list of prize winners is as follows:

	Snider.	200 yards.	500 yards.	600 yards.
A. Miller.....	89	22	31	26-29
G. Murphy.....	89	28	25	25-21
D. Mitchell.....	89	29	29	26-20
L. L. Marks.....	89	26	27	27-83

#### SCHUTZEN NOTES.

To fulfill the wishes of many of your subscribers, I reported from time to time the different Schutzen Corps and their summer and fall shooting festivals. Since these festivals have been closed (with the exception of that of the Jersey Schutzen Corps, which will be held on Thanksgiving in the Schutzen Park, Union Hill)

I feel myself duty bound to follow the Schutzen Corps to their winter festivals in the ball room. Saturday, the 20th of Nov., the General Herzog Co. No. 31 of the Germania Schutzen Bund, of which Jacob Neeschbach (the well known Plattdeutsche Schwtzer) is the Capt. held their second annual ball at Weber's Hotel, Hoboken, which was indeed a grand success in every respect. Schutzen from different parts, as New York, Brooklyn, Great Hill, Jersey City Heights and Jersey City were present. Great credit is due to the different committees, and especially to the Captain.

SCHUTZEN CORPS.—The annual ball of the New York Schutzen Corps will be held at Beethoven Hall, Wednesday evening, December 1. The event is looked forward to with many pleasant anticipations.

—The greatest nourishing tonic, appetizer, strengthener and curative on earth—Hop Bitters.

## Yachting and Canoeing.

THE ANTHRACITE PIASCO.

THERE is no longer the slightest probability that any one in America will build a Perkins' boiler, much less the peculiarly clumsy contrivance with an extra cylinder introduced to do away with a gland, known as the Perkins engine. It would therefore be merely wasting words over a dead issue to deal with the matter any further than to cite the Perkins Company and their agents before the bar of public opinion. When the Anthracite arrived in America waters it was given out that her consumption of fuel was one pound of coal per horse power per hour. It is a great strength of this statement that the Perkins system obtained a vast deal of free advertising from the unprofessional press, and among those journals which ought to have known better than repeat the provocations of the Anthracite people *Forbes* and *Stream* was the only one which had the independence and courage to stamp the statements made concerning her economy as a common falsehood. We quoted the English engineering journals in proof, and took several contemporaries to task for the manner in which they subserved their vanity over the Perkins boiler. We gave out data to justify them in their sensational accounts of her economy, and the wonderful "revolution" she was going to create in marine engineering—and that after the "invention" had been on the market for years, and had been tried out of every vessel it was ever put into in England. The *Anthracite*'s successful crawling across the ocean and back proves nothing for her engines or boiler, it goes to show simply that a hundred-ton vessel need not founder every time she goes to sea, something the world had known ever since the *Arct* fouled anchor in the harbor of the blow up, from which we arrive at the conclusion that wrought-iron pipe will stand more than 500 pounds to the square inch, information which could have been equally as well procured from the nearest plumber or gas fitter. The sole object for which the *Anthracite* was sent out was to convince the engineering world of greenhorns—that the Perkins boiler was economical in the generation of steam, that in the language of her engine driver, she consumed less than half as much coal as the ordinary tubular boiler. That is the whole aim of the Perkins boiler, and that is the only point of interest in the whole matter. How effectually the *Anthracite* belied the wholesale untruths told about her, the publication of the report of the Government Board of Engineers shows in the most convincing manner. The report shows that the *ANTHRA*ST took just issue with its contemporaries in holding up the statements of interested parties, notably of the Secretary of the Perkins Engine Co. and the disreputable satellites he permitted to gather about him, as made out of whole cloth. In place of consuming 1 lb. the *Anthracite* consumes 2 7/16 lbs. of coal per horse power per hour, a consumption which proves her to be a total failure from an economical point of view and proof absolute of the falsity of the reports given out concerning her. She consumes as much fuel as an ordinary tubular boiler, and her engines are no more economical than the least economic arrangements, and she consumes *more* coal than many an ordinary trading steamer or tugboat in our harbor! Such is the truth as developed by the experimental trials at the Brooklyn Navy Yard. Had the Perkins people not made themselves a laughing stock among engineers by their extravagant claims at the outset, the results obtained might be looked upon as ordinary or fair, such as would be shown by any first-class boiler worked with a view to the greatest economy. In the light of the unimpeachable claims made by the Perkins people, the results of the trials are a total failure. How to account for the wide difference between the substantiated results made in America, and the unsubstantiated reports of *Bramwell* and the Perkins Co. in England upon any other supposition than that of wilful deception, we are willing to let the reader judge for himself. The Perkins people, and the Board of Naval Engineers attach this very careful and non-committal paragraph to the close of their report:

"As economy, its superiority to the systems now in vogue, and its future career, are matters of opinion, and of course, of which the record and results of the trial will form an item."

As the experience with the Perkins boiler extends already over a long number of years, and as it has failed to receive the endorsement of practical steam users or of the engineering fraternity during these years, the probable extent of "its future career" can be readily surmised.

#### MINIATURE YACHTING.

*Editor Forest and Stream:*—The healthful and delightful sport of miniature yachting is fast growing in popularity in this country, and assuming proportions which already compel the members of the Metropolitan Miniature Y. C. to go to tide-water in order to sail in the races and regattas, as the small boats are so much cramped for maneuvering room by the masts of the too small racing or testing boats. The speed of the different models. The supreme delight of the sport can only be known by those who participate in it. There are, however, a great many who never go to tide-water to sail, which is greatly on account of the inferior size of their boats, and of the smallness of the shallow models, which are wholly unsuitable to tide-water sailing. Speaking of shallow models reminds me of the innumerable trials I have made with them, the multiplicity of models I have made, and the loss of time and expense I have expended in building them, until at last I made an entire departure from this kind, and have, by repeated experiments, found the following dimensions about as near right for sea-going vessels as my varied experience has proven: Divide the keel into four parts for the beam, and lay down a beam of death of hold. When I speak of keel I mean the portion which would be the keel of a large vessel, and not the "false keel" which we add to our small craft, giving the model an easy bilge, with from 32 to 35 deg. dead-rise, a long floor and an easy run; width of deck 45 to 50 per cent. at bow and 40 to 45 per cent. at stern. Of greatest beam. Guard against any flat surfaces, and make all lines either concave or convex. I do not, however, wish it to be understood that the above are the only dimensions upon which a sea-going vessel can be modeled. Lined departures from them can make but little increase or decrease of increase of any of the measurements, which, of course, depends upon the uses to which the vessel is to be put and the waters in which she is to sail. My experiments have, however, proven to me one matter more important than the mere dimensions for the purpose of the purpose of racing as a delightful pastime and healthful recreation, which is the modeling and building them for the purpose of constructing large vessels from them, which would save a great deal of money in experimenting on the large vessels built from the models, which convey no accurate information, either of shape or of

correct position of mast or spars, the cut of the sails, or anything else about them, either above the water-line or below it, until after she has been launched and sailed, and after several trials, and has been found not to be the fast boat which the owner anticipated. Owner and builder are taken aback, and then follow the multitudinous suggestions, and the experimental alterations begin—probably with considerable result, and the experiment often follows, and so on, until at last the speed which can be got out of her has been attained. The builder, of course, is not the loser by this, either in pocket or reputation, as he is a man who understands his business so far as he has learned it, so he is happy. But the other party, the owner, loses quite different about the matter, as he finds that the boat has cost him from \$15,000 to \$20,000 more than he calculated, and is therefore not in the best of humor, and in many cases is ready to sell her for less than she cost him, much more than he expected, and the experiment often follows, and so on, until at last the speed which can be got out of her has been attained. The builder, of course, is not the loser by this, either in pocket or reputation, as he is a man who understands his business so far as he has learned it, so he is happy. But the other party, the owner, loses quite different about the matter, as he finds that the boat has cost him from \$15,000 to \$20,000 more than he calculated, and is therefore not in the best of humor, and in many cases is ready to sell her for less than she cost him, much more than he expected, and the experiment often follows, and so on, until at last the speed which can be got out of her has been attained. The builder, of course, is not the loser by this, either in pocket or reputation, as he is a man who understands his business so far as he has learned it, so he is happy. But the other party, the owner, loses quite different about the matter, as he finds that the boat has cost him from \$15,000 to \$20,000 more than he calculated, and is therefore not in the best of humor, and in many cases is ready to sell her for less than she cost him, much more than he expected, and the experiment often follows, and so on, until at last the speed which can be got out of her has been attained. The builder, of course, is not the loser by this, either in pocket or reputation, as he is a man who understands his business so far as he has learned it, so he is happy. But the other party, the owner, loses quite different about the matter, as he finds that the boat has cost him from \$15,000 to \$20,000 more than he calculated, and is therefore not in the best of humor, and in many cases is ready to sell her for less than she cost him, much more than he expected, and the experiment often follows, and so on, until at last the speed which can be got out of her has been attained. viene ad essere più. The name remains to be seen.

ruption of wheatfish, which in its turn is said to be a translation of one Indian name. You probably know the fish by one of the names given. We try to use the popular name for all fishes which has the sanction of the greatest number of people, irrespective of locality or what we were taught to call it in boyhood. We have little doubt but what the New York marketmen will, in the next century, force their names for fish upon all the fishermen with whom they deal, and they are extending their range all the time. They have done so in many cases already. Hence our preference for the name given by the old Dutch settlers to the fish in question, as we think it is the one which will eventually be the name from Maine to Florida, or wherever New York market men buy.

Brown Coor, Lamoine, Me.—My gun is a choke bore, 10 gauge, of nine and a quarter pounds weight. 1. How much powder, how much shot, and what size shot shall I use in shooting ducks and coots? 2. What is the proper charge and size of shot in shooting ruffed grouse? 3. With several choke-bore I have found that

aper shells give a much better pattern than metallic shells. This the case with most choke-bore? 4. Are Eley's concentrators good for such a gun as mine? A limited experience has impressed me favorably. 5. How shall I prevent my gun from leading? 6. Would wire cartridges of No. 3 or 4 shot make my gun effective at any greater distance? 7. In using coarse shot is it not necessary that they make perfect layers in order to do the best shooting? 8. Is Lafin & Rand's Orange Lightning powder among the best for my gun? And what size shall I get? I want a clean powder if I can get it. 9. Is not 70 to 75 yards as far as most good guns are sure of a bird? 10. What can I do to keep the rust off my gun? Ans. 1. 4 drs. powder and 1½ ozs. No. 4 shot. 2. 3½ drs. powder and 1½ ozs. No. 9 shot. 3. Very likely the waste have shaken up in the metallic shells. 4. We have found that the latter give good results in choke-bore. 5. Yes. 6. You cannot prevent what is commonly called "leading," but it can easily be removed with a wire brush. 6. Yes, if they will easily pass the choke. 7. Yes, if practicable. 8. Yes; a coarse powder for sea shooting. 9.

Yes. 10. Use some rust preventer. Half a dozen are advertised in our columns.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpenter, oil cloth, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Advt.]

### FARM HOMES

In-Doors and Out-Doors.

By E. H. LELAND,

ILLUSTRATED.

This is a most charming book and should be in every farm home in the land. It is written in a most captivating style by one who is thoroughly familiar with the subjects treated. Every page abounds in valuable hints and suggestions, commencing in an interesting narrative form. The volume is very handsomely printed on tinted paper, bound in extra cloth, beveled edges, black and gold, and will make a most valuable holiday present or rural friends.

Price, Post-Paid, \$1.50.

ORANGE JUDD COMPANY,  
245 Broadway, N. Y.

#### The Kennel.

### MOUNTVIEW KENNEL,

FOR SALE TO CLOSE PARTNERSHIP, the entire kennel of dogs, composed of animals of the rarest breeding and most successful field winning strains, to-wit:

LINCOLN—White and orange dog, whelped 1876, and imported from Mr. Llewellyn's kennel. By Dan, ex-Lulu H., second in brace with Gladstone, Tenn. field trials, 1878; first free-for-all N. A. K. C. field trials, 1879; second in brace with Count Fred, N. A. K. C. field trials, 1879, at Paloket, Ill. Is a magnificent field dog and a splendid breeder. Price \$1,500.

COUNT NALER—White and black dog, whelped August, 1879, imported from Mr. Llewellyn's kennel; by the great Count Windem, ex-Nora. Price \$300.

LAD—White and orange dog, whelped 1879, by Lincoln, ex-Daisy Dean. Price \$200.

PUPPIES, Dashing—White and lemon bitch, whelped 1874, bred by Mr. Llewellyn, and imported 1879; by Dan, ex-Countess. The only Derby winner in America. First Field Trial Derby, 1875, England; second Crystal Palace, 1879; second All-Aged Stakes, 1879, at Shrewsbury; second Birmingham, 1876. Her puppies, Dashing Beauty, won the Puppy Stakes, and Dashing Bold, the dam of Count Windem, won the land this year. Also dam of Baffle, a beach winner, bred to Lincoln in September. Price \$150.

DAISY DEAN—White and liver, whelped 1875; by Pride of the Border, ex-Ruby, dam of Pearl of Maugr, winner of Puppy Stakes, Tennessee field trials, 1878, and dam of Ruby, who ran second to the best in the St. Louis K. C. Cup, 1877. Price \$350.

MAZZE—Blue belton, very handsomely marked, whelped 1875, by Sam, ex-Countess Bear, and Mr. Llewellyn, and imported 1879; bred in September, at Lincoln. Sam won first in three field trials in England. Price \$200.

DASHING PLOVER—White, with black ears, whelped 1879, imported 1880; bred by Mr. Llewellyn; by Dush II, ex-Phantom, the dam of Count Windem. Dush II, the greatest field trial winner that ever lived, and the highest priced dog that Mr. Llewellyn ever bought. Price \$200. Address JOSEPH H. DEW, Columbia, Tennessee. Nov. 25/90

FOR SALE—My Gordon Setter bitch, staunch, stylish and well broken. Good retriever. G. W. DALL, Fall River, Mass. Nov. 15/90

SUPERIOR IRISH SETTER PUPS.—For sale, a brace (dog and bitch) of very handsome Irish setter pups, 4 months old, in perfect condition. Dam, the grand bitch Nora (out of Tilly by champion Burke), winner of 1st prize N. Y. 1880. Sire, Countess O'Mara, winner of 1st prize N. Y. 1880. For printed pedigree and particulars address W. H. PIERCE, Peekskill, N. Y. Nov. 25/90

## BRAIN AND NERVE FOOD.

Composed of the NERVE-GIVING principles of the ox brain and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excesses or nervousness. It promotes digestion and strengthens a failing memory. It prevents debility and consumption. It strengthens the brain, gives good sleep, and recuperates after excesses. Physicians have prescribed 200,000 packages. For sale by druggists or mail, \$1. F. CROSBY, 664 and 666 Sixth Avenue, N. Y.

## Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbrie has recently established in Murcia, Spain, where all the high quality gut is made, the most extensive and perfect factory of this article in the world. The grades named below will run at least 25 per cent. better than those of any other manufacturers.

## Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, known to by all burning paper, namely: THE OIL OF CREOSOTE. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 28, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made safe for use. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water St., NEW YORK.

EASTWARD HO; or ADVENTURES AT RANGELEY LAKES. By Charles A. J. Farrar. A splendidly fascinating story of sportsman's life in the wilds of Maine. Beautifully illustrated. Handsomely bound in cloth. \$1.50.  
CAMP LIFE IN THE WILDERNESS. By Charles A. J. Farrar. An amusing account of a trip to the Rangeley Lakes. 224 pages. 12 illus. Price 60 cents.  
FARRAR'S HATCHARDSON AND RANGELEY LAKES ILLUSTRATED. A complete and reliable guide to Richardson and Rangeley lakes, Farmhouse, Dixville Notch and headwaters of Connecticut, Androscoggin, and Magalloway rivers. 228 pages. 50 illus., and a large map. Price 60 cents.  
FARRAR'S MOOSEHEAD LAKE AND THE NORTH MAINE WILDERNESS ILLUSTRATED. A comprehensive hand-book of the Moosehead Lake region and sporting resorts of Northern Maine, with map. The tours of the Kennel Club, Penobscot and St. John rivers, ascent of Katahdin, etc., are fully treated. 224 pages. 14 illus. Price 50 cents.  
FARRAR'S POCKET MAP of the Richardson and Rangeley lakes region and the waters of Northwestern Maine. Printed on tough linen paper, cloth covers. 80 cents.  
FARRAR'S POCKET MAP of Moosehead Lake and vicinity, and famous hunting and fishing resorts of Northern Maine, also the headwaters of the Kennebec, Penobscot and St. John rivers. Printed on tough linen paper, cloth covers.  
FARRAR'S STEREOSCOPIO VIEWS, 30 sets. Send for catalogue.  
Any of the above publications mailed, postpaid, on receipt of price. Address: CHARLES A. J. FARRAR, Jamaica Plain, Mass. T. Deed

## FOR MAGAZINES

NEWSPAPERS, Send for our Catalogue for 1881. Now ready. Everything at club rates. Everything free of postage. All the 4 magazines at \$3.45, and others at similar prices. We make Foreign subscriptions a specialty. We send:  
London Times, weekly, per year, for..... \$3.45  
Punch, per year..... \$3.45  
Spectator, per year..... \$3.45  
Chambers Journal, per year..... \$3.45  
Illustrated London News, per year..... \$3.45  
All other prominent English, French and German periodicals at corresponding prices. Send for our catalogue, giving club prices on nearly 2,000 publications. Free by mail to any address. A. W. HOFFE & CO., 11 Bromfield St., Boston, Mass.

## THE POULTRY WORLD,

(MONTHLY) AND  
The American Poultry Yard,

(WEEKLY)  
Both publications are exclusively devoted to Poultry.

Published by H. H. Stoddard, Hartford, Conn.

THE POULTRY WORLD is sent post-paid for \$1.25 per year. The AMERICAN POULTRY YARD for \$1.50—both papers for \$2.00. A series of twelve magnificent Chromes, each representing a standard breed of fowls, sent for 15 cents extra to all subscribers to either publication.

## THE SUBSCRIPTION EDITION

Walton & Cotton's Angler,

with additions and corrections from the Editor's (the late Dr. Richard Owen copy, and the illustrations.)

IS NOW READY FOR DELIVERY.

This edition is printed on the finest plate paper is of a small 4to size, and is put up uncut and loose in a unique portfolio for illustrating, and is LIMITED STRICTLY TO

ONE HUNDRED COPIES.

It is an elegant volume and a model of typography. Also now ready, an OCTAVO EDITION of the same work, printed in full Morocco, with the illustrations.

Price in extra cloth, gilt head, is. Price in heavy calf, extra, \$12. Price in full Morocco, extra, \$18.

JOHN WILEY & SONS,  
15 Astor Place, New York.

## THE SPORTSMAN'S LIBRARY.

THE great pressure on our advertising space obliges us to withdraw the list of books which we have on sale to make room for other matter. Any book on yachting or field sports, as previously advertised in these columns, will be furnished on receipt of price. FOREST AND STREAM PUBLISHING CO. J27-12

### Ammunition, Etc.

7 Birds and animals preserved by superior French and American workmen.

WILD RICE per bushel. Supply  
limited. Government duty on Wild Rice from  
Canada two cents per pound.  
R. VALENTINE, Janesville, Wis.

# FOREST AND STREAM

## ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

[Entered According to Act of Congress, in the year 1878, by the Forest and Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.]

Terms, \$4 a Year. 10 Cts. a Copy.  
Six Mo's, \$2. Three Mo's, \$1.

NEW YORK, THURSDAY, DECEMBER 2, 1880.

Vol. 15—No. 18.  
[Nos. 39 and 40 Park Row, New York.]

### CONTENTS.

EDITORIAL:—	
Adirondack Fires; A Gigantic Fish Trap; The Complete Angler; Preserved Game Grounds; Our Field Trial Reports; How He is Mistaken.....	313
THE SPORTSMAN'S TOURIST:—	
A West Virginia Fox Chase; In the Canadian Wilds; In a Country House Library.....	344
NATURAL HISTORY:—	
Our Waterfowl; Something About Squirrels; A Sick Orang; Fishing on the St. Lawrence; Spawn Fishing at Rangeley On a More; Fishes' Names Get Mixed; The Catfish; The Muscadog; A Fish Parasite.....	346
FISH CULTURE:—	
The Central Fishcultural Society; Another Attack on a Game Protector; Fish Pirates; Chinese Poachers; Unusual Bass.....	347
GAME BAG AND GUN:—	
Our Philadelphia Letter; Efficient Methods of Game Protection; Roughing it among the Ducks; Game and Fish Chat; A Proposed Club; Grouse, Quail and Deer; The Waste of Waterfowl; Heavy Birds; Notes from the Game Grounds; Shooting Matches.....	347
OLD TIME PRACTICAL JOKES.....	355
THE KENNEL:—	
The Eastern Field Trials; The National Field Trials; "Comples" on Field Trial Rules; The English Setter; Instinct or Reason? What is a Cocker? Noreen; Remedy for Mange; Kennel Notes; Kennel Management; Current Dog Stories.....	350
THE RIFLE:—	
Range and Gallery; Hunting Rifles.....	355
YACHTING AND CANOEING:—	
Right as Far as He Goes; Measurement; Yachting News; Canoeing; Unsinkable Canoes.....	356
ANSWERS TO CORRESPONDENTS.....	357

## FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 2, 1880.

\*.\* The FOREST AND STREAM goes to press Wednesday. Correspondents are requested to mail their communications so that they may reach us before that day.

It is our conviction that any man who will shoot on Sunday in New Jersey will break any and every other provision of the game laws.

THINGS have come to a pretty pass when the 25c. and 50c. pools on the dogs at field trials are telegraphed over the land. This boys'-play gambling is ridiculous, but if we are to turn the field into a race track, with all the accessories, we might better stop now.

THERE is at least one game protective society in this country which has succeeded in doing what it started out to do. Some of its methods are explained elsewhere. We commend a study of them and of their results.

ADIRONDACK FIRES.—Many destructive forest conflagrations have resulted from the carelessness of Adirondack visitors who, upon abandoning camp, have left their fires burning. There is at present no provision of the statute which touches this point, and we hope that those who are now amending the game laws will see to it that a clause is introduced, which shall oblige all parties to carefully extinguish their fires before leaving camp. It should also be forbidden under severe penalties to leave any offal near a spring or brook, this practice inevitably driving away the game.

As the parties who commit these abuses are generally known, it would not be a difficult matter to apprehend them were there something in the law to cover the case.

THE COMPLETE ANGLER.—We have received a copy of a new addition of "The Complete Angler; or, The Contemplative Man's Recreation," by Izaak Walton, and "Instructions How to Angle for a Trout or Grayling in a Clear Stream," by Charles Cotton—with copious notes, for the most part original, a bibliographical preface and a notice of Cotton and his writings by the American editor Geo. W. Bethune, D. D. New edition, with some additions and corrections from the editor's own copy. Two volumes in one, published by John Wiley & Sons, New York. A large octavo of 662 pages printed on good paper in clear type and beautifully illustrated. We will review this important addition to American angling literature in a future article.

### A GIGANTIC FISH TRAP.

WE have seen a circular headed "The Long Island Fish Company," which is now being circulated. It states that the company has been organized under the laws of the State of New York "for the purpose of leasing and owning suitable locations for the erection of weirs, and erecting weirs or pounds (sometimes called traps) at such locations, and catching and selling all kinds of fish, and rendering fish for the oil and for fertilizers."

We also learn that the company has become the owner of a tract of land at Napeague beach, near the eastern end of Long Island and a few miles west of Montauk Point. Here they propose to put out a monster trap; and as one built in the ordinary manner with poles would not stand a week on this straight line of the Atlantic beach which is so frequently storm-swept they propose to put down iron piles after the manner of the ocean piers at Long Branch and Coney Island. They have chosen a place where the island is only half a mile wide; Napeague Bay, an indentation in Gardiner's Bay, being on the other side, where their vessels can load for Sag Harbor and where their factories and ice houses can be built. There is no question about the millions of fish to be captured there, as all the fish which traverse the beach coming from the East seeking the inlets of Shinnecock Bay and Fire Island, as well as those moving to the eastward to round Montauk and enter Gardiner's and Peconic bays, or to enter Long Island Sound, traverse this route, and the fishermen often make enormous hauls there when the weather permits. Here, too, they come nearer the shore than at any other point, for there are no sand bars outside the beach to force them out for deeper water.

This monstrous affair will fish night and day the year round, and take fish which should be allowed to fill their mission of spawning. They say "a weir is fishing night and day and not only catches the schools of fish accidentally seen from the shore or from the deck of a fishing smack, but catches everything that comes along, and schools of fish not apparent from the surface."

The weir is to run 600 to 700 feet into the ocean, into thirty feet of water, and with this they suggest that persons taking stock may receive a great return, say \$1,000 per annum for every \$100 invested, and assert that "with the iron weir more menhaden can be caught than the whole fleet of boats can catch. We have no opinion to offer as to these statements, being content, for the present, to present the facts as they appear. We do not hesitate to say, in this connection, that all fish seeking our shores to spawn should be allowed to do so, and that the Menhaden Association are killing their goose by allowing the fish to be taken for manure when they come to spawn and are worthless for oil.

An article in the New York World describes the trap as follows: "The weir will be an iron pier ten feet wide, with bents or sections twenty feet long. It will run out 700 feet, with thirty feet of water. At the outer end will be the heart-shaped pound, the large end of the heart in-shore. This heart is about seventy feet across and outside of it is a box of iron piles and netting about seventy-five feet square. The fish striking the pier netting will run out seaward to the heart and, passing out at the lower end, will find themselves in the outer receptacle. In the sections of the iron weir storage for thousands of tons of fish can be provided, where they will keep alive in their native element for a month or longer, and need not be brought to market when the price is low."

The office of this company is 71 Broadway, New York. Mr. Herbert M. Rogers appears president and Mr. Herbert C. Plass as secretary and treasurer.

EASTERN FIELD TRIAL Gossip.—We shall now have a chance to see the Eastern and Western dogs work together. Mr. S. T. Hammond, of Springfield, Mass., has a lot of good ones in hand, and Mr. C. B. Whitford is at the Eastern Field Trials Meeting with Gladstone and Peep o' Day.

Mr. A. H. Moore's kennel is at New Suffolk in charge of Mr. E. S. Wannamaker as handler, Mr. S. T. Hammond is there with Affion, Sensation, Ratler and Bob; Mr. John C. Higgins, of Delaware City, Del., is on hand with some of his fine dogs. Dr. S. Fleet Spein's kennel is in charge of Jefferson Cooper. Mr. Godeffroy's entries for the trials, among them Croxteth, are in charge of J. E. I. Granger. Bassford, of Westchester County, is also there with good dogs.

### PRESERVED GAME GROUNDS.

OUR proposal last week, that those of our readers who would be willing to make a fair remuneration to farmers for the privilege of shooting over their lands should send their names to us, has met with the response it deserved, and we are encouraged to again bring the matter before the gentlemen sportsmen who read the FOREST AND STREAM. As the general plan of the work which we have undertaken was fully set forth in our last issue we may here repeat:

The FOREST AND STREAM does not stop with a reiteration of the general recommendations here given.

We propose the fair trial of a carefully matured scheme, of which the general purposes are:

1. The protection of game birds by farmer and landowner for the benefit of the gentleman sportsman.
2. A fair remuneration of the farmer by the sportsman for privileges granted.
3. Putting the two interested parties into direct communication with each other.
4. A discrimination between gentlemen and rowdies, and the protection of the farmer and the gentleman sportsman alike from the direct and indirect injury of lawless gunners.
5. The uncompromising enforcement of the law against netting and snaring—not in the interest of the sportsman as against that of the farmer; but for the mutual benefit of both.
6. The united efforts of farmers and sportsmen to duly protect and replenish the supply of game.

To put into tangible shape such a scheme as this, we must at the outset receive the endorsement and co-operation of the sportsmen who are interested. If we have not mistaken, we shall receive this; and without further preliminaries, we now call upon such of our readers as approve of the plan, and are willing to join us in it, to send their names and addresses to this office. We invite correspondence on the subject.

We publish elsewhere some correspondence on the subject, and have received other letters, which will appear next week.

### HOW HE IS MISTAKEN.

AN old time friend and correspondent of the FOREST AND STREAM sends us some articles with this remark:

If you think as I do you will see the necessity of having fine articles on the closing of the year so as to induce old subscribers to renew and new ones to subscribe.

We know that our friend means well, but he is mistaken. We do want fine articles at the closing of the year; but we want equally fine letters and sketches at all other seasons. The current numbers of the FOREST AND STREAM are such as ought to induce old subscribers to renew and new ones to subscribe, but casual readers may rest assured that these numbers are not exceptional in merit. We mean to make a good paper for twelve months, and fifty-two weeks in the year. We hold out no inducements to subscribers at this time that we do not also strive to hold out all the year around. We are trying to conduct the FOREST AND STREAM in such a way that it may be depended upon every week for a supply of the best sportsman's literature published in the world. This effort is not sporadic nor confined to occasions.

### OUR FIELD TRIAL REPORTS.

OUR reports of the National American Field Trials Meeting, which gave full telegraphic accounts of the running up to the day of going to press, were a step in advance of any similar work done by any weekly paper in this country. It is certainly a new thing for the readers of a "sporting" paper to have the news of current events furnished to them so fresh as was the case in this instance, and as it is done today in our reports of the Eastern Field Trials Meeting.

Great credit is due to our representative in the field for the careful and accurate account which he gives of the running, and we have no doubt that our readers in all sections of the country will appreciate the efforts that we are making to give them the very fullest and latest news on all current events.

The full news of the runnings of the National Trials was published at least eight days in advance of any other paper in the United States, and came to the readers of FOREST AND STREAM 60 much ahead of the general public.

A WEST VIRGINIA FOX-CHASE.

Bridgeport, W. Va.

## IN THE CANADIAN WILDS.

But to the country. Around us stretches for miles a vast wilderness—it is little better—of lake, rock, forest and shrub; lakes abounding in trout or pike and dory, supporting broods of ducks and, so naturalists say, producing all kinds of blood-thirsty flies; river-valleys well stocked with grouse, ruffed and Canada, hares, beaver, otter, mink and mousquash, or lynx, for small game; and moose, caribou and black bear for large. But I have forgotten the muskrat, or musquash, an unpardonable habit for many a meal, a savory bouillon of that same fishy lake water, and the camp fire, the night-long course one would prefer deer, bear, or beaver, but tonight I am not to be despised when there is nothing but "fish and confetti" (salt rock) in cauldron.

Another up! I had that nearly cost me my gun and rods and other "elctetors" may warn other fellows if they ever sojourn in the same districts. Camped on a river, which by day's rain would flood, and two days later, when I went into a canoe, the rain was still pouring, and the morning woke me with a cold, "lock, sir, and breakfast nearly ready." So throwing the blankets I turned out and looked out of the old lumber shanty we had appropriated. A gloomy morning, with heavy steady rain, and as the same weather had held good for two days before, we had our torrent ready, the river being nearly three feet over the ordinary level. We could not start at that time, and, going on the timber, I was obliged to wait the day, and the day after, until the river had bettered. The day after, possibly because it was haying season, I couldn't get a man who knew the river, and we had to go it as we best could. Now "Jim," so good at fish-bals and plum-duff, etc., was no canoe-man. Arthur was but a youth, and I was decidedly an average with a paddle. Of course the bawling was a part, but I took that at once, and the beating of oars, or rather the "fluked" through it by using the canoe light. So we took our usual places, Jim in the bow, Arthur in the middle and myself in the stern; and with three inches of the gunwale above water we embarked. Two rapids are run with a little water shipped; and we come to the head of a nice short one—nice and steep and rough, and a rough and steep one, and enough to make a man as I saw how low we were to the water. Let me say to the boys and in we ran. Bet

IN A COUNTRY HOUSE LIBRARY.

It was Malcolm himself who interrupted my reverie appearing upon the threshold, saying that the occupants in the

library had done me the honor of wondering at my hermit-like absence. He, however, was talked out and had come to his haven of refuge for a pipe.

It was while lighting his violetwood that he pointed across the lake with "Look, Warwick, are those not ducks in the west end?" "Faint! Your're right. Rig up, old fellow, and we'll take the skiff after them." Then drawing out an oil-tanned leather jacket from a cupboard, he opened a cabinet whose interior did service for an ammunition box, and I left him swabbing out the oil from the barrels of a ten-bore as I hastened to my room for my Scott, Mackintosh coat and Glengarry bonnet.

FRANK WARWICK.

## Natural History.

### OUR WATERFOWL.\*

#### IV.

THE *Anatinae* may be distinguished from the *Anserinae*, or geese, on the one hand, by having the tarsus scutellate, and from the *Fuligulinae*, or sea-ducks, on the other, by having the hind toe simple. In other words, the tarsus, which is the naked portion of the bird's leg between the origin of the toes and the next joint above, is covered in front by broad, overlapping scales, instead of being, as in the geese, "reticulate," or covered with small, approximately six-sided scales, which merely meet and do not noticeably overlap. The hind toe is short, elevated, and has no lobe of skin depending from it.

The *Anatinae* have been termed by different writers Fresh-water, River, Shoal-water and Inland Ducks. As a group, they may be said to be confined to fresh waters, although they are often found on the sea shore, and some species occur during the migrations more abundantly on salt water than on inland lakes and streams. They feed to a very great extent on vegetable matter, and as a result of this diet their flesh is excellent eating. The legs of the *Anatinae* are placed well forward, and hence they are quite at home on dry land, where they walk and run with ease. Unlike the geese and swans, in which the two sexes resemble each other in color, the males of the *Anatinae* are, as a rule, more brightly plumaged than the females, while the young of both sexes resemble the latter.

The female alone performs the duty of rearing the young, the males deserting her as soon as the eggs are laid.

*Anas boschas*. Mallard; Greenhead (male); Gray Duck (female). Male, head and neck, brilliant glossy green, bounded below by a collar of white; breast, deep chestnut, fading on the back into brownish gray; lower part, gray, transversely barred with black; wings, black tipped; speculum, or "wing spots," violet, with a black border; tail feathers, white; bill, greenish yellow; feet, orange. The female has wing as in the male; everywhere else, yellowish brown, marked with streakings and specklings of black. Length, about two feet; weight, about three pounds.

The mallard is perhaps the best known of all our ducks, and as the progenitor of the common domestic duck, its appearance is familiar to every one. It is found almost everywhere throughout the United States, being least abundant in New England. We have occasionally found them in Connecticut associated with the next species, but they are unusual even there, and occur still more sparingly in Massachusetts and to the eastward. In our Western and Southern States, however, it is extremely abundant during the migrations, and probably in these sections more ducks of this species are killed each season than of any other. They are shot in the grain fields, in the sloughs and in the rice swamps, and come well to decoys.

The mallard breeds in considerable numbers within our borders, and on the plains and in the Rocky Mountain region may fairly be considered a resident. We have seen them in the dead of winter, when the thermometer stood 12 degrees below zero, on open spots on the Lodge Pole Creek in Nebraska and Wyoming, and know of their having been taken on warm spring holes in the Elk Mountain Range when it was much colder. In fact, from favorable feeding-grounds they are only driven by the absolute closing of the waters. In California, during the winter, they are very abundant, and form a large proportion of the ducks that then abound there.

*Anas obscura*. Black Duck; Dusky Duck; Black Mallard. The black duck closely resembles the mallard in form, and in color is like the female of that species, but the general tone of the plumage is much darker. The bill is yellowish green, and the feet orange, with dusky webs, or wholly dusky. It is about the same size as the preceding species. The female is somewhat duller in color than the male, and is smaller.

In New England and along the Northern Atlantic coast, this species almost wholly replaces the mallard. It is found in less abundance in the West, and is not common beyond the Mississippi River. We have seen occasional specimens, however, in Nebraska, and Dr. Yarrow has reported the bird from Rush Lake, Utah. On the Northern Atlantic coast it is the only one of the *Anatinae* that occurs in sufficient numbers to furnish good sport.

\* Many of the descriptions of waterfowl given in these articles are taken, almost without change, from Dr. Coues' "Key to North American Birds." Since that author's descriptions are models of conciseness, and, at the same time, call attention to the salient features of each species, it has been thought better in many cases to follow him rather than to attempt to better what is already so good.

Where black ducks have been much shot at they feed only at night, and in some localities we have known them to be so suspicious that they would not leave the open water for their feeding-ground before midnight, and would be off again before daylight. In some localities the species comes well to decoys, and is shot from blinds built on the feeding-grounds, or from batteries; but most of those taken on the Atlantic coast are killed as they fly from the open water to places where they pass the night. In very severe weather, when the feeding-grounds are covered with ice, the black ducks suffer severely. They are then obliged to resort for food to such warm springs as may be still open, and the gunners, taking advantage of this, kill great numbers of them.

The black duck sometimes breeds with the domestic duck, and the offspring of this intermixture makes an excellent table bird. It has also been domesticated, and after a few generations reared in captivity would, no doubt, make a valuable addition to the poultry yard. Being usually kept with other ducks, however, they soon lose their characteristic color, and cannot be distinguished from the ordinary domestic bird. Such of the offspring of the black duck and the tame mallard as take after the wild parent make excellent black duck decoys, and can without much difficulty be trained so as to be of great service to the gunner.

A smaller variety of the black duck, denominated by Mr. Ridgway *Anas obscura fuligula*, is resident in Florida.

*Dasila acuta*. Pintail Duck; Sprigtail; Pheasant. Male, head and upper neck, brown; stripe on side of neck; breast and lower parts, white; sides and back gray, waved with black; dorsal line of neck and tertiary wing feathers, black; scapulars, black, bordered with silver gray; speculum, green; tail, long, 4 to 9 inches, the black middle feathers extending far beyond the others; bill, black; feet, gray blue. Female colored much like the female mallard, but paler; always to be distinguished from that bird by the narrower, differently colored bill, different feet and more pointed tail.

The pintail is an extremely abundant and widely distributed species. It occurs in greater or less abundance everywhere from New England to California. During the migrations it affords much sport to gunners in the Western and Southern States. Up to within a short time it had been supposed that this species always retired to the far North to breed, but Dr. Coues has shown that some breed in Montana, on the tributaries of the Milk River. During the month of July he found in this region young birds scarcely able to fly. In Alaska, according to Mr. Dall, they breed in considerable numbers.

The pintail is one of the most graceful of our ducks, and appears to equal advantage whether seen in flight, on the water, or on dry land. They associate freely with mallards, teal, and other fresh-water ducks.

*Chaulelasmus streperus*. Gadwall; Gray Duck. Male with the pale gray plumage, somewhat barred with black; shoulder, chestnut; greater wing coverts, black; speculum, white. Female smaller, with little or no chestnut, but with the other wing marks. Bill, black; feet, dull orange; length, about twenty inches; weight, about two pounds.

Although the gadwall is said to be distributed through North America at large, we have never found it very abundant on the North Atlantic coast. In the interior it is much more plenty, and furnishes good sport, decoying readily. In the Rocky Mountain region it is abundant during the migrations, and some remain through the summer to breed. Dr. Coues found their nests in Montana, and we have taken them in the mountains of Wyoming, not far from the line of the Union Pacific R. R. In California it is rather abundant.

*Marces penelopis*. European Widgeon. Head and neck, grayish brown, speckled with black, the top white or brownish white; faint traces of glossy green on its sides; breast, brownish red; belly, white; under tail coverts, black; a white patch on the wing; speculum, green, bordered with black; back, gray, waved with black; bill and feet, blue gray. The European widgeon is merely an accidental visitor to our shores, and occurs so rarely that any specimens of it which may be killed should be recorded, and their skins preserved. It can readily be distinguished from the succeeding species by the brownish, instead of gray, head and neck, and by the mere trace of green instead of the broad patch seen on the American bird.

*Marces americana*. American Widgeon; Baldpate; Whitebelly. Head and neck, grayish, speckled with black, the top white; a broad patch of glossy green on the side; otherwise like the preceding, which it about equals in size; weight, about one pound fourteen ounces.

The widgeon is found almost everywhere throughout the United States, being equally abundant on the seaboard and inland. They are found in great numbers on the brackish waters at the mouths of many of our rivers and bays, and many are shot on our inland waters. We have found this species breeding abundantly in Montana and Dakota, near little sloughs and narrow streams.

[TO BE CONTINUED.]

PROCEEDINGS OF THE PHILADELPHIA ACADEMY.—Part II. of the Proceedings of the Philadelphia Academy of Natural Sciences, covering April to September, has just reached us, and for it we desire to express our acknowledgments. It is replete with interesting matter and contains contributions from the pens of Dr. Leidy, Mr. Kingsley, Dr. Chapman, Capt. Vogdes, Mr. Theo. D. Rand, Dr. Harrison Allen, Dr. Hartman, Mr. Barbeck, Mr. Lockington and others.

AT TABLE in another column gives some new testimony on the beaver question.

### SOMETHING ABOUT SQUIRRELS.

SQUIRRELS are wonderfully mixed up with childhood and olden times. Solitary indeed would have been the grand old woods without those ever-present and active little nut-crackers.

The striped or ground squirrel is a sprightly and industrious little body. He is not fastidious in his diet, but his favorite food seems to be beech nuts, of which he frequently stores away large quantities for winter use. It is quite amusing to see the amount of nuts which he will gather and cram into his mouth until his cheeks are distended seemingly to bursting. His deposits are invariably underground, where he hides during the winter, and seldom comes out while cold weather lasts. In the spring when his supplies are short he is sometimes driven to the necessity of digging up young corn which has been lately planted near the woods, which brings him into bad repute among the farmers' boys, who often wage an exterminating war against the whole race.

The red squirrel or chickaree is a hardy specimen of the race, and is bound to live whether nuts are plenty or scarce. They are out in all kinds of weather, and we frequently find them in midwinter in deep pine forests, where they subsist chiefly on pine cones, or rather the small seeds which are found in the cone. He is the most lively and active of all squirrels; his every move, look or action denotes mischief. His favorite home is near settlements and among butternut groves, from the nuts of which he has such an ingenious and workmanlike manner of extracting the meats. He will sometimes lay up large stores of these nuts in hollow stumps and trees for future use. The red squirrel is found sitting upright on a limb with his back turned to the body of the tree and tail curled over his head, while he keeps up an incessant chattering and sputtering which no other species could imitate. Regardless of the boy who is filling his pockets with small rocks, determined to pelt the life out of him, and who, forgets the fact that he generally came out second best in all his former attempts to stone a red squirrel out of a tree top, Chickaree awaits the attack. He does not seem to be much alarmed at the boy's approach, merely making a few bounds upward and squats himself lengthwise on top of a good sized horizontal limb, as much as to say, "I am ready for you, if there is any danger you can just see how easy I can slip over on the other side of the limb." Boy begins throwing stones and finally expends all his ammunition without effect, while he knows he cannot get him. Becoming exasperated, he declares he will hoist the squirrel out of that, and begins climbing it. When he gets pretty close to the game the little red runs out on the end of the limb, makes a flying leap, comes to the ground right side up and runs off as though nothing had happened. Boy slides down, and while pinning up wires runs in his pants discovers the little rascal in the top of a neighboring butternut tree skipping from branch to branch, clipping off the stems and letting the butternuts fall at a lively rate. Boy concludes to wait a while; he will make something out of that squirrel yet, and after a sufficient time he falls to and gathers up quite a pile, and for lack of a sack to carry them he decides to cover them with barks and rubbish and come for them early in the morning. But in his absence Chickaree has been off every nut and is now waiting for his own use. He is a great robber of birds' nests, and while there be eggs or young birds it is all the same to him. He is also addicted to stealing hens' eggs, of which he has a peculiar knack of inserting into the small end his sharp teeth without otherwise breaking the shell, and carries them off with apparent ease; in fact, his petty larceny proclivities render him somewhat obnoxious and frequently brings down vengeance on his devoted head.

The habits and habits of the black and gray squirrels are nearly alike, the only difference seen in their habits and locality. I believe the former is seldom found except in the Northern and Middle States, while the latter is found in nearly all the Western and Southern States as well as in some localities in the Middle and Eastern States. I have never found the black and gray both occupying the same ground. I have found the fox squirrel among the gray both West and South. They differ in size but not much in habits.

The natural home of the black squirrel is in heavy bench, maple, locust and pine forests, where they are quite at home at a fast rate on the tree tops, leaping from branch to branch with surprising agility. They rarely if ever lay up food for winter, as they seem to be well adapted for foraging in all kinds of weather. However deep the snow may be they have a natural instinct for finding nuts or other food which may be lying under the snow.

The flying squirrel is perhaps scattered over more territory than any other variety, and is not often seen even in localities where they are plenty, as they are decidedly nocturnal in their habits, seldom moving in daylight unless when disturbed.

They are socially disposed, and it is rare that one is found alone. They seem to keep together in families of a half dozen or more high up in the hollow trunk of some old tree. Their power of flying, or rather sailing, is attained by their extending the legs at right angles with the body, which also distends the skin and flattens the squirrel to the dimensions of about five by seven inches. The tail is thickly furred, wide and flat, and doubtless aids them in their flight. Their mode of travel is to run up a tree nearly or quite to the top, and sail off on a descent of about forty degrees until near the ground, when with a sort of swoop they shoot upward ten or twelve feet striking another tree, thence, running up to the top, repeat the manoeuvre, and in this way some distance is gained in a short time.

I have frequently while being camped out on dark nights heard those little night ramblers come spitting along from tree to tree, one after another, until a whole family had passed.

Piney Falls, Tenn., Nov. 23, 1880.

ANTLER.

A SICK ORANG.—The orang which is at present at the Westminster Aquarium has had a severe attack of sickness from which, however, it is now happily recovered. The London correspondent of the *Liverpool Post* says: "The missing link who parts his hair down the middle, and has been for some time past on exhibition at the Westminster Aquarium—namely, the orang-outang—has not escaped falling a victim to the malady which has proved fatal to so many of his kind in our climate. The stranger caught cold, and quickly developed into a severe attack of bronchitis, and on Friday night last his medical attendant held out little or no hope of the patient being able to survive the night. However, Mr. John E. Carrington, F. R. S., the naturalist of the aquarium, was determined, if possible, to save the creature's life. He sat up all night with him steaming and doctoring him, and by morning the symptoms were so favorable that the orang-outang was declared to be out of immediate danger. Since then, by dint of careful nursing, the animal has

been brought around, and is now happily convalescent. His patience under his sufferings was, I believe, above all praise, and he took Mr. Carrington's hot baths with all the complacency of a Major Pendennis."

GOVERNMENT PUBLICATIONS.—The Natural History Editor desires to acknowledge with thanks the receipt of the following works: "From the Interior Department, Professor J. A. McMonigot, of North American Birds," from the War Department, Part II. of Professor E. D. Cope's "Report on Extinct Vertebrates Discovered in New Mexico during 1874," by the U. S. Geological Surveys West of the 100th Meridian."

## Sea and River Fishing.

FISHING ON THE ST. LAWRENCE.

BROCKVILLE, Ont., Nov. 13, 1880.

A FEW words about fishing, for "recreation," in the St. Lawrence may not be out of the way, now that fishing in that respect may be considered as a thing of the past for this season.

In general, it will be conceded by all who frequent our beautiful water that the quantity of fish has greatly increased since our fishery laws have been enacted, especially black bass and maskinonge have augmented since 1875 wonderfully in numbers and also in size. It is natural that now and then an unlucky sportsman will say everything to the contrary, but a steady observer will agree with me. Certain localities are always "fished out," but that is even local and detracts little from the immense extent of fishing grounds, which are composed of the innumerable bays, channels, shoals and inlets of the river between Kingston and Brockville. I have observed that since 1875 black bass are caught on grounds where, in 1872, not one could be found.

I ascribe this not merely to the direct effect of the law preventing netting and unlawful fishing, protecting fish in spawning season, but also to the fact that the public mind has been educated to a more civilized view of these matters. I have frequently seen, and as late as 1874, bushels of small black bass, rock bass and sunfish lying in heaps on the rocky shore of an island, blackened and decaying in the sun; only one case of this kind has come to my knowledge since. Thus it was that the poacher emptied his nets and took not even the little trouble to throw the small fry back into the water.

The "Brook group" of islands, in the immediate vicinity of Brockville, are divided by the navigable channel of the river, and offer, in shoals and small channels, favorite feeding grounds for black bass, maskinonge and the unavoidable pike. At the head of this group, where the river is three miles wide and suddenly forced into small channels, the maskinonge, our "monster of the deep," lies in wait for his prey behind a rocky ledge, under the current, which rushes over his head up stream, ready to dart any unfortunate member of the finny tribe which the current may bring down into deeper water. Now and then you can see him disperse a school of silvery cisco and behold the water foam from the powerful stroke which has carried him to the surface after his victim. Here, every summer, quite a number of maskinonge are caught, and I have preserved the head of one, taken last October, weighing forty pounds.

West of these islands, and up the river, a lake-like expanse of water meets our eyes, and the Amherst group is reached. Large shoals on both sides of the river give miles of good trolling ground, and especially the shoals on the foot of the Amherst group of islands harbor black bass of good size in July. These shoals, as well as the islands, can easily be reached by stopping from the little steamboats running between Alexandria Bay and Ogdensburg at Allen's Landing. Below the "Crossover" light-house, on the American side, as it is called here, under dark stream to below Oak Point, is a succession of rocky shoals which have given us many a day's happy sport, and hard work.

After middle of July the phantom minnow is most efficient, and trolling, even when using flies, is most practiced. On the Canadian side extensive shoals are found from the light-house up river to Jones' Creek, where a string of five islands separates a fine bay from the channel. Into this bay empties Jones' Creek, and a more romantic and interesting spot can hardly be found on the shores of the river. Before entering upon a description of this part of the river, which will merit to be noticed by the sportsman, I will return to the above mentioned Amherst group of islands. These are situated right in the middle of the river and number ten or more, surrounded by numerous shoals and large extent of weedy bottom in every direction, forming the well-known locality for black bass, which are landed here in large numbers, and sometimes three and more islands at a time are occupied by parties from Ogdensburg, Brockville and other places, and their tents, bay and camp fires at night frequently attract the attention of the passengers of the numerous steamers and the solitary sportsman.

In the foregoing I have touched upon the different feeding grounds of black bass between Brockville and the Amherst islands. They comprise the shoals and channels around the islands of the Brook group. These shoals are on both sides of the river in that wide and beautiful stretch between the Brook group and the Amherst islands, and lastly the large area of rocky shoals and weed beds around the Amherst islands.

The first part of the season and up to end of July bass fishing is always good in all sheltered places, in bogs and around islands and where weed beds are near. After the disappearance of shad-flies the rocky shoals near the steep channels afford better sport. But the black bass of largest size I have always found near the places where food and shelter for minnows collect in July and August are large numbers of small fish. On the rocky open shoals it is very rare to land a bass of three pounds or more, whereas I have taken a bass of five and more pounds near sheltered weed beds, in bogs and on the mouth of creeks. A lady last July landed one small-mouthed black bass of such size as I would have never believed black bass could reach. Its extreme length was twenty-six inches, depth of body over seven inches, and weight seven pounds and two ounces. A week later the same skillful hand landed a big bass of over five pounds and a pickerel (pike perch) of eight pounds. They were hooked with a single minnow (pike perch). These fish were killed in the last week of July, in a sheltered bay inside of the islands, on the Canadian side of Crossover Light-house. A look on the maps of the river will show that at the Amherst group the river is extremely wide; on the south side Chippewa Bay and on the north side a large bay-like cut, making it about five miles wide, but divided by numerous

islands. This part, from the Amherst group to the Alexandria Bay, is more known to sportsmen in general and will form the subject of my next letter.

## SPAWN FISHING AT RANGELEY ONCE MORE.

BOSTON, Nov. 26.

WILL you allow the writer of the article in your issue of Nov. 4 on spawn fishing at the Rangeley Lakes to say a few words called out by two letters referring to his article which have since appeared in your paper?

His position is, that spawn fishing in September or in October of seasons of "sportsmen" now do not primarily fish for propagating purposes should not be permitted. And he fully agrees with his old friend "Captain Fred" in his recommendation in your issue of the 25th inst., that nothing but fly fishing should be allowed after September 1. And he further asserts that the case which he referred to in his previous letter was an outrageous action on the part of the holders of a permit from the Commissioners in that the fishing was not solely for propagating purposes, that fish were killed under the license held from the Commissioners and that only a small proportion of the trout so taken by the parties referred to ever contributed to the stock of eggs which were saved, that the object of the licensed persons was to make a big score after the season closed and that they accomplished their object.

He further asserts that he can prove what he has stated, and that Mr. Commissioner Smith, in his letter in your issue of the 25th inst., did not state all the facts, because, as the writer believes, he was ignorant of them, and that when Mr. Smith said the only permits were held by Messrs. Kimball and Stanley he either did not know or forgot to state that other parties fished uninterruptedly in his presence during the first five days in October, and it is to their conduct only that the undersigned referred in his previous letter, well knowing that neither Mr. Stanley nor Mr. Kimball would abuse their privileges.

Having attracted his subject in calling public attention to the subject the undersigned will continue to discuss the question privately when he receives a reply to a letter lately written to Mr. Smith personally, in which all the facts are stated for his information.

FAIR PLAY.

## FISHES, NAMES GET MIXED

MONTREAL, Canada.

DURING several seasons in different parts of Quebec I have taken generally with a spoon what I consider as three different varieties of fish. First is a trout nearly black in color and called *truite noire* by the "habitants" running to large sizes, not so thick and chunky as the gray trout, and not so pretty a fish. Although I had not the two fish to compare I think the eyes of the "black trout" larger than those of the gray. The spots and markings very indistinct and the lateral line not marked; fins black, with red edges; belly nearly black; irides yellowish brown; flesh (of all I got) white, and I am told by the "habitants" this is always the case.

Then there is the gray trout, lake trout, or salmon trout of the Ottawa waters, and the "Tuladi" of Lake Metapédic and Metis lakes and vicinity. Are these latter the same fish? I look up Hallock's "Gazetteer" and find that they are "mixed." I have asked Mr. Whiteave, mentioned in the "Gazetteer," and he can give no more information on the subject than ordinary mortals, so I turn to you. What are these fish?

Again, I find in the "Gazetteer" "pond-pickerel, dorée (Canada), *Esox reticulatus*." The writer first insults our dore by putting him into the pike family, and then says "he is so small and bony that he is hardly worth cooking when caught." Now I want the author to "take it all back," for the following reasons:

First, the dore is not a pike at all, but a perch, and only second to the black bass in that family. Again, he is not small and bony. I have taken them myself of three pounds weight, and know of one being killed in Lake Roseau in Muskoka that turned the scale at ten pounds. Doubtless I could collect more instances of even larger fish being taken. His flesh is delicious. The nearest fish in the "Gazetteer" is the "Pike perch, glass-eyed pike, white salmon, etc., and *Stizostedion americanum*, Girard," but one fish is much darker above and a bright yellow below, as his name implies—"gilded."

That skilled fisherman, the ex-secretary of the F. and G. P. C. of P. Q., at the last "blow out" given by the club called him *Luciperca canadensis*, and some of the members were down on him for so doing.

Thirdly, let me ask what the difference between a pike and maskinonge is? I have asked Mr. W., and he said the first was dark with light markings and the latter had the reverse. The habitants say a maskinonge is striped; "Gazetteer" says, "The northern pike, first described by Agassiz, is sometimes confounded with this fish, but may be easily detected, as it has the lower jaw filled with teeth, whereas the anterior half of the maskinonge is toothless."

I have before me the head of a pike that weighed twelve pounds, a pike such as the author goes on to describe. The head is nine inches long from the lower jaw (longest) to the gill, from the end of the lower jaw for a distance of one and three-quarter inches the teeth are, even dry as it is now, but one-twentieth of an inch long, and from this point back on each side are six or seven teeth from one-quarter to nearly one-half in length. The upper jaw has three terrible banks of teeth in the roof of the mouth. I have taken a good many pike in a good many waters, and all identical with this, and have to confess, to my shame, that I never saw a maskinonge. Perhaps you can tell me what difference there is between it and the despised pike that has so often appeared at my table or substitute for such in camp?

WASAT.

Only four "trouts" are now recognized by naturalists as being east of the Mississippi River. These are brook trout, *Salmo fontinalis*; blue-back trout, *S. ogosqua*; the lake, or salmon-trout, *S. namaycush*; and the siscowet, *S. siscowet*. The tuladi, *S. tonia*, is now included in the third.

The color is not enough to found species upon in ichthyology, and this is the great mistake of anglers in general. It goes for very little because it is not constant. There is a possibility that you have both *fontinalis* and *namaycush*, but the former is subject to great variation in color, from white, through amber and pink, with green back, to almost black, and in the case of the large ones going to salt water the spots often become invisible.

The "dore" is not of the pike (*Esox*) family, but is the pike perch (pickerel in parts of Canada), *Stizostedion* of Rafinesque, whose name has been restored to replace that of *Luciperca* of Cuvier for the same fish. As the *Esox reticulatus* is a "pickerel" in New York it was a natural error to give this name to another fish called "pickerel" in Canada.

Often the body of the maskinonge is plain olive. In some cases it has large dark oval spots, and in others it assumes the appearance of faint lines. Color, as we have said, is nearly nothing in fishes. The best way to distinguish the maskinonge, *E. nubilior*, from the great pike, *E. lucius*, is that the former has the lower half of the cheek and opercle bare, while the latter has the cheek scaly and opercle bare. The smaller, *E. reticulatus*, has, in addition to the tenet-work on its sides, from which it is named, both check and opercle scaly.

## THE CATFISH.

BEDFORD, O., Nov. 15, 1880.

Editor Forest and Stream:

D. R. E. STERLING is quite right in what he says about the edible qualities of our northern catfish. It is really one of the very best of our many good fishes when properly served up.

The late Prof. J. P. Kirtland, whom nobody knew but to love and respect, gave me a sound lecturing because I did not say more good words about this fish in the first edition of my book. He also gave me the following method of preparing and cooking this fish: "Never take off the skin, but scrape it with a knife, pouring over it hot water, repeating the operation until the skin is as white as a piece of bleached linen; then remove the gills and intestines, leaving the head on, and stuff it with a pound of goose or duck, adding to the stuffing, for a ten or twelve pound fish, a little garlic (not Garlic), in quantity about as much as one-fourth of the size of a nutmeg, chopping the clove of garlic fine, and distributing it through the stuffing, then sew up the fish tightly and hold in boiling water by the tail for ten seconds, no longer; then lay it on its belly in a baking pan, and bake it slowly for four hours if you are not too hungry to wait so long, but if you are three hours will answer. But do not forget the garlic, and you will ever after hanker for baked catfish. Try it, and if you cannot get a catfish take some other large fish and serve it up in the same manner. Care should be taken not to put in too much garlic in the stuffing, not enough to give it a distinct odor of it."

In a late number of FOREST AND STREAM, Dr. E. Sterling states that he has caught the black bass at the Sault Ste. Marie, which was a great surprise to me. I have fished at that place at different times for as much as six months altogether, with minnows and flies, for large trout. I have fished there in the months of June, July, August and September, and on two occasions I fished there for four weeks, and on two or more times that prince of anglers, Judge E. D. Potter, of Toledo, fished with me, and neither of us ever caught or heard of a black bass being caught, or seen there. I do not make this statement as doubting what Dr. Sterling says in his communication, but it is strange that I never caught any there, nor did I ever before hear of any being taken there.

T. GARLICK.

AT SALTIE also has something to say about this subject in a letter on another page, in which he establishes the valuable fact that the catfish is more northern in its range than it has usually been credited.

THE MARAŁOZOS—Cleveland, O.—I will send you a photograph of a female maskinonge (*Esox nubilior*, Cuvier), that weighed fifty-four pounds and was taken in the Maumee River, near Toledo, O., by Judge Emory D. Potter, of the Ohio Fish Commission. The cast of this fish is now in the Kirtland Society of Natural Sciences here. I speared a fish of this kind in the spring of 1842 near the Hones Point clubhouse, on Sandusky River, which weighed eighty pounds. I gave it to a swarthy Frenchman, named Angler, to do with as he pleased, and was satisfied with a mere all-dollar for it. This fish I considered also a "Daniel Lambert" among his kind. The waters of Sandusky Bay teemed with this noble fish in those days, now none are found there except now and then a fingerling (comparatively speaking), which is to be seen in the market. I have at present the mould of a male and female of this fish, which are perfect. The former weighed thirty pounds and the latter fifty pounds. The fish from which the moulds were taken were sent to me by Mr. W. C. City, Mich., twelve years ago, and cost me \$15. I very much doubt if the like are to be found in that vicinity now.

E. STERLING, M. D.

A FISH PARASITE—New York, Nov. 20.—While fishing in Westchester creek on the 2d of this month I caught a tomcod to which was attached a peculiar parasite, three of which I send you in alcohol with this. They were fastened to various parts of the fish by the root, which you will notice at one end, being firmly attached to the flesh, and the sucker passing through the skin, allowing them to wade out with the action of the sucker. When removed from the fish the sucker, or duct, or whatever it may be, was filled with blood, as also the pouch to which it conducted, which seemed to form the body, but the feelers were white. The skin immediately around where the blood duct entered the fish was red and inflamed. The fish itself was in good condition and remarkably gamy for a tommy when caught. The parasite seemed to be very tough, so much so that it resisted without injury a sharp strain to detach the root from the flesh. They have been inspected by several old tomcods who "never see the like afore," at the same time you may be perfectly familiar with them. Please inform me through your columns what they are. Will you at the same time tell me whether it is lawful to set pound nets in the Westchester creek, as I saw one running out from the shore of Pierre Lorillard's estate. The net had a very small mesh, small enough to entrap a quarter pound bass. This may in part account for the scarcity of bass in the Harlem River and the Big Little Gats.

SNARE.

The parasite is *Lernaeonema radiata*, Steenstrup and Luetken. It is figured in Rep. U. S. Fish Commission, 1871-2, Pl. VII, fig. 30, and recorded by Prof. E. A. Verrill in same, page 578, as found in Vineyard Sound. The net is unlawful.

## Fish Culture.

### ANOTHER ATTACK ON A GAME PROTECTOR.

LAST week we chronicled the attempt on the life of Game Protector G. M. Schwartz, of Rochester, N. Y., by a rifle shot from the shore while he was in the discharge of his duty, and we now learn from the *Syracuse Courier* that

John S. Collett, one of the game protectors recently appointed by the Governor and an act passed by the Legislature last winter, left Albany for a trip to Otego county, having heard that fishermen on the Susquehanna were killing fish in great quantities and in violation of law. He secured the assistance of the Deputy Sheriff of the county, Mr. Mead, and meeting that functionary at Enadilla, the pair proceeded to the little village of Wells Bridge, near which it was understood the illegal operations were going on. While in the discharge of their duty the officers were stoned by the fishermen and narrowly escaped with their lives.

In commenting upon the remark which we quoted from an Oswego paper, last week, the *Utica Herald* says:

"The Onondaga County Game Protection Association is no more deeply interested in this work than any other association of its kind only as far as the enforcement of the law is concerned. The secret of the whole trouble is that county, town and village officials and local game constables around Onondaga Lake, with but few exceptions, are as deeply interested in illegal fishing as the poachers, and for years have willfully neglected their duties and winked at the open violation of the law. The people of the State are spending money to feed and support the outlaws and moonshiners who threaten to shoot the State officers. It is probable that they will have an opportunity of testing their bravery, and possibly they may discover that shooting is a game that can be played at by others. It would be a fine judgment on the sharks to withhold all supplies of young fish and allow them to scoop out all the fish within the lake and then starve out the remainder of their days upon its banks. When the next raid is made by State Game Agent Dodge and his men there will be few nets left to work with."

### THE CENTRAL FISHCULTURAL SOCIETY.

The following circular has been issued:

DEAR SIR: The second annual meeting of the Central Piscicultural Society will take place at the Grand Pacific Hotel, Chicago, on Wednesday, Dec. 15, and your attendance is respectfully requested. It is expected that the meeting will be of great interest, as many papers are expected to be read and discussed during the day or two which the society may remain in session.

No list of the papers to be read has been received, but it is usual, for such members as may choose, to prepare a paper on some branch of the subject with which they may be familiar, and all members are invited to do so without further invitation; or, should you be unable to attend, the secretary will read your communication.

Arrangements have been made for reduced rates at the Grand Pacific Hotel, and it would be well for those who propose attending the meeting to engage rooms in advance.

Correspondence previous to the meeting may be addressed to the President, Mr. N. K. Fairbank, 59 Wabash av., Chicago, Ill., or to the Corresponding Secretary, office of Forest and Stream, New York City.

By order of the President.

F. MATHER, Cor. Sec.

### PISCATORIAL PIRATES.

Under this head the *Syracuse, N. Y., Daily Courier* gives an account of the lawless fishermen of Keuka and Seneca lakes, to which we referred last week and from which we extract the following:

It is a lamentable fact that the lakes of Central New York are raided by lawless gangs of pirates who carry naught for the laws or legitimate sport. This is the spawning season, but the piscatorial pirates seem to be intent on depleting the waters and leaving them barren of their finny populations. These buccanniers snap their fingers at the statutes and bid defiance to the officers. In not a few instances they pursue their vocations armed to the teeth and threaten to empty a charge of lead into any one who interferes with them.

Thanks to the efforts of the *Onondaga Fishing Club*, the illegal fishermen have learned that they can draw their seines and set their gill nets only at their peril. Game Constable Travis has a sharp eye for the malefactors, and it is seldom that one escapes him. The waters are rapidly becoming stocked, and it will not be long before as fine sport can be obtained on the Onondaga as on any lake or river. Last summer the fishing was finer than for ten years.

The Seneca river suffers from the predatory operations of the robbers, but it is hoped that before long they will be made to answer for their transgression of the law.

On Skanateles Lake the pirates carry on their unlawful work in open defiance of the law. In the vicinity of Glen Haven the water is lighted up at night by a large number of jack lights. The fishermen are rapidly depleting the waters of the fine trout for which the lake is noted. The robbers threaten vengeance on any one who interferes with them or makes complaint against them. The people living on the lake hardly dare say their souls are their own owing to the reckless acts of these nocturnal fishermen. This is a splendid field for some daring officer.

The people living in and about the adjoining towns have endeavored to stock Oswego Lake but the pirates have resisted their efforts by robbing the lake, luke and outlet. If the robbers are allowed to continue their work Oswego Lake will never be known as a fishing ground.

On Oneida lake it is well known the poachers are up in arms and defy the law. A short time ago their nets were raided by State Game Constable Dodge. This aroused their ire, and they now patrol the beach along the fishing grounds with loaded guns and swear they will kill any one who approaches. There is little reason to doubt their threats, as they are lawless in their habits and a bold set of rascals.

WHITEFISH CULTURE ON THE DETROIT RIVER.—Very good progress has been made in stocking the lakes with the whitefish, *Coregonus albus*, by depositing the fry at the great natural spawning ground in the Detroit River. The *Essex Record*, of Windsor, Ontario, recently said:

"Every day we hear of fresh evidences of the great good-faith by the establishment of the fish hatchery at Sandwich. The main bulk of the white fish taken this season are of an average weight of a pound and a half each. There are hardly any old ones taken, showing beyond a doubt that the hatchery has provided the catch, and that but for its having been put into operation white-fishing on the Detroit River and connecting lakes and rivers would by this time practically have become a thing of the past. So long as the catch was made up largely of old fish it was difficult to convince skeptics that the fry turned into the river each spring survived the dangers of young fish-life and returned to the place where they first took water; but now now can find a reason for disbelief. Not only is the existence of the fish unquestionably due to the hatchery, but their numbers are immense—just what we and others favorably to the enterprise at the outset predicted they would in a few years become. Even in parts of Lake St. Clair where a white fish had not been taken for a long period, they are now quite abundant. All that is necessary to bring back the old-time big fish-harvests here and consequent cheapness of price to consumers all over the continent, is to work up the fish hatcheries to their highest capacity. The matter of supply is entirely in the hands of the authorities."

CHINESE AND OTHER POACHERS IN CALIFORNIA.—The *Southern Union-Democrat* says: "Quantities of dead fish are frequently seen on the Stanislaus River at or near Reynolds' Ferry. The belief is that giant powder causes their destruction. If such be the fact the parties engaged in the nefarious business should be hunted out and punished as the law contemplates." The *Tuolumne Independent* says: "Reports reach us from various sources that at different points on the Stanislaus River, about Reynolds' Ferry, Chinamen are killing and taking fish in violation of the law by the introduction of medicated bait and blasting with giant powder; and furthermore are obstructing the passage of fish to the upper waters of the river above named by constructing dams in the operation of mining their claims. White men are also taking fish in these waters by unlawful means. We are informed that the salmon are quite plentiful in the upper waters that have passed the fishways at Knight's Ferry dam; therefore it is to be seen of what vast importance to this part of Tuolumne County the construction of a fish ladder at that place has proved."

A DONATION TO THE CAPE CLEAR FISHERMEN.—The Baroness Burdette-Couts has taken a great interest in the fishermen of Great Britain and Ireland and has made them several charitable bequests, as well as having built a large fish market in London, which, however, was never occupied, as the dealers would not leave old, cramped and uncomfortable Billingsgate. This truly good lady has just granted (that is the word used for her gifts) the Cape Clear fishermen the sum of \$14,250 to help them start again in business after the disastrous season just closed. This swells her bounties to the fishermen alone to the princely sum of half a million of dollars.

UNLAWFUL BASS.—*New York, Nov. 25.*—I saw in a fish store in Harlem a few days ago a string of striped bass, not one of which would weigh over a quarter pound, and have seen small bass for sale in many other places down town. What can I do to prevent their sale without appearing personally in the matter? What is the price of the "U. S. Tide Tables," of which you speak in the *FOREST AND STREAM*? SHADDO.

You may complain to the nearest Game Protector, who must prosecute. Apply to Thomas Manning, 53 Beaver street, New York, for the tide tables.

CARP FOR TENNESSEE AND ARKANSAS.—Mr. J. F. Ellis, of the United States Fish Commission, recently delivered one thousand carp to Judge W. W. McDowell, Memphis, for distribution in Western Tennessee and Arkansas.

## Game Bag and Gun.

### OUR PHILADELPHIA LETTER.

IN the Southern portion of New Jersey there is an extent of country, especially in the counties of Atlantic and Burlington, covered with extensive growth of scrub oak and dwarf pines, which has long furnished an excellent harbor and range for deer, and although they do not exist there in any great numbers it is of very common occurrence for parties going out properly equipped in quest of them to bring in one, two or three fine specimens of the hunt.

We have been on a recent excursion of this kind, and it is a very tedious, if not unprofitable, and must confess it is of this kind is composed of anywhere from five to fifteen men, all armed with double-barrel shot-guns loaded with buck shot. Every point where the deer is expected to pass (it is all guess work) is guarded by a gun, while one or two of the party make the drive with the dogs. Purely-bred hounds are seldom used, and I have seen pointer, half-pointer and bound terriers, beagles and the thoroughbreds making up a pack in one of these Jersey deer hunts. The drive is generally a short one, and one section being "drawn blank," a second and even a third and fourth is tried. When a deer is killed the carcass is divided, and as the party is generally a large one, a small portion only falls to the share of each. Your correspondent has made a vow never to go deer hunting in New Jersey again, for it has always been my luck never to have either buck, doe or fawn come my way or pass my net. In fact, but two deer were ever killed in the numerous hunts I have been fortunate or, I should say, unfortunate enough to have attended. There is too much "needle in the haystack" chance in them for me.

Very many deer from our own State are coming into market and a plentiful crop of mast is reported; in fact there has been a great growth of beech trees all over through our forest counties, which accounts for the number of wild pigeon exposed for sale at our game stores.

A very remarkable scene was witnessed on the Hawley branch of the Erie Railroad, last week. This branch runs from Hawley to Laekawaxen, a distance of seven miles, passing through a very wild section of the State and winding its way along the course of the Lackawaxen River the entire length of the road. The other day as a loaded coal train was moving under full headway three large deer bounded from the woods and leaped upon the track. They stopped, looked at the coming engine, and then like a flash darted down the track a few yards in advance of the train. The engineer increased his speed considerably, and at short intervals

the engine whistled, when the deer would toss their heads defiantly; but in spite of the efforts of the engineer he was unable to overtake the animals. The race continued for over three miles, when a man who was walking up the track frightened the deer from the rails, and they leaped the embankment to the Lackawaxen River, which they crossed, and disappeared into the mountains. The engineer fired several shots at them from his revolver as they ran down the track, but they apparently escaped untouched.

We met Dr. Twaddell at Krider's this morning and learned of the great sport he had in Maryland with his beagles, Blunder and Melody, eighty hares having been killed during the trip. It is not generally known that the marsh or black-floated hare of the Middle and Southern States makes a much better run than the common variety of "cottontail" which is found near timber and frequents the upland more. It was the little black-floated foot that afforded the Doctor and his party so much amusement, and the runs made, he stated, were astonishingly long and quick; few hares escaping excepting those that "holed." The portion of the company that devoted their time to the quail found the birds abundant and the coveys full.

As I wrote you would be the case, now that we are having a real touch of cold weather, the rafter grouse shooting through our State has become better. The birds are seeking the valleys along water courses for shelter, and are being found there. More canvas-back ducks have been killed this week at Havre de Grace than since the opening day of the season, but they are not by any means plentiful. From parties that have returned from the New Jersey coast we learn that the brand to not stool well, and many Canada geese pass "right along high" without stopping or paying the least attention to the decoys. We imagine that the numerous immense hotels that have been built on the narrow strip of beach which separates these inland bays from the ocean, has the effect of frightening the fowl. We have frequently seen flocks of both geese and brant, when coming in sight of these barns of buildings, to "climb" right up into the air and continue their journey southward without touching, when it was evident they would have alighted to the stools had they not been driven from their course by the buildings. HOHO.

### EFFICIENT METHODS OF GAME PROTECTION.

#### THE WEST JERSEY GAME PROTECTIVE SOCIETY.

I HAVE been reading with considerable interest in the late numbers of your paper the articles written by yourself and others in regard to the protection of game and the formation of game societies, and I should like to add a few lines of my experience for the last six years, both as one of the committee on the purchase of game and the committee on policing and prosecuting violations of the game laws of the West Jersey Game Protective Society.

I contend in order to protect the game successfully the proper laws must first be passed; and, secondly, they must be pluck and nerve enough to enforce them, otherwise they are a dead letter.

We see in your columns the formation of numerous game societies throughout the country, but fail, except in rare instances, to see that they ever achieve anything, and in the course of six months they either go out of existence or dwindle into a pigeon-shooting club, the very reverse of what they were formed for.

This arises from various reasons. A want of funds is no doubt often a stumbling block, and when such is the case it is to be deplored. But too often it arises from an apathy and selfishness upon the part of the members, who are unwilling to give the time and trouble necessary in seeing that the laws are properly carried out. It is surprising to me to see how many intelligent men who shoot who will not even take the time to inform themselves upon the objects, letter and spirit of the game laws, but rush madly into print and condemn the very laws as unconstitutional which two weeks before they considered right and proper.

There is no doubt that the people of this country have to be educated up to a knowledge of and a proper respect for the game laws. This, however, is being done rapidly by the sporting papers of the country, and I know of no one who deserves more credit in this respect than the Game Protective Society of New York. With plenty of money, integrity of standing and purpose, backed up with nerve and most able counsel, they pushed their cause to the courts of the last resort, and the community at large thus given a line of decisions which not only placed the standing of the game laws upon a proper footing, but also put to flight the curlstone lawyers and the unconstitutional letter writers.

The first duty of a game protective society is to employ a lawyer of good standing, who will examine the game laws of the State and post himself upon the laws and the decisions of the different States. Let him then, under the directions of the society, frame the game laws which they intend to present to the Legislature. If this is done the society will find, when the time comes to prosecute their cases, that the offender will be unable to escape by any quibble, and that the Court itself will not be in doubt as to the meaning of the phraseology used in the act. To have an offender arrested with all the evidence against him, and yet to allow him to get off by the insufficiency of the law, is the very worst thing that could happen.

The next step should be, after appointing a police committee, is to get an intelligent, sober and industrious officer. This individual is a most important person, as upon his intelligence and ability will depend the successful termination of all suits. The officers should be supplied with an official paper setting forth his appointment, and should also be supplied with blanks drafted by the counsel of the society. Most of the justices of the peace before whom the offender first comes are so ignorant as to be unable to draft the papers properly, and in the event of an appeal to a higher tribunal the cause would be lost by the consequence of a want of season. Of course reason to suppose harbor game out of season. Of course this must be done in the proper legal way, and with good reason (which is supported by affidavit), that you have cause to suspect the person of violating the laws. The railroad companies are always ready to help you, and you can get them to issue an order to their employees that any one know-

ingly violating the laws in shipping or receiving game out of season will be dismissed from their employ.

Let it also be known that upon any person giving any information of any violation of the law by letter to the secretary of the society that the case will be prosecuted without dragging in the informant in any way. It will soon be found that a vast amount of information will be obtained which otherwise never would be heard of. In this way your detective can go quietly to the spot where the violation has been committed and work up the case, and the society as a body becomes the prosecutor and the salaried officer the informer. I say salaried, because if he is so it can make but little difference to him whether the reward is paid or not, and it puts him before the community in a better position than a mere informer trying to convict a person for a reward.

By thus adhering strictly to the law, and using good judgment when a case should or should not be prosecuted, it will not be long before the violations of the law will be few and far between, and the countrymen generally respect your good efforts.

I contend that no society has done more for the protection and propagation of game, and certainly no society ever had in the beginning greater enemies than the West Jersey Game Protective Society. But by persistently adhering to its rights and enforcing the law without fear or favor, I think I can truly say that it now stands for integrity and ability beyond reproach.

There are still some grumblers who find they cannot shoot out of season, who stick to the old state argument that the law is unconstitutional. As I wrote a long article in November of 1876, which your paper kindly printed, I do not intend going over the ground again, but should any of your readers wish to inform themselves they can either write to you for the information or read the case of *McClurg v. The State of Virginia*, 4 Otto Reports, where the subject is discussed by the Supreme Court of the United States. I would also recommend your correspondent, Mr. J. H. Griffith, to read the above case and the decisions printed in your paper in 1875 and 1876, and given by the New York courts, upon the right of State passing game laws, and the property of the game at large belonging to the State. The prosecutions by the society have been numerous to mention, but they have always been successful, except in a few cases.

I believe we now have, since the law is understood by the farmers, their support. The arrests for trapping and snaring have been numerous, but in every case successful. The trapping is now in a great measure stopped, and I hope in next week to make some four arrests which will completely break it up in that particular section of country.

If the officer employed will make a stay of a week in that particular section of the country where the trapping is to be made, and make all his arrests at once he would completely break the practice there. To attempt to arrest the game sellers for handling trapped game is impossible, as it can never be proved that the birds were trapped except by picking them, which of course no game seller will allow. Let all sportsmen adhere strictly to the law. Let them inform secretaries of the different clubs of the persons who are violating the laws and their residences, and if they will not appear on the witness stand themselves let the secretary send his officer to the place and work up the case.

A farmer who violates the law to-day will do it to-morrow, and you will almost always find him out. Let all sportsmen be civil when ordered off a farmer's land and do not let them claim the right of shooting on any one's place without permission, and it will not be long before they can shoot wherever they please, unless he be a very ugly character.

I have written this article with the hope that it may be of some benefit to gentlemen who propose enforcing the game laws, and I can only add my hope that they will be successful as we have been. A MEMBER.

We want the name of every sportsman in New York City, and in other cities, who thinks that he can afford to pay the farmer's boy something for preserving the quail for him to shoot.

## ROUGHING IT AMONG THE DUCKS.

BY A VETERAN.

BEFORE the terrible storm was well cleared away, my brother and I started Thursday evening. That night it cleared away again, with a gale from the northwest that blew great guns all that night and the next day. When we got up in the morning we found the ice had formed rapidly in the pond and seemed to make faster after sunrise, spite of the high wind. One of our company thought no boat could live in the pond, and said no one but an Esquimaux would attempt to launch in it. But my brother and I saw about 200 fowl in the middle and made up our minds to try it. The thermometer was nearly zero, and after getting our life-skiffs clear of the ice, a task of about half an hour, we found every wave put a coat of ice over boat and rower; still we started for those ducks, and meant to have a "whack" at them any way. Heading our skiffs off before the wind we went down upon them like arrows, about a good gun shot apart.

Coming near enough we gave them two barrels each in the water and as they rose, loading quickly, gave them right and left as they passed. Picked up dead birds from the first volley, seventeen. This was better than we expected, for the wind ceased as our aim was expected to be very steady. Then too, the wind would not let us stop where the birds rose from, but away we went to the leeward side of the pond, where we were soon in difficulties among the cakes of ice rapidly solidifying. Besides the birds we picked up others came down among the little cakes to the edge of the pack ice, and the pack made around them so fast we could not reach them, as our skiffs could not penetrate it. Nor was it strong enough to bear them. They came a flight of one-half or three-quarters of an hour getting clear of this pack and back to the windward side of the pond. Our boats and our bodies were sheets of ice, and as I found gloves in the way and went bare-handed, my hands were nearly frozen. After a little rest we paddled to a point to windward of the ducks for a second rally. Although many went out of the pond into the ocean and did not come back, others did come, for it was so rough outside. Again we came down upon the birds. This time they did not wait for us, and we had to start them. The result of second rally, sixteen ducks. Again we worked up to the windward shore. This time I found so much ice in my boat and on her that she had to be pulled out and cleared of it. Also, toward

the latter end of the rally, there was so much ice on my coat—fully half an inch I should think—I could hardly get my gun to my shoulder, and when I did the butt slipped up or down on the ice of my coat, so as to be very unsteady. The ice was so thick, too, was very uncomfortable, and the ice on my eyelashes almost blinded me. But I had to have one more crack at them. So my friends broke the ice over the buttons of my coat until we got that clear. Then I was going to try them in my shirt-sleeves, but my friends insisted upon my donning an oilskin coat, so with that we started a third time.

My brother got two. I snatched six times at capital shots, but the ice was so thick over the firing pins of my gun that the cartridges would not explode. Opening the gun to fix them, I could not get it shut. Then, coming into the drift ice, I came so near not being clear this time I thought when a man's gun was frozen up he had better not try to shoot any more. After a desperate effort we got ashore again and then we quit. Result of the three rallies, eighteen broadbills, a bluebill and a widgeon for my brother, eighteen broadbills for me. You see we shoot very nearly alike, and there is much generous rivalry between us. My brother then took the guns in the house and cleaned them. I dismounted the boats, got them, the oars, the game, etc., safely landed and packed, and then we changed our clothes, had a capital dinner, and home we came. I never had better fun or more excitement in my life.

Our heavily-laden wagon broke a spring coming home, so we came but slowly, otherwise no calamity befel us. I find myself suffering ever since with my hands, because of my indiscretion in leaving off gloves. The ends of my fingers are numb yet, five days after the event; the skin has broken in three places on my left thumb, and the whole top of my right little finger has risen in a water blister. But I would go through the same experience again for the sake of another such day. The exhilaration was such, as I fought the waves, I found myself shouting with exultation at every stroke, and no one could hear me for the roar of the wind. I was a boy again, and know I shall be a better business man for the year to come, until I can get another such day of recreation.

Next day a boy went out on the ice which had formed, got eight frozen in, dead as we left them, and I think the same number of cripples and shot out of an all-hole. Considering the weather our score was good.

It was our last chance; the fowl are all gone. If I had not been for a misunderstanding we should have been there Wednesday—my friend was there we found afterward, the day appointed. There were more than 1,000 birds there that day. It was a flat, calm and lowering and I believe we could have bagged 150 fowl. It was a pity, for the larger part went off before the storm of Friday, but we had great sport as it was, and better than I used to get. I think I have failed to do heretofore this fall. I used to discount my brother. Up to this last excursion he has beaten me shamefully this fall. This day the quality of the shooting was a little in my favor again considering the misfires of my gun. Once or twice I took a bird from one flock passing to right with one barrel; one from a flock passing to left with the other. As these birds fly faster than any swallow or quail it is no easy matter.

Our boats are especially constructed for this purpose. My brother built them. His is ten feet long, three feet wide and one foot deep. Mine nine feet, nine inches long, two feet nine inches wide and ten inches deep, otherwise they are just alike. By this arrangement of sizes it sits in the wagon body, nine fits inside his. We put a seat across mine, load in our equipment, hitch up the horse, and away we go to any pond where we hear there are birds. The boats weigh about sixty pounds each, and another gentleman who sometimes goes with us has one just large enough to hold my brother's when he goes along his boat sits in the wagon and ours are placed in his. I will describe my boat, which description will answer for all, though the internal arrangement of each is made to suit the owner and user.

The sides being sprung—they are made of  $\frac{1}{2}$  in. white pine—and secured to the stem and stern board, and the braces in place, the bottom was put on. The first covering was of  $\frac{1}{2}$  in. cedar, carefully cut and covered with copper tacks to the braces. This was well coated with lead paint, and while heavy, close woven drilling was stretched over it. The drilling was then well painted on the outside. Before this was quite dry, another was put on, filling all the spaces in the threads of the cloth with paint. Over this painted drilling was then put another bottom of one-quarter inch cedar, and the bottom protected by strips one inch wide, running lengthwise of the boat, six inches apart. This made a light skiff with a round bottom, that, after four years' service, was so good a boat. The sportsman sits in the bottom, and is so very low in the water. The boat is fitted with patent bow facing oars, so one can watch his game as he rows up to it; and with his cocked gun lying between his legs, the muzzle elevated by lying over a bulkhead, B, so arranged that he can paddle almost up to his game, approaching them from the windward. They always rise against the wind, so start toward the boat; and then as they pass, drop the oars, swinging the gun up, and then as they pass, it toward the game, up with the gun and let them have it right and left. At the sportsman's right is an open topped box, containing his loaded cartridges, which can be shored under the thwart if it is very rough, or there is rain. The bulkhead serves a double purpose of keeping the muzzle of the gun elevated, and making a space in the bow of the boat to throw the game to keep them out of the way and keep the boat clean. It is movable so it can lie in padding the boats. My brother has none in his, his gun lies in the bottom. Last year an accidental discharge sent it over the bow. The sportsman sits in the bottom, and is so very low in the water. The boat is fitted with patent bow facing oars, so one can watch his game as he rows up to it; and with his cocked gun lying between his legs, the muzzle elevated by lying over a bulkhead, B, so arranged that he can paddle almost up to his game, approaching them from the windward. They always rise against the wind, so start toward the boat; and then as they pass, drop the oars, swinging the gun up, and then as they pass, it toward the game, up with the gun and let them have it right and left. At the sportsman's right is an open topped box, containing his loaded cartridges, which can be shored under the thwart if it is very rough, or there is rain. The bulkhead serves a double purpose of keeping the muzzle of the gun elevated, and making a space in the bow of the boat to throw the game to keep them out of the way and keep the boat clean. It is movable so it can lie in padding the boats. My brother has none in his, his gun lies in the bottom. Last year an accidental discharge sent it over the bow. As it is always cold when we go for broadbills it is very uncomfortable taking them out of the icy water with the hands after they are shot. So beside the right leg of the gunner lies a short-handled landing-net to lift them. At the time of our last frolic the water froze over our nets, and we were obliged to use them, and they were so heavy we could not use them. The good old-fashioned, bare hands had to take their place. That day I used a Remington 13-bore 9½ lb. gun, loaded four drams powder, and an ounce of No. 6 shot. It is a cheap gun (\$50 new), but is the best shooting, best balanced gun I ever shot, with the bestliest, most aggravating breech-opening mechanism. There are so many pieces it is constantly out of order, and so much of it on the outside, the old thing is a pain to hold. The pair of barrels were so good they would beat the world. I think there is nothing further to say, except that I have since been told that the dead birds and cripples picked up the day after our battle were twenty-two instead of fifteen, making the total score sixty.

Seacoast of Conn., Nov., 1879.

## GAME AND FISH CHAT.

FEW items of Quebec news I can give you of the past fall. Most of our game has for some unexplained reason been unusually scarce. There have been but few snipe or cock, and bags have been small in consequence, and in the markets high priced ruffed grouse are scarce; but this state of things is easily accounted for, they are snared almost to extinction under the vile law that allows of hare snaring, and this state of things there is no remedy for unless it is the repeal of the law. But few large ducks have come in, and most of the kinds in market are green and blue winged teal, buff heads and blue bills. Geese have not been so scarce for twenty years, and are very scarce here, but since I am happy to see, are getting scarce, and if there were none at all our ruffed grouse would benefit by the loss. We have had a mild and pleasant season, no snow of any account until within the last week. Some vessels in the harbor loading yet. Caribou hunting will very soon be in order; it only requires about eighteen inches of good snow with a good hard frost, and everything is ready. Everything promises well for the sport. So much for sporting notes.

I see in a copy of the *Forest and Stream* of Nov. 11 that Dr. Sterling in an article on the catfish says: "The extreme northern range of the catfish is, you may be certain, Lake Erie." In this I beg most politely to differ with him. During the summer of this year (1889) while on a trip to the Northwest I caught over twenty of these fish, varying from ten to twenty-five pounds, in the mouth of a small river running into the Red River of the North, near the village of Lake Park, Minnesota. I caught them in the finest water, one of the most common fish in those waters. They seem to be of two varieties, one a black, unpleasant looking fish with a body small in proportion to the size of the head, the other longer, better shaped, with smaller head and mouth, and yellow in color. I am not sufficiently versed in fish lore to know if they really are different varieties, or whether they are only male and female of the same kind. One thing I do know, that as a table fish they are second to none of the 10,000 in Minnesota. I caught them in the finest water, one of the most common fish in those waters. They seem to be of two varieties, one a black, unpleasant looking fish with a body small in proportion to the size of the head, the other longer, better shaped, with smaller head and mouth, and yellow in color. I am not sufficiently versed in fish lore to know if they really are different varieties, or whether they are only male and female of the same kind. One thing I do know

beyond, which lay on the north shore of the island. Belle, on approaching the spot where the birds had moved from, had a remaining brace of birds flushed, and she dropped to wing. In proceeding to where the birds had been marked down Belle straightened herself out and pointed hesitatingly on a small fresh rook which some birds had just left, but she was uncertain and roared on. Hebe was sent to the fore, but the cover was too thick to work the dogs in, and some grassy patches were tried. Tallman ahead of his puppy flushed a single bird, and Hebe dropped to order. Belle then, having the wind, pointed staunchly stern well up and straightened herself out. At order she drew on grandly reminding one of the old sort, and after roading about twenty yards the bird which had been running flushed of itself. Belle was given the point, which she deserved thoroughly. Warming to her work she showed form and grand style. Further on a bevy was moved by Tallman, and at the sound of its taking wing another bevy flushed where Belle had first taken up the trail of the single bird. All of these birds were proclaimed to be natives, as the three hundred imported birds from Illinois had been planted in another section of the island. As the second bevy scattered in a narrow strip of scrub oaks near the beach, both bitches were swung around to the leeward of the patch. On the outer edge Hebe pointed and the birds were flushed and shot at by Tallman. One bird started for the main land, but tired out and fell in the water, where it was picked up by Rover. Belle, a moment later pointed, and the brace was ordered up at 9:55 A. M., after being down just half an hour. Belle was awarded the heat, provision being made to have her back later on. Certainly over 150 birds had been moved on the range.

#### Rover against Jennie II.

Mr. Raymond's Rover was put down, a large, leggy pointer, with good head, being handled by Mr. G. H. Newton and Jennie II. by her owner, the latter being a tiny set infant. In same part of ground the start was made. Both dogs at once pointed on separate birds, being somewhat apart. The handlers were ordered to flush and kill, but both birds escaped. Jennie dropped to order, but Rover held his point, and after a bird was flushed in front of him. Under the circumstances the performance was worthy of high rating. The brace was then given a spin in the old stubble field, the little bitch moving quite sharply, while Rover measured off the ground with a slow rolling lope. Back to the bay-bushes the brace were sent, and in the scrub-oaks Rover made a rattling point, head well up and turned to one side. He was staunchness itself, and stopped where he was until Tallman, in cut-and-mouse-like-manner, could convey his little bitch in sight for her to back. She was allowed this, we think mistakenly. Jennie was then put on some birds and Rover given a chance to back her, which he failed to do. The judges then requested the handlers to establish a point to enable Belle, winner of first heat, an opportunity to back, the brace, for the time, being relieved from penalty should flushes occur. Rover found and remained staunch on point and bevy was moved. Jennie, upon reaching place where bevy pitched, pointed excellently, and Rover, who was ascending the hill-side beyond, caught sight of her and backed grandly, thirty yards away. Belle was brought up and allowed a back. The brace was then ordered up at 11 A. M., after being down forty-five minutes. Jennie was awarded the heat, which, we think, should have gone to the pointer. He had shown a good nose, unusual staunchness and his backing above described was first-class.

#### Queen against Belle.

Queen, who had a bye, handled by Mr. Tallman, and Belle, winner of first heat, handled by Mr. Haight, were put down for the second series in a thick lot of scrub-oaks on the hill. Belle at once pointed, drew on and stopped, roared for some thirty yards and pinned the bevy, which had been running. The birds were flushed by handler. Belle continued to rood on carefully, when birds were flushed. Queen up to this time had shown no disposition to work, and at 11:20 A. M. after brace had been down ten minutes, the dogs were ordered up, Belle winning the heat. A breeze began to freshen up, and the sun coming out made it a perfect day for working dogs, and really the sport was most enjoyable.

#### Jennie II. against Belle.

At 11:30 Jennie II. and Belle came together in the same patch of scrub-oaks. Jennie almost immediately pointed in grand form and Belle backed her. The bird was moved. In leaving the brush Queen drew a view lay before her. We had reached that part of the island, border spoken of, as resembling Montauk. The rolling hills, cut between with gulches, spread out from our feet as we stood on the highest point of the island. In the hazy background stretched forth the larger bay, hemmed in with blue hills and steep, sandy slopes, while above us the white clouds caused the autumnal sun to fight up only a broad strip of the bay and the marsh land. The hills were drawn blank, and at 11:45 A. M. the brace was ordered up, the heat going to Belle, making her first prize winner and leaving Jennie II. second. Belle, the winner, is the first of the Sensation strain ever run in this country.

An adjournment was now had for luncheon and the field was not taken until an hour later.

#### Hebe against Rover.

Hebe and Rover, same handlers, were put down on the rolling ground west of the house. Hebe at once warned up and showed good style and clipping pace in the open, outrunning her large companion. The hills were drawn blank, the imported birds having moved their location. It was not until three-quarters of an hour had been consumed that a feather was seen. The beat had been directed to the south part of the island, and the last of the morning a strong-flying bevy was flushed from the hills. They scented the brush and pitched several hundred yards away along the high slopes on the east shore. In some longish grass there they were found and both dogs flushed. Rover made a careful point on some dry leaves and the birds were flushed by the handler. In a washed gully he tripped over a brace, which were somewhat wild, and Hebe followed suit with two flushes. The dogs were then ordered up and the heat given to Rover, after being down an hour and twenty minutes.

#### Rover against Queen.

The finishing heat lay between Rover and Queen, but as the latter again showed no push, Rover was awarded the third money.

The boat was soon reached, and 3:20 P. M. saw the party back to New Suffolk.

The first day's sport passed off smoothly. The weather was fine, and the running of the youngsters fair. In the evening a meeting was held at the New Suffolk Hotel, and President Aten, as chairman, congratulated the club on the successful termination of the first day's running. Mr.

Washington A. Coster, of Flatbush, L. I., was appointed Steward in place of Mr. Hecksher, who was obliged to return to New York. The entries then closed in the Puppy Stakes, with the nominations noted below.

**PUPPY STAKES.**—Open to all pointers and setters under 18 months of age. Limited to 25 entries. First prize, \$100; second prize, \$50; third prize, \$25; fourth prize, \$15. Entrance fee, \$15; forfeit, \$10. Closed November 29, 1880, with eight nominations, out of which there were six starters and two withdrawals.

#### ENTRIES.

J. O. Donner, New York City, white, black and tan setter bitch puppy Jersey Queen (Ranger II.—Silk), 18 months.

A. E. Godfrey, New York City, white and orange setter bitch puppy Daisy (Ranger II.—Silk), 13 months.

H. W. Livingston, New York City, lemon and white pointer dog puppy Baronet (Rush—Rose), 1 year.

D. S. Gregory, Jr., Jersey City, N. J., lemon and white pointer bitch puppy Belle (Sensation—Grace), 11 months.

W. Tallman, Brownville, R. I., white and black setter bitch Jennie II. (Scranton's Patch—Jennie), 8 months.

Max Wenzel, Hoboken, N. J., Irish setter dog puppy Chief (Berkeley—Duck), 15 months.

John C. Higgins, Delaware City, Del., white and lemon ear setter dog puppy Lincoln II. (Lincoln—Petrel II.), 15 months. Withdrawn.

W. Buckingham, Norwich, Conn., unnamed pointer. Withdrawn.

#### SUMMARY OF THE DRAWING OF THE BRACES.

Tallman's Jennie II. against Livingston's Baronet.

Gregory's Belle against Godfrey's Daisy.

Donner's Jersey Queen against Wenzel's Chief.

(By Telegraph.)

SECOND DAY.—NOV. 30.

MATTITUCK, LONG ISLAND, DEC. 1.

The morning broke bright and clear, and throughout the day the weather was perfection. A rather fresh breeze was blowing from the northwest, and at 8:30 the party of yesterday, increased by many new arrivals, took the little steam yacht Psyche and started for Robins' Island.

#### Jennie II. against Baronet.

Arriving half an hour later, the first brace were cast off at 9:10—Jennie II., handled by her owner, and Baronet, a fine little pointer, handled by William W. Titus, Croleville, L. I. Cornfield was drawn blank. Baronet showing himself to be a good ranging and fast-going puppy. On approaching the bayberry-bush field the judges flushed a bevy and Baronet dropped to wing and Jennie to order. Jennie then pinned a bevy and pointed staunchly, but as the judges were intent on following the first bevy, the point was not scored in her favor. On following the bevy, both dogs flushed it in a hollow, but Baronet, who had been showing much greater working powers, at last found and pointed a single bird. Titus, knowing his dog, claimed a point too quickly as we thought, for Baronet was unsteady at the time. A bird, however, was subsequently flushed, and the little pointer was allowed the point, Jennie having all this time been sticking closely to the heels of her handler. A move was then made for the second bevy, and Jennie was penalized with a false point, although birds were in the briars, and Baronet refused to back. Baronet found a single bird along a path in the briars, and pointed grandly and Jennie backed. Titus flushed and failed to kill. Jennie winded and stopped cautiously, and Baronet backed; both dogs roared on, and Jennie got to the birds and pointed. Tallman flushed and crippled a bird. The bevy, which was a very large one, pitched into the scrub oaks along the shore, and Jennie retrieved the dead bird. Baronet then pointed handsomely, and Jennie failed to back, and Titus flushed a single bird, and on moving on walked into the bevy, and, shooting twice, got one down, the little pointer dropping quickly to wing. On being sent to retrieve the dead bird, Jennie mounted and hit it badly, but the bird was a cripple and the cover thick. All along Baronet had shown good finding qualities, and the brace was ordered up after being down three-quarters of an hour, with Baronet the winner.

#### Belle against Daisy.

At exactly ten o'clock the second brace, Belle, the first winner of the Nursery Stakes yesterday, handled by Haight and Mr. Godfrey's Daisy, handled by his trainer, Philip Thurlie, who has established a reputation from training McDonald's Plunkie, were cast off in the old stubble field to a most favorable place for the opening spin. The little setter bitch Daisy showed herself to be a very quick worker, exceedingly sharp in her turns, and a grand free ranger, being astonishingly fast. Belle also showed her stylish form to great advantage, and was evidently a plucky one, for one of the toes of her off hind foot was greatly enlarged from an accident on the cars on Saturday evening, and her foot was like a ball of fire and very painful. Across the fence in the briars Daisy passed to windward of a bevy, which her handler flushed, the bitch dropping instantly to wing. Belle secured a point and moment later a magnificent back, as Daisy stopped for a second where birds had been running. Belle false pointed along the east shore, and the brace was swung to the leeward of the range. Again the old field was entered, and Daisy more than before gave an exhibition of her flying qualities, as she scoured the hills far and near. Along the brush which skirted the shore Belle began to wind, feeling in the air with head well up for the scent. On she drew, fast but cautiously, for over a hundred yards, and at last settled on her point. Daisy, on being called up, failed to back, passing her companion, and fifteen yards further on she suddenly became aware of the presence of birds and pointed staunchly, Belle keeping her point. Thurlie killed and Belle, with assistance of handler, after pointing dead, retrieved in a slovenly manner. The birds having been marked along the shore in brush which skirted the shore Belle began to wind, feeling in the air with head well up for the scent. On she drew, fast but cautiously, for over a hundred yards, and at last settled on her point. Daisy, on being called up, failed to back, passing her companion, and fifteen yards further on she suddenly became aware of the presence of birds and pointed staunchly, Belle keeping her point. Thurlie killed and Belle, with assistance of handler, after pointing dead, retrieved in a slovenly manner. The birds having been marked along the shore in brush which skirted the shore Belle began to wind, feeling in the air with head well up for the scent. On she drew, fast but cautiously, for over a hundred yards, and at last settled on her point. Daisy, on being called up, failed to back, passing her companion, and fifteen yards further on she suddenly became aware of the presence of birds and pointed staunchly, Belle keeping her point. Thurlie killed and Belle, with assistance of handler, after pointing dead, retrieved in a slovenly manner. J. F. K.

I think "Learn" is right, and second his motion that Geo. D. Macdougall accept the office of Secretary *pro tem.* of the American Cocker Club. That gentleman has been trying for some time to have a standard made by which to judge the breed, and I think it is a very laudable attempt. I judge the office. It is certain we must have two classes, a small spaniel from eighteen to twenty pounds be called a cocker. Let those over thirty pounds go where they belong, in the field spaniel or large class. A dog above that weight is better called a bird dog and not a cocker. I have no objection to my part I do not believe in a dog for woodcock or grouse much over or under twenty-eight pounds. Over that weight

GARDNER, Mass., Nov. 26.—There was a good attendance at the Hackmatack Range yesterday. A series of meetings was inaugurated. There is to be a contest each week until a certain sum is realized. It is open to all. The prizes to be awarded aggregate \$50. The first prize is \$10. Distance, 200 yards, off-hand, using the inch-ring and Creedmoor target combined. The work of yesterday is told by the following score:

I. N. Dodge.....	89	91—186 Geo. F. Ellsworth.....	83	89—172
Chas. Shawmut.....	86	91—110 O. R. Pratt.....	71	63—134

MAMMOTH RIFLE GALLERY.—Boston, Nov. 26.—Thanksgiving week was a busy one at the Mammoth Gallery, and the contestants in the Excelsior Rifle Match were large in point of numbers; the gallery was well filled both day and evening during the week with riflemen and their friends, many members of the several rifle clubs in this vicinity being among the number.

Mr. R. S. Gray, of the Massachusetts Rifle Association, still holds the lead with 191, closely followed by Mr. N. W. Arnold, of the same Association, with 191, and Mr. U. A. Pollard with 191 ranking in the order named. The three leading contestants are so close that it will be hard for any one to name the winner. Mr. E. F. Richardson follows closely with 190. Next in order is Mr. J. Merrill with 188, and sixth is Mr. S. Canterbury, with 186, out-ranking Mr. H. Appleton, who also has 186.

On Dec. 1 will commence a new match, called the Any Rifle Match, with six cash prizes, as follows: First prize, \$7; second prize, \$6; third prize, \$5; fourth prize, \$4; fifth prize, \$2; sixth prize, \$1. Conditions of the match are: Any twenty-two calibre rifle three pounds pull; rounds, eight; possible 40; five scores to win, or possible 200; position, off-hand.

The management, desiring some one to make a clean score, will offer an extra prize of \$15 to any one making a clean score of eight consecutive bullseyes. This the management thinks will be an incentive for the crack shots to put forth greater efforts in this direction. This new match will commence on next Wednesday. The following are the leading competitors, with their scores to date; 50 yards, rounds 8; possible 40; five scores to win, or possible 200:

R. S. Gray.....	58	38	58	39—191
N. W. Arnold.....	57	38	59	39—191
U. A. Pollard.....	57	38	59	39—191

A. H. Long.....	53	34	54	34—169

Pistol Practice.—This favorite range has been lively also during the week, and the crack of this little arm has been almost incessant. Mr. J. J. Dunne was nearly successful in getting the gold prize, twice making thirty-nines, his third shot on one score was a three o'clock nipper, and his sixth shot on his next score was a seven o'clock four; it was a fine effort, and showed capital holding. On Dec. 1 will commence a pistol match with three cash prizes, as follows: 1st, \$5; 2d, \$3; 3d, \$2; also an extra prize of five dollars to any one making a clean score of eight consecutive bullseyes. Conditions are: Holding the weapon at arm's length, rounds 8, possible 40, three scores to win, or possible 120; distance 50 feet; the match to continue during the month of December. The following are some of the best scores; 50 feet, rounds 8, possible 40:

J. J. Dunne.....	5	5	5	5	5	5—39
S. O'Brien.....	5	5	5	5	5	5—39
P. J. Rabbe.....	5	5	5	5	5	5—39
A. L. Andrews.....	5	5	5	5	5	5—39
H. M. Griggs.....	5	5	5	5	5	5—39
S. S. Foggy.....	5	5	5	5	5	5—39
A. B. Prescott.....	5	5	5	5	5	5—39
R. S. Gray.....	5	5	5	5	5	5—39

BROOKFIELD, Mass., Nov. 26.—Yesterday, Thanksgiving Day, several of the members of the Sportsman's Club had a practice at the range, breaking glass balls. Each had ten shots; the balls were thrown from a rotary trap, with eighteen yards rise. The record was as follows: C. H. Griffin, 10; J. P. Crosby, H. P. Gerald, George Chapin and Henry Crosby, 9 each. The two last are but 19 years old.

#### HUNTING RIFLES.

NEWPORT BARRACKS, Ky.

ALOW me, as a sportsman of many years' experience, to ventilate my views on what I consider good, serviceable sporting rifles—rifles which in their way and for actual work cannot be excelled; and although I admit they still may be improved upon, at all events, for the present, they stand, in my estimation, as the best in this country, regardless of cost.

I will commence with what I consider to be the best rifle for sporting in timber, for self-defence against odds, for general utility, and, in fact, the best rifle for killing game on the run, and quick snap-shooting generally.

In 1870 I bought a cal. .44 rim-fire Winchester repeater, which

shot 23 grs. powder and 200 grs. lead. With this rifle I killed a good many deer and some elk, and in its day it was the best American repeater made; but then it had many shortcomings, especially for killing large game—the load was entirely too small to give good results, and although a most convenient gun, yet it was not "the thing."

In 1873 I bought one of same make, but of later model, which shot a heavier load—40 grs. powder and 200 grs. lead. This gun was a good one, and with it I killed many deer, antelope, elk and buffalo. Still it was not a "bone crusher," and although I always used a hollow-pointed explosive bullet, in many cases I did not bag game which a heavier ball and larger load of powder would have "called in." When first I used this gun I tried factory ammunition—viz., solid bullet and ordinary rifle powder. Afterward I used Curtis & Harvey powder, and made my own hollow-pointed balls. With these I came out very well, and consider that for light sporting rifle—one that is not intended for game any larger than deer, and exclusively for shooting in timber, where the range seldom exceeds 100 yards, and no wind to disturb the flight of the ball—this is an excellent rifle; but for prairie work the bullet is too light, especially when cast hollow-pointed; and I have been sadly disappointed when shooting at black-deer deer across ravines, at say, 250 to 300 yards, to see my bullet drift away to one side, per haps several feet, when I knew I held where I thought was right making due allowance for wind, depression of ground, etc.

Since then this same firm (Winchester) has turned out what consider the very best rifle in the world as an all-round gun—viz., a cal. .50 Winchester Express, burning 95 grs. powder and 300 grs. lead (hollow-pointed bullet). This gun is rather heavy, to be sure, but that is all that can be said against it, and it must be borne in mind that a strong shooting gun must be full weight, as a light gun would kick fearfully with 95 grs. powder, even if it does shoot a light bullet. I don't like the long magazine, but one that carries, say, six cartridges, and that, making with one in the barrel seven shots, is as many as are generally required. Such a weapon in the hands of a skillful marksman is a perfect armory in itself, and will stop any animal at which it is fired, backed by an accurate aim and good judgment.

The penetration is not so great as that attained by rifles which shoot a more pointed and heavier bullet, but it will be found amply sufficient to bowl over a grizzly, buffalo, or any animal that is a native of this hemisphere, and with that one shot, if properly delivered. But what if the first shot doesn't? You still have six others—and there is the beauty of the repeater. Should you jump a band of deer, by keeping cool and giving the gun a show, you may bag three or four before they get out of range. This, of course, depends upon the ground, etc. At all events, you can always count upon doing more mischief with seven shots at your fingers' ends than you could under the most favorable circumstances expect to win only one or two shots. Then again, when hunting in the Northwestern States in the winter, it is an inexpressible luxury to be able to do all your loading at home before you start, as when it is ten or twelve degrees below zero I have always found it was more comfortable to keep on my gloves—or, rather, mittens—and no other gun (other than a repeater) can be handled successfully with these ungainly but indispensable appendages. By the way, for hunting in cold weather, a regular mitten for the left hand and with one a forefinger for the right is what is wanted. The trajectory of this cal. .50 Winchester Express is very flat, and that is one of its best points. To those wishing a somewhat lighter gun I would recommend the gun of this make which shoots 60 grs. powder and 300 grs. lead (solid ball), but for a smashing, killing bullet, give me the cal. .50. As to the gun being too complicated and liable to get out of order, that theory has been entirely forgotten out West, where they are most extensively used, and with decent care and attention they will last as long as can reasonably be expected, considering their price.

Regarding the Express system—or hollow-pointed ball and peculiar grooving—there is, I believe, no one who now doubts their superiority over a solid ball, any more than that a choke-bore shotgun will shoot out a cylinder, or but what a 10-gauge gun, if properly built, will shoot out a 12. These things happily seem at last to be settled facts, and it would be folly to argue with a man who would not accept them, as such an individual could never be convinced. For my part I am fully convinced that a 160-grain hollow-pointed bullet, driven by 40 grs. powder, will do more damage and have a more demoralizing effect than a 500-grain sharp-pointed bullet, with 100 grs. powder. This I know to be a fact on antelope and deer. For buffalo and other large animals the former is too light and has not the requisite penetration; but the 300-grain ball from the cal. .50 Express is just the thing.

I hope I have not opened a hornet's nest by advocating a certain rifle in preference to others, as I do this merely as a word of advice to beginners, and not in contradiction to ideas which may be too deeply rooted to allow of any change.

THUNDER.

BOSTON, Mass.

OF late much has been written upon the subject of "Hunting Rifles," and the articles have been eagerly devoured by me. The late Bayard Taylor used to say that he never found himself in the company of a person but what he could learn something, and so each of the new contributors I am introduced to through your columns tells me some little useful point, which adds to my store of knowledge on this subject.

Rifle shooting is my madness. Hunting with a rifle I prefer to all other sports, so if I may tell fellow sportsmen my opinion of hunting rifles, perhaps—even if I am thoroughly thrashed by some able scribe—some one may find a grain of wisdom which will profit them.

In hunting with a rifle we are supposed to be in pursuit of game which is too large and too shy to be bagged with the shot-gun, therefore we want a more powerful arm. The question naturally arises, "What calibre do I require and how much powder do I require to charge my rifle?" Look over the market, and you will find many excellent weapons, but a large, very large, proportion of the so-called hunting rifles in the gun-stores to-day are totally unfit to kill anything above the size of a hare. Rifle makers generally to-day seem to be manufacturing objects d'art instead of weapons of usefulness and defence.

When I go hunting I take either my shot-gun or rifle, and when I take the latter I go to kill what I cannot kill with a shot-gun, and I therefore have a weapon with which I can kill my game from 100

to 500 yards. To do this, 60 grs. powder is (theleast I should think of using, and never have shot less than 70 grs. The bullet I want to weigh at least 420 grs. The rifle to be .45 cal., and to weigh not under 9 lbs. Now, some of your readers will exclaim, "None of that for me," and will cite cases of tigers and bears being killed with .38 cal. rifles; but because such a case has been brought to their attention, it is no reason that the weapon is suitable to hunt such animals. Dr. Cones once shot a wolf dead with No. 10 shot, but I don't believe our ornithological encyclopedia would go without-baiting with such ammunition.

I have owned many rifles, and what I tell your readers is the result of a long experience and many tests. The finest and best hunting rifle I ever owned I bought in a city gun-store—a poor, disreputable, second-hand, Sharpe "Old Reliable Business" rifle, the old model, with an inside hammer. How insignificant it looked in the background, for in front were those objects d'art—those beautiful, high-priced, hot-house-flower rifles, with Italian walnut stocks, natty white straps attached to the slings (how white and clean those straps were!) But my eyes were upon that plain, substantial Sharpe, and as an art connoisseur would seize a Rembrandt, a Titian, or a Guido, I seized that rifle, paid for it, and bore away my prize.

Now, if I may be permitted to, transfer the reader to the plains of the Great West. Time, early in the morning; very cold, a strong wind blowing; in the distance, five antelope; two hunters approaching them, one armed with a light rifle, shooting about 30 grs. powder, and bullet to correspond; the second, the writer, armed with the Sharpe rifle above mentioned, charged with the Winchester government ammunition, 70 grs. powder and 420 grs. lead. We manage, by being mounted, to approach within about 250 yards, when away go the antelope like the wind. They run about 50 yards, and with that habit so fatal to them, stop for an instant to indulge their curiosity. In a second two shots are fired, the lighter bullet strikes the ground about 150 yards from the shooter. The antelope run, but before they have covered fifty yards, one is down, stone dead, bored through with the 420 grains of lead. I look around, and in the distance, upon a slight eminence, stands a noble buck. As in quick time as I could "pump" a shell into a Winchester, I had slipped one into "Old Reliable." The buck was so far away that as he faced me he looked like a tiny object, but he soon presented his side, and my rifle was at my shoulder. "Don't rise," shouted my companion. Crack went my rifle. "You're hit him! What a shot! He's all right!" I heard as I jumped into my saddle. What a distance, I thought, as I cantered up to my game. How pretty he looked, so sleek and clean. He was shot behind the shoulder—a well-placed shot, but he was not dead, and he jumped to his feet. Another shot brought him down, and I cut his throat just as the boys from camp came riding up. "We thought you wild," they exclaimed, "to shoot at such a distance. What a gun to 'hold up.'" The distance was paced, and 468 paces counted.

I have detailed this account—which is a truthful one—to illustrate what I wish to say in conclusion. I have shot many deer and antelope; of the latter I have rarely killed one under 200 yards, and from that distance up to 468 paces.

I want and have a rifle—the one mentioned—that I can shoot, I cover, bears and moose; and my bullet, with the charge of powder mentioned, will, if well placed, bring to bag the largest game. It will also shoot perfectly at long range. When antelope shooting, I sometimes use the Government shell, 85 grs. powder and a 500 gr. patched ball. This is very effective in making long shots.

I do not believe in magazine rifles. I have used them, and know their merits and demerits, and cannot but believe that, sooner or later, hunters who now favor them will believe as I do.

To sum up my statements in a concluding paragraph: I do not believe any rifle is fit for actual field service but what takes powder and lead enough to make a nearly flat trajectory up to 150 yards. Have your rear elevating sight fast, and learn to shoot at different distances by drawing a line or coarse sight. Let the front sight regulate the elevation. Get such a rifle, brother sportsman, and you will find it a fit weapon to shoot in timber or on the open prairie. Have target sights, if you like, interchangeable with the hunting sight, and you will find you have a "thing of joy forever."

## Yachting and Canoeing.

RIGHT AS FAR AS HE GOES.

Editor Forest and Stream:

I HAVE observed that you think American builders give too much beam and too little depth to a yacht of given length; also, that you oppose the use of the centreboard and the use of much canvas in one sail. I infer from your account of the race between George and Annie and Ayub and Lass that you specially object to the cat rig, probably as the embodiment of all the above-mentioned defects. I think your condemnation of these models and rigs just, so far as applied to large yachts intended for rough work and much "outside" cruising, but when applied to our smaller sailing boats, of which the cat is the chief, I consider it entirely too sweeping. The very things which seem failures when applied to sea-going yachts are, it seems to me, those which make the cat such a favorite. Her small draft and centreboard enable her to sail in very shallow water, and when in deep water to use a large keel. As we cannot deepen our inlets and shallow lakes, and still like large boats, we can only increase the beam to add to their size, which increases of beam also prevents the necessity of much ballast—a great consideration to a small crew.

I suppose almost every one has had experience of the convenience of the single sail plan. Every summer I handle cat-boats alone, which it would be impossible for me to handle if the canvas was divided into two sails. In your review of Kemp's "Yacht and Boat Sailing," you said, in speaking of the part relating to the ten and five-tonners and smaller craft, that we had practically next to nothing to learn from the English, our small sloops being far superior to anything of their class described in his book. And as concerning smaller sail-boats, "On smooth water we are king." Now, the cat is the chief of these smaller boats, and I claim that it is in her class especially that "we are king." Dixon Kemp speaks very highly of the catboat, and recommends that the cat be used for all sailing. I have been a marvel to those whose smallest rig was that of a waterman's boat with three sails. I think it should also be remembered that our waters are not as rough and choppy as those surrounding

our back files. Article by Com. Chase in number for Aug. 7, 1879.

B. C.—Best plan to renew your Cape Ann suit is to give one or two coats of boiled linseed oil with a little beeswax dissolved in it, if the thread of the cloth is still worth it.

S. N. J., Philadelphia.—We know of no one having such a gun for sale. You will perhaps find it by making your wants known to gundealers, or by advertising in this paper.

J. B. L., Lockhaven.—Your duck may perhaps be a wood duck, but as you do not describe it we cannot tell with any degree of certainty. It is not, however, a geosander, that is certain. Write more full particulars.

H. A. G., Utica, N. Y.—1. What is the scientific name of the bluefish? 2. What is the scientific name of the fish caught along the coast with hook and line, generally called snappers and snapping mackerel and sometimes young bluefish? Ans. 1. *Pomatomus saltatrix*. 2. They are the young of the bluefish.

D. L. T.—All large yacht clubs publish an annual pamphlet giving names of members, yachts of the squadron, constitution, by-laws, etc., for private circulation among the members only. You may obtain a copy through the courtesy of the secretary possibly, by addressing him at the club rooms, Madison avenue and Twenty-seventh street, New York.

J. McN.—The waterproofing process you refer to is probably the following: Dissolve paraffine in naphtha or benzine and soak the garments thoroughly, letting them dry slowly. Another recipe is: Half pound sugar of lead and half pound powdered alum dissolved in bucket of rain water; pour off into another vessel and steep the garments. Hang up to dry without wringing.

SALE BOAT.—We do not like to discourage any invention. The one you speak of will be hard to place on the market. It seems, as far as we know, more suitable to models than to large yachts. You can address the inventor through us. Only actual experience can demonstrate the extent to which it can be applied with success, and that experience we have not had.

V. A. N.—The dimensions 32x8x3 will make a good boat of the Sharpie style. A little more beam would make her safer. She will do very well for Mississippi and Florida waters. The chief danger is her great liability to capsize, and if green hands are to accompany you keep your eyes open in bad weather. A keel with iron on it would make her safe, but would not suit for exploring shallow and unknown waters. An iron centerboard would help you much. We counsel ½ ft. beam. Mr. Clapham makes a specialty of such boats. See his card. The drawings of the Newport catboat were published before our advent and we cannot vouch for them. All three plans ought to coincide.

FLORIDA.—Twins Lakes, Orange County, Nov. 17.—"Florida," in your issue of the 11th, wants to know what are the prospects of a young man going to Florida to engage in the orange business? Ans. It depends mostly on the man and depth of pocket. 2. What part of the State is best adapted to the business for healthfulness and profit? Ans. Elevated pineland for the first, almost anywhere south of danger of frost or freeze. For quickest profit get the richest land to be had, which is hammock, which you can't

live on healthfully the year round. Pineland is not rich but is healthful, and takes much manuring. Locate near transportation. If possible get hammock for grove, with pineland near for residence. 3. How long before one can realize, etc.? Ans. It depends on whether you plant seedlings or budded trees. 4. What amount of capital? Ans. How much do you want to plant? 5. What time of year best to begin? Ans. September or October. 6. Any book treating of orange culture? Ans. Send to T. W. Moore, Fruit Cove, Fla., for his "Treatise on Orange Culture." I have been on my present place five years. Have had some experience; grove (part) coming into bearing. Shall be glad to give inquiring parties information. Have done nearly all my own work and know considerable about the difficulties of orange culture. It's not a "flowery bed of ease." "There is no excellence without great labor."

P. S.—One thing more, very emphatically: Let no man come to Florida, expecting to support himself from his pineland place in south Florida and raise a grove at the same time. If one can combine the three desiderata (healthfulness, good garden land and suitable orange land), then he can raise vegetables for Northern markets, and so keep the pot boiling or help thereto. There is a divided opinion as to the degree of latitude north of which the orange can safely be grown. S.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpets, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Adn.

The photographic copy of "Fysehynge Wyth an Angle," by Dame Juliana Berners, A. D., 1496, for sale by Mr. Bouton, is a handsome "plaudet" in the old "black letter." Our readers will do well to remember that we have several copies of the delightful old book, edited by Mr. George W. Van Sielen, handsomely bound

and in good plain type with the quaint spelling preserved, which we can supply at \$1.50 per copy. A few rubbed copies at \$1.25. Send your orders to this office soon.

NOT THE MAN.—*Gazetia*, N. Y., Nov. 22.—Editor *Forest and Stream*: Very often I see the question asked about the responsibility of some one who advertises in FOREST AND STREAM. Not knowing but it refers to your humble servant, I send you a few names, any one of whom will tell you how I do biz with them: Colby & Johnson, 17 Maiden Lane; L. A. Mathew, 16 Maiden Lane; Charles L. Obry, 63 Nassau street; T. Irwin & Sons, 39 Pine street; J. H. T. E. Barr, banker, Cazenovia.

WILL H. CRUTTENDEN.

[We do not recollect having received any inquiries respecting Mr. Cruttenden, and had we received them it would not have been necessary for us to ask him for references.]

## FOREST AND STREAM.

A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INCLINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

Published by FOREST AND STREAM PUBLISHING COMPANY, Nos. 39 and 40 PARK ROW (Times Building), NEW YORK.

#### Terms:

Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

#### Advertisements.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive new advertisements, nor alter standing advertisements later than Tuesday morning.

#### Correspondence.

Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention. Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

#### Address.

All communications, of whatever nature, relating to the business or editorial departments of this paper must be directed simply

FOREST AND STREAM PUBLISHING COMPANY,  
New York City, N. Y.

## MacIntosh Waterproof Goods.

In ordering Stock or Pants please state the Size—you can easily obtain it from your Shoemaker—of the Boot or Shoe you are accustomed to wear.

The quality of these goods is so well and widely known as to require no comment. It is not only unequalled, but also unapproached by that of any similar manufacture in the world. By a special arrangement with the Messrs. MacIntosh, we are enabled to place their goods in the hands of Sportsmen at prices which will certainly drive all inferior makes out of the market.

Stockings, full length, any sized foot, per pair	-	-	-	-	-	-	-	-	-	\$8 00
Pants, reaching nearly to the armpit,	-	-	-	-	-	-	-	-	-	14 00
Heavy flax ground sheets, weight 6 1-2 lbs., size 7 1-2x4 1-2 ft., each,	-	-	-	-	-	-	-	-	-	8 00

ABBEEY & IMBRIE, 48 Maiden Lane, New York.

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R.R. Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE Trout, Grayling, and Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakellets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, (also for packing fish can be had at many points.

THE FISHING LINE, 100 N. Y. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are good, and are passing the average in countries now enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Freight at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists and Guns and Fishing Tackle, a book of 80 pages, containing full information and accurate maps of the Fishing Grounds and Lakes, address: A. B. LESTER, Gen'l. Pass. Agent, Grand Rapids, Mich.

Fire-Arms, Ammunition, and all Articles connected with the same, and sole Agent for J. Stevens & Co.'s Celebrated Arms.

DARLINGTON, Wia, Sept. 3, 1890.

Dear Sir—I received the 32 cal. rifle you sent all O. K. I did not expect to get an octagonal barrel and globe sight and such a very much for your fair dealing toward me. But I must tell you how the gun shoots. After adjusting the sights I fired five successive shots at a red, 125 yards, and put every shot in a bullseye 1 1/2 inches in diameter. Three of the shots would be covered by a five cent nickel piece. I killed a hawk 200 yards the second shot. I am confident I could kill a deer with it three-quarters of a mile away. The gun is well balanced, and the workmanship is superb. I shall recommend the gun whenever I can.

Truly yours, EUGENE HALSTED.

## GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1½ casks.

**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; gives penetration with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1½ and 5½ casks and in 12½ kegs.

**Dupont's Choke Bore.**—Specially adapted for "Choke Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6½ kegs and 1½ casks.

**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1½ casks and 6½ kegs.

**Dupont's Rifle Fg.**—"Sea Shooting."—FFg. and FFfg. The Fg. for long-range rifle shooting, the FFg. and FFfg. for general use, burning strong and moist. Packed in ½, 1½ and 5½ casks, 6½, 12½ and 25½ kegs. Fg. coarse, FFfg. fine. Dupont's Sporting, Mining, Shotgun and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Bomb, Hexagonal, Cylindrical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by P. L. KNEELAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,  
MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square casks of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1½ lb. casks and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. casks and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG. and "Sea Shooting" Fg. in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and 1½ lb. casks. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" Fg. is the standard Rifle Powder of the country.

**Superior Mining And Blasting Powder.** **GOVERNMENT CANNON AND MUSKET POWDER;** also, **SPECIAL GRADES FOR EXPORT,** OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

\* \* THE FOREST AND STREAM goes to press Wednesdays.  
Correspondents are requested to mail their communications so that they may reach us before that day.

—This is an excellent time to call the attention of your friends to the merits of the FOREST AND STREAM. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

THE man who thinks that he can afford to pay the farmer's boy more for quail than the boy is paid by the baggage-masters is invited to send his address to this office.

WE must beg the indulgence of numerous contributors whose communications are deferred this week.

BACK FROM THE FIELD TRIALS.—A portion of the retreating throng of sportsmen who had been interested witnesses at the Eastern Field Trials, passed through this city on Monday, and we had the pleasure of seeing many at this office during that and the following days. Among those who called were Col. James Gordon, (Pious Jeems), Dr. Rawlings Young (Gulney), Mr. J. C. Higgins, Mr. J. O. Donner, Mr. T. Gladston, Mr. Theo. Predmore, Mr. Tallman, Mr. B. J. Martin and Mr. G. W. Bissford.

IT is about this time of the year that the American bear vaunteth himself in all his primitive imminesty and blood-curdling ferociousness. Our country exchanges teem with hair-raising accounts of the frightful encounters and howling struggles of man and beast. There is one venerable old bear, who makes his appearance in the paper year after year, with all the regularity of the revolving planets; and along with him in this year of grace, 1880, comes the same unhappy "settler" to die again for the fortieth time his lingering death in the embrace of the monster. He is dead again; but we shall look for him, just the same, next year. He and the bear are as fixed in the newspaper world for all time to come as is *Ursus Major* in the heavens.

And, by the way, what about that family out in Iowa who are eaten up every winter by the wolves? Is it not almost time to hear from them again?

### THE DITTMARS' ABRACADABRA.

THERE came into our hands some time ago a printed circular, issued by the present Dittmar Powder Manufacturing Company, setting forth as a reason for the stoppage of their "sporting powder" mill the alleged sickness of Carl Dittmar. The circular letter further alleged that the failure of the company to make any more "sporting powder" was not due to the effect of our publication of the true nature of our compound, but that, on the contrary, the publications of the FOREST AND STREAM articles had rather helped their business. Within the past week the Dittmars have published what they state to be extracts from a seventy-five page pamphlet prepared in reply to these FOREST AND STREAM statements, which had helped them so substantially. The Dittmar Powder Manufacturing Company (No. 2) is not altogether consistent.

The Dittmars preface their pamphlet by assuring the public that they did not themselves write the FOREST AND STREAM's article. The simple fact that the FOREST AND STREAM's article contained the exact truth about the "Dittmar sporting powder" is sufficient proof that it was not written by the manufacturers of that explosive.

The pamphlet which the Dittmars have been two months and a half in preparing is, as we supposed it would be, mainly an abusive attack upon the FOREST AND STREAM. Had the Dittmars been conscious that the truth was on their side they would not have tried to bury the powder beneath the gutter refuse and muck of their ribaldry. We insist, and the public insists, that the "Dittmar sporting powder" manufacturers must not attempt thus to evade the facts adduced by the FOREST AND STREAM.

Stripped of its personality, the Dittmars' "reply" is this:

1. That the truth was published by us in consequence of the withdrawal of their advertisement. We simply repeat what we said before respecting the withdrawal of that advertisement, namely, that "after their agent had been informed that we were about to publish the results of our investigation, the Dittmar Powder Manufacturing Company, upon the trumped up pretext that our refusal to publish what we thought to be a libelous letter proffered by them was unfair, judiciously withdrew their advertisement." The Dittmars allege that we published the article because they withdrew the advertisement. We affirm our belief that they withdrew the advertisement because we had told them that we were about to publish the article. This is a matter concerning which the public may draw its own conclusions. Right motive or wrong motive, the facts adduced respecting the powder remain. The Dittmars may "publicly charge" until the crack of doom; the facts are not altered thereby.

2. That the truth was published by us in the interest of other powder concerns. This is unqualifiedly false. The exposition of the powder, except such portions of it as were then credited to others, was written entirely, every paragraph, sentence and word of it, by the editor of this paper, and in the interest solely of the sporting public and for its protection.

THE FOREST AND STREAM insists upon the right to expose any and every fraud and swindle, which endangers the personal safety of its patrons, and to gather its information from every available source. In investigating the "Dittmar Sporting Powder" we pursued this course, and we did not stop until we had inquired if Mr. Dittmar's sworn testimony concerning his sporting powder tallied with the letters written by him to forward its sale. We consulted the records. We found that they did not so tally. We published them. *Hinc illic lachrymæ*, which means, literally, "hence these tears," freely translated it means hence Carl Dittmar's "sickness."

3. They quibble on the patent specifications we published. By referring to the notice on the backs of the "Dittmar sporting powder" cans it will be found that the patent there called for is the one published by us. The reissue of the same patent does not affect the case at all. That those, who are interested in following the present Dittmar Powder Manufacturing Company in their crayfish movements, may satisfy themselves that Mr. Dittmar's patent was correctly presented they may send to the Patent Office at Washington and procure all of his patents upon payment of a fee of twenty-five cents for each one. The numbers are 98,854, 99,069, 99,070, 145,403; reissues, 5,759 and 6,645 and No. 179,688. More-

over, if Mr. Carl Dittmar will send us a copy of a patent and accompany it with a sworn affidavit that it is the patent under which his powder is made, we will publish it, and the affidavit with it.

4. Professor Morton's report. We have not the patience to follow the writers of the pamphlet through the tortuous course of self-contradiction here, wherein in one sentence they deny that the Dittmar powder was "sporting powder," and in the next affirm it; and then go backward and forward again. For example in one sentence it is:

"The alleged Dittmar powder presented him [Prof. Morton], and which we claim to have been nothing more nor less than Duflin, a blasting powder generally called Dittmar powder."

Then:

"Suffice it to say that no nitro-sugar, etc., not even in infinitely small proportion has for many years been used in the production of Dittmar sporting powder."

And again, forgetting what they have said, further on they affirm:

"Now, as far as the nitro-starch and nitro-sugar mentioned in that deposition are concerned, they beyond cavil, are purely detonating powders, and as such highly beneficial to a blasting compound, but, although science owes the production of such nitro bodies on a commercial and practical scale to the invention of Mr. Dittmar, we have nothing to do with them here because, as Prof. Morton states, they [i. e., nitro-sugar and nitro-starch] are present in the sporting powder in such small quantity that they do not effect the character of the material."

That is to say—and after ten weeks in which to say it—the powder referred to by Prof. Morton is in one breath "blasting powder" and in the next "sporting powder." "No nitro-sugar, etc., used, not even in infinitely small proportions," and then "they are present." The Dittmars deny that Prof. Morton referred to sporting powder and then they acknowledge it; they deny the nitro-sugar and then admit it; in short, in one of these statements the writers of this Dittmar pamphlet are guilty of falsehood.

Their pamphlet sorely needs editing. The concerted efforts of all the editors in New York could not prove the safety of the "Dittmar sporting powder," but the youngest and most inexperienced editor in the land, if he were given ten weeks in which to do it, could have doctored up this pamphlet so that its successive assertions should not have directly or by implication proved themselves false.

We advise the Dittmars to take another ten weeks and fabricate, if they can, a rejoinder, of which one-half shall not be a contradiction of the other half; a rejoinder, in short, which shall contain a decent proportion of truth.

The report of Prof. Morton referred explicitly and solely to Dittmar sporting powder, which had been received by us in person from the present Dittmar Powder Manufacturing Company, and by us delivered, sealed as received, to him.

Had the Dittmars entertained any honest doubt about this they might have written to Prof. Morton. His reply would have satisfied them.

OFFICE OF THE FOREST AND STREAM PUBLISHING COMPANY,  
NEW YORK, Dec. 7, 1880.

PROF. HENRY MORTON:

Dear Sir—The FOREST AND STREAM of Sept. 23, 1880, contained a report written by you on Dittmar powder. May we ask you to state explicitly whether or not that report referred only to "Dittmar sporting powder," samples of which in sealed cans were furnished to you by ourselves. Truly yours,

FOREST AND STREAM PUBLISHING COMPANY.

STEVENS INSTITUTE OF TECHNOLOGY,  
HOBOKEN, N. J., Dec. 8, 1880.

Editor Forest and Stream:

The powder examined by me and reported upon to you as Dittmar powder was contained in a sealed can labelled "Dittmar's New Sporting Powder."

The paper seal was intact and was broken by me.

My report was therefore founded upon the material sold by the Dittmar Company as sporting powder.

On the reverse side of the can were directions about the use of the powder in shot-guns.

Truly yours,

HENRY MORTON.

If the Dittmars will furnish us a sworn affidavit that this powder, which they delivered to us in sealed cans, was blasting powder, and not sporting powder, we will with pleasure publish that affidavit also in our next issue.

As to the influence of the nitro-starch and nitro-sugar contained in the sporting powder, we advanced no opinion. We

simply stated what Carl Dittmar—under oath—said that he thought of them. And this brings us to the sworn testimony.

5. Respecting the sworn testimony of Mr. Dittmar, which we published in our issue of September 23, the Dittmar Powder Manufacturing Co. explain:

"In the first place, this deposition has no even remote application to sporting powder. It refers only to blasting powder and to the ingredients used to produce such powder."

A portion of that deposition was as follows:

UNITED STATES CIRCUIT COURT.

New York, Feb. 19th, 1890.—Before John A. Shields, United States Commissioner Southern District of New York. Deposition of Carl Dittmar, of Binghamton, N. Y., who, being first duly sworn, deposes and states:

"My GUNPOWDER, when I first made it, had the same tendency as nitro-glycerine powder. It burst most all the guns at first, when I began to introduce it. It was just the same as if I could use nitro-glycerine powder. I have it now so that it is tamed down, and don't burst any more guns."

"My gunpowder," the Dittmar pamphleteers explain, "refers only to blasting-powder." "It burst most all the guns" "has no even remote application to sporting powder. It refers only to blasting powder." "Don't burst any more guns" "refers [Feb. 19, 1890] only to blasting powder." This "tamed down" stuff, which "refers only to blasting powder," is, or was, for sale at No. 24 Park Place. The price per can is, or was, 65 cents and 85 cents. "All canisters are sealed, and only warranted when the seal is unbroken." The manufacturers warn the purchaser that the powder is "not guaranteed if this seal is broken." He is sensible who leaves the seal unbroken.

We may explain just here that the deposition from which we have quoted Mr. Dittmar's confession, referred principally to his blasting powder. The statements therein made by him respecting his "sporting powder" were in no wise pertinent to the case, and Mr. Dittmar might just as well—and better—have omitted them. But the words, which we have quoted, he did utter under oath, little dreaming that they would ever be brought before the public in contrast with the delusive letters he had written about his "sporting powder."

The Dittmars allege that we have garbled the testimony. A copy of the deposition, as written out from the stenographer's notes and printed under the supervision of Mr. Carl Dittmar's own counsel, is now at this office. It is open for inspection. Any one who has sufficient interest in the matter may satisfy himself that we have quoted Mr. Dittmar fairly. We invite the fullest reference to every letter deposition and article cited by us in this discussion.

The Dittmars lay stress upon the fact that Bogardus and Carver used "Dittmar sporting powder." Well, Bogardus was paid to use it. Whether or not he paid now, we have no means of knowing. Moreover, we refuse to believe that Bogardus ever used it alone in a pigeon match where he was shooting for *bona fide* stakes. He has admitted to us, personally, that in such a match he would not use it in the second barrel. And as to Carver, too, used the "Dittmar sporting powder" for pecuniary considerations. Moreover, we are credibly informed that Carver shattered two guns with the "Dittmar sporting powder."

The Dittmars strenuously deny that their "sporting powder" is a nitro-glycerine powder. The FOREST AND STREAM strenuously denies it, too.

The Dittmars and the FOREST AND STREAM are agreed on that. But we have said, and we reiterate, that the so-called "Dittmar sporting powder" is analogous to nitro-glycerine powder, that is to say, that under given conditions, which are absolutely beyond the control of the man who uses the powder in his gun, the "Dittmar sporting powder" will detonate.

We insist that the Dittmar pamphleteers must not evade this statement of the true nature of the explosive. Mr. Dittmar, being first duly sworn, knows it to be correct. That is where Mr. Dittmar—under oath—and the FOREST AND STREAM agree again.

And when the Dittmar pamphleteers issue their second edition, we advise them to omit the self-contradictions and falsehoods now existing in their pamphlet, and in place thereof, to explain in their rationale of their nitro-cellulose compound that the conversion of the powder into gas may be by detonation; and for a "more extended scientific consideration" let them explain that the man who pulls the trigger of a gun loaded with their "tamed down" stuff is just as liable to blow off his own head as he is to kill the bird.

The Dittmar Powder Manufacturing Company accuse us of having been personal in our discussion of their explosive. We recognize this bid for sympathy on their part as an old dodge, but we submit that any reflections, which may have been cast upon the character of the manufacture of the "Dittmar Sporting Powder," have been only the reflections suggested by a fair presentation of his past written and sworn utterances respecting his powder. We suggest to the manufacturers of the "Dittmar sporting powder," that the sportsmen of this country are not to be caught with their craft. A burnt child dreads the fire: the "rationale" of the process of combustion will not induce the child to put his hand into the flame a second time. The most vigorous pumping of gas will not keep a bursted balloon in the air. Scurrilous pamphlets will not float "Dittmar sporting powder."

We have repressed our indignation at the course of a man who for greed of paltry gain has placed a powder analogous to

nitro-glycerine in the hands of the sporting public, and then systematically and shamelessly bolstered it up by fraud and deception. We have directed our remarks so far as possible to the powder and not to the man. We have preferred, and we still prefer, to leave any reference to Mr. Dittmar's personal character out of this discussion. But if Mr. Dittmar and the present Dittmar company want a change, and would have us leave the discussion of the powder for a consideration of Mr. Dittmar's "honesty with respect to past and present life, and the purpose which guides him," let them distinctly say so.

We fall also to see what is the bearing on the case of the statement that the FOREST AND STREAM in the past has commended the powder. Murderers go unhung and thieves associate with honest men until they are found out. That the powder looked well at first is shown by the fact that it was accepted without question and thoughtlessly commended by many until we set to work to find out what its true nature was. Our investigation showed that its true excellence was all seeming, and the deeper we got into it the more extraordinary it seemed that the public should so long have been imposed upon. It appeared to us, after we had discovered the nature of the explosive, a plain duty to announce it to the shooting world; and having done that, we have done all that can be expected of us.

The allegation of the Dittmar Company that their business has increased and that ours has diminished since the publication of the article is one which has nothing whatever to do with the question of the safety of the powder. It makes not a particle of difference to us whether they sell ounces or tons of their compound; that is a matter which interests, we presume, only the manufacturers and the consumers of the article, and among the latter we are not to be counted. On some accounts it would be an excellent thing if their business were to prosper greatly. It would cost some lives, no doubt, but it certainly would make the gun trade very lively, and many of our advertisers would accumulate wealth at a surprising rate.

The public do not care whether the exposure of the character of the powder has benefited or injured the FOREST AND STREAM, nor did any calculation as to what would be the effect on our business enter our minds when the articles were published. We had a duty to perform; we did what we thought proper in the case.

The Dittmar Company thought that the price of their advertisement should have purchased our silence. We disagreed with them.

This paper is not managed to please the Dittmar Company, but the Forest and Stream Publishing Company and the subscribers to this journal. If its management suits them the Dittmar people may, we think, possess their souls in patience.

As a matter of fact, the circulation of FOREST AND STREAM is, and has been steadily, increasing since the publication of September 23. But that is wholly beside the question.

We have purposely avoided any discussion of alleged results of tests alleged to have been made by the Dittmar manufacturers. We do not question Mr. Carl Dittmar's ability to safely perform, with given samples of his "sporting powder," any experiments he may see fit to devise. It is a matter of record, and he swears to it, that "it [which does not refer only to blasting powder] burst most all the guns at first." But Mr. Dittmar has repeatedly told us before that he never had any accident with the powder and that he never burst any of his own guns with it. Moreover, in the absence of other proof than the Dittmar powder manufacturer's unsupported assertion, we must be excused from giving credence to what they may say.

The Dittmars again characterize our exposition of their "sporting powder" as maliciously false and slanderous. This we again deny. If they think that they can make good the charge of wrong motives and false representations, their proper course is to sue us, prove it in the courts and recover damages. They may easily satisfy themselves of our responsibility by consulting any of the mercantile agencies. And if they did not recover six cents, a simple judgment in their favor would be of more decided advantage to them and their product than they can ever hope to gain by the dissemination of twenty tons of such rotomondade as this pamphlet.

The Dittmars have proved such adept in misrepresenting their own powder that we cannot trust them to fairly represent the charges of the FOREST AND STREAM against the explosive. We have therefore reprinted in convenient shape our scientific discussion of their nitro-cellulose detonating explosive, and we shall be happy to supply the articles upon application. They contain the simple and direct explanation of the difference between the "Dittmar sporting powder," a chemical combination, and common black powder, a mechanical mixture, and the different explosions of the two. The manufacturers wholly ignore this. There was nothing else for them to do.

MORE CAMP FOR THE EAST.—In drawing down the national carp ponds at Washington Prof. Baird found 1,000 young "leather carp" which he did not know of. These have been sent to Mr. E. G. Blackford, Fulton Market, New York, for distribution, making the third lot. These are fine fish, from four to six inches in length.

"Homo" manages to put a deal of information into his weekly letters from Philadelphia.

## WALTON'S COMPLETE ANGLER.

MESSRS. JOHN WILEY AND SONS, 15 Astor Place New York, have supplied a want in giving the angling public a new and handsome edition of the late Dr. Bethune's Walton. Of all the editions of Walton, either English or American, we have preferred Bethune's, and its popularity is attested by the fact that his editions were exhausted before his death and have been in demand since. The volume now before us is a reprint of the original, and opens with a letter from the Doctor to his friend Charles Lanman, the graceful writer and accomplished angler, and followed by Bethune's poem, "Saptogus," which, when read in winter, stirs the angler's blood until the lines,

O, that the willow's leaf were free,  
And the dogwood were in flower

rise to his brain during the cares of business, and he knows that there is a time coming when he can throw aside his cares and get beyond the screech of the locomotive. Dr. Bethune seemed to be thoroughly imbued with Walton's spirit of admiration for nature, the feeling that is at the bottom of all true angling enjoyment, and which gives more pleasure to its possessor than the mere capture of a few fish which can be bought in the market for a dollar. How many men miss this enjoyment and measure their pleasure by the number of trout in their creel. They find no music in the chirp of the kingfisher, the call of the loon, nor companionship in the chattering of the squirrel, which scolds them as an intruder into his domain; but Walton felt all this and more, and if the modern reader is occasionally tempted to smile at his credulity and superstitious notions he cannot help admiring his quaint style, which is in perfect accord with his simplicity and freedom from technical lore.

In the bibliographical preface to the first volume Dr. Bethune gives us ninety-two pages of notices of fishing books before the time of Walton, which is followed by "The Complete Angler," with copious foot notes, and illustrated with fine steel engravings of Walton, "The Salutation" and "Landing a Trout," as well as numerous woodcuts, all from the original.

The second part opens with "some account of the life and writings of Charles Cotton, Esq., by the American Editor," and steel portrait of Cotton. The list of birds is interspersed with entire poems and precedes the second part of the "Complete Angler," while the appendix contains songs and poems, and an "Arrangement according to the method of Cuvier, of the American species of fishes alluded to in the preceding pages. By James E. De Kay," which was authority thirty years ago, but is not followed now.

In the appendix is also found "Extracts from the Journal of the Lake Piseco Trout Club," and Trout Fishing on Long Island (Frank Forester); a "list of books on fish and fishing founded on Sir Henry Ellis' catalogue, as reprinted by Pickering, but very greatly enlarged and carefully corrected making the most complete list ever published," and "books in the cathedral library, Salisbury, formerly belonging to Isak Walton.

The volume is a large one, printed in large type on good paper, and will no doubt meet with large sale. It is a large and handsome volume; price \$8 to \$16, according to style.

## THE EASTERN FIELD TRIALS.

IN last week's issue we gave the full account of the running of the Nursery and Puppy Stakes, with the names of the successful youngsters. The running of the All-Aged Stake commenced on the day of our last publication, Thursday, and continued during Friday and Saturday, ending only as the sun went down on the last day of the week. Three days therefore had been devoted to the great event, and it was deemed expedient to declare the running of the Brace Stakes off and postpone the running of the Club Stakes, indefinitely. A special train was engaged, and the party returned home late on Saturday night, well satisfied at having been present at a most successful field trial meeting.

Considering the lateness of the season the Club is to be congratulated on having secured the good services of the clerk of the weather, for only one day, Wednesday, turned out to be a bad one.

The entry of twenty-seven names in the All-Aged Stake was a very large one, and brought together many of the finest strains of dogs in the land. The draw was remarkable, not only that the braces were to an extent evenly balanced, but it certainly was strange that the pointers should fall together as they did in the different heats.

There were plenty of birds in the openings at the start, but towards the closing hours of the trials the bevies had drawn into the dense cover and breaks, where they were hard to find, and when found in many instances impossible to move.

Taking the words in Instruction to Judges, "The dogs are to be hunted in all respects as in an ordinary day's shooting in a sportsmanlike manner," as our text, we have written our report as we saw it with our own eyes, without fear or favor. We consider that the decisions rendered by the judges were in the main correct, several of them astonishingly so, particularly in those cases where a good dog was handicapped by an inexperienced handler. But in several decisions we have begged to differ in our report, and we have tried to make it clear why we did so.

As a rule there was less "kicking" than is usually the case at competitions of the kind, and the only regular withdrawal

was one that we were told was suggested by the President of the Club.

The dogs as a rule turned up in fine condition, but there were two of the youngsters afflicted in a manner that rule No. 6 was drawn up specially to cover. No man has a right to present any dog in a mangy condition, and it is a breach of contract with every owner present if the dog is allowed to run.

The largest draft from any one Kennel was that from the Moorfield, owned by Mr. W. H. Moore, of Philadelphia, in charge of Mr. Wannaker, of Coolspring, N. O. Lass o' Gowrie, Raleigh, Luna May, Count Fred and La Guy were all on hand, who with Countess Bang, constitute the strength of the kennel this season so far as preparation for field trial events is concerned. Mr. Moore was singularly unfortunate in having but three of the lot-in running order. Countess Bang a superb small pointer bitch who was entered at Vincennes, and in fine order there, came in season on her return and had to be left at home. Both Luna May and Count Fred were taken sick two days before the opening of the trials from exposure from travelling from Vincennes. The former, a fine bitch of rare excellence and perfectly trained is one of the best field dogs in Mr. Moore's kennels, and Count Fred who was winner at Patoka last year in Puppy stakes, and also second with Lincoln in braces in same trials was a stand-by whose loss was keenly felt. Raleigh, as we have noticed in our report, was just over a severe attack of rheumatism so that out of the draft of six superior dogs only one half, and not those that were considered the best for the Robin's Island ground were left to run.

There was a deal of luck in running off the heats, and in several instances dogs of grand ability were cut down by dogs of less merit. As shown in our report Gladstone won first; Dashing Monarch second, and the judges awarded Sensation third, and Glen came in for fourth place under the rules.

At a meeting of the Eastern Field Trials Club held at McNish's Hotel, New Suffolk, L. I., during the trials it was determined to secure the privilege of the purchase of Robin's Island from the owners. This was done, and a three months' refusal was secured.

## The Sportsman Tourist.

### NOTES ON DEER HUNTING IN CANADA.

THE American readers of FOREST AND STREAM, as a rule, do not appear to hunt much in Eastern Ontario, at any rate for its larger game, judging from the columns of the said paper, and these are not likely to be used or are not used to the same extent in the more settled States of the neighboring Republic for the purpose of running deer. I may be pardoned, therefore, if in the following notes, I particularize more than is probably necessary, and I may add, that although running deer with dogs has a tendency to exterminate deer, or at least, to drive them to other resorts, yet while it lasts the fun is fast and furious. Who would enjoy fox hunting if the music of the dogs were wanting? though of course, the excitement of the ride lends the chase its zest and sport.

In Ontario deer hunting with hounds for the sportsman is the rule, for the pot-hunter the exception; although pot-hunters from your side of the line formerly brought dogs over here and carried off numbers of deer. Now that the Legislature has stepped in, the sportsman has a clear field. On my trip this year we were fortunate in having located ourselves where we were in no danger from dog poisoners, who flourish in some sections, and we were not even troubled, in some, by the "natives," on hearing our dogs barking themselves to the runways and killing our deer ahead of the hounds.

My brother and myself, with a couple of men who thoroughly understood hunting, and seven dogs, put in a very good time of it for about ten days near the head waters of our Canadian Mississippi, and managed to bag fourteen deer, which is considered about the average brought in by those who were out this year.

After two days' ride over the most infernal road that statute labor was ever performed upon we arrived at a lumber shanty, the first, by the way, that I had ever seen. So we gazed upon that shanty and poked our noses into every corner thereof, and the result is that we now know that a lumber shanty is a log building with a large hole in the roof through which the smoke of an immense fire finds its way or not, as the case may be and the wind may decide. Around the sides are the "bunks," or beds, or whatever you like to call them, and in these shanties as many as thirty men live and sleep—if they can—for I fancy they are often troubled in their dreams with things just as annoying as the point of Shakespeare's "bare bodkin" would be, realizing to the full the expression "packed like herrings in a barrel" and living on pork, beans and bread (the latter baked in the ashes and very good) without butter during the whole winter. As I am partial to butter we moved on and reached our headquarters on the shore of the lake at dusk. At daybreak our plan generally was to send a man into the bush with two sets of dogs in order that we might have two chases in the morning, and again after lunch have two more, as some of the deer were very likely to run to other lakes than the one we were watching. As soon as the first pair of dogs "start" the man loosens the others and they start in their turn, provided they can find a track, and the man hurries back to the lake to help watch. As we could always depend on our dogs "watering" the deer somewhere, we rarely watched the runways. In the event of any of your readers not fully understanding the term "runways," I may say that the red deer have regular "runs" or paths by which, when they are chased by dogs, they make their way to the lakes where they have been accustomed to drink. Hunting on runways is probably better sport than hunting on the lakes, as you generally hear and see more of the hunt and frequently get more chances to shoot.

Last Wednesday, fifteen miles from here, I went out for a runway, bringing two dogs along with me, and much to my disgust the deer took the water almost at once, although

not till he had been fired at and missed by the men with the dogs. In the afternoon of the same day we ran two more, which were both missed, much to our disgust, while I had not the luck even to see the "deers," as the hunters call them, all day. Old Charlie, my best dog, when last seen was within thirty yards of the fawn he was running, though of course he would never catch it.

To resume where I was saying about hunting on the lake. On the Monday after we arrived I had been watching for about three hours where by the well-known crash of the bushes in my rear I was put on the *qui vive*, and in a few seconds a nice buck jumped literally over my head into the lake. Of course a fallen tree under which I lay hid me from the deer. After looking around to see if any danger threatened, he struck boldly into the lake. Thus the fun began as my boat into which I had by this time thrown myself was tossing wildly in a heavy sea. I pumped cartridges at the buck for some time before he got his *coup de grace*. By this time the dogs had come to the shore, and were rewarded with a taste of the blood, and as one of them was a pup it did him a great deal of good. We got another deer that day, and kept on at that rate till we left. One day we put into the lake three separate "chases," but killed none of them on account of the high wind which caused them to "skulk the shore," as it is called; that is, they strike out along the shore for a couple of hundred yards and then land, and are off for good, as they are rarely shot when they try this plan of escaping.

There is no better sport than to sit on the shore of a lake listening to the baying of the hounds, every moment expecting them to "bring in" their deer, now coming straight toward you, and then off almost out of hearing. I tell you one is kept in a delightful fever of excitement; but on windy and rainy days there is the other side of the picture, as frequently you can't hear the dogs, and you may have to remain for five or six hours wet without any result, without a drop of "the crature" to put a little warmth into the cockles of your heart, or anywhere else about your half frozen person, and you have got to stay there till you receive a signal to go, for it is a point of honor "never to give up the ship" when watching for deer. Ye gods! I would just say that if anyone wants to hunt deer at the proper time—the first week in November—he will find sport, but will have to have the patience of Job, with a fair share of endurance and cheerfulness under discouraging circumstances; for the very time he leaves his post, may be the time the dogs will put in the deer and he had better had been the piper who played before Moses, and have been "dead and buried and embalmed before Romulus and Remus were suckled" than the man he is, for he may look out for squalls when he returns to camp if the deer has gone in at the place deserted by him.

The two men who were with us were almost as good as Indians in the woods, and as is no rare thing with an old deer hunter, could take a track, and by carefully noting the different sizes and the general direction the deer seemed to be taking, follow it till "started." This is useful, as very few dogs can take a track more than a day old, and some dogs are so keen of scent that they will work away at an old track for half a day, and in the end make nothing of it, for deer travel so far when they move about that it might be a long time before the dog could reach the fresh scent. For this reason some prefer a dog which is not too finely bred, since it is not worth while wasting time over an old trail, since while a very keen scented dog is wasting time one not bred quite so fine would pass on and take a fresher track. I am getting lazy, and what is perhaps worse, prosy, so I will just say that this paper has been written solely for the purpose of stimulating the interest of the readers of FOREST AND STREAM so that they may also give their ideas and experiences on deer hunting; for duck hunting, etc., is all very well, but any one who has hunted deer with dogs a few times will do as I have, put aside his double barrel and fishing rod and take to the rifle. We only shot one partridge, and that from a wagon with a ball during this fall's trip, and although lake trout—magnificent fellows twenty inches long—might be caught in dozens where we were I never put in a line.

Perth, Ontario.

RIFLE.

## Natural History.

### OUR WATERFOWL.

*Querquedula crecca*. English Teal. In the male the head is slightly crested, and is bright chestnut, with a broad glossy green band on each side, becoming black and meeting on the nape of the neck behind; breast and under parts white, the former marked with circular black spots; upper parts and sides varied with black, and whitish; under tail coverts, black; speculum, green; the long scapular feathers are black externally, and creamy white internally; bill, black; feet, brownish; weight, about ten ounces. In the female the coloration is very plain, and the bird resembles somewhat the female pintail duck.

This is a European species' accidental on the Atlantic coast.

*Querquedula carolinensis*. Greenwinged Teal. Resembles the preceding species, but has a conspicuous white crescent on the side of the body, just in front of the bend of the wing; scapulars, plain. Female resembles that of *Q. crecca*.

The greenwing is so abundant and well known throughout the country that it seems almost superfluous to speak of it at length. Almost everywhere it is highly esteemed as a table bird, and its gentle and unsuspicious nature causes it too often to fall a prey to the wiles of the small boy as well as to those of the more mature gunner.

The greenwing is a hardy bird, and usually remains with us until the advent of really cold weather. It breeds in considerable numbers in Montana, where, during the summer of 1875, we found along the mountain streams many females with newly-hatched young.

*Querquedula discors*. Bluewinged Teal. Male with head and neck dark slate color, almost black on the crown, with metallic reflections; a white crescent in front of the eye; under parts, yellowish brown, thickly spotted with black; upper parts, barred with black, almost to the exclusion of the brown; scapulars, striped with tawny; wing coverts,

sky blue; speculum white, green tipped; bill, black; feet, yellowish brown. Female plainer, without head markings, but may be known from any except the female of the next species by the wing markings. Size of preceding.

The bluewinged teal appears to be confined to that portion of North America east of the Rocky Mountains, being replaced to the westward of that range by the succeeding species. Throughout the country which it inhabits, however, it is a well-known bird, and, especially early in the season, affords good shooting. It shuns cold weather, and usually disappears soon after the first frost. It is a gentle little bird, and is usually very easily approached. When flying, both this and the preceding species often crowd quite close together, and a single discharge will sometimes bring to the ground a dozen individuals out of a flock.

*Querquedula cyanoptera*. Cinnamon Teal. Male, with head, neck and under parts, rich purplish chestnut, becoming darker on crown; chin and under tail coverts changing to black on the belly; wings as in *Q. discors*. Female difficult to distinguish from the female of that species but usually darker and with some traces of chestnut. Somewhat larger than the last, and with bill a little longer.

The cinnamon teal is a South American species which has only within a few years been ascertained to occur in any numbers in the United States. It is very abundant in California, and is found from the Pacific coast east to the Rocky Mountains. It also occurs occasionally and as a straggler in some of the Gulf States, having been reported from Louisiana by Pilat, and from Florida by Maynard. It breeds in considerable numbers in the Rocky Mountains, whence we have obtained both eggs and skins.

*Spatula clypeata*. Shoveller, Spoonbill. Bill greatly expanded in front, being twice as wide at tip as at base and with numerous and prominent laminae. The male has the head and neck green, the breast white, sides and belly chestnut. Wing coverts, blue; speculum, green; scapulars, some blue and others black; all with white stripes; bill, black; feet, red. Female colored much like the female mallard but never to be known by the bill and the blue wing markings. Bill in female and young, yellowish brown.

The shoveller is abundant almost everywhere though perhaps less so in New England than elsewhere. It is an excellent table bird and affords good shooting in many places, being, like the little teal, rather an unsuspicious bird. It breeds in considerable numbers in the region west of the Missouri River, where during the migrations it is found in considerable numbers. It has also been found breeding in Alaska. We have found shovellers abundant in California and have had fine shooting at them in that State.

*Aisya sponsa*. Wood Duck. Crested. Head with green and purple reflections, with parallel, curved, supercilary and post-ocular white stripes. Throat and upper fore-neck white, sending out two short stripes, one below and behind the eye; and one below the back of the head. Breast, rich, purplish chestnut; marked in front with arrow-shaped white spots. Lower parts, white; sides, gray, waved with black, and barred behind with black and white. Upper parts black, with glossy reflections. Bill, red and white; feet, brown. Female, less brightly colored, the head gray. This most beautiful of all our ducks is very generally distributed throughout North America. We have seen it in Nebraska, and it has been recorded by Dr. Hayden's expeditions from Heart River, Dakota, and other trans-Missouri localities. It is especially noteworthy, in addition to the beauty of its plumage, for its habit of nesting in hollow trees. The young either drop from the nest to the water or are carried to it by the mother in her bill.

The woodduck does not decoy well, and is perhaps most often shot by jumping it from creeks and pond holes. In many sections they are killed by paddling up to them on the narrow, winding creeks in which they feed, and shooting them as they rise from the water.

### SNAKES.

SCARCELY know of an animal that crawls the earth, or cleaves the air, or swims the sea toward which I instinctively cherish a greater repugnance, and for which, at the same time, I show more consideration than the snake. Let a lot of boys encounter a snake in their rambles, and however good natured and accommodating he may show a disposition to be, by turning "tail to," he is a lucky snake if he escapes a merciless visitation of cobble stones upon his head.

The best of saints do not seem to have grace enough to permit a snake to enjoy, unmolested, the pursuit of happiness. People generally can't leave a snake alone, though to my mind it is the easiest thing in the world. If, on a bright day, a snake sees fit to crawl out of some dark cavern or nasty marsh to sun himself on the roadside, it is pronounced trespass worthy of capital punishment, and the weapon nearest to hand, be it club, fence-rail, stone, or what not, is seized for the unequal and deadly fray.

For one, I never stop to interview a snake with stones or sticks, or to molest him in anywise. If I'm in his way I get out of it. If he's in my way I allow him to enjoy it, he, being the weaker animal of the two is entitled to the courtesy. I always accord to him the right of way, even though I have to go across lots home sometimes. If he lifts his head and hisses forth his complaint, I say, "Yes, you're right, every man's hand is against you but one, that's mine." Historicians, who love to indulge in figures of speech, talk about "the milk of human kindness." Why, for the snake, my cup is always brimful of this milk. He enjoys it; he likes to feed upon it just as much as your cats and dogs and pigs do. Now let me be understood, for I would not have anybody to think of me as strutting about on great, tall stilts, disdainfully looking down on the rest of mankind,

but the most wonderful story comes from Georgia. A gentleman in Macon sends Professor Baird the following slip from a local paper and vouches for its truth. It says: "Yesterday afternoon Mr. E. Witkowski, who owns the tan yard on the old confederate army property, concluded to cut the dam and clean out the pond in order that he might introduce his new German carp. The pond contained a large number of smaller fish and among them Mr. Witkowski hoped to find his four carp which had been put into the pond last May. He found three of the fish, but to his astonishment they were by actual measurement twenty, twenty-two and twenty-five inches in length respectively. The fourth escaped through the cut in the dam. These carp were but two or three inches long when put in the pond and their growth is remarkable. They are now in the tank in the rear of their owner's store on Cherry street, where we saw them last night and where the public are invited to see them to-day."

**CANADIAN FISH CULTURE.**—Notwithstanding the most inclement and boisterous autumn for many years past the Newcastle (Ontario) Hatching Commission has laid down upward of five million of salmon trout eggs, collected in the waters of Lakes Ontario and Huron. All of these ova were taken from fish in the act of being conveyed to the markets of the United States and Canada for consumption. The percentage of young fish hatched from these eggs will therefore be a clear gain to the country, as against a total loss.

In speaking of the increase of whitefish (*Coregonus*) since artificial propagation has been carried on, the *Essex Register* registers the following:

At one of Mr. Chas. Gauthier's river fisheries two thousand whitefish were taken last Monday. At the same place only three thousand were taken in the whole season of 1879. They are making hauls here of from twenty-five to 150 whitefish, averaging about 14 to 15 pounds apiece.

## Sea and River Fishing.

### CONCERNING ROBBERS.

IN a recent article on the violation of the laws and the facility with which fish and game can be disposed of in the great city, we said:

The fact is that New York City needs a game Protector, and Long Island needs another—men who reside on the premises and can watch the markets. These markets, as we have before said, are the great incentive to poachers, and if the sale of their plunder is stopped they cannot follow their unlawful business. There is entirely too lax a state of public opinion in regard to the violation of the game laws, many people looking at it as a venial offense, but it is robbery—robbery of the worst kind.

The *New York Market and Index Journal* publishes our article entire, and remarks:

We will allow this is an unpleasant position for our fish dealers to be placed in—"robbers" and a still less pleasant one for the markets generally—"the great incentive to poachers." The latter accusation we think entirely too sweeping, inasmuch as one would be led to believe that marketmen were hand in glove with the poachers, which we deny unhesitatingly, and yet, we shall not for one moment attempt to defend rogues or the law-breakers, and we trust that, for the good name of the markets, the marketmen shall do all in their power to assist the game and fish protective associations in their endeavors to sustain the laws, and not necessitate the appointment of a "game protector to watch the markets."

We do not mean to insinuate that the great body of market men of New York are violators of the law. As a class they contain as many honest and upright citizens as any other, but it is folly to assert that they are all saints, and among them may be found a few who have no higher idea of respect for law than—well, perhaps lawyers, doctors, editors, or other men taken in lump, and these have the same lax state of morals which we charged upon the general public, *i. e.*, a lax idea of the morality of a violation of the game law. They know that the law says that a striped bass shall not be sold if under a half a pound in weight, but their customers will buy them and they are offered them, and so the trade is opened as if it were the most legitimate thing in the world, and we contend that the mere knowledge of the presence of an officer empowered to enforce this and kindred laws would have a salutary effect upon a class of marketmen who perhaps have not the slightest idea of being "robbers."

Nevertheless, we repeat what we said before—"These laws are made, or should be made, to give every man a fair start in the race for sport, and he who starts a few days, or weeks, in advance is a robber, whom it is base flattery to call simply a violator of the law." The striped bass question is one which affects the food supply as well as angling, and, therefore, demands enforcement.

We think that the *Market and Index Journal* will find that the interests of the market men are on the side of the observance of all laws intended to protect fish and game, and that these laws are for the good of not only anglers and sportsmen, but for the whole people.

**THE CATFISH.**—Cleveland, O., Dec. 3.—I am glad to know that the catfish is found farther north than Lake Erie, on Lake St. Clair. The farther north you find the fish the better food it will be for the table and probably the more expert in taking the fly. Perhaps we may yet find it within the Arctic circle, in which case he will probably be half salmon and the other half cat. Let some bolder angler from the Red River or Lake Winnipeg region respond.

DR. E. STERLING.

We would like the address of Mr. John J. Collett, one of the recently appointed game protectors of the State of New York. We have written him at Cobleskill, Schoharie County, the address given in the original list, and the postmaster at that place forwarded it to Albany, from which place it was returned to us.

### THE ILLEGAL FISHERMEN.

NOW when the law breakers have assumed an attitude of defiance to the laws and are parading the shores armed and threatening death to all officers of the law it may be of profit to read the following learned, and yet humorous opinion of Judge Riegel, and the comments of the *Syracuse, N. Y., Sunday Times*, which under the heading of "A Just Law Dedied," says:

The moment a law is enacted, the provisions of which are for the general good of the people, and yet encroach somewhat upon the privileges of a small class, it is almost always the case that such law, but such law, it may be, is defied by the class who imagine themselves injured by it. This has been the case, to a great degree, in this State, with reference to the just laws for the preservation of fish and game; and within the past few weeks the opposition to the officers of the law by the piratical fishermen has arisen to attempted assassination, arming of the law-breakers and threatened murder to any officer who seeks to do his clear duty.

All good citizens will rejoice at every triumph of justice in this matter, and, therefore, will find pleasure in the following opinion of Judge Riegel, given the past week in the case of William Fancher, of Baldwinsville, against Reuben Wood and George Travis, Fancher having sued for the recovery of the value of a net destroyed by the game constable. Fancher had recovered judgment before James R. Shea, of Baldwinsville; but Judge Riegel, as will be seen, differs with him:

It appears by the Justice's return that the defendants took what is called a fyke net from where it had been set by the plaintiff, in the Seneca River, for the purpose of catching fish, and substantially destroyed it. That when the net was taken from the river, it had in it bullheads, pike, pickerel, sunfish, perch and rock bass. The plaintiff testified that he had at that time six or seven nets in the Seneca River. He was allowed to testify, against the defendant's objection, that when he caught any fish aside from bullheads, suckers, catfish and eels, he threw them back into the river without injuring them.

On this testimony the Justice gave the plaintiff a judgment for \$25.00, the value of the net, from which this appeal is brought.

By sec. 23, chap. 534, laws of 1879, it is enacted that "No person shall kill or catch, or attempt to kill or catch, any fish except minnows, bullheads, eels, suckers and catfish, in any of the fresh waters and canals of this State by any device except that of angling with a hook and line." Certain waters are specifically excepted, not material to this case. By the same section it is further enacted that "All nets, seines, weirs, traps or other devices forbidden by this section are hereby declared contraband, and any person finding the same in any place where they are forbidden is hereby authorized to destroy such contraband articles; and no action for damage shall lie against him for such destruction."

It appears that the right of the defendants to take and destroy the net in question, depends upon the question whether they found it in a place where it was forbidden. The statute mentions no place where the devices of catching fish therein mentioned are forbidden except infrequently; but the plain inference is, that when one of the devices herein mentioned is found in a place where it was manifestly set for the purpose of catching fish other than bullheads, suckers, eels and catfish, it is in a forbidden place. It is in a forbidden place for the reason that it is in a place where it will, in the ordinary course of things, do the mischief which the statute forbids.

The law will presume that the person setting the net or other device, intended the natural consequences of his act. The defendants could not know what disposition the plaintiff would make of the fish when caught, nor was the statute so unreasonable as to require them to know. All that the statute required was that they should find the net under such circumstances, and so placed and set that it would necessarily and according to the ordinary course of things, do what the statute had forbidden.

It is possible that Mr. Fancher did throw those fish back into the river, which the law forbade him to catch. But this law was framed with reference to the known moral characteristics of ordinary mortals who would engage in such an act, and whom the Legislature knew better than to trust to do any such thing. Angels' visits on this planet are too few and far between to influence the ordinary course of legislation.

A fisherman all alone in the darkness of the night or at the early dawn, in the act of sorting out the nice, plump pike, pickerel and bass, and throwing them back into the river, for no other purpose than to afford some enthusiastic disciple of the Lake Waukegan school of catching those same fish with hook and line, would be a spectacle worthy the admiration of gods and men; but whether any such transaction occurred on this subliminary sphere, aside from the one testified to by the plaintiff, may well be considered a matter for grave doubt. If the Legislature had known Mr. Fancher, it is barely possible it would have trusted him to do what he swears he did do; but such cases are too exceptional to form the basis of legislation. I never knew but one man whom I would have trusted in such circumstances. He died a few years ago, quite young. All the old women in the neighborhood declared they knew he wasn't long for this world; he was too good. It is against all probability that our legislators intended to expose the fish they assumed to protect to such dire peril, or the fishermen to such grievous temptation. Certain it is, that if the construction contended for were to prevail, the object of the act would be wholly frustrated.

It is claimed that the Board of Supervisors have passed an act authorizing the taking of bullheads, suckers, catfish and eels, by means of fyke nets, during the months of April and May. But it is plain that the Board of Supervisors cannot modify the force and effect of an Act of the Legislature.

It was not claimed before me that that part of the Act authorizing the seizure and destruction of the net was unconstitutional, and I have not, therefore, examined that question.

Judgment reversed.

P. B. McLENNAN, for appellant; George Hall, for respondent.

The *New York Times*, in commenting on this, says:

The Judge's opinion is full of good, common sense, and is at the same time quite amusing. "All nets, seines, weirs, traps, or other devices, forbidden by section 23, are declared contraband, any person finding the same in any place where they are forbidden, is authorized to destroy such contraband articles, and no action of damage shall lie against him for such destruction. Necessarily, then, the nets being in for-

bidden places the constables had the right to destroy them. As to Fancher's throwing away certain fish and keeping others, his Honor treated that part of the story exactly as it deserved. The law was not made with reference to the differences of moral character in those given to setting fykes. A might be a moral poacher, and B an immoral poacher and the distinction would be hard to understand. It would take a very clever fyke net, however, should be taking fish at night, to determine what were suckers or young shad or black bass.

### THE BEAVERKILL CLUB FOR 1880.

NEW YORK, NOV. 25.

#### Editor Forest and Stream:

The report for the Beaverkill Club for the past season shows that the spring and summer, indeed all the seasons, have been very dry. Whether the effect of this will be to lessen the number of trout, next year's sport alone can determine; on the whole, I do not expect to find it diminished. Our warden reported late in October that he thinks there were more fish on the spawning-beds than ever before, although this seemed hardly possible.

Six of our ten members have been up on the stream this year.

There have been caught, so far as known:  
1,691 trout on Mead's (Bulkeley's), weighing.....216½ lbs.  
139 " "Ive's (Merwin's)," ".....17½ " "  
488 " "Weaver's," ".....66½ " "  
396 " "Bank's," ".....49½ " "  
1,364 " "Balsam Lake," ".....203½ " "

4,078 trout in all, weighing.....555½ " "

Balsam Lake has been our standby; five of our members caught there, in a total of eleven days' fishing, 523 trout, which weighed 83 pounds. Every one of those fish would surely make a cup of coffee and broil some trout at a camp-fire on that lake again next year.

In the matter of size, the fish seem to run larger upon Bulkeley's (Mead's). Bulkeley has noted thirty fish taken which measured from nine to twelve inches each in length and weighed from five to ten ounces apiece, the thirty weighing in all 17½ lbs. Besides this, Mr. Geo. W. King, while fishing on Balsam Lake with me, caught a trout which weighed eight ounces and is the largest that I ever saw taken from that lake, which has always been noted for the uniform size of its fish. On August 31 Mr. J. S. Van Cleeft caught one there which weighed three-quarters of a pound. On the 14th day of August I caught 13½ lbs. in Balsam Lake, and again on August 20 I caught there and kept twenty-five trout which weighed five pounds and put back alive 44 of large average size, which weighed about eight pounds more. Mr. King took on the same day 10½ lbs., and on August 30 Mr. Van Cleeft took 12½ lbs. from the lake. All who went there had good days satisfactory. The expenses this year have been \$40 per member.

The average temperature by our warden's thermometer has been rather higher, but on the 1st of May it snowed and again on May 14 it froze ice half an inch thick, with frost on the 4th and 18th of June. Between the 19th of June and the 17th of July there were ten thunder showers. On June 28 Bulkeley has put a X against the thunder shower, and July 10 he says it was "heavy." There was frost again the 29th of July and the 6th of August, and on the 15th of August everything was killed by the frost. It happened to be the time, I never realized more the injury that is often suddenly effected by natural agencies. The crops, the winter's food, the support of many families, were ruined in a night by a magic touch. The thermometer reached ninety again Sept. 16. The first snow came on the 20th of October, and by Nov. 22 the Balsam Lake was frozen "soled so it would bare up a man," the trout had all left the inlet and were off the beds along the stream. GEO. W. VAN CLEEFT.

### THE DEATH-TRAP IN SHINNECOCK BAY.

POND QUOQUE, NOV. 20, 1890.

#### Editor Forest and Stream:

It was with much surprise that I perused your article under the above heading in your issue of Nov. 11. I was the more interested as I was intending to visit this famed locality and spend a few days on the waters and along the shore of this beautiful sheet of water. I arrived here about a week ago, and so much was I impressed with the truly lamentable state of the bay, instead of devoting my time to the ducks, I have spent most of my vacation in trying to find a way for this disastrous evil—doubtless disastrous in many ways. You well say that the State should have sole charge of so important an interest as the food supply obtained from the tidal waters along the coast, for in this case, not only is the vast amount of fish food usually secured in these prolific waters entirely cut off, but the inhabitants of this vicinity are obliged to draw from their hard-earned store and send to New York for what fish they consume. This seems incredible, but you have only to appeal to the express company to substantiate its truth. This sad state of affairs throws two or three hundred hardy "toilers of the sea" out of employment, and of course their families must, in many instances, suffer for the necessities of life. Not only is the fishing interest annihilated, but should the bay continue closed the ducks will most assuredly leave and thus destroy the last remaining chance that the poor man, living here, has to eke out a scanty livelihood. While all agree that an inlet is of vital importance I find that there is great diversity of opinion as to where it should be located, and upon sitting the evidence obtained by interviewing many individuals, from Indian Reservation to Atlanticville, I have come to the conclusion that the greatest good to the greatest number requires that the inlet should be opened as far west as possible, and I am thoroughly convinced that the old inlet, just east of Atlanticville, will entirely meet this requirement.

Upon going into elaborate argument to prove this I cannot forbear stating the well-known fact that all along our extensive coast there are but very few exceptions to the rule that our land-locked bays communicate with the sea at their western extremities. While I find that nearly all wish the inlet at their doors, I have almost invariably succeeded in obtaining from them at least a partial admission that upon the whole a western inlet would serve the best purpose and last the longest. It strikes me that the State authorities should take care in this matter and give this strict community legislation as may be needed to protect them in their rights; and if I may be allowed a word, I would respectfully suggest that the committee having charge of the matter do not allow their judgment to be warped by the smoothly-flow-

ing sentences and well-rounded periods of some "oily-tongued" advocate, but rather let them listen to the hardy sportsman, who may not be able to quote you Chesterfield, but who can and will tell the truth if properly approached.

There is one great and crying evil connected with the inlet just closed that should be abolished by the Legislature or Commissioners, if they have the power, and that is the use of seines or "bull nets" at its mouth. I presume; although I do not know this for a fact, that the men who use these nets are "simple-hearted and free from guile," and are honestly plying their calling with the sole object in view of keeping the wolf from the door. Certain it is that they catch a fair amount of fish, but owing to the scarcity, bring an exorbitant price. Now let me tell you how their proceedings strike a disinterested looker on. The fishermen tell me that while the tide is running out of the bay the fish are hovering about the mouth of the inlet and just before slack water they ascend up the slight current. Now is the golden opportunity. Our honest fishermen spread their nets at the lower end while a party at the upper end, with much pounding on their boats and an splashing in the water, turn the frightened fish and scare a portion of them into the nets while the rest go out to sea, and as a natural consequence the fishermen of the bay secure none, and are obliged to purchase their supply of these honest fishermen at an exorbitant price or send to New York for what they use.

Far be it from me to sit in judgment upon these men. I do not even impugn their motives. I merely state the naked facts, and but echo the wailing prayers of hungry fellow creatures when I earnestly call upon "the powers that be" to so restrict and regulate this abuse that in the dwellings around this fair bay not in vain shall be the prayer, "Give us this day our daily bread."

SHADOW.

New York, Nov. 28.

#### Editor Forest and Stream:

Many trips to Shinnecock Bay have interested me in that once famous shooting ground, and I beg leave to offer a word in regard to its inlet, concerning which there is some misunderstanding.

There was a State law passed about three years ago providing for the appointment of commissioners to fix the place for an inlet into that bay and making it an offense for any one to cut through the beach at any other point than the one decided on. Such a law was necessary, because it was thought that an inlet must be in the west end of the bay, in order to remain open, and because, whenever an attempt was made to cut an inlet where the east end people would cut through the beach in their neighborhood (which they could do in a few hours, because of its narrowness), and thus obtain the head of water in the bay without which no large inlet can be secured. It is a work of many days to cut through the high beach further west.

Since this law was passed two inlets have been made, one opposite the light-house and one further west. Neither of them kept open a year, nor do I believe that any inlet from the ocean which local enterprise on Shinnecock Bay is capable of making will keep open.

Two things are to be proposed in this connection. One is that the State perform the work on a larger scale than has yet been attempted. The State appropriates a larger sum of money, which Long Island tax-payers have to help pay every year for Hudson River improvements. Why should it not spend a little on Shinnecock Bay? Another proposition is that instead of cutting through the beach to the ocean a dike be dug across the neck of land from Shinnecock Bay from Moriches Bay. I do not believe that any ocean inlet can remain open very long, while a good channel leading to Moriches Bay (the eastern part of Great South Bay) would be certainly permanent. Such a channel would not make Shinnecock Bay so good a fishing ground as an ocean inlet, but it would keep down the water, and so restore the feeding grounds for snipe and wild fowls. It is a fact, all reports to the contrary notwithstanding, that snipe and wild fowl shoot here are grown poorer annually, and an honest sportsman whom I instruct to send for me when there is good duck shooting has not been able to send me the wished for message in two years.

The great objection to the opening into South Bay is the fact that the waters would become fresh, or nearly so. The water at the eastern end of South Bay is now so fresh that the horsefoot (*Limulus*) cannot live in it, and it is full of small pike, a variety inhabiting brooks and ditches.

**ONEIDA LAKE POACHERS.**—The New York *Telegram* recently contained the following: "A Schwartz is needed at Oneida Lake. So hold have the illegal fishermen become that they threaten to kill the next game officer that appears. The Oswego *Palladium* says: 'They are lawless in their habits and it is not doubted that they will fulfill their threats. One man has thirty of these trap nets, worth \$40 apiece. If the enforcement of the law be insisted on it is believed that there will be trouble, and at the same time it looks cowardly for the Oneida County Game Association, which started the movement, to back out.' If there is such a thing possible as a thorough exposure of the illegal fishing on Oneida Lake it should be done. It is a notorious fact that is talked of among all classes in Central New York that the authorities dare not do their duty. The matter should be agitated all possible and the guilty ones, who compose the wealthier classes all round the lake, be brought to justice."

**TOWNA—Kookuk, Nov. 29.**—We have enjoyed an immense amount of fine sport at this place this winter with the rod and line, and have caught some fine specimens of the black bass, striped bass, croppin, etc. What we need here is a strict enforcement of the State fish laws, and they were properly enforced we would have some of the finest fishing waters that there are in this State, or even in the West. I am in hopes to contribute something in the future in regard to the fish and fishing grounds of Southern Iowa.

W. H. D.

**A FLORIDA PARTY.**—Washingtonville, N. Y., Nov. 26.—My wife and self are preparing for a trip to the Gulf coast of Florida, having spent three winters there very pleasantly, our only drawback being a want of congenial companions. Should you know or hear of any gentleman who is fond of shooting and fishing, and his wife, not afraid of roughing it a little, you will please have them address Manatt, P. O. Box 101, Washingtonville, Orange Co., N. Y.

**Missouri—Sedalia, Nov. 27.**—Weather fine and quail and rabbit-shooting good.

OCCIDENT.

## Game Bag and Gun.

### SPORTSMEN AND LAND-OWNERS.

COMMENTS ON THE FOREST AND STREAM'S PLAN.

A NOTE published in your issue of the 25th inst. from East Rockaway, Queens County, L. I., and signed "J. H. Griffith," is replete with gross ignorance, spite, offensive references and unnecessary threats, and but for the prominence you give it would not be worthy of notice.

The writer's objection that the game laws involve an "encroachment upon the liberties of the people by the wealthier classes," and "if not unbecomingly ought to be," evinces a desire to excite unworthy prejudices and shows an obtuseness of mental vision which would delight Dr. Hammond as a specimen from the Island.

All laws are in one sense an "encroachment upon the liberties of the people" by the dominating classes to which Mr. Griffith himself, if he owns a farm, belongs. What protects him in his property? What deters the ubiquitous tramp from occupying and using Mr. G.'s house and barns, and what punishes the genius if he invade them or rob or destroy the chicken-root of his crops? And is a tramp not one of "the people" and outside of "the wealthier classes"? But for the laws he might, if the stronger, reverse his position and convert himself into a member of the "wealthier classes" and turn Mr. Griffith out of his possessions and into one of "the people." Does not this wandering factor in society consider this law "unconstitutional or that it ought to be?" But who should stand more stoutly for it and insist upon its enforcement than East Rockaway farmers? Who denounce "woe unto any man who disregards these notices" to keep off their farms?

Mr. Griffith, with felicitous inconsistency, stigmatizes one part and in the next instant calls for protection upon another portion of these very game laws. He and his neighbors have put up "the required legal notice." Whence is the authority for this notice derived and what is its effect? Why form these game laws which he so grievously arraigns? But when a shooter on his or any other farmer's lands would in ordinary cases, where no special injury was done, be liable only in nominal damages—say six cents—for the technical trespass, whilst these laws assure him of any actual damage and entitles him besides "to exemplary damages to an amount not exceeding twenty-five dollars." The gunner, heedless thereof, is assured that Mr. G. and his neighbors will exact this portion of damages. Is not this part of the law "unconstitutional?" Mr. Griffith, "ought it not to be?" It would be difficult to compete with Mr. Griffith in his senseless appeals to the prejudices of the unthinking or ignorant. "Encroachments upon the liberty of the people"—"the wealthier classes"—"that unmitigated nuisance, the real sportsman"—"aristocratic trespassers" and such like phrases dance through his inflated imagination with all the inaptness and jumble of a Rockaway-claim-produced nightmare.

The experience of every sportsman has come in contact with a real sportsman will rise up and testify that a kinder, more genial, liberal, considerate and unaristocratic member of the human family than he, cannot be found on or off Long Island.

He does not "throw down" farmers' fences, or intentionally "wound their cattle," and if by accident any injury occurs from him to land, or living thing, the real sportsman is always ready and prompt to make full reparation. Nor does he place himself in a position where he is forced, by his social position if he have it, or in any way or manner oblige, or make himself offensive. He is retiring, and consorts on equal terms with all whom he meets. He is forgiving, too, as well as consoling; for should he meet even Mr. Griffith, he would shake his hand cordially, and assure him that he had not the slightest intention of invading his farm, and probably exclaim, "Lord Griffith! the sea must have been running pretty high on the bar the other night before you overhauled your sheep."

No farmer is, notwithstanding Mr. Griffith's assertion to the contrary, "virtually the owner of the game" by which he is understood to mean quail and partridges. They are locally migratory birds—particularly the former—and feeding here to-day and there to-morrow. By what right, then, does any particular farmer claim to virtually own them? If he were proprietor of all the country they might belis, but from lack of immemorial every where these birds have been regarded as *fero nature*—wild birds—with ownership in no one until captured and in hand. The sole proprietor of them in their natural freedom is the people of the State. It is to the interest and enjoyment—and some cases the health—of the public that they should not be exterminated, hence the game laws and the prohibition against certain means of capture sure to exterminate them if permitted.

There is much more in this subject, and the cognate suggestion in your issue of the 25th inst., as to the "proposition to Gentlemen Sportsmen," but there is neither space nor time to discuss them at present. If this long screed does not weary and scare you I may return to it.

MANHATTAN.

Please add my name to your list of subscribers and send copies to this office weekly. I also wish to give my hearty indorsement to your scheme for the preservation of game. I will willingly pay any farmer from \$2 to \$5 per day for shooting over his land, where quail are plenty, or rather, say twenty to twenty-five cents for every quail brought to bag. There are plenty of quail on Long Island, at Moriches, Hempstead, Manor, Southern Neck, Gold Ground, etc., and if your plan were put in operation fine shooting could be had near at hand.

I would also suggest that not only quail be protected, but that where there exists a town law against battery shooting, as in Moriches Bay, the law-abiding gunners should be encouraged in their efforts to prevent the lawless ones from batteries. There would be as fine shooting in this bay as anywhere, as the darts are wild and abundant if the law were adhered to. This can be especially who uses batteries in the spring and by "driving" the birds curtails their stay in the bay. His name can be given if necessary. Geese are also plenty, but in regard to them a worse evil exists. The life-saving crew being near at hand, under cover of darkness fire-light them on their feeding-grounds.

This matter should be looked into by some one in authority. With all these disadvantages against good sport, I have shot from twenty-five to thirty-five quail in a day in the bay. I would willingly subscribe my pro rata for an enforcement of the law to make the sport still better, as it does not continue good very long once fire-lighting takes

place. I have no doubt that a number of sportsmen would rather pay the full price of the game to law-breakers than have to travel miles for good shooting at heavy expense. I am one of them.

In going into the details of a scheme for preserving game, the following ideas suggest themselves to my mind.

Given a certain locality, the farmers of the township, village or hamlet organize a club for preserving game, (those not entering into the association to be debarred from the benefits of the club and to be prevented from illegally killing or snaring game of any kind by process of law. The members of the club to constitute themselves into an organized body of game-keepers, appointing certain ones among them to see that the laws are enforced. To keep posted at the railroad stations nearest their town the names of parties, members of the association, where good board can be found; they also to act as guides and keep tally of the game killed. A liberal rate to be fixed upon per bird, to be paid to the club, and the man or boy who acts as guide to be paid for his services, say \$3 to \$3 per day; a reasonable rate of board to be fixed. The funds thus earned to be divided among the members of the club. Advertisements to be inserted in good sporting papers of the localities where such clubs exist, with details as to board, rates, prospects for birds, etc., etc.

I think that these suggestions, conveyed to the farmers of Long Island in a liberal spirit by some of the game associations, would soon make as fine shooting grounds in our near neighborhood as can be found anywhere. The farmers' clubs would find it to their interest always to have plenty of birds, securing remuneration to themselves and sport to the gunner.

New York.

E. W. S.

If our sportsmen would invest a few dollars with the farmer boys and eat an example of liberality they would have no trouble to monopolize all the desirable preserves they wish. I bought about 1,100 acres for a stock farm near this city, and I found the farmers very prejudiced against the town gent (as they called them) buying on their lands, and had noticed, but up warning them from going on their lands to hunt. I soon got the secret. Indiscreet hunters had been there and shot stock, frightened their cattle and left down fences and open gates. I tried a careful, generous course, by handing the boys a few dollars and avoiding all carelessness. I now have at least fifty coveys of quail and prairie chicken and rabbits in abundance on my own land, with almost unlimited privileges.

Two years ago I had to winter the Bob Whites among my fat cattle in my brush heaps. I cut and piled brush heaps, then threw wheat straw over the brush piles, and over eight quail wintered nicely. This winter has set in so hard I am preparing to do the same thing.

C. G.

I read with great interest the letters in the *FOREST AND STREAM* on the subject of protecting game. Keep it going; it will help to call the attention of true sportsmen to the dangers which threaten the extinction of game in our vicinity, and perhaps stir up the game clubs to a sense of the responsibility resting on their shoulders. I must say that I consider Long Island one of the worst-poached places in this State, excepting, perhaps, the Adirondack region.

I have shot and fished on Long Island a great many years and I know that the evils that "A True Lover of the Sport" complains of are only too true, and if our new society is a success we shall do our share toward breaking them up, whether the farmers like it or not. But I think that the farmers will find it greatly to their advantage to stop poaching and preserve the game.

MEMBER NEW PROTECTIVE SOCIETY.

New York, Dec. 3.

As you invite comment on your plans for bringing the sportsmen and farmers more into accord, I would suggest that the sportsmen put themselves in direct communication with the farmers for the purpose of securing board, lodging and a guide and companion for their sport instead of going to a hotel, where the charges would be higher.

It is generally conceded that the influx of sportsmen into any locality is the means of carrying a good deal of money into that place. This being so, why not give the farmers whose land furnishes the game the benefit of that money? It will also be the means of bringing the two into contact, and if the sportsman be a gentleman he may make a convert of the farmer, whose previous ideas of a sportsman may have been formed from the roughs or market-hunters he may formerly have thought fit to order off his place. As a farmer (and also, I hope, a sportsman) I know whereof I write.

Litchfield, Conn.

E. H. A.

As a sportsman and having a wish to pour oil on the troubled waters apparently existing between shooters and farmers, and also to start the ball rolling you suggest, I will guarantee to pay the boy or farmer on whose grounds I may shoot next season the rate of \$12 per 100 quail, or I will pay a reasonable price for permission to shoot and give one-half the birds killed on said grounds. Now, game preservers, come up to something that does look like action.

Brooklyn, N. Y.

SIXER.

I fully indorse your plan as between farmer and sportsman in commenting on the letter of Mr. Griffith in to-day's paper. I have preached this doctrine to farmers and sportsmen wherever I have met them during my shooting for last five years and am glad you are putting it before us in tangible form.

Brooklyn, N. Y.

A. S. S.

I heartily approve of your plan for the removal of the differences of opinion between "the farmer's boy" and "the city sportsman."

New York.

Wm. D.

**MINNESOTA DEER SHOOTING.**—Pillbury, Minn., Nov. 30.—The open season for deer commenced in this (Todd) county November 1 and closes December 15. That the game has been reasonably plenty the following list will show: The Bain brothers (three of them) have killed 45 deer and 4 bears; Peter Aleshiro, 20 deer; Loring Bachelor, 22 deer; Marshall Adams, 22 deer; Henry Adams, 17 deer and 2 bears; A. Pilsen, 14 deer; Peter Roy, 17 deer; Millard Aleshiro, 16 deer; N. Kinney, 17 deer; Peter Roy, 18 deer; while almost every man in town has killed from 1 to 10. At least 4 tons of venison saddles have been brought in this season, and it is said that but little regard is paid to the game law, and in a few years the deer will be utterly exterminated. Pheasants, gray and black squirrels, coons, wolves, etc., are quite plenty.

J. F. J.

started, and found the roads very bad, having not been lately worked. The team could only go in a slow walk. We arrived at Brady's at one o'clock p. m. Having ridden in the Northwest snow storm all the way out we were much chilled. I went into the house and introduced myself. We soon had a good warm dinner and were made to feel comfortably at home, which we duly appreciated after our cold ride.

We found here quite an extensive place, Messrs. Adams and Brady owning 3,300 acres of land, mostly under fence, with a nice frame dwelling and large barn, in which were eighteen head of horses for use on the ranch. The firm had 2,000 head of sheep on the place, and out about 1,000 head on that week. After dinner we donned our hunting clothes and rubber boots, and under the guidance of Frank Fuller, son of our host, we went to the river to try the ducks, but it was snowing so hard that the ducks were flying but very little, and only two ducks were killed that evening. We found that the river shooting would not do, and that we should have to try the swamps.

Next morning the snow storm was over, and the prospect was much better. After an early breakfast we crossed the river and made our way some three miles across the country to a large rice swamp. Here we found very hard tramping to get into the swamp. The prairie grass and wild rice had fallen down, covered with snow, and underneath water and mud. We did not see any ducks flying, and it looked discouraging. Kerdolph, Bishop and Hopkins stopped at the edge of the swamp, while Frank Fuller and myself concluded to make our way to the centre, which we did after hard work.

Suddenly the ducks rose out of the wild rice by the hundreds. We both fired, but were too far away. I quickly put in two more shells, and as a second flock rose nearer and circled toward us I got one with a right and one with a left, both the mallards. We then waded into the rice and took our positions, each on a muskrat house. Soon the ducks commenced flying and we had good shooting all day as they flew over us. We fired about a number of clipped ducks that fell out in the rice and water and would get away before the dog could get to them, it was so hard for him to get through the thickly-grown rice and the rat holes, and we would have lost many more if it had not been for my young Gordon setter Sigel. It was hard on him. The weather and water were so cold I had to keep him covered with a rubber coat after each bath. By 5 o'clock Frank and I had all the ducks we cared to carry out of the swamp. We loaded up and started for home. We tramped about a mile and a half, mile we sat down and poured the water out of our rubber boots, which had got in over the tops by sinking into the rat holes and runways. After going some distance further I found I was going to give out with my load, being very tired and weak, not having had anything to eat since early morning. Frank took the ducks and I the guns, and thus weighted we trudged on another quarter-mile, when I told him I could not go any further. It was then after dark. I told him I would have to go home until he went home, two miles for a team. He said there was a Swede lived about a half-mile across the country and he would go there and get him to haul us home. He took my light gun and some shells in case he could not find me on his return, he could shoot and I could answer. He left ducks and his gun with me. After he had gone I sat down by the side of a log to rest, but being wet and getting chilled after walking, I thought I would certainly freeze. I was just about to start a fire, but the grass sticks were too wet. I then examined the ducks and found quite a number of them still warm. I piled them up and sat down on them and threw the wet rubber coat that I had used over the dog over my shoulders; I was then a little more comfortable, but still I shook like the ague. I must have made a conical and forlorn-looking picture sitting humped over on that pile of ducks in the moonlight, with the gun lying against the log and Sigel curled up near me. After an hour I dried out a little. What some men can make of themselves for a little sport! It would have been a good subject for Thos. S. Steele and his tourgraph, entitling it "The Weary Sportsman."

After what seemed to me an hour, which was really but half that time, I heard a team coming through the woods and then Frank's welcome halloo! I answered, and he was soon with me with the Swede and a spring wagon. We loaded in and quickly drove the two miles home, for which I paid him one dollar. The rest of our party had come in a ranch rig. We soon exchanged our wet clothes for dry ones and did ample justice to a good supper, which Mrs. Fuller knows well how to prepare. On going to bed I took a heavy dose of quinine, but I did not get to sleep until after midnight, I was so completely lagged out.

Next morning I found myself all right and ready to do the "same thing over again," and had forgotten all about that moribund on the pile of ducks. We dried out a little by firing them with hot cartridges and then started for the swamp again. This time we crossed the river in the boat and ran up the bayonet to within a mile of the swamp. Bishop went with Frank and I into the center, where we had been the day before. He took his position as we did on a rat house. About one hundred yards from us we saw Bishop knock down several ducks during the first hour's shooting, and then we heard a report like a young cannon. We looked over that way, but did not see Bishop. He had a small muzzle gun that he had brought about the day before how well and far it would shoot, and he had loaded very heavy and fired at a duck, when both barrels went off, making the loud report, and when Bishop came to he was on his back in the water at the foot of the rat house. The gun had "kicked" him clear off. A few minutes after we saw him going slowly across an opening in the marsh, occasionally looking back with a sorrowful, ill-used look. He did not shoot my horse. His arms were black, blue and lame. Our shooting was not so good this time, the ducks were wild and flew high. I could only use one barrel of my gun, having lost one of the plungers the evening before. But we had our dinner with us and got home a little after dark in good condition with a heavy bunch of ducks. All the ducks we shot on this trip were mallards, except two teal, and they were the largest and finest I ever shot. The next morning Mr. Fuller drove us to Moccasin.

We purchased here a fine lot of pigeons, and bas for ourselves and friends. Our shooting was not so good this time, but we enjoyed the trip and returned feeling strong from the out-door exercise and with huge appetites, except poor Bishop, and we shall never ask to be more generously treated or to sit at a better table than that furnished by Mr. and Mrs. Fuller at Brady's.

Neenock, Ind., Nov. 20

THE FOREST AND STREAM's exposition of "Dittmar shooting powder" will be sent upon application.

## DUCKING IN A SNOW STORM.

I HAVE BEEN away for a few days duck shooting in the neighborhood of Bond's, Long Beach, N. J. Thought you would like to know how the shooting was. We left the Market Street Ferry at 6:40, November 23, bound for Tuckerton; arrived at Tuckerton about twelve o'clock; found our gunners, Sam Shords and son, already with shells, sneak boxes and decoys. A northwest gale had been blowing hard for two or three days, and had blown the water out of Tuckerton Creek so that Capt. Geo. Burton, who was to take us over to Bond's, could not get his yacht aloft. After waiting some time the tide came in so that we got the yacht off and started for the beach. After a cold but pleasant sail of about one hour we arrived at Bond's. The cold was increasing fast, and it looked like a freeze up. However, we made everything ready for an early start in the morning. Next morning we were up by daylight, but found we could have no shooting. Sam reported the bay frozen out to the edge of the channel, and a very low tide, so it was no go. We spent the day watching the flight of brant, black duck and broad bills flying up and down the channel, hoping for a better luck next day. It was getting colder all day, and Wednesday was no better. A few snappers broke their way through the ice with their sneak boxes and tried strolling in the ice with poor success. Two boats shot one pair of dippers, three cub heads and one brant. The next day the weather was warmer with good tide, wind east and the ice moved off the flats so that we could get to the bunches. We got off before daylight, put out decoys and fixed ourselves snug, thinking we would get some shots at the black ducks as they came on the feeding ground. We did nothing early, although we heard the ducks and geese honking all round us, but they did not want to fly. About nine o'clock we had a long shot at two broad bills high over head. Sam gave them his big gun and dropped them both. After waiting an hour or so we had a shot at a single brant and down he came. Nothing was done after that, until, after twelve o'clock, the ducks, black, mallard and sides of the bunch; they did not notice our stools; the tide was now making fast and we began to get ready for work. In a short time we saw a bunch of brant making for the goose bar. Sam began honking and turned them toward us. They came on splendid. "Don't shoot till I give the word," said Sam. On they came; rounded up in the wind, hovered over our decoys, and at the word we gave them three guns, and down came eight. We gathered and hardly got fixed with two black ducks and three geese. Three guns again and down a pair. After that we had shots at single and double ducks until we had fifteen or sixteen.

It now began to snow; the wind went from east to northwest again; it began to thicken so that we could not see the shore. We stood this for a good while thinking to get some more shots, but it grew worse, so we took up decoys and left. Next morning it was frozen on the west side of the channel, so that we could not get to the bunches. We concluded that we would leave for home, and we left in a snow squall; wind northwest blowing a gale. Capt. Burton put in a double rest and started for Tuckerton. When we got off Tuckerton Cove found the cove and mouth of creek frozen up, but we had a good crew and cut our way through the ice into the creek which we found open, the ice having gone out with the tide. We soon made our way to the railroad, took the five o'clock train for Philadelphia, and arrived at Market Street at six o'clock well satisfied with our trip, and think if we had good weather so that we could have shot four days we would have made a big bag, for the brant and ducks were very plenty.

Philadelphia, Pa.

## OUR PHILADELPHIA LETTER.

AN important discovery has just been made by Prof. Toussaint, of the Veterinary College of Toulouse, with the view of protecting animals from epizootic diseases by preventive inoculation. M. Pasteur, of the same college, had already succeeded in shielding gallinaceous birds to a great extent from the zymotic disease known as chicken cholera by vaccination with attenuated virus. Recently young hunting dogs have been inoculated with vaccine virus to protect them from the plague of whelp, which sometimes kills them when quite young, which has proven quite successful, the average number of puppies succumbing to this fatal malady in large kennels, where it frequently rages to a fearful extent, being much less, and those attacked by it have it in a much milder form than animals not inoculated." The above I have taken from the French, being from a letter dated October, 1880, written at Paris to a medical journal of this city, and will no doubt be interesting to your readers having kennels and expected to be troubled with whelp. Certainly the experiment can easily be tried here, and we would recommend the part of the body of the youngster most easily exposed upon to be directly under the forearm where the skin is free from hair. We would use the freshest of vaccine virus, which can be readily purchased at ten to fifteen cents per pint from any reliable dispensing druggist.

In the same article we read that "M. Toussaint has directed his attention to the extension of these experiments to other animals, especially to sheep, with the belief that they may be protected from the invasion of certain forms of malignant maladies which annually carry off victims innumerable among the horned beasts in various parts of Europe."

Your correspondent will be having access to a large list of medical journals which give interesting accounts of experiments on dogs and articles of value to the kennel man will be incorporated in my weekly letter.

An important test has been made as to the virtue of Liebig's extract of beef as a nutriment. Beef extract being often advised in the rearing of puppies, it may be well to give the article on the subject to your readers.

The London Lancet says: "It has been proved that dogs fed exclusively upon Liebig's extract were found to die sooner than those not fed at all." This has been accounted for as due to the deleterious influence of the potash salts of the extract; for although these are indispensable to the economy, a large dose of them is injurious in the absence of the food whose metabolism it is their office to direct." The food here referred to is the albumen and fibrine of flesh wanting in Liebig's extract, by his own confession; in fact, all simple extracts of beef are flavors of beef only, in no sense nutritious, and are valuable as stimulants but not food, the entire nourishing properties being in the albumen and fibrine or insoluble portions.

Referring again before closing my letter to the vaccination of puppies as an preventive or to cause a modification of violence in the attack, I would advise, after the skin had been abraded with the ivory point on which the virus has been

spread, and the matter had been well rubbed into the part, that a small piece of court plaster be placed over it as is done with the human subject. Game should also be taken, however, that blood is not drawn, as there is danger of its doing so, and giving away the virus and not taking it into the circulation, and thus preventing a good take." We should try the experiment as soon as the puppy was weaned—certainly before his second teeth were visible.

We are now having winter in earnest, with every probability of a severe and prolonged one on us, with plenty of snow. So there is more need, Mr. Editor, that you continue to agitate and call the attention of the sportsmen of the country to the necessity of perfect protection for game birds and to freely exchange their views on the subject, as is invited in the columns of your journal last week.

Illustrative of what can be done by systematic effort, note the result of the labors of the West Jersey Game Protective Association.

I have been reading with much interest the papers on natural history in *FOREST AND STREAM*. In number three, under the head of "Our Water-Fowl," the writer states the snipe goose (*Anser hyperrus*) is less abundant on the Atlantic coast than further westward. This we know to be the case, but we would like to mention as an incident in the change of migrations of birds, that for the past three years large flocks of the fowl mentioned have made their appearance in Delaware Bay, about Bombay Hook. The first season of their arrival none of the local sportsmen knew what they were nor were they at all molested for two or three weeks, until two Philadelphia duckers—John McCullum and John Brown—who were down the bay, came across them. Many were shot and sent to the city to be sold for what they would bring. McCullum and Brown being unacquainted with the bird, they were offered for sale for a trilling sum and the wise ones readily and eagerly purchased them, for they are all water-fowl and some of them snipe. They have again appeared in Delaware Bay, but not in such great quantities. These are the larger birds (*Hyperrus*), not the smaller variety (*Chilodre*). The writer, in 1875, killed three about twelve miles from Valparaiso, Ind., while snipe-shooting, a gander and two geese, one of the latter, having a wounded and festered leg, had evidently sought the upland pond, where they were found, for rest, leading the other two with it. Homo.

## HOW THEY DO IT IN ARKANSAS.

BALTIMORE, Nov. 26.

THERE are doubtless many of your readers who are not acquainted with the method used in the South—and probably other portions of the States—by pot-hunters for capturing the persecuted little quail; and for the enlightenment of these I will describe the *modus operandi*, prefacing the description with the hope that although they may heretofore be acquainted with the manner, they will, not one of them, make use of their information. It is merely for their general knowledge, not instruction.

The "Squire" was the only one in the village who practiced netting, and was very fond of it. Often was he seen astride his gray nag, with his net slung from the horn of his saddle, bound on a pot-hunting expedition against Bob White. The "Squire" was one-legged, but rather active if he chose to be which was rather seldom, as he was lazy; he was poor, he had a wife and five small children to feed, but for all that I hardly think the means were justified. I had never seen how it was done, and once accompanied him.

As quail were plentiful in that region, we had hardly proceeded a quarter of a mile through the woods or we flushed a berry. Marking them down about a hundred yards off, under a bush, the "Squire" selected a place about thirty or forty yards distant from the birds, dismounted and set the net, which was composed of twine, the meshes being about one inch and consisted of a barrel ten feet long, the opening being fifteen inches in diameter, tapering to a point at the lower end. The opening being on the right side, which were stuck into the ground and the barrel drawn out its full length and staked at the point, thin wooden rings preventing the net from collapsing. Wings twelve feet in length, of the same material, about fifteen inches in width, were then staked obliquely from each side of the opening, forming a figurelike the letter Y. This was done with a quickness denoting practice. Then remounting, after posting me at a sufficient distance not to frighten the quail, he waited long enough to witness everything, he made a detour, and coming toward the birds on the opposite side from the net, so slowly as not to make them take wing, he started them from the cover where they had lit. Slowly he advanced, whenever the birds appeared inclined to scatter, he stopped altogether. Now a little on one side to steer them, now on the other, he gradually drove them into the outspread wings well bunched. Running along, they came to the opening, and of course entered. As the last of the birds entered, the "Squire" quickly advanced and running up drew the stakes at the opening, imprisoning the entire berry, which one by one met an ignominious death by the application of the "Squire's" thumb to their skulls. Fourteen quail were thus killed. I tried hard to get him to set at least one pair free, that a chance might remain for a next year's brood, but was unsuccessful; he wanted them for his young "uns." It was my first and last participation in this kind of bird killing.

There is, or was, no game law in that State—Arkansas—protecting quail. During the season the "Squire" probably killed more quail in this manner than I did with shot-gun, the net frequently not leaving a single bird of the berry. Do the Long Islanders do the same? FREDERICK.

## DOWN IN SOUTH MISSISSIPPI.

WOODVILLE, Wilkinson Co., Miss., Nov. 28.

SEE in your department of Game Bag and Gun sport, notes from all parts of the country except this. I thought perhaps your readers would like to know how things are done with gun and dog away down in South Mississippi. In the way of game we have the quail, turkey, wild fox and a few deer out here in the hills, though twenty miles from here in the swampy places are quite plentiful. The above list comprise what we consider game. Besides, there are innumerable quantities of rabbits, squirrels, coons, etc. Quail (or, as they are more commonly called here, partridge) shooting is our principal sport in this immediate section. Our dogs are altogether pointers and principally native stock, though they have no long pedigree attached to their names. Yet, I fancy, for the work we have them for they would be the best in the swamp. The best of the "blue bloods" of the North and West. Our dogs have very few, if any, objections; however, very few of them are thoroughly broken, though that is attributable, I think, to the abundance of birds and

The morning opened rough, with the wind blowing a gale from the northwest—anything but a day on which to test the scenting qualities of dogs. An early start was made across the bay, at 8 o'clock, and another judge, Dr. J. C. Monroe, of Brooklyn, N. Y., was added to the trio which had acted as judges at the previous trial. The puppy Staked was one of New York City, and was appointed Referee. Treasurer Hall, the official scorer, with a view to signaling the decision of the judges from time to time, had armed himself with a red flag. The first dog, the former incoming to denote a demerit and the waving of the latter, merit, was duly means had been provided for specifying which dog in the

brace was under discussion, the spectators, held in check seventy-five yards behind by the field stewards, were not enlightened to any remarkable extent, but viewed the performance as one hidden in deep mystery.

Arriving at the island, overcasts were stowed away in the house near the landing and the contestants called together and addressed on the part of the judges by Dr. Rawlings Young, who tersely said: "Gentlemen, the judges in these trials propose to do their best in rendering their decisions, which shall be based upon the rules and upon their best judgment."

All-aged stakes open to all setters and pointers, limited to fifty entries. First prize, \$200; second prize, \$100; third prize, \$50; fourth prize, \$25. Entrance fee, \$25. Forfeit, \$15. Closed with 70 nominations.

Entries—P. H. Bryson, Memphis, Tenn., black, white and tan setter dog Gladstone (Dane-Petrol) four and a half years.  
T. H. Bryson, Memphis, Tenn., black and white setter bitch Peep (Dane's Grouse-Fisher's Belle), four years.  
C. Dafoia Wagstaff, Babylon, L. I., lemon and white pointer dog Lord Dufferin (Golden's Dash-Howson's Fox), two and a half years.

Westminster Kennel Club, N. Y., lemon and white pointer dog Sensation (Jim-Nell), six and a half years.

Norton Eaton, Providence, R. I., black setter bitch Smut (Pete-Queen Bess), four and a half years.

Horace S. Bloodgood, Providence, R. I., black and white setter dog (Dane's Grouse-Fisher's Belle), four years.

Dr. S. Fleet Speer, Brooklyn, N. Y., black, white and tan setter bitch Maids (Dick-Cluck), three and a half years old.

Dr. S. Fleet Speer, Brooklyn, N. Y., black and tan setter dog (Dane's Grouse-Fisher's Belle), four years.

Dr. S. Fleet Speer, Brooklyn, N. Y., black and white ticked setter bitch Lizzie Lee (Drum-Millie), twenty months.

Dr. S. Fleet Speer, Brooklyn, N. Y., black white and tan setter dog St. Elmo, (Pride of the Border-Jessie) four years.

W. C. Higgins, Delaware City, Del., black and white setter dog Dashing Monarch (Dash II.-Countess Moll), two years.

W. H. Thayer, Bristol, R. I., liver with white breast pointer dog (Reck-Strong's) Four-Day's Nellie), two years.

Dr. F. A. Allen, Brooklyn, N. Y., black, tan and white setter dog Glen (Dash-Belle), six and a half years.

W. C. Higgins, Delaware City, Del., lemon and white setter dog Warwick (Leicester-Petrol), two and a half years.

Wm. Stanley, Zugzwang, N. Y., black and tan setter bitch Belle (Jack-Williamson and Lawson's bitch), five and a half years.

O. Donner, New York City, white and lemon ear setter bitch Bessie (Hedge-Hedge), five years.

A. H. Moore, Philadelphia, liver and white pointer dog La Guy (Bang-Juno), two and a half years.

A. H. Moore, Philadelphia, red Irish setter dog Raleigh (Elcho-Rose), two and a half years.

A. H. Moore, Philadelphia, blue Belton setter bitch Lass of Gowrie (Paris-Pearl), three years.

G. W. Bassford, White Plains, N. Y., white and black setter dog Iron Duke (Dash-Fire), five years.

G. W. Bassford, White Plains, N. Y., orange and white setter dog Grouse-Dale (Grouse-Dale's Dots), two years.

Edmond Orgill, Brooklyn, N. Y., lemon and white pointer dog Flash (Flake-Lilly), four and a half years.

Wm. Stanley, Zugzwang, N. Y., black and white ticked setter bitch Isabella, (Chester-Fannie II.), five years.

H. W. Livingston, New York City, white with liver ears setter dog Bay (Pride of the Border-Dinny), four and a half years.

E. D. Goffredo, Guyanar, N. Y., liver and white pointer dog (Dane's Grouse-Fisher's Belle), four years.

R. D. Ripley, New York City, red setter dog Spy, (Duke-Belle), two and a half years.

The following was the result of the drawing:

Glen against Dashing Monarch.

Iron Duke against Isabella.

Ray against Spy.

Croxteth against Sensation.

Lizzie Lee against Peep o' Day.

Lord Dufferin against Bessie.

Warwick against St. Elmo.

Dash against La Guy.

Runt against Belle.

Gladstone against Nat.

Maids against Grouse Dale.

Afton, a bye.

#### FIRST SERIES.

(Glen against Dashing Monarch.)

First BRACE.—It was about nine o'clock when Dr. Aton's large black, liver and white setter dog Glen, the winner of all of first in the braces, came trials, last year, handled by Mr. Sidney Blydenburg, of Long Island, and Mr. Higgins' black and white imported setter dog Dashing Monarch were cast down for the first heat. Monarch is a very handsome and powerful dog and was handled by Mr. E. J. Martin, of Wilmington, Delaware. In crossing the hill-side of the old stubble Monarch went lame in his near fore foot, having twisted it on the frozen ground. It appeared that soon after his arrival he had jammed his foot was bitten through, but it has not troubled him. In a moment, however, Monarch was himself again, and away he sped, showing grand style and pace, leaving his companion somewhat in the rear. On the strip of buckwheat Glen winded along the fence. Entering the briar and bayberry-brush range, Glen showed up a trifle headstrong. In a briar hollow Glen pointed and Monarch, being called off, followed suit, not seeing his dark-coated competitor in the dense underbrush.

The winners were not moved, although subsequently one of the spectators stirred them up, and Glen was given a false point. Monarch being called off, quartered to the shore, and Glen began to potter, winding up with a false point, which Monarch backed in good form. Monarch got his blood up and increased his speed. At the end of the scrub-oak strip near the shore a brace of birds was moved by Monarch flushing one and stopping at sound of wing. Glen backing Blydenburg sent a charge of shot after the second bird, which landed the dogs stopped. Monarch dropped to shoot and Glen to order. Monarch on being ordered on instantly pointed, and Martin flushed bird and missed. Glen roared and pointed along inner edge of bush and Monarch backed. Both dogs roared on and Monarch forged ahead. Glen turned off sharply and secured an excellent point, and the bird was flushed. Shifting positions again Monarch pointed a single bird, and Glen backed. Martin moved bird and shot. Monarch remained on his point, but Glen at the same time moved in and five birds were flushed. Each handler killed, and Monarch was ordered to retrieve. He at once beat and secured one bird, and on way back pointed the second with dead bird in his mouth. This he also picked up and carried it a few steps when he dropped it and delivered the other in style. Glen was sent for remaining bird, which he retrieved with assistance of handler. The third was awarded to Dashing Monarch after the brace had been thirty minutes.

As he was far superior in style and nose. He handled himself throughout for the body sent and pointed with head well up.

#### Iron Duke against Isabella.

SECOND BRACE.—Mr. Bassford's black and white setter dog Iron Duke, handled by owner, and black and white setter bitch Isabella by Chester, out of Fannie II. winner of first in puppy stakes last month, 1879, and formerly owned by Mr. John Davidson, handled by Mr. W. Tallman. Drownville, R. I. The brace was slipped at 9:45 A. M. on same range, and along the northeast shore Isabella was penalized with a false point, and Duke for failure to back. The bank was followed around until the high ground was reached, when the brace was away to leeward of a briar hollow where some birds were heard calling. Isabella false pointed again, and again Duke raised back. The judges then ordered the brace up after being down a quarter of an hour with decision reserved.

#### Ray against Spy.

THIRD BRACE.—At ten o'clock Mr. Livingston's white (with liver ears) setter dog Ray, handled by Mr. W. V. Titus, of Centertown, L. I. (now Circleville) aspiringly published, and Mr. Ripley's red Irish setter dog Spy by Duke, out of Belle, known on the bench as a winner, and handled by Mr. O. B. Edwards, of Sag Harbor, L. I., were put down. As the wind had increased in fury, a move was made for a more sheltered position at the south side of the island. On the way a bevy was flushed by spectators, Spy winding at the time. The birds popped the crest of the hill and were marked in some scrub bushes. Then Sensation, dressed in green and pointed, Ray failed to back and passed on and flushed several birds. Edwards shot and missed, and both dogs showed great unsteadiness. Spy further on winded and flushed. Dogs ordered up by judges without chance to range or retrieve after ten minutes down, with Spy the winner.

#### Croxteth against Trim.

FOURTH BRACE.—Wm. Stanley's liver and white pointer dog Croxteth, handled by Philip Thurtle, and Dr. R. Day's (Norwich, Conn.) small liver pointer Trim, handled by W. H. Thayer, of Bristol, R. I. The brace was put down at 10:15 A. M. in a cornfield, and the rough, frozen ground was well beaten by both dogs. We had never seen Croxteth in better condition, which speaks well for Thurtle, who has had no end of trouble with him. He is a grand dog of the heavy bone sort, while Trim was of the light, wiry build. Croxteth led off with a draw ditch across the field and pointed, and game-cock on the edge of the brush. Trim backed finely, but moved on as the judges crowded him. For this performance Croxteth was penalized with a false point and the back of Trim was not allowed, although he deserved it. A long sweep of grassy and brushy range was drawn blank, the heat unavoidably leading down wind. Trim flushed a woodcock, but was not penalized, as it had been agreed that the trials should only be run on or near the ground. The beach being reached, a detour was made along the shore to the extreme end of the island. On a sheltered range of rolling ground, intersected with strips of cover and ending in several large, grassy flats, the brace was cast off again. Croxteth at once winded and, with head well up in grand style, roared to a bevy, which flushed wild. Thurtle shot and missed and both dogs dropped to order. Croxteth, at edge of brush, pointed where a moment before we had seen the bird's wild. Trim backed and the bird pointer was penalized for a false point, the judges not having seen the bird. Trim pointed where very struck, but left the scent, and Croxteth drew on forty yards on his belly and pointed like a rock, head up and stern down. Thurtle flushed and killed and Croxteth, on being ordered to retrieve, took a few steps and pointed grandly on a new bird. The judges ordered Thurtle to take his dog off the point. He was pulled off and retrieved nicely. It was a grand exhibition of careful work, done in good style, and the best of the judges, eyes, and Croxteth was pronounced the winner after being down fifty-five minutes, out of which there were twenty-five of actual work. This by no means, however, should infer that Trim is not a good working dog.

#### Sensation against Lizzie Lee.

FIFTH BRACE.—In the same place on the grassy plain at 11:15 A. M., the Westminster Kennel Club made good their promise of showing that there was something more than looks in their stand-by, Sensation. The old fellow turned up drawn as fine as silk—perhaps too fine—and considering the many hands through which he had passed, Mr. S. T. Hammond certainly showed good style. He was certainly in luck to be put down in the centre of a scattered and well lying bevy, and there was much curiosity expressed by the large numbers of spectators to see how he would come out. Among the number we noticed more than one who has for years been decrying Sensation simply because they have been inspired with that fallacious idea that because a dog is a winner on the bench he is good for nothing at all. This is a very shallow and dangerous opinion, and the opinions of the majority about any dog before seeing him work. It was a lesson worth something, and we trust it will be remembered. Against the old dog had been drawn a ratter in Dr. Speir's Lizzie Lee, a remarkably handsome black and white ticked young setter bitch. She appeared with a record, having won first prize at the late Nebraska Field Trials, where she obtained a score of 98 out of 100. We had the pleasure of meeting her late owner, Mr. George W. Waddington, of Geneva, Iowa, at the same time, and he expressed his opinion that she was a dog of unusually fine qualities. Lizzie Lee was handled by Mr. Jefferson Cooper, of Blauveltville, N. Y. Sensation had not taken half a dozen steps forward before he threw his nose up and winded. Every eye was upon him, and the spectators drew up within thirty yards. The scent was so hot that it took the legs from under the old dog, and he crawled on his belly roading where it was supposed the bird had just been where later on birds were moved by the lookers on. He was called off, and at once pointed grandly, and Lizzie creaked round him and the bird, falling both to back or wind. Hammond flushed a brace and killed, and Sensation set to retrieve, which consisted in lifting and mouthing the bird. After ten minutes down Sensation was given the heat, which was remarkably short and sweet—not to Lizzie, however, who might have had more of a chance. We shall not forget the "A" which came from the crowd, as Sensation pointed, or how the Westminster Kennel Club stock went booming. Naturally we consider Sensation to have the grandest style we have ever seen in a pointer. His nose is as keen as a briar, and his movements graceful in the extreme. He is a plucky one, too, for later on in other heats he never once shirked his duty or turned one inch from the briars. This is more than can be said for some of the setters that run the trials, who have been placed in proper position in his early days he would have shown up in the foot-prints of Croxteth, the old fellow had a good chance from his near position to keep his weather eye open

as to what was going on, and in our heart we believe he turned it to good account, but this is the more to his credit, for it shows he is not lacking in intelligence. No comparison can be drawn between Sensation and Croxteth, because they are of an entirely different type. The latter is a grand, powerful, lusty dog, with strong action, a goer and a lasser. He is under most excellent command and free from most faults that dog flesh is heir to. Those that were fortunate enough to see these two dogs, one following the other, will long remember the pleasing sight. We were glad on our own account the pointers did so well, for we predicted as long ago as last March that there was good stuff in Croxteth, whom we had seen do good work in the quarry on quail; and from personal knowledge, we suggested that it would be well to see Sensation first before decrying him. All the harm we wish those that have spoken slightly against the old dog is that they had been present and seen what we did.

#### Lass of Gowrie against Peep o' Day.

SIXTH BRACE.—Mr. Moore's very handsome blue setter bitch Lass of Gowrie, handled by Mr. E. S. Wamaker, of Coalsprings, N. C., and Mr. Bryson's black and white young setter bitch Peep o' Day, handled by Mr. C. B. Whitford, St. Louis, Mo. The brace was turned down on the same range as before, eleven A. M., and Peep o' Day at once pointed at edge of scrub bushes. As previously mentioned, he was called up to back, which he did magnificently, and then put on the chain. Lass then backed beautifully. Whitford killed and Peep ordered to retrieve, which she did indifferently. Turning back the brace was given an opportunity to show their going qualities. Both ranged and quartered superbly, and showed up at this period of the heat as very evenly matched. Both dogs were very fast, but Lass of Gowrie showed the more gameness. Croxteth, Lass pinned a bird grandly while going, great speed and dropped on her point. Peep backed excellently. Bitch flushed; not shot at on account of spectators. The work was first-class and was duly appreciated by all present. Lass half pointed in grass and roared into the cover, where she dropped to point. Peep came up and failed to back. Spectators flushed two birds on coming up. Evidently the scent in this sheltered position was not so good as in the open, and became warmer as the wind was again advanced, and the dogs fell off considerably. The brace continued to do good work and as the heat was located so that spectators could keep the dogs in sight the interest never flagged. Lass dropped on half point where birds had been, Peep passed her and also dropped to point. Lass instantly moved up and backed, and this was repeated twice, the dogs roading and running in various positions, but, strange to say, maintaining the same relative distance, and up the far side the bevy flushed with the dogs spoke volumes for the handlers. On top of hill Peep pointed where birds had just been moved and Lass backed instantaneously, sixty yards behind. A large range was drawn blank and Peep began to fall off in pace, though not in ranging. Lass pointed in briar hollow and the judges were about to give her a false point when Wamaker declared point. He stated that he could move the birds. Lass roared in through briars, and up the far side the bevy flushed with. She was allowed the point, but penalized for slight unsteadiness when birds rose. Lass, in bunch of briars, pointed, and Peep backed. Wamaker flushed and killed, Lass dropped to wing and Peep to order and Lass retrieved perfectly. Lass pointed suddenly on slope beyond and Peep refused to back and birds were flushed. The brace was ordered up while judges compared their scores, and it resulted in the brace being called down again, and the same position was brought the judges together again, and Lass was given the heat after being an hour and three-quarters. The scoring was said to have been very close, but Lass had shown herself the superior of Peep in training, being a much older dog, with more bottom and nose, and a much more useful cover dog, but not enough in the open at times. Lass was broken by L. H. Smith, of Strathroy, Ont., and ran at Nashville, 1878. She won 2d New York show, 1880. Lass is a beauty.

#### Lord Dufferin against Fred.

SEVENTH BRACE.—Mr. Wagstaff's lemon and white pointer dog Lord Dufferin, handled by Mr. W. Tallman, and Dr. Speir's black and tan pointer dog Fred, handled by Dr. J. H. Heighit, Allaire, N. J., were the next brace. Fred led off with the scent in his nose. He roared along the fence by the strip of buckwheat turned out on the stubble and straightened himself out and pointed stanchly—a point of the old-fashioned sort. Lord Dufferin caught the hot scent along the fence and pointed. Heighit flushed four birds and killed, Lord Dufferin dropped to shot and Fred to order, and a moment later Heighit's briary, and the hand the point, and the field to cross showed good going qualities, and the ten yards at run o'clock the brace was ordered up, and the party adjourned to luncheon in the house. Resuming at half-past two the same brace was put down on hill side of the old stubble, the brace dividing honors as to pace and style. At edge of brush a bevy was moved, which pitched into a briar patch in the bush. Fred on reaching there pointed and Dufferin failed to back and shared point. Tallman flushed a single bird which he failed to grass. Both dogs retained point and bevy was then walked up. Heighit killed and both dogs dropped to order. Dufferin was sent to retrieve and pointed where scattered birds had moved. Fred pushed past him failing to back. Dufferin then retrieved and dogs were ordered up with Fred the winner after thirty-five minutes actual work.

EIGHTH BRACE.—Mr. Moore's red Irish setter dog Raleigh, handled by E. S. Wamaker, and Mr. Donner's pretty white and lemon setter bitch Bessie, handled by Theo. Predmore, Forked River, N. J. Raleigh was winner of second in All-croft stakes last year in same meet, being the dog owned by Dr. Wm. Jarvis, of Clarendon, N. H., and handled by same trainer, and Bessie won second in puppy stakes last year in same meeting. The brace were put down in same place on the scattered bevy. Bessie is a lovely medium sized bitch, and the smartest we had yet seen, but she wants finishing touches to her education. She seemed a bit tender in her going, but it came from being over careful. Raleigh went stinger, and it was given my support, being the best of all walkers, but he was decidedly off having been suffering from rheumatism all autumn, and recently increased by plunging into a cold spring. In briar hollow Bessie winded, showing a delicate nose, and further on on hill side again drew and pointed. Predmore then managed to get her a false point, which later on was withdrawn as birds were flushed. Raleigh in splendid style roared and pointed, and Bessie backed. The birds were evidently very close; Raleigh continued to rood; Bessie backed, and pointed, and the judges went up the hill. Again Bessie pointed and her handler indulged in a false point. Raleigh pointed, a bird was flushed and killed, the dog dropping to shot and the bitch to wing. Raleigh retrieved care-

lessly. Both dogs started to their work, and Bessie showed herself to be a sharp working, busy little animal. Raleigh going down wind flushed a brace. Bessie on crown of hill dropped to point, got up and roared. Raleigh, a jealous worker crowded her and a brace of birds was flushed by handler off to one side. That Bessie might show her qualities as a retriever, a dead bird was thrown up and a gun discharged. She dropped to shoot, and retrieved the bird under wind very prettily. The heat went to Bessie at 3:35 p. m., after being down within ten minutes of the hour.

Warwick against St. Elmo.

NINTH BRACE.—Mr. Gause's lemon and white setter dog Warwick, handled by Mr. E. J. Martin, who handled Dashing Monarch, and Fred Spier's black and white setter dog St. Elmo, handled by Mr. Jefferson Cooper, of Bladensburg, N. Y. St. Elmo, besides being a well-known bench winner, has won in the field at Hampton, Iowa, 1877, at Robin's Island, trials in All-aged stakes last year, and second at the Nebraska trials last autumn, having at the last-named place a score of 804 out of 100. The cast off was in the brush, and as the brace started away there was little to choose between the two, so evenly were the dogs matched. St. Elmo dropped to point in a brush heap; Warwick backed instantaneously; bird was flushed by judges on coming up. Both dogs showed grand training and that they were at home in the cover. Bessie took their turns, and Warwick made his score good by pointing and St. Elmo backed. A single bird was moved, but not shot at. In open pasture both dogs moved and quartered finely. At edge of brush St. Elmo dropped to point, got away and roared. Warwick backed. St. Elmo continued roading, twisting and turning through the brush over the dry leaves, and making but little noise. Warwick followed each turn, treading also, passing through the brush over one hundred yards. St. Elmo on reaching the open brought up on a dropping point, and Warwick, close behind, backed, his head and tail up, a beautiful piece of work for both dogs and the best reading of the trials. The bevy was flushed and a bird killed, both dogs dropping to shot. St. Elmo retrieved finely. The dead bird was then thrown out and gun discharged for the benefit of Warwick and he retrieved it to perfection, setting up and holding bird up, as all dogs should be trained to do. A few scattered birds dropped on the crown of the hill, and there both dogs secured a point and half a dozen birds were moved. The heat was a hot one, the most evenly contested one of the trials, and ended without one single error for either dog. In hollow Warwick pointed in grand shape and a bird was moved. Again on hill-top in less time than it takes to write both dogs pointed a single bird, a grand picture, and on slope leading to a brushy gully St. Elmo pinned a bird, this stand standing, and Warwick backed across him, in a few seconds being enough to cover with a cloth. The heat, which was a nip and tuck one from the start, was given to St. Elmo, who had little the best luck and was perhaps a shade quicker in his turns; but both dogs were rattlers, and cannot be spoken of too highly for work done in this heat. The race lasted thirty-five minutes.

Rush against La Guy.

TENTH BRACE.—Mr. Orgill's lemon and white pointer dog Rush, handled by Mr. Orgill's new kennel man, Charles A. Gladstone, of Baltimore, Md., and Mr. Moore's liver and white pointer dog La Guy, handled by E. S. Wannaker. The dogs were much of a size and a remarkably fine-looking brace, again showing the strange good fortune of the draw. La Guy at once began to show Rush the way and Rush took two looks at a long stretch of open ground and followed. Rush flushed bevy on opposite side of hollow and seemed all together off. We then learned that not expecting to be run until the second day, and not being among the braces ordered over in the morning, he had been worked until noon and given two fees. Under these circumstances he should not have been allowed to run. Rush false pointed and Guy backed. Rush moved on and Guy came alongside and both pointed. Both dogs were so much of a size and pointed so much alike, that it was difficult to see the other dog was completely hidden, for their tails were held up the same way, of the same length, thickness and curve, and it was impossible to see the one further off, although the dogs were several feet apart. As the north shore was reached the full force of the wind, which was blowing a gale, was felt, and Guy made an unfortunate flush. Guy then false pointed and Rush backed gradually. Guy pluckily took the briars and landed himself first in the stubble field, where he flushed a bevy, the birds flying on a large scale. The bevy scattered along the shore in wide wreeds and grass. Guy pointed in briars and Rush went in and flushed, thus extinguishing his chance for the day. The brace was ordered up after being down twenty-five minutes, with decision reserved.

As the tide was at ebb the little steam yacht could not make the landing and it was late before the party was conveyed on board by small boats and the welcome lights of New Suffolk were sighted.

At the evening meeting of the club the following gentlemen were proposed for membership:

Messrs. Benj. M. Earle, Providence, R. I.; Newton Earle, Providence, R. I.; R. C. Cornell, New York; H. S. Bloodgood, Providence, R. I.; Dr. S. Fleet Spier, Brooklyn, N. Y., and Crump Ormsby, New York City.

FRIDAY, DECEMBER 8, 1890.

The day opened as badly as it could for the running of the dogs, a terrible northwest gale sweeping the island and freezing one to the marrow. The bay was crossed betimes and the field taken at quarter past nine.

Rush against La Guy.

TENTH BRACE.—Continued.—Rush and La Guy were again ordered down to finish their heat of the preceding evening. The road was taken to the south side of the island, that the dogs might be worked in a sheltered position out of the fury of the wind. On hill-side beyond the last gully leading to the east shore a bevy was flushed wild by the judges. Rush showed much better going qualities than on the afternoon before and seemed awake to what was going on. Both dogs worked jealously. On bank in scrub-oaks La Guy pointed and Rush also winded at same moment and pointed and a single bird was flushed by the noise. La Guy dropped to wing. Rush, on a hill, flushed a bird and the brace was ordered up at 10:05 a. m., after being down fifty minutes, with La Guy the winner.

Snuat against Belle.

ELEVENTH BRACE.—Mr. Earle's small black setter bitch Snuat, handler with Grouse Dale of second in brace at Robin's Island, 1879, handled by T. M. Aldrich, of Providence, R. I., and Mr. Stanley's medium-sized black and tan imported setter bitch Belle, winner of first in champion class, New York, 1880, handled by Mr. C. Townsend, of Englewood, N. J.

Belle started off as wild as a hawk and showed up as a very free goer. The brace had been put down on same bevy on the dry leaves in brush along the shore. Belle flushed a bird and chased, which was not seen by the judges; she then pointed finely in hollow and Snuat refused to back; went in and took point. Townsend flushed and Belle ran in and chased. Snuat, after being rolled over, dropped to order. The brace was ordered up, to be put down later, at discretion of judges. Time of heat, ten minutes.

Gladstone against Nat.

TWELFTH BRACE.—Mr. Bryson's well-known black, white and tan setter dog Gladstone, handled by C. B. Whitford, of St. Louis, Mo., and Mr. Bloodgood's small black and white setter dog Nat, handled by T. M. Aldrich, Providence, R. I., was the next brace, at 10:15 a. m. They had been appropriately termed by Mr. Aldrich as the giant and the midget. Gladstone was turned down in fine condition and is, beyond question, the best built dog for going that we ever saw. He swept off at a terrific pace coursing over hill and dale with tremendous strides, his style being simply perfect. To the astonishment of every one they kept his little legs going to such good purpose that after being down five minutes a half a mile of the beat had been gone over and judges and spectators were alike left in the rear, and the little fellow was not a bad second. On went Gladstone at an air-splitting pace, now and again slightly checking to the wind and off again like a bird. At one word and hint from Whitford he would drop to a trot in the brush and away again in the open. Nat was all business during this trying ordeal. When the highest ground had been reached the east shore, Nat pointed in a briar patch where birds have been running. There was no one present save the two handlers, Judge Von Lengerke, who throughout kept well up with the dogs, and one or two others and ourself. Whitford called Gladstone up, and as he rounded the briars he caught sight of little Nat and backed. Nat was ordered on, and quick as a wink Whitford, who was letting Gladstone go for all he was worth, circled him on ahead and in a moment he brought up standing in grand form forty yards away on the bevy which lay along a hillside, pointing them at fully twenty-five yards. Gladstone stopped, roared and backed perfectly. Gladstone was awarded a point and Nat a back, who against any other dog and handler would have been in first, as he had undoubtedly been the first to find. The bevy sprung wild, and Gladstone dropped to wing and Nat to order. On hill top the bevy pitched, and Nat got there first and pointed in some briars where birds had struck and run down in a brushy hollow near a fence. A moment later, Whitford, who was in the hollow below, sent Gladstone up. On the can, Gladstone, who had been running, he had passed between the briars and the fence some fifteen yards when suddenly he whirled and came to a dropping point, with his head turned round toward the fence, and there he pointed like a rock, beyond question one of the finest points we ever saw or ever expect to see. The birds were moved along the fence in the brush thirty yards away. In a hollow filled up with briars, through which led a narrow path, Gladstone winded and pointed, went on and beat out the opposite hill side, returning in same path pointed and backed. The bevy flushed very wild and topped the hill. On hill top in bunch of briars Nat suddenly pointed, and Gladstone, who was a few feet back to one side, the next moment pointed a different bird. Three birds were moved, a brace in front of Nat and a single bird by Gladstone. Whitford shot and missed; Nat dropped to wing, and Gladstone to order. It was then asserted that Gladstone had been called off point a few minutes before in some place where Whitford supposed to have been the place from where the bevy jumped. All this was a mistake, as we saw the full credit for an excellent find and great staunchness. Both dogs were scored a point by the judges, but Nat certainly had the best of it. Further on in a bushy hollow Gladstone pointed, and Nat, twenty feet behind, backed splendidly. A bird was moved, and Whitford's wing broke it. On being sent to retrieve Gladstone passed the cripple several times, failing to locate it. Nat on being ordered to retrieve crawled up the steep bank and returned at once with the bird alive, an excellent piece of work. Over the bank Gladstone pointed and Nat came up and backed splendidly. A bird was moved, but not shot at. The dead bird was thrown into the bush and a gun discharged and Gladstone retrieved properly. The brace was ordered up at 11:10 a. m., after being down five minutes under the hour, with Gladstone the winner. There is no doubt that Nat three times during the heat showed either Gladstone or his handler the presence of the birds first, and he was carefully reading Gladstone's handler would boldly circle him the first time. It was a very creditable performance for little Nat, who found backed and retrieved in much better form, but though he has a clipping pace for so small a dog he was out-styled and out-paced from the start, but in our opinion Nat won the heat, as it was a race between dogs not handlers.

Iron Duke against Isabella.

SECOND BRACE.—Second Opportunity.—Mr. Bassford's Iron Duke and Isabella, handled by Mr. Tallman, were again given a chance. The brace was cast off at 11:10 a. m., in the scrub oaks on the same bevy. Isabella potted and Duke half pointed, went on and flushed bird. Bassford shot and Duke failed to drop to shot. After being down quarter of an hour, Iron Duke was given the heat.

Snuat against Belle.

THIRTEENTH BRACE.—Second Opportunity.—Mr. Earle's Snuat and Stanley's Belle had their second try at 11:40 a. m. The brace was cast off in the corn field. A bevy was flushed wild in the scrub oaks and not followed. A long range of brush and hilly country was drawn blank, and it was not until the extreme western side of the Island was reached that a feather was moved. Snuat then pointed a bevy in a briar patch near a salt marsh. Belle circling around the cover came up, and back to back, and shared point. A large bevy was flushed, and the birds shot down. Belle broke shot and Snuat retrieved nicely and won the heat. As it was not 12:40 p. m. a move was made to the house for luncheon and a rest taken until 1:10 p. m.

Maida against Grouse Dale.

THIRTEENTH BRACE.—Dr. Spier's black, white and tan setter bitch Maida, handled by E. H. Haight and Mr. Goodwin's Grouse Dale, by W. Tallman. Resuming where bevy had been flushed before luncheon. Both dogs showed good pace and ranging powers. Grouse Dale false pointed, and Maida backed to order. On edge of impenetrable briar thicket Maida pointed and birds ran, while waiting for Grouse Dale to be brought up. The birds were driven back and roared off to one side. The birds could not be seen. On hill-top in brush both dogs pinned a bird between them. Maida shot and Maida broke shot and chased very badly, which threw the heat to Grouse Dale after being down forty minutes.

SECOND SERIES.

After against Dashing Monarch.

FIRST BRACE.—Mr. Lincoln's orange Belton setter dog Afton, who had a bye, a well-known winner on the bench, handled by Mr. Hammond, and Dashing Monarch, by Mr. Martin, were turned off at two o'clock. Monarch found bevy on edge of brush above the stubble field and pointed in grand form very staunchly. Afton backed finely. Martin shot and killed. Both dogs dropped, and Monarch retrieved perfectly. The bevy split, part of the birds sailing into the briar range where most of the birds had dropped to for shelter. Afton on backwater stubble half pointed and went on. Afton quartered finely and showed up as a wild ranger. Monarch, however, took the lead and in scrub-oaks along the shore pointed, and Afton backed. A brace of birds were flushed and the heat given to Monarch, after running half an hour.

Iron Duke against Spy.

SECOND BRACE.—Iron Duke handled by owner, and Spy by O. B. Edwards, were cast off in same place at 2:30 p. m. The bevy was flushed while waiting for dogs, which scattered in the long sedge grass. Iron Duke flushed a single bird, and a second and a third. Spy flushed a bird in brush, and Iron Duke secured a point in the grass. Spy bounced around Iron Duke failing to back, and the bird was flushed and Bassford missed. Iron Duke pointed staunchly, and Spy backed to back. This gave Iron Duke the heat, after being down fifteen minutes.

Sensation against Croxteth.

THIRD BRACE.—Sensation and Croxteth came together being handled by Hammond and Thurtle. There was considerable private betting on the result of this heat and great interest felt by all present. Sensation led off with a flush of a single bird, going down wind, and chased. He then turned into the brush and pointed; Croxteth came up and pointed behind, also having the scent. The bird was moved and hard hit and Sensation partly retrieved, biting bird badly. Along the fence by the backwater field Sensation again showed his excellent nose by pointing in the ditch with his head level with the field beyond. Croxteth came up and backed and went on past Sensation, failing to catch the scent. Hammond killed and the bird was not recovered, although both dogs had a chance to retrieve. Sensation false pointed and Croxteth backed. Croxteth pointed and Sensation coming up behind, fifteen yards away, caught scent and pointed, not seeing Croxteth. Thurtle killed and Croxteth retrieved excellently. Along the fence Sensation dropped suddenly to a single bird on a dropping point, with his head turned downwards. He was firm as a rock. Croxteth came up, backed, pointed over him, became unsteady, went in and flushed brace, thus ruining his chance to be placed. Sensation continued to hold his point and, being ordered on, caught a winged bird he had directly under his nose. The heat was given to Sensation after lasting twenty-five minutes. It was evident that Croxteth's nose was off from the start.

Lass o' Gowrie against Fred.

FOURTH BRACE.—Lass o' Gowrie, handled by Wannaker, and Fred by Height. In hollow Fred made a grand point and Lass backed; single bird was moved. Lass made dropping point, and on being sent on the bird was flushed ahead of her. Fred false pointed in brush heap and Lass backed. Lass was then awarded the heat after being down half an hour.

Bessie against St. Elmo.

FIFTH BRACE.—Bessie, handled by Predmore, and St. Elmo by Cooper, were ordered down in stubble field. Bessie sailed off, showing a lively pace and outspending her competitor. Upon reaching the far side the brace was ordered up for the day, as it was already dark, and the party was soon steaming to New Suffolk.

SATURDAY, DECEMBER 4.

The morning was one of the most perfect ever seen for the season. The wind had died out and the warm sun shone brightly, without a cloud in the sky. Later on a slight breeze from the N. W. stirred the tops of the grass and enabled the dogs to do some fine work in the exposed portion of the island.

Bessie against St. Elmo.

FIFTH BRACE.—Continued.—Shortly after nine o'clock Bessie and St. Elmo were put down over grass valley at the south side of the island. Bessie struck scent and moved down wind, worked around and flushed a good sized strong flying bevy, which skirted the valley and towered over the brush on the crown of the hill. Bessie upon going down wind in cover along the shore, had several birds flush very wild by the noise in the dry leaves, St. Elmo being away behind. Bessie pointed staunchly and several birds were moved. St. Elmo false pointed along bank and Bessie failed to back. A move was made across the opening to where birds had been marked. Here Bessie pinned a bird in sedge field form, being very staunch. St. Elmo came up and backed for a second, crowded in on the bitch and flushed and chased badly, which ended his chances in the race. Bessie won handsomely after running twenty minutes. No one who had seen the superb work of the dog on the first day would have imagined that it was possible for him to show such unsteady work. Mr. Cooper was certainly greatly astonished as he had handled St. Elmo with full confidence. It shows that dogs, like white men, are at times "a mighty unsartin."

La Guy against Snuat.

SIXTH BRACE.—La Guy, handled by Wannaker, and Snuat by Aldrich were cast off along the south-east shore, both dogs winded, and a single bird was moved. Fred went on both dogs roared, and near South Point one of the judges flushed the bevy. In sedge grass Snuat pointed and La Guy backed, a gun was shot at each of the three birds that moved. On extreme point La Guy pointed single bird and Snuat flushed. When this decision was rendered it occurred to Aldrich to take the change out of the little bitch. La Guy scored a false point when he really had birds running in front of him, and Snuat failed to back. She then passed two birds on the sandy beach, and crawling up the bank picked up the bird La Guy had been roading, left the trail and pointed fresh bird, while La Guy was kept at charge. The heat was given to Snuat after running forty minutes, which decision we consider a premature one, to say the least, as La Guy had shown the best work.

Gladstone against Grouse Dale.

SEVENTH BRACE.—Gladstone, handled by Whitford, and Grouse Dale, by Tallman, were put down on same range of sand hills along west shore of island. Grouse Dale troubled the scorers with a flush along the beach. In briars in open, Grouse Dale pointed and Gladstone backed; a brace was flushed, Tallman killing. Grouse Dale broke shot badly, retrieving when ordered very cleanly. Birds were passed along

the beach. In briar hollow Gladstone half painted, Grouse Dale pointed brace, and judges in going to him moved bevy to windward of where Gladstone was roading to. Gladstone false pointed and Grouse Dale made a capital point, Gladstone backing grandly. Scent bird moved and Grouse Dale dropped quickly to wing. Grouse Dale again pointed bird in thick underbrush, Gladstone again backing. At shot Grouse Dale again broke in. This unsteadiness on his part was what was beating him, for he was picking up his birds in grand style. By a little pond Grouse Dale flushed a single bird. Gladstone in brush pointed; bird shot at and missed. Gladstone pointed in same place and bird was killed. Gladstone sent to retrieve, located fairly and returned quickly with bird. Gladstone won the heat, after brace had been down forty minutes.

#### THIRD SERIES.

##### *Dashing Monarch against Iron Duke.*

FIRST BRACE.—Dashing Monarch and Iron Duke. Both dogs flushed. Monarch pointed in dropping position and Iron Duke failed to back. On top of ridge Duke flushed and Monarch was awarded the heat, after being down forty minutes.

##### *Lass o' Gowrie against Sensation.*

SECOND BRACE.—Lass o' Gowrie and Sensation put down on same range along the northeast shore. Lass got quickly away and false pointed badly. Sensation backed in form. It was evident Lass was far from being herself. A long range was drawn blank, the birds, from having been disturbed so much, hid away in the brush and dense briar thickets. Sensation pointed staunchly in hollow and a small lot of scattered birds flushed wild. In a briar patch Sensation false pointed and Lass dropped to back. The judge, recognizing that Sensation backed, as the birds were not moved, Lass was scored a false point. Sensation winded and howled through the thick bull-briars and pointed. Hammond was ordered to take him off point and Sensation was given the heat. This Wannaker stated was done while Lass was pointing, and being dissatisfied with the judge's decision he left the ground.

##### *Smut against Bessie.*

THIRD BRACE.—Smut and Bessie were cast off in the scrub oak belt along the beach. Bessie pointed and Smut passed her on point and flushed bevy. Both dogs, however, were awarded a point. Smut pointed and Bessie backed, but was given a point. Along the shore Smut pointed and Bessie backed to order. The judges, recognizing that Bessie was handicapped by having an inexperienced handler, allowed the heat to run longer than it otherwise would have done. Smut won after brace had been down just half an hour. A half hour was taken for luncheon and a very acceptable rest.

#### FOURTH SERIES.

##### *Gladstone against Dashing Monarch.*

FIRST BRACE.—Gladstone and Dashing Monarch were put down in briar range, and a bevy which was flushed by spectators made a long flight and was marked down in brushy ravine along shore. There Monarch secured a capital point on hill side and Gladstone backed. The bird was flushed and killed by one of the judges and Monarch broke shot, but checked himself after going a few steps. He then retrieved splendidly. Behind brush, where we could not see, a bird was flushed, both dogs being there. Monarch was found pointing staunchly, and we subsequently learned that Gladstone had circled around him and had made the flush. Gladstone came up and backed and Martin this time shot and killed. Monarch dropped to shot, showing the necessity of the handlers doing all the shooting. Gladstone was sent to retrieve, and the bird turned out to be a winged one. He then pointed dead, and the bird fluttered up again, and he flushed a fresh bird and chased, which was excusable under the circumstances. Gladstone then plunged into the briars and retrieved the winged bird alive. It was a grand piece of work, but he should not have been subjected to an ordeal that is apt to muddle any dog. Gladstone pointed a bevy very finely, and after being down three-quarters of an hour the heat was given to him.

##### *Sensation against Smut.*

SECOND BRACE.—Sensation and Smut were started in briar lot, along the shore in scrub-oak belt. Smut pointed and Sensation backed indifferently, three birds were moved, Smut turned to the left and after going six yards pointed bevy. Sensation failed to back and shared point alongside. The birds were flushed and both handler shot and killed, but the birds were not ordered to be retrieved. Smut again picked up a bevy in brush and Sensation backed her. In picked up a bevy on shore Smut roaded where birds had been and Sensation followed suit. Across the fence in the stubble edge Sensation came to an excellent point and Smut backed; a brace of birds were flushed and one killed, which Sensation retrieved indifferently, biting the bird. The heat was awarded to Sensation after the brace had been down twenty-five minutes. This decision caused great dissatisfaction, and the owners of Smut and Nat, who were present and had seen the running, withdrew their dogs from the trials. There is but one opinion in our mind, and that is that little Smut had the best of it from the start.

#### FIFTH SERIES.

##### *Sensation against Gladstone.*

Sensation and Gladstone, at 2:40 P. M., met at last in first place. Gladstone flushed a bird and Whitford rang in a shot. Sensation pointed and single bird was flushed. Gladstone flushed a single bird; he then, and the fence, along shore dogs were evidently off and Sensation was plainly showing his overwork. He was tired and used up. Gladstone again flushed a bird and it seemed that the retrieving of the winged bird in his heat with Dashing Monarch had unsteadied him. The brace was then taken beyond the house to the west, while a lot of imported birds were planted along the shore in the grass. The dogs were then swung around to the leeward, but both failed to make birds out on being brought to the spot. Just at night Sensation winded a bird in a weary way, and before he could establish his point, Whitford sent Gladstone down on the beach, where he secured a magnificent point. A consultation among the judges was held and the decision came up from the beach that Gladstone had won, after being down fifty minutes. Reviewing the heat and number of flushes made by Gladstone, we consider that the old pointer showed the best nose and work, and should have been the winner.

#### SIXTH SERIES.

##### *Sensation against Dashing Monarch.*

In the moonlight Sensation and Dashing Monarch were run for second place on the same birds. Monarch pointed a sin-

gle bird and Sensation backed; at shot both dogs showed unsteadiness. Monarch pointed another single bird and Sensation again backed. Thus Monarch landed the second prize with ease and the judges awarded Sensation third place.

A discussion then ensued about the interpretation of the club rules, and it was found that according to their absurd wording (and, a dog that had not won a heat, was the fourth winner. The following is a summary of the heats as they were run in series and the list of winners:

#### SUMMARY OF THE RUNNING OF ALL-AGED STAKES.

##### FIRST SERIES.

Dashing Monarch	beat	Glen.
Iron Duke	"	Isabella.
Spy	"	Ray.
Croxteth	"	Trim.
Sensation	"	Lizzie Lee.
Lass o' Gowrie	"	Peep o' Day.
Fred	"	Lord Dufferin.
Bessie	"	Kaleigh.
St. Elmo	"	Warwick.
La Guy	"	Rush.
Smut	"	Belle.
Gladstone	"	Nat.
Grouse Dale	"	Malda.

Afton a bye.

##### SECOND SERIES.

Dashing Monarch	beat	Afton.
Iron Duke	"	Spy.
Sensation	"	Croxteth.
Lass o' Gowrie	"	Fred.
Bessie	"	St. Elmo.
Smut	"	La Guy.
Gladstone	"	Grouse Dale.

##### THIRD SERIES.

Dashing Monarch	beat	Iron Duke.
Sensation	"	Lass o' Gowrie.
Smut	"	Bessie.
Gladstone	"	a bye.

##### FOURTH SERIES.

Gladstone	beat	Dashing Monarch.
Sensation	"	Smut.

##### FIFTH SERIES.

Gladstone	beat	Sensation.
-----------	------	------------

First prize, \$200, and special prize, Fox gun, to Gladstone.

##### SIXTH SERIES.

Dashing Monarch	beat	Sensation.
-----------------	------	------------

Second prize, \$100, to Dashing Monarch, judges awarding third prize, \$50, to Sensation; also winner special prize, silver cup, for best hunting dog in all stakes. Fourth prize, \$25, to Glen, under the rules being the best dog, in their opinion, beaten by second-prize winner.

A PLUCKY CHALLENGE.—Mr. Horace S. Bloodgood, of Providence, R. I., has forwarded a challenge to the owners of Gladstone and Sensation, offering to run Nat and Smut either in braces or singly on Robin's Island against those two dogs, a two days' match for \$1,000, each party to select a judge and they to select a referee.

#### THE CARE OF DOGS.

##### CHAPTER III.

THE sickening odor which greets our entrance at most of the prominent kennels is due not so much to the unbecoming dresser's portion as to the unsuccessful effort or total neglect to remove all traces of impurity from the floors and lower portion of walls and on benches. Dusting floors with sifted road dust to the depth of one-sixteenth of an inch and cleaning out for a fresh supply each day will keep them disinfected; but the parts most needing attention are the walls and sides of sleeping benches. After removing all bedding and dust from floor the sides should be scrubbed with a broom and rinsed by dashing clean water over them. A rigid adhering to this practice will enable the kennelman to dispense with carbolic acid and other troublesome disinfectants. Carbolic acid is good in its place—especially in the hospital quarters where there are cases of a loathsome nature and where it is not convenient or advisable to freely use water upon the boards; but for general use in the kennel I cannot endorse it. That an excessive quantity exposed is injurious to the olfactory nerves (though the injury be but temporary), few who have studied the subject will hesitate to assert. Knowing that a theory which cannot be brought down to practice remains but a theory, let us say that it does not directly affect those most sensitive nerves; let us only say that it interferes with their natural power of scenting game and let us prove it beyond a possibility of a doubt by a very simple practical test, which any person can make without going into a scientific discussion.

To prove that hair—not only the coat of the dog, but human hair—will absorb and retain a great amount of scent, let a person remain for half an hour in a kitchen where fish, oysters or onions are frying or fragment cabbage boiling; let them walk in the open air until the clothing is free from all taint, then apply your nostrils to the hair of their whiskers or head (if no hat was worn in kitchen) and tell them what they saw cooking. You can do it, provided your "dose aid stobbed up" with a cold.

Now, to test the scenting power interfered with by carbolic acid, or the scent of it, upon the hair, against the same power under ordinary circumstances. Take small tin or wood boxes and label them on the bottoms as they are filled with a very faintly-scented mixture of flour and one of the following aromatics for each box: Cloves, allspice, cinnamon, ginger, lemon peel, orange peel. Dilute each until the person upon whom the test is being made can only detect and distinguish the aroma by the greatest possible exercise of his olfactory, each box being held four inches from the tip of the nose. Now moisten his mustache and the hair of his head with a very weak solution of carbolic acid. Or let him sleep during the night in a room corresponding with the kennel disinfected by carbolic acid; let him walk around the room in which the test is made twice before placing the boxes successively at the aforesaid distance from tip of nose, and ask him to distinguish lemon from orange, ginger from cinnamon, or cloves from allspice, and note the difference in the time required to do so, distinguish, if he succeeds at all.

In applying this experiment to the dog we find no difficulty. His coat is all hair, it absorbs and retains an immense amount of

scent when kept over night in a closed kennel impregnated with a powerful odor. This scent is retained for a considerable length of time, even in open air. His power of scent is keen and delicate to a degree not exceeded, we believe, by any other animal. The scent of the bird is sometimes strong, often faint, and it must be detected at a considerable distance to be of use to the dog and master. Now is it not reasonable to suppose that this powerful scent carried in and thrown from the coat of the dog will interfere materially with his detecting and locating the scent of the bird?

Beside all this, I have frequently seen dogs made deathly sick by the odor of this most excellent disinfectant. So much for carbolic acid.

There are times, such as rainy days and freezing ones, when scrubbing and wet boards are out of the question; for a wet kennel on a rainy day when the dogs are or should be indoors, is quite as unwholesome, breeding colds, rheumatisms, and often distemper. When scrubbing must be dispensed with, care should be taken to take up all droppings, and on the first bright, warm day give the neglected places a thorough scrubbing and a thin coat of whitewash early in the morning, so as to allow it to dry perfectly before night. The beds should be cleared of all droppings, vomit or litter, and the straw turned over to air, if not renewed. Don't sweep the pile just outside the door and leave it; but remove it to the manure pile, and keep your yards clean.

To clean kennels and yards I owe my success as a kennelman. No case of mange or distemper has ever originated at our kennels, nor (as I remarked before) have we lost a single case from any disease this year. I boldly assert, without fear of contradiction, that one half of all diseases to which canine flesh is subjected are the result of filthy kennels, improper food and mismanagement.

It would make your heart sad to visit some of the noted kennels of the East and the West and look upon the dogs crowded together in a filthy den, the stench of which is almost unbearable, and chained with a four feet chain to a diminutive square bench, upon which they may manage to curl, but cannot stretch out their cramped and weary limbs. Their eager, pleading eyes beg earnestly for air and freedom.

Or look at the score of high strung ambitious champions of the bench and club confined in the narrow, cramped, high-fenced close pens, more fit for slaughter-house bullock pens than for the permanent quarters of sporting dogs.

Why do sportsmen and breeders persist in ignoring the fact that the respective natures and provinces of the dog and hawk are totally different and widely separated? Might not that account for some of the porky performance shown at our field trials by dogs from which we looked for better things?

Dogs will dig when they get the chance. Let them dig, the exercise is strengthening and the excitement a wholesome stimulant and the fresh mold an excellent disinfectant. If they are in yards drive stakes along the bottoms of the fences to prevent digging through; if on exercise wires drive stakes around posts to prevent becoming loose, and carefully block or prop up any house or small kennel which they may undermine, so as to prevent its falling upon and injuring them.

It is no use to attempt filling up the holes permanently before the ground begins to freeze. The best you can do in warm weather is to move wires and houses to new ground—a decided advantage under all circumstances. Where the sides of grounds will not permit a change or removal, plow or break with a cultivator about one third of the ground at a time each month until the whole is turned over, then begin at the first part and repeat the process. It is worth the labor expended.

EVERETT VON CELIN.

DEER HOUNDS AND THEIR TRAINING.—In regard to the training of deerhounds, I have often inclined to the belief that like poets, they are born, not made, for I have seen hounds which had been trained all their lives to run foxes, in the case of Stagers, never having seen nor smelled deer tracks, when put on the latter task with alacrity and delight to the noble game, and ever after pass a fox track with silent contempt, and a good judge can usually select those which are likely to do this thing. It is necessary that a first-rate deerhound should possess in a high degree courage, endurance, speed and intelligence; their heads should be wide in proportion to their length, ears well rounded and not over-long, muzzle broad, and lips not too pendulous; chest deep and broad, and forelegs well set apart in case of leaping; and it should be repeated till the deer is caught, if possible. There is a vast difference in the manner in which deer hounds run their game. Some which will never leave the track, while in dry ground, will return the instant the deer takes water, even if the stream is less than a foot in depth; others will cross streams which are not beyond their depth, but decline to swim, and will be at fault if the game courses up or down the stream; others again, will, upon the game taking water, swim across and follow up and down the bank for miles, then recross and do the same on the other bank, and develop more than human sagacity in searching out the trail. These are the deer hounds *par excellence*, and readily command from seventy-five to one hundred and fifty dollars. When a hound leaves a track, for any reason except inability to follow it farther, he is worthless, and should be discarded.

PENROSE.

WESTMINSTER KENNEL CLUB'S OFFICERS FOR 1880.—The following is the list of officers to W. K. C. for 1880: Genl. A. S. Webb, President; C. DuBois Wagstaff, Vice-President; Robert C. Cornell, Secretary; Edmund C. Stanton, Treasurer. Board of Governors.—Alex. S. Webb, Wm. F. Morgan, Robert C. Cornell, C. DuBois Wagstaff, Elliot Smith, George De F. Grant, Walter S. Webb, Lewis B. Wrigley, Wm. A. Haines, E. C. Stanton, Lewis K. Willard, H. C. Mortimer, F. O. Deane, and Wm. H. Lanza. The club is in a most flourishing condition. A number of important improvements have been made on club grounds at Babylon. As the club has no vacancies, it is proposed to increase the members to 100.

"REX"—*Ashfield, Mass., Nov. 26.*—Noticing Mr. Lathrop's communication, I would merely suggest that this is a very large world, and that there are several dogs in it, and that it is entirely possible to have even a "dog man" occasionally of pedigree or blood a little mixed, and yet not be generally

considered as particularly ignorant or perverted in consequence. RUFED GROUSE.

PENNSYLVANIA BENCH SHOW.—Mr. Chas. Lincoln will reach Pittsburg, Pa., this week and enter into his duties as Superintendent on the 10th inst. Major J. M. Taylor, of Lexington, Ky., has been selected as one of the judges.

—Mr. J. J. Snellenburg's address is at New Brighton, Pa., not New Castle, as published in account of Vincennes trials.

KENNEL NOTES.

NAMES LAINED.

*Harold*.—Mr. Geo. Schofield, of Toronto, Canada, claims the name Harold for his liver and white cocker dog puppy by Flusher out of *Fanny*, purchased from M. P. McKoon.

*Halidee*.—Mr. Geo. Schofield, of Toronto, Canada, claims the name Halidee for his liver and white cocker bitch puppy by Ned II. out of *Daisy*.

*Tip*.—Mr. D. B. Eley, of Greensboro, Indiana, claim the name Tip for his black, white and tan setter dog puppy out of *Bessie Lee* by imported *Pan*.

*Amel*.—Mr. Charles W. Stewart, of Ft. Madison, Iowa, claims the name Amel for his liver and white cocker dog puppy, purchased from Mr. S. A. Kay, of St. Louis, Mo., by Dan out of his *Flora*.

*Grace II*.—Mr. E. W. Saporta, of New York, claims the name of Grace II for his pointer bitch, 11 months old (Sensation-White's *Grace*) litter sister to Gregory's *Belle*, winner of Nursery stakes at Holm's Island, 1880.

*Dien*.—L. R. Landy, of South Framingham, Mass., claims the name Dien for his red Irish setter bitch, whelped December 11, 1879, by Champion Barkley out of Rockwood's *Ad*, who by Elcho out of Fetter's *Elcho*.

*Sard*.—Mr. E. L. Seelye claims the name *Sard* for his red Irish dog puppy, whelped August 31, 1880, out of W. N. Callender's *Queen Bess* by Roly O'More.

*Silent Partner*.—Dr. A. McCollum, of this city, claims the name *Silent Partner* for his liver and white English pointer spaniel dog whelped at Peckskill, N. Y., October 17, 1880, bred by Dr. Wygant out of his *Fly* by his *Maria*. *Maria*, 1st prize N. Y. C., Class 48, No. 756; *Fly* music out of Whitman's *Fannie* by his *Carlo*; *Carlo* imported from 1st prize St. Louis, 1879; *Fly*, McKoon's *Flora* and name; *Flora* by Bestor's imported *Juliette* and *Ship*, Sen by Bestor's *Koon's Nellie* and *Captain*; *Nellie* by *Puss* and *Fly*, both imported; *Captain* by Bestor's imported *Romeo* and *Juliette*.

*Trump*.—Dr. H. B. Wygant, Peckskill, N. Y., claims the name *Trump* for liver and white cocker spaniel dog puppy, whelped Oct. 17, 1880, out of his *Fly* by *Maria*.

In your issue of 2d inst., Mr. Line F. Kellogg, of Princeton, Kan., claims the name *Lady Elcho*, for a bitch mentioned in the same issue as sold to Mr. Snodgrass, of Ottawa, Kan. I ask that the animal may be given another name, as I claimed the name *Lady Elcho* for my horse-Elcho bitch, April 8, 1880.

C. E. WING, M. D.

WHILPS.

*Jessie*.—Mr. E. A. Herzberg's *Jessie*, dam out of Champion St. Elmo, whelped December 3, 1880, two dogs and two bitches to his pure Laverack Aldershot.

*Pet*.—Mr. E. F. Mercillotti's celebrated first prize English pug bitch *Pet* has whelped five dogs and one bitch.

*Mr. E. B. Bassford's* Newfoundland bitch has presented her owner with a litter of ten puppies, seven dogs and three bitches, by the same owner's *Lion*. All the pups are black without a white hair.

*Tipsey*.—Mr. C. W. Bassford's (White Plains, N. Y.), red Irish setter bitch *Tipsey*, whelped Dec. 4, 1880, nine puppies, four dogs and five gyss, all red by Elcho III. A brace of dogs and gyss will be disposed of.

DEATHS.

*Dayton*.—Dr. J. J. Jennelle's red Irish setter bitch *Dayton* (Bob-Duck) died Thanksgiving night from distemper. She was in whelp to Elcho II.

PURCHASES.

*Settlers*.—Mr. E. F. Mercillotti has purchased from Mr. William Hall, of New York City, a brace of pure black English setter dogs of excellent strain and careful breeding.

*Curlew*.—Mr. J. O. O'Leary, of Hornellsville, N. Y., has purchased from A. A. Sewell the liver and white cocker bitch *Curlew* (dark-Fanny Little sister of *Sailor Boy* (first at Rochester) and of Little Buttercup).

*Bernhardt*.—Mr. J. O. O'Leary, of Hornellsville, N. Y., has purchased of Joseph DeBarrie the liver colored bitch *Bernhardt* and six pups by *Elcho*.

*Princess*.—Mr. J. O. O'Leary, of Hornellsville, N. Y., has purchased of Frank Ammon the black and white ticked bitch *Princess* (Widair-Dolly).

*Siguna*.—Mr. J. O. O'Leary has purchased of John Prunell the black cocker bitch *Siguna* (Widair-Foe).

BREDS.

*Unser Fritz-Waldine*.—Mr. Wm. Loeffler's dachshund bitch *Waldine*, first prize St. Louis, 1880, was bred November 21 to Dr. T. Twaddell's *Unser Fritz*, winner of Centennial medal and special prize, Philadelphia, 1876; first and special prize, Baltimore, 1877; first and special prize, Philadelphia, 1878.

*Conce*.—Dr. C. E. Wing has a fine healthy litter of seven puppies, five dogs and two bitches, out of Countess Lusen (Drake-Countess Vesta) by Mr. Ray's *Coin*. They were whelped October 20.

*Black-Dash*.—The black and tan setter Black Bess, (1,066 N. A. K. C., Stud Book, Vol. 1.) owned by Mr. James T. Walker, Troy, N. Y., was bred to same owner's *Dash* (956 N. A. K. C., Stud Book), Dec. 4, 1880.

*Rosindale-Lela*.—Dr. C. E. Wing's *Rosindale* by *Dash III*, was bred Dec. 1880, to Sumner's *Lela*.

SALES.

*Lady Thelma*.—Dr. J. J. Jennelle, of Du Quoin, Illinois, has sold his Irish setter bitch in whelp to Elcho II. to Mr. R. G. Sylvester, Carbondale, Illinois.

*Harold*.—Mr. M. P. McKoon, of Franklin, N. Y., has sold to Mr. Geo. Schofield, of Toronto, Canada, a liver and white cocker dog puppy out of *Daisy* by Ned II.

*Tip*.—Mr. D. B. Eley has sold his beautiful orange and white ferrier bitch *Tip* to Mr. John Mackey, of New York City.

*Set*.—Mr. E. F. Mercillotti has sold his Newfoundland dog *Set* to Etienne Hale, of New York City.

*Ed*.—Mr. Wm. W. Truslow, of New York, has sold a brace of pointer pups out of his imported *Nell* by Mr. Orgill's *Champion Rush* to T. Broach, of Morrisania, N. J.

*Fly-Maria*.—Dr. B. Wygant has disposed of his "Fly and Maria" litter as follows: A dog to Mr. Robertson, of Peckskill; two dogs to Dr. A. McCollum, N. Y., one of which died; one died of membranous croup. One dog he keeps, not for sale.

CURRENT DOG STORIES.

XV.

One of our citizens had the business of the time. One morning last spring his master started to come up town, and the dog wanted to accompany him, but was not allowed to do so. It was a sore disappointment to the dog, and he made great complaint. He stood on his hind legs, with his fore paws on the window, and watched his master out of sight. After a while he was let out, and

troiled about the yard for a short time, and then started off, and that was the last seen of him. It was learned that he went out on a snuff and did not come until he got to a neighbor's some miles away, where he has since remained.—*Ashblatta, O., Sentinel.*

XVI.

One of the two most prominent dogs of our day—Prince Bismarck's *Tyras* and Viscount *Hugo*—the latter has just joined the canine majority, full years of age. *"Hugo"* (the "Hug") who achieved historical immortality two years ago by collarizing the venerable Gortschakoff when the celebrated diplomatist was paying an official visit to the German chancery, still lives to dismiss troublesome deputations and terrorize impudent petitioners. But *Senat*, the great French poet's faithful friend and constant companion during many years of exile, has succumbed to old age at Hanterville House, and received interment in the grounds of that romantic retreat. With him was buried the silver collar presented to him somewhat late in life by his master, whose senatorial experiences of the docility toward royalty exhibited by the first French legislative chamber in pre-Napoleonic days probably suggested to him as admirably appropriate to "the most obedient of dogs" the name he bestowed upon his favorite. Upon this collar was engraved the following dictum expressly composed for *Senat* by the author of "Un Homme": "Je voudrais que un logis quelcon que me ramenant. Mon chat? Chien. Mon maître? Hugo. Mon nom? Senat." For the benefit of our readers, we translate: "I wish some one would take me home. My profession? Dog. My master? Hugo. My name? Senat."—*London Telegraph.*

XVII.

The family of James Herrington, of Stapleton, S. I., while seated at the supper table on Tuesday evening, had their attention attracted by a squealing noise in the kitchen closet. On making an investigation, Mr. Herrington discovered a rat with one of its legs dangled in the air, and its face close to the head of the cat. The rat rushed out into the yard, carrying both the rat and the cat with it. The cat at once attacked the rat, but the latter, notwithstanding its crippled condition, showed fight, and succeeded in fastening its claws on the rat's back. The rat then rushed out into the yard, carrying both the rat and the cat with it. There the rat, still held prisoner, was killed by the cat.—*Sun.* There was a dog in this story, but he got left.

Here is an authenticated instance of practical joking fitly reproached: A friend of mine has a rough-haired collie, wise and exquisitely modelled. One evening a lady of the household, with whom he was a special favorite, stooped quietly, as he lay with his head on the rug, and placing her face close to his head, said sharply with a slight shout in one of his ears. Ticked and startled, he jumped up and moved off, seemingly somewhat offended. In the course of the evening the lady happened to be reclining in an easy-chair, when the collie, as if by accident, or as if the inmates to rise, and making a circuit, to move stealthily toward the chair, put his fore paws on one of the arms, and placing his nose close to the lady's ear, to give a sharp bark and instantly bound off.—*Spectator.*

THE CHASE: ITS HISTORY AND LAWS.

(Continued from page 310.)

THE paintings on the Egyptian tombs and the bass-reliefs of Nineveh and Babylon, which, after the long lapse of ages, have in recent times been brought to light, and the Jewish history, which, though we may not be certain as to the precise date at which it was composed, still undoubtedly carries us back into a remote antiquity, have afforded us some insight into the habits of these nations as regards the sports of the field. It is only at a much later period that we become acquainted with the sporting habits of other nations of the ancient world. Our first knowledge of the Persians and Medes, as hunters, is derived from the Greeks, who in Asia Minor became the subjects of the Persian Empire, or, as regards Greece itself, were brought into contact with the Persian court or rulers after the Persian wars. But a long interval separates the Egyptian or Assyrian monuments from the writings of Herodotus or Xenophon, and we are therefore unable to say at how early a period the passionate love of the chase, which in the days of these writers had acquired such large dimensions, it had become a national characteristic of the Persians, had its first commencement. In its existence, as a national institution materially influencing the national character, ancient writers, both Greek and Roman, are agreed.

The hunting parks, of the Persians and Medes were, if we may trust the Greek writers, on a still grander scale than those of the Assyrians. Curtius, the historian of Alexander's campaigns, who of course could personally have known nothing of the matter, but is said to have drawn his materials from early and reliable sources, speaking of these inclosed parks, tells us that the conqueror having entered with his army into one of these parks, in which the game had not been disturbed for a long time, a slaughter of four thousand head ensued, after which the king feasted the whole army in the park. Of course the story would not have been complete if the narrator had not made his hero slay a lion with his own hand. He accordingly does so, and represents the king as disdainfully rejecting the assistance of Lysimachus, one of his officers, who, as he was engaged with the lion, and peremptorily ordering him to retire. Out of this incident, adds Curtius, arose the story of Alexander having ordered Lysimachus to be thrown into a pit with a lion, whom, however, Lysimachus succeeded in killing. More reliable is the statement of Xenophon, as showing the extent of these enclosures, when he tells us that the whole of the Greek army of Cyrus, then amounting to 13,000 men, and in which Xenophon was himself serving, was reviewed in one of them. On another occasion the Greeks received private information that a large army of the enemy was stationed in a neighboring park. As an instance of the extensive scale on which the royal hunting establishments were organized is to be found in the statement of Herodotus, that the tax imposed on four large Mesopotamian villages was that of maintaining the royal hounds in the Babylonian satrapy, in consideration of which these villages were exempted from all other tribute.

We are informed by the Greeks that the Persian youth, in the earlier period of the monarchy, were regularly trained to the chase, as well as to horsemanship and other martial exercises, as the means of developing their physical powers and preparing them for the hardships and fatigues of war and the business of arms. At the latter period at which Xenophon wrote, these habits are said by him to have fallen into desuetude—to which, as one of its causes, in his enthusiastic love of the chase, he goes so far as to ascribe the decline of the Persian power; the more rational view of the matter perhaps being that the downfall of the nation and its easy subjection by the Macedonian conqueror were to be ascribed, not to the disuse of hunting and other active exercises, but to the growing effeminacy and luxurious habits which led, among other evils, to the abandonment of the chase, and the other many and warlike pursuits of their fathers.

Of the other Eastern nations of the period we are treating of we know little or nothing, though at a later period we read of some of them—for instance, the Parthians—as being passionately devoted to hunting. All we are acquainted with as regards India in this respect is that the Indian hounds

were acknowledged to be the finest then known, from which we may infer that the chase had been energetically cultivated in that country. It may be assumed that the other nations of the East had not been behind their Assyrian, Egyptian, or Persian brethren in following what seems to be the common, and as it were instinctive, propensity of man, more especially as in these countries wild animals were abundant, and the facilities for hunting great.

The mention of Greek historians brings us to the Greeks themselves. But here the beginning of history is lost in the obscurity and mist of fable. Even Xenophon, in his treatise on hunting, has nothing better to tell us of its origin than the legendary story that hunting and the training of hounds were the invention of Apollo and Artemis, who imparted the discovery to Chiron, who in his turn transmitted the long list of heroes whom the writer enumerates. But, as has already been observed, the existence of the legend itself shows how deep was the sense of the benefit resulting to mankind from the services of the hunter in the destruction of wild beasts. It shows, too, that the Greeks were from the earliest times a nation of hunters. Nor could it well be otherwise. A country intersected in all directions by mountain ranges, covered with forests, would be prolific of wild animals, of which an active and energetic population would not fail to take advantage. When we come to the historical times, we are told an idle story, for which there seems to be no sufficient authority, of Solon having forbidden hunting to the Athenians. It is certain that, if any such law was ever pronounced, it never was enforced or obeyed. In Sparta hunting is said to have been enjoined to the young and active by public authority, and hounds were maintained at the public expense. Hounds of the Spartan breed were much esteemed, as were also those of Crete, which probably differed but little, if at all, from those of Sparta. We have to thank the recorded excellence of the Spartan hounds for the exciting and vivid description of a pack of hounds which Shakespeare, who had probably been reading some old work on hunting, gives us in the *Midsummer Night's Dream*. *Illypolya* begins:

I was with Hercules and Cadmus once,  
When in a wood of Crete they bayed the bear  
With hounds of Sparta: thus did my ears  
Such gallant chiding; for besides the groves,  
The skies, the fountains, every region near  
Seemed all one mutual cry: I never heard  
So musical a discord, such sweet thunder.

To which Theocritus answers:

My hounds are bred out of the Spartan kind;  
So loved, so honored, that their heads are hung  
With ears that sweep away the morning dew;  
Crock-kneed and down-lapped like Thessalian bulls;  
Slow in pursuit, but matched in month like bells,  
Each under each, a cry more tunable  
Was never heard of, nor cheered with horn,  
In Crete, in Sparta, nor in Theosy.

Whether hounds were used by the early Greeks, for the purpose of running down the game, or only for that of finding and bringing the fiercer animals, such as lions and boars, to bay, for the purpose of their being speared by the hunter, and of driving the smaller sort, such as hares and deer, into the net, and so capturing them, appears to be doubtful. From several passages in the *Iliad*, especially the spirited description of the Calydonian boar hunt, as also from that of the boar hunt mentioned in the *Odyssey*, it is clear that the boar hunt was represented as having been wounded by the boar, by the spear of which wound he was first recognized on his return to Iliaca, it is clear that in the Homeric age hounds were used for the first of the purposes above mentioned. But in these instances no mention is made of their employment for the sole purpose of catching the hunted animal. On the other hand, in what is said in the *Odyssey* by Eumaeus, of the old hound Argos, it would seem that hounds were sometimes used for the purpose of pursuit. For Eumaeus says of Argos that no animal, if once caught sight of, it could escape from him, while at the same time his power of scent was perfect.

Be this as it may, as regards the Homeric age, the use of the hound for this purpose solely was unknown in later times, as may be inferred from what Xenophon says on the subject.

It is to this accomplished Athenian, the general, the philosopher, the friend of Socrates and Plato, and at the same time a keen sportsman, that we are indebted for the earliest treatise on hunting, or of treatises on hunting, which has come down to the scholar. Banished from Athens, Xenophon settled himself at Scillon, in the neighborhood of Olympia, where, having religiously applied the fund devoted to that purpose by the rearing army, out of the money made by the sale of their prisoners, in dedicating and endowing a temple to Artemis, and appointing an annual festival in honor of the goddess, he diverted himself with hunting as well as literature, and composed this treatise known by the name of the *Cynegeticus*. It treats of three kinds of hunting—hare-hunting, stag-hunting, and boar-hunting; but the work is principally devoted to hare-hunting, which was plainly the favorite sport of the author, who evidently would not have agreed with the poet Thomson, when he says:

Poor is the triumph o'er the timid hare.

The work in question gives the fullest account of this form of hunting; but the sport is certainly not such as, according to our ideas, would be deemed sportsmanlike. It consists not in the fairly running down the hare by the hounds asisted by the skill of the huntsman—a result which, according to Xenophon, seldom occurs, and which he seems to think it *Cynegeticus*. It is in driving the hare, by means of the hounds into nets placed in various places, where, when entangled in the net, she is to be knocked on the head by an attendant stationed there for the purpose.

(To be continued.)

Weakness and sickness changed to health and strength with Hop Bitters, always.

The Rifle.

RANGE AND GALLERY.

PORTLAND, ME., Nov. 25.—There was a general day's shooting at the Fort Preble mts to-day, though the weather was not all that could have been desired, and the wind blew in such a way as to greatly bother the contestants, but nevertheless the shoot between teams from the Mechanic Blues and the Cadets resulted in a fine exhibition of marksmanship. The range was 200 yards. At 2:30 p. m. both teams faced the targets, and the Cadets won the toss. Privates Baker and Dow led off, the former opening with a "mias" and Private Dow with an "outer," closing with 60 points. Cap-

tain Davis and Sergeant Knight, for the Blues, both opened with a "centro" and closed with the same, making 72 points. The following is the score made by the teams:

Blues' Team.	
Capt. C. W. Davis.....	4 3 5 4 5 2 3-37
Sergeant Knight.....	4 3 5 4 5 2 3-37
Corporal Blomfield.....	4 3 5 4 5 2 3-37
Private Hogan.....	4 3 5 4 5 2 3-37
" Maxwell.....	4 3 5 4 5 2 3-37
" Dow.....	4 3 5 4 5 2 3-37
" Ross.....	4 3 5 4 5 2 3-37
" Russell.....	4 3 5 4 5 2 3-37
" Cowdry.....	4 3 5 4 5 2 3-37

Cadets' Team.	
Private Baker.....	3 0 3 9 5 4 4-48
" Dow.....	3 0 3 9 5 4 4-48
Capt. Winslow.....	4 4 4 3 3 4 4-48
Private Hogan.....	4 4 4 3 3 4 4-48
" Plaisid.....	4 4 4 3 3 4 4-48
" Miliken.....	4 4 4 3 3 4 4-48
" Miliken.....	4 4 4 3 3 4 4-48
Lieut. Mosely.....	3 4 0 2 3 3 0-22
Private Falls.....	3 4 0 2 3 3 0-22
" Eastman.....	3 4 0 2 3 3 0-22

On the foregoing shoot the first five shots were counted for the company badge. The Blues' badge was won by Sergt. G. A. Knight, he making 19 out of a possible 25. The Cadets' badge was won by Private F. M. Miliken with a similar score.

A shoot with the Regulars was proposed, and with a picked team from the Blues and Cadets the match proceeded with the following result:

Fort Preble Team.	
Sergt. Wilson.....	3 4 8 4-17 Corp. Tobin..... 4 2 4 4-13
Sergt. Nelson.....	0 4 0 4-12 Corp. Folsom..... 4 4 0 0-13
Sergt. Emerson.....	0 4 1 4-10 Sergt. Foss..... 4 2 4 3-14
Private Donaldson.....	4 4 4 5-23 Lieut. Best..... 3 4 3 4-13
" Allen.....	4 5 4 6-23

Picked Team.	
Capt. Davis.....	3 0 3 3-11 Private Hogan..... 3 3 4 2-16
" Winslow.....	4 4 4 3-20 " Plaisid..... 3 3 4 2-16
Sergt. Knight.....	0 3 0 3-10 " Miliken..... 4 2 4 3-11
Private Dow.....	4 4 4 3-13 " Ross..... 3 3 2 2-10
Sergt. Curtis.....	4 4 3 4-11 " Plaisid..... 3 3 4 2-16

Total..... 159

Boston.—The scribbles on the newspapers here are smitten with the desire to shoot, and have grown up to a second annual exhibition of their skill. A little over a year ago several gentlemen connected with the Boston press conceived the idea of having a rifle competition between teams representing the daily newspapers of the city. The project found favor, and a short-range match was arranged, to take place at Walnut Hill, over the range of the Massachusetts Rifle Association. The contest was open to teams from all Boston districts, but only three newspapers—the *Globe*, *Post* and *Herald*—were represented Nov. 21, 1879. An exceedingly strong and treacherous wind blowing all day long across the line of fire, and the cold being of an intensely penetrating quality, the scores were not gratifying. The *Herald* team won the match, the *Post* and *Globe* teams getting second and third places respectively. Going with the match was a series of five gold medals, one for each man on the winning team.

A month or two back, the first anniversary of the "press rifle match" having drawn near, it was proposed by certain of those who had participated in that competition that a second contest of a similar kind take place at an early date. Out of this proposition grew the match of yesterday. The various newspaper offices were communicated with in regard to the matter, and favorable responses were received to the subsequent invitations which were sent out to participate in the affair. The *Globe*, *Post*, *Traveler* and *Herald* signified their willingness to enter teams, and success was thus assured. The Massachusetts Rifle Association kindly proffered the use of its range, and, all the necessary preliminaries having been arranged, a party of about twenty-five newspaper men took a train this forenoon for Walnut Hill. Besides the competitors in the event of the day there were included in the company several "non-combatants"—"friends of the boys" and "attaches of the different newspapers, who had come out to see "the office" carry away the prizes. Arrived at Walnut Hill station, a large sleigh was found in waiting, and the contestants were taken to the range. Here every arrangement had been made for the comfort of the riflemen, the "winter shed" having been well warmed and a substantial "hunch" provided. At 10 o'clock sharp the match was called. The competition was open to teams of five men from each daily newspaper office of Boston; distance, 200 yards; rounds, 10; any rifle; off-hand shooting; the rules of the M. R. A. to govern in all things else. The prizes for the match were, for the winning team, five medals of gold and silver. When the marksmen faced the butts the wind was blowing fresh from the northwest, ranging from that point to west throughout the shooting. The sun was out bright, and the range was covered with snow. But there was very little trouble, the weather conditions on the whole not being unfavorable to the making of good scores. The following are the scores:

Boston Herald Team.	
C. B. Danforth.....	4 5 3 4 4 5 3-40
S. J. Byrne.....	4 5 3 4 4 5 3-40
T. D. Parker.....	5 3 4 4 3 0 3-23
J. R. Keenan.....	2 3 3 3 4 4 0 3-23
" J. G. Gowan.....	0 0 0 0 0 0 3 3-24-163

Boston Globe Team.	
J. F. Frost.....	4 5 4 4 4 3 4 5-40
C. Vincent.....	4 5 4 4 4 3 4 5-40
A. A. Fowler.....	4 5 4 4 4 3 4 5-40
Chas. Orr.....	4 5 4 4 4 3 4 5-40
C. G. Dupee.....	3 0 2 3 3 0 3 5-20-134

Boston Post Team.	
C. Tower.....	0 0 0 2 0 0 5 0-4-11
Ed. Stearns.....	5 4 3 0 3 0 3 5-24

MANMOUTH RIFLE GALLERY—Boston, Nov. 26.—The Excelsior Rifle Match for November, at the Mammoth Gallery, is ended with some of the finest shooting that has taken place this season. Mr. U. A. Pollard was nearly successful in getting the extra prize. The last day of the month he made an excellent 39; his second shot was a seven o'clock nipper, so close as to split the bullet. "It was a fine effort and capital holding. This placed him in the lead, winning the first prize of \$7 with 192 out of a possible 300. Mr. R. S. Gray wins the second prize of \$6 with 191, and N. W. Arnold takes the third prize of \$5 with 191, being outranked by Mr. Gray. Mr. E. F. Richardson wins the fourth prize of \$4 with 190. Mr. J. Merrill wins the fifth prize of \$2 with 188, and Mr. S. Canterbury wins the sixth prize of \$1 with 186, outranking Mr. H. Appleton, who also has 186. The match has been very popular. The gallery was well filled during the month, and the excitement at times was great. On Dec. 1 was commenced a new rifle match, with six cash prizes as follows: \$7, \$6, \$5, \$4, \$3, \$2. Also an extra prize of \$15 in gold to any one making a clean score of eight consecutive bullseyes. The conditions of the match are: Any 22 cal. rifle, three-pounds pull, position off-hand, rounds 8, possible 40, five scores to win or possible 200, the match to close on Friday evening, December 31. The following are the leading competitors during the month. The first six was the prize winners. 50 yards, rounds 8, possible 40; five scores to win or possible 200:

U. A. Pollard.....	38 39 38 39 39 39-192
R. S. Gray.....	38 38 38 39 39 39-191

Pistol Practice.—This favorite range has also been very lively during the month, and the crack of this little arm and the ringing of the little electric bell has been almost incessant. Mr. J. J. Dunne and Mr. S. Odiorne have carried off the honors during the month, although Mr. J. Miller, of New York City, has shown himself at home with this weapon. Mr. Dunne made two thirty-nines, Mr. Odiorne one thirty-nine, and Mr. Miller's two thirty-sevens were fine shooting and showed capital holding. On Dec. 1 was commenced a pistol match with five cash prizes as follows: \$5, \$3, \$2. Also an extra prize of \$5 for a clean score of eight consecutive bullseyes. Conditions of the match are: Holding the weapon at arm's length, rounds 8, possible 40, three scores to win or possible 120; distance, 50 feet. The following are some of the best scores made during the month of November: 50 feet, rounds 8, possible 40:

J. J. Dunne.....	5 5 5 5 5 5 5 5-39
" re-entry.....	5 5 5 5 5 5 5 5-39
S. Odiorne.....	5 5 5 5 5 5 5 5-39
" re-entry.....	5 5 5 5 5 5 5 5-39
J. Miller.....	4 5 4 5 4 5 4 5-37

Geo. E. RAYMOND, Manager.

BRIDGEPORT, Conn., Nov. 27.—The Bridgeport Rifle Club had a shoot at Seaside Range on Thanksgiving Day, but on account of the storm in the morning the attendance was small. Fifteen turkeys were shot off on a ring target, Mr. White and Mr. D. E. Marsh making the best scores of 55 each in the subscription match—200 yards, 5 shots, off-hand:

A. C. White.....	5 5 5 5-25 Philo M. Beers..... 5 4 4 5-22
D. E. Marsh.....	4 4 5 5-22 Isaac McCourt..... 5 4 4 5-22
Fred Barber.....	5 5 5 4-23

This will, I think, finish our shooting for this winter. R. S. B.

THE ALFORD MATCH.—Credendoor.—The twenty contests, for the twenty Remington rifles offered by Mr. A. Alfrod, closed on the 17th ult. The matches were at 200 yards, 10 shots, with any military rifle, and the winners were as follows:

July 2, 1879, Capt. J. L. Price, 7th N. Y. Sharps, 41; July 30, Sergt. T. J. Dolan, 12th N. Y. Remington, 44; Aug. 13, Lieut. H. Griffin, U. S. Eng., Springfield, 45; Aug. 23, V. J. Underwood, 7th N. Y. Remington, 41; April 14, 1880, W. M. Farrow, Peabody, 45; April 28, L. L. Pandling, 12th N. Y. Hotchkiss, 42; May 15, Fred. Alder, 7th N. Y. Sharps, 43; May 24, J. R. Grohman, Battery K, U. S. Sharps, 42; June 9, Frank H. Holt, 23d U. S. Infantry, 42; June 16, H. Cobb, Sharps, 43; July 17, Sergt. E. Demmer, 71st N. Y. Remington, 43; July 31, Lieut. G. N. Whistler, 6th U. S. Artillery, Sharps, 43; Aug. 4, Sergt. A. B. Van Heusen, 12th N. Y. Remington, 45; Aug. 25, Lieut. T. J. Clay, 10th
--

U. S. Infantry, Springfield, 43; Sept. 4, Geo. Joiner, Sharps, 44; Sept. 23, S. S. Bumsted, Springfield, 43; Oct. 9, Capt. A. M. Miller, U. S. Eng., Springfield, 41; Oct. 30, J. W. Todd, Sharps, 41; Nov. 6, H. M. Lockwood, 7th N. Y., Remington, 41; Nov. 17, H. M. Lockwood, Sharps, 43.

Pandling took part in fifteen of the contests, and was the leading scorer in five of them on a score of 631 in a possible 750. He becomes the winner of the Creedmoor rifle offered.

N. Y. RIFLE CLUB.—The officers for the coming year are: President, L. V. Sone; Vice-President, C. H. Clevever; Captain, F. J. Donaldson; Adjutant, A. H. Jewett; Treasurer, J. H. Meeker; Corresponding Secretary, J. L. Martin; Financial Secretary, W. H. Cadwell.

SEALIA, Mo., Nov. 27.—The Queen City Guard displayed their inefficiency before the butts yesterday at Siche's Park. At the grounds a two-and-a-half-foot target had been erected. To the south of it a pit was dug to accommodate those who kept watch of the shots on the target. The conditions of the match were: Distance, one hundred yards at a two-foot-and-a-half target, five shots for each man, each perfect shot to count five; weapon, regulation musket; the prize, a handsome gold medal worth \$20. It was as cold as Greenland at the grounds, but the boys stood the piercing wind and low temperature very well—after they got a good fire built. The ancient deity, who has the credit of bringing fire from heaven, was blessed over and over, and a few sacrilegious fellows even went so far as to pay some left-handed compliments to the devil, who has the reputation of keeping the boss fire.

At 2:30 the shooting began and continued until it was almost too dark to see well. Major Current finally came out winner. The Major is an old veteran, and has shot at men often enough to enable him to hold his gun pretty steady in front of a board. The following is the score of shots out of 41 contestants:

Ripley.....	0 0 4 2-11 Thatcher..... 3 0 0 4-3-9
Ramsay, R.....	4 2 2 2-14 Ramsay, D..... 4 2 2 2-9-9
Brady.....	2 3 0 3-8 Sander..... 2 2 0 3-11
Heller.....	2 2 0 3-9 Landers..... 3 0 4 2-11
Hammond.....	3 0 4 3-13 O'Brien..... 3 0 4 2-10
Leahy.....	2 0 2 2-4 Leahy, C..... 2 4 2 2-10
Henry.....	4 0 3 4-5 Capt. Fredericks..... 4 0 0 0-8
Hancock.....	4 2 0 2-10 Wright..... 2 3 3 2-12

DENVER AMATEUR MILITARY RIFLE TEAM.—By courtesy of the Secretary, Mr. Jno. P. Lower, we have received a photograph of the members of this club, grouped about the firing point of their range, where Mr. Lower talked us: "We shot Oct. 24, making 612 in 15 shots; each 200 yards, off-hand, with Sharps' 1873 military rifle. Each rifle could be hung on its trigger after cocking and relieving the trigger lock, say 9 pounds and over pull.

CARSON CITY, Nev., Nov. 31.—The Carson Guard had its annual shooting match to-day. The liberal prizes donated to the riflemen had the effect of bringing out the full strength of the company, and fifty-nine men took part in the match. The day was bright and clear, although a trifle cold. The score has never been exceeded in the State by the same number of men from any one company. The score of 1,488 by 40 is an average of 37½, a score never before made by 40-men in the United States. The following is the score of each member:

Little..... 34 Sam Vucelich..... 35

Geo. C. Thaxter..... 42 George Carwin..... 35

Jonathan Saffell..... 42 P. L. Plinn..... 34

#### SCHUETZUN NOTES.

The grand prize and poultry shooting festival, which was given by the Jersey Schuetzen Corps, Capt. A. B. Hardekopf, at the Schuetzen Park, Union Hill, on Thanksgiving Day, would have been a grand success for the treasury of the corps had not the weather clerk played one of his tricks. We noticed, in spite of the snowing that day, a great many of the Schuetzen were present. The shooting was greatly injured by the snow and cloudy day, otherwise the scores would have shown different figures. At the prize target, 200 yards distance, out of a possible 75, the following was the result:

M. W. Farrow.....	59 N. Judson..... 59
G. H. Brown.....	58 W. Klein..... 58
M. Dorler.....	58 P. Klein..... 58
N. Dorler.....	58 W. Klein..... 58
G. Joiner.....	58 D. Miller..... 58
M. Penning.....	58 A. Erdman..... 58

picking the prizes, and especially by the first prize, which was a nicely dressed-up pig of about 105 pounds, for which Mr. Farrow, Fitz and Mr. Judson had to draw for, as the list shows all three were equal. Mr. Fitz drew No. 1 and ran off with his baby pig. The poultry was also nicely dressed with flowers and red, white and blue ribbon. The affair closed with great satisfaction to everybody.

**HOBOKEN, Dec. 3.**—The father of the Schutzen, Capt. H. D. Busch, of Hoboken, returned last Thursday from his two months' pleasure trip in California and was received by the New York Schutzen Corps and many friends at the Pennsylvania depot in Jersey City and escorted him to his home. A band of music at the head of the company played "Home Sweet Home" on their way. At the hotel in Hoboken some of the Capt.'s friends, who had not the time to go to the depot had a hearty handshaking upon his arrival. The hotel was splendidly decorated from top to bottom. The Capt. looks well and says he has had a splendid time, especially in San Francisco with the California Rifle Club, of which the majority are old acquaintances. This club gave a grand banquet in honor of Capt. Busch before he left and presented him with a gold clock as a token of their esteem and friendship in the shape of a horseshoe to be worn on the watch chain and contains specimens of the various kinds of quartz found in California. Capt. Busch is in hopes that he will be able to return the compliments to the California Rifle Club at the next Bundes Festival of the Sharpshooters' Union of North America.

**SCHUTZEN CORPS BALL.**—The ball which the New York Schutzen Corps, Capt. Geo. Aery, held Dec. 1, in Heeborn Hall, was a grand success of which the captain and the corps can be proud. The hall was decorated in splendid style and visitors could be counted by the hundreds and showed the great friendship which the New York Corps holds with the different companies. At half past ten o'clock Major Karl Klein's separate troop appeared in full force and parade uniform under his command. Also a strong delegation from the Jersey Schutzen Corps, Capt. A. Hardekopf, a strong delegation of the Helvetia Rifle Club, with Pres. Mattmann, and a delegation from the Green Valley Schutzen Club, with Capt. A. Zengner. All the different committees proved themselves in their respective duty faithful and deserve great credit. The amusement was kept up until a late hour and everybody seemed to enjoy himself.

Hop Bitters strengthens, builds up and cures continually, from the first dose.

## Yachting and Canoeing.

PREHISTORIC YACHTS.

[FROM FOREST AND STREAM, Vol. 2, 2255; page 66, 660; A. D. 3,000.]

**Editor Forest and Stream:**  
Our family is from the oldest sporting race in America. Further back than our genealogical tree reaches into the misty dimness of the fabulous past our original progenitors were to be traced. Our forefathers were a hardy, energetic, and skilful people, with the rifle and equally at home with sheet and tiller, and back in the semi-civilized ages of the nineteenth century and thereabouts, that same love for field and sea distinguished our worthy sires. It is a family tradition that they would sooner save their funeral expenses at the close of their career, than die without the light afforded by a regular subscription to FOREST AND STREAM. I had long known that, stored away in the vaults of our house, lay a treasure in files of that invaluable journal reaching far into the ages of the past, the first copies having appeared, it is said, as long ago as A. D. 1873. Think of it, my dear friend, had this complete of a sporting journal started twelve hundred years ago! And it was then as it is now the ablest of its kind, and the only recognized yachting journal in America.

You will remember that at a short time ago a poor wretch who built boats by thumb rule for a living imagined that he had discovered something new in the art. His idea was to build a boat very flat, and very short, and very wide, give her an immense rig and load numerous bags of shot, and then, when the weather side to keep her on her legs. The deluded fellow became a hero on the subject, and ridiculed our fleet of catamarans, which, as you well know, displaced the light draft racing machine many years ago (see Vol. 12, 575 of the *Encyclopædia Britannica*, published A. D. 1875). The doctors took care of him, and he is soon to be discharged from the uptown asylum on Yonkers avenue. As I knew him to be a worthy man his case made some impression upon me. While hunting in the vaults the other day for some models of a catamaran which he was to build for an acquaintance, I happened to turn over a pile of volumes of FOREST AND STREAM, when one of them fell open at my feet, and, as accident would have it, the familiar heading "Yachting and Canoeing" greeted my eye on pages turned yellow with age. A glance showed the volume to be one of the very oldest, and I was back to the time of the first issue of 1880. In a moment I was absorbed in its priceless leaves, and forgetting everything else, followed up my search until the waning light compelled me to desist. Such revelations, such a wealth of information, such a mass of matter concerning the life and being of our sporting forefathers, what a treat it was! Your readers would be overwhelmed should I depict an ideal scene of sport, or reproduce the yachting history of those long forgotten days. But one thing struck me most, the persistent Bourgeoisism which ruled among the yachtsmen of that hazy age. Not that they were any less noble, or less true, or less brave, but they were not so far from being no better—nor, as I learn from FOREST AND STREAM, they certainly did not better—yet with a perversity which would now be deemed highly creditable to a cast iron moral, our worthy forefathers seemed to have displayed the stupidest of wooden sign posts as soon as they landed on the subject of yachts and their properties. I am referring now especially to the "open boats" of the day, for I understand that racing yachts too small for cabins were known by this appellation about the year 1880. To these open boats my attention was drawn, but the very next morning, when I was recently caused the boat builder before mentioned to lose his reason.

I should judge that the open boats of the nineteenth century offered the very worst features possible to unite in the same craft. They were certainly not only an awkward sailing and bag sailing machines nowadays as absolutely bereft of reason, yet at the time I am now considering they were in high favor with the people, and that is spite of the fact that the catamaran, in its many forms, had been favored by the same people. Our stupid grandfathers failed to appreciate her at her real value, and for many years went on building such laughable caricatures as the sand bag boats must have appeared to sensible men of the times. It is amusing and instructive to read in the old volumes of FOREST AND STREAM the reports of yachtsmen in which the catamaran sailed around whole fleets of "sand baggers" and toyed with them as though they were at anchor, and we get an insight into the slowness of those days. In Vol. 14 of FOREST AND STREAM, under the heading of "The Yacht Race," we find a falling to pieces through the wasting effects of centuries, and seem to have been several individuals gifted with common sense beyond their day. There is a story told in one number taking the sand-baggers to task for the foolishness of their sailing, and from the observations of the writer, it is evident that the catamaran, and from which I learn that it was then considered a

"big thing" to capsize a yacht, the spectators cheering as the crew sprang and spluttered in the water, altogether impervious to the disgrace which would befall a man who had been so disgraced. Racing in the machines resolved itself simply into a vulgar question of carrying the most sand bags on the weather deck, buying the largest rig and exhibiting the most reckless disregard as to whether the boat sailed right side up or not. And there it is, a matter of the most serious nature, and which I believe, reflected according to their standing as athletes, the man who could toss the most cobble stones a fathom distance in a minute being deemed the best sailor, while the captain appears to have been popular according to the number of his crew, and the vigor of the crowd. I can readily understand that the open boats must have been a terrible agony to those who even then viewed yachting as a noble sport, a refined art and a perfect science, and can excuse the writer in FOREST AND STREAM, if at times in his wrath and contempt for the machines he hurled violent terms at the want of principles displayed and the absence of manliness among the open boat sailors of the primitive ages. He had right on his side and he seems to have known it.

But the most peculiar thing, which incomprehensible to us in this enlightened year of 3,000, is the obstinacy of those ancient worthies. They sought to attain the highest speed in their open boats, and when it was found in the catamaran they deliberately refused to acknowledge her, or to have anything to do with such a "sailing machine." Could they have been so stupid as to refuse to acknowledge her? How blindly they stood in their own way! Could they but have seen what narrow minded simplicity they were writing themselves down in that overbearing sportsman's organ, FOREST AND STREAM, they would not have felt a huge of shame at the thought that their future age would smile at us as we do. Let me give you two million yachting readers the history of our present catamaran, the most numerous and popular of all our "open" craft. Her history is only to be found in FOREST AND STREAM, upon the case of the numbers of which I have just been speaking.

It seems that about the year 1876, an enterprising master of State Island named Meigs, in conjunction with another genius named Herreshoff, brought out the catamaran Amariyllis, the first of the species now so well known to us. She was a wonderfully fast machine, with two keels, and she sprang out of the water like a ball and socket joints, giving independent play to each of the hulls. So perfect was she in detail and so thoroughly had the idea been digested by her originators that at that time, twelve hundred years ago, we still cannot find a more perfect model of a catamaran. She was unable to add anything in the way of improvements or innovations. With the characteristic conservatism of our forefathers, she was ridiculed at first because she was new, and when she had whipped all the boats of her day she was lastly consigned to a special class, and her name is now used to designate a class in every attribute of a yacht she far excelled the death trap known as "open boats." But such was the vanity and the shortsightedness of the barbarians who ruled the yachting councils. A great vessel, and dignified and graceful, she was, but she was not the thing of the future. In 1876, to celebrate the one hundred birthday of a former political division of the American continent which went by the name of the United States. A great race for those days—was one of the features in New York Bay, and of a numerous fleet the Amariyllis was such such as to draw the disheartened, slow-thinking men of the age into disqualifying her for the prize offered—simply because she was too fast! Was there ever such a piece of flagrant injustice placed on record in the year 3000? It would be impossible for us now to understand the principle of equity much better, and the man who would propose such a cowardly escape from the natural consequences of being too pig-headed to adopt the best of everything would be pointed at with the finger of scorn.

Other boats of the Amariyllis were built by the aforesaid Herreshoff—why, by the way, she was a native of a Southern ward of our great city of Newargensett, the ward then being still a separate village called Bristol and completely surrounded by green country fields. The Herreshoff family were men far ahead of their fellows in those days, and they were not only so, but they were so in every respect. They produced the coil boiler, now in all but universal use, and their fast steam yachts challenged the world's admiration for their lightness of hull, beauty of model and speed. The Herreshoff family were not only so, but they were so in every respect. They produced the coil boiler, now in all but universal use, and their fast steam yachts challenged the world's admiration for their lightness of hull, beauty of model and speed. The Herreshoff family were not only so, but they were so in every respect. ## TRADE—"BEATS THE WORLD."—MARK. Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.  
THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning papers, namely: The Oil of Creosote. CHARLES G. EMMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1873, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.  
Manufactured by GOODWIN & CO., 207 and 209 Water St., NEW YORK

GUNPOWDER!  
Dupont's Rifle, Sporting and  
Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1b canisters.

**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 4 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1b and 5b canisters and 6 1/2 and 13 1/2 lbs kegs.

**Dupont's Choke Bore.**—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 2 being the coarsest. Packed in 6 1/2 lbs kegs and 1b canisters.

**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1b canisters and 6 1/2 lbs kegs.

**Dupont's Rifle Fg.**—"Sea Shooting."—FFG and FFGF. The Fg for long-range rifle shooting, the FFG and FFGF for general use, burning strong and moist. Packed in 1/2, 1b and 5b canisters, 6 1/2, 13 1/2 and 25 lbs kegs. Fg coarse, FFG fine.

Dupont's Sporting, Mining, Blasting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 70 Wall Street, N. Y.** N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

The Hazard Powder Co.,  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1b. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 13 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand. Fg is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" Fg in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFGF is also packed in 1 and 1 1/2 lb. canisters. Burns strong and moist. The FFGF and Fg are favorite brands for ordinary sporting, and the "Sea Shooting" Fg is the standard Rifle Fg of the country.

#### THE ENGLISH CHALLENGE.

THE note from the chairman of the Council of the National Rifle Association of Great Britain, which we publish in another column, gives to our American managers a chance which they should not neglect. Here is an opportunity to start afresh, free from the many entangling alliances and confusions which surround our ill-starred Palma, and to wipe out that wretched Hyde affair of last summer. If properly conducted, this proposed contest could mark the beginning of a new lease of life for our moribund American Association and give American riflemen a chance to draw together and score another signal victory. We need some common object in view to invite the somewhat scattered energies of our marksmen. There is too much tendency on the part of Walnut Hill to pull away from Creedmoor, of Brinton and Stockton to 'go it alone,' and so on of all the ranges the country over. This challenge, couched in the form of an invitation, means that the British rifle-makers at last consider themselves provided with arms fit to cope with those of American manufacture, and the manufacturers of this side the ocean should be ready to show at once that the supremacy of our small arm output can yet be maintained. This challenge is the first direct communication between the older N. R. A. and its younger rival. There have been explanations, corrections, etc., before with a long string of misunderstandings which it would be tedious now to go into. Putting all this by-gone matter aside and guarding specially against any cropping up at the present time of these old time wrangles, a discreet management on both sides may now lead to a match which shall be truly representative in character. Ample time intervenes between now and the date fixed for the match for the completion of all details. We have had an experience in the past to teach us what to avoid in a dozen particulars. The manner of team selection and composition, the vexing question of the captaincy, the ways and means and the proper status of the match may all be fixed long enough in advance to make the actual work on the range and at the match very simple. We might be captious and insist that as an American team had won the Palma, and that made its conditions as an international championship emblem the British team are bound to make the match on this side the water. We say all this might be insisted upon, to the fomenting of a very pretty battle on paper and the setting back of rifle shooting in this country to a serious extent. Let the Palma remain under its present condition, but let this note from Earl Stanhope inaugurate a new match to be fought at convenient intervals between the picked teams of the two National Rifle Associations.

ANTELOPE HUNTING.—The letter which we print this week from the pen of "Tirador," is by all odds the very best contribution to the literature of this branch of hunting that we have ever read. While we do not entirely agree with the writer on all the points he gives, we still feel that his article furnishes a great amount of most useful and practical information. In a few words he gives one of the most important directions for success in hunting the antelope. "Don't be in a hurry," he says, and the man who hears this in mind will get many more shots, and much better ones, than he who is eager to shoot at his game the moment he sees it.

In the early days of our antelope hunting we have too often crawled up to the top of a hill, fired at the first antelope that appeared in sight, and then seen the rest of the band jump almost at our feet and gallop away over the hills followed by a few wild and ineffectual shots. Take time, therefore, and locate your game well before you shoot at it. We have always used and prefer a double-barrelled field glass about the size of an opera glass rather than an extensible spy-glass, such as is recommended by "Tirador;" but this, after all, is much a matter of habit. A man uses best what he is most accustomed to.

OLIVER FISHER WINCHESTER, the founder and President of the Winchester Repeating Arms Company, died at the ripe age of seventy years at his residence at New Haven, Conn., last Friday, December 10. His career was one of small beginnings and proud achievements; his life-work well rounded and complete. An extended sketch of Mr. Winchester's life will appear in our next issue.

#### THE POOR CHILDREN'S CHRISTMAS.

THERE is no charity which appeals more strongly to the heart of the average man than one which helps the little ones, and no charity does better work than the one whose appeal we publish below. So much good can be done by what will appear to many of our readers a very little money that we feel sure that the Children's Aid Society's request for help will not pass altogether unheeded.

Sportsmen are proverbially kind of heart and free of hand, and we believe that at this season, when the nature of every man is a little softened and when kindly thoughts are felt and good wishes exchanged by the fraternity throughout the land, there will not be lacking men who will gladly respond to such a solicitation as the following

##### CHRISTMAS APPEAL FOR POOR CHILDREN:

The bitter cold and snow-storms of winter coming on so early will remind the kind-hearted of the thousands of little children in New York who are homeless and friendless, without shelter from the biting storm and frost, half-clad and barefooted, and sleeping often in boxes, cellars or attics, growing up thus for misery and crime. They reach out hands of silent appeal to the many in this country whom Providence has blessed, and ask for aid and sympathy.

Who will help the Children's Aid Society to make Christmas happier to these unfortunate little ones? The best Christmas gift is a home.

Fifty dollars will send three homeless children to homes in the country. One hundred dollars will put shoes on seventy-five barefooted little boys or girls. One hundred dollars will give 120 hungry children a hot meal for a month.

Surely those who have homes and friends and every comfort will enjoy Christmas better for feeling that they have made it happier to the homeless and friendless orphan.

C. L. BRACE.

Secretary Children's Aid Society, 19 East 4th st. N. Y. Gifts of clothing and provisions may be sent to the Central Office, 19 East Fourth Street, New York, or will be called for, if the address be forwarded.

Donations of money may be inclosed to either of the undersigned. If they are in checks or post-office orders they can be made payable to the order of George S. Coe, Treasurer. Wm. A. Booth, President, Third National Bank, 20 Nassau street; George S. Coe, Treasurer, American Exchange National Bank, 128 Broadway; C. L. Brace, Secretary, 19 East Fourth street, New York.

ERRATA.—In our last issue, eighth line of article "The Dittmars' Abracadabra," for "our compound" read "their compound." In second column, last line but one of quotation from Dittmars, for "effect" read "affect." Page 304, first column, thirteenth line from bottom, for "manufacturer" read "manufacterer"; three lines below, for "manufacteres" read "manufacterers."

These were manifest typographical blunders, comparatively trivial and unimportant beside the gross perversions of truth, of which, as we showed last week, the Dittmar Powder Manufacturing Company, No. 2, have been guilty.

A HANDLER'S PROTEST.—The communication published in another column from the handler of Nat and Snut at the recent field trials meeting speaks for itself. We have no desire or intention to go into the merits of the case, nor to comment on the results of the trials further than we have already done in the very full report published in our issue of last week.

That report was written without fear or favor and events were recorded as we saw them. From that report our readers can draw their own conclusions.

We have more than once in these columns expressed our appreciation of the difficulty of a judge's position at all dog shows, whether on the bench or in the field, and we desire now to record our thorough belief in each and every one of the gentlemen who occupied this position at Robin's Island.

There is not, nor can there be, the slightest possible doubt that each one of the judges desired most ardently to see the best dog win, and whether or not these gentlemen saw things differently from the handlers, reporters or spectators, there is no doubt that they gave the decisions which seemed to them proper. Every one who entered a dog knew, before the running, who the judges were and every one knew further that their decisions would be final, and while there can be no harm, now that it is all over, in discussing the results of the meeting, this should be done in a temperate way and with due respect for the honest convictions of others.

## FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 16, 1880.

\*\* The FOREST AND STREAM goes to press Wednesday. Correspondents are requested to mail their communications so that they may reach us before that day.

—This is an excellent time to call the attention of your friends to the merits of the FOREST AND STREAM. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

THE CENTRAL FISH CULTURAL SOCIETY.—Mr. Fred Mather, of the FOREST AND STREAM, is now in Chicago, at the second annual meeting of the Central Fish Cultural Association, a report of which will be given in our next issue.

We have on hand another batch of letters respecting the relations between farmers and sportsmen; and we regret that these are crowded out of our present number. They will be published next week.

The following articles have been reprinted together in pamphlet form from our issues of September 23, September 30, October 7, and December 9, and will be furnished to the readers of this journal upon application:

"The 'Dittmar Sporting Powder.'"  
"Eradicating Detonation."  
"The Detonation of 'Dittmar Sporting Powder.'"  
"The Dittmars' Abracadabra."

THERE have been numerous reports of hunting accidents this fall. The New York Sun, with its usual diligence, has collected and published at frequent intervals the accounts of dire calamities in the field. Of the men killed by shot-gun accidents the majority belong to that class who will persist in drawing their loaded guns muzzle-foremost after them through fences, into wagons and out of boats. It is extremely seldom, indeed, that an accident is reported to have occurred from any other cause than recklessness and carelessness. Common sense would seem to suggest that a loaded gun should not be pointed at the handler himself nor at his companions; but simple as it is, and easy of observance, it is a rule which is constantly forgotten, and the neglect of which is repeatedly fatal.

## Natural History.

### OUR WATERFOWL.

#### FULIGULINÆ.

THE Sea Ducks present many differences in structure from their fresh water cousins and constitute a subfamily of the *Anatide*. One of the most obvious distinctions is the constant presence in this group of a lobe or flap of skin depending from the hind toe which is never seen in the *Anatide*, so that the two groups may always be distinguished by an inspection of the feet. In habits the two subfamilies differ widely, although there are not wanting species of each which approach in their mode of life, that of the other. The Sea Ducks, as their name implies, are maritime in their distribution, though by no means exclusively so, yet many of them retire to fresh water lakes or streams for the purpose of breeding. There are others like the Eider duck for instance, that even during the breeding season remain on the salt water, and are only found occasionally during the migrations on our rivers and lakes. All the *Fuligulina* dive for their food, and thus are enabled to feed in deep water where the *Anatide*, which have not this habit could not get a living. Those species which confine themselves to the sea feed almost exclusively on shellfish and are, therefore, very little esteemed for food, the flesh being rank and fishy. On the other hand, species which pass a considerable portion of the year on our inland waters are excellent eating, and some of them are the most sought after of all our ducks. Such are the Canvasback, the Redhead, the Broadbill and others. The legs in this group are placed farther behind than in the *Anatide*, and its members are thus less at home on dry land than are the fresh water ducks, while, on the other hand, the power of swimming and diving is increased. It is from the *Fuligulina* that much of the eider down of commerce is taken. The eider duck of course furnishes a portion of this, but other genera such as *Harelda* and *Ademia* supply a down which, for all practical purposes, is just about as valuable. The genus *Fuligula*, which is sometimes farther divided into the subgenera *Fulvia* and *Aythya*, contains some of the most important of our Sea Ducks.

*Fuligula marila*. Greater Scaup Duck, Big Blackhead, Broadbill, Bluebill, Raft Duck, Flocking Powl.

Male, head neck and fore part of body black, the former with green and purple reflections; below white; sides and fore back darker, waved with black; speculum, white; lower back, tail and wing tips dull black; bill blue, feet darker. The female has the face white, and the black of the male generally replaced by brownish. Length about twenty inches.

The broadbill, or blackhead, is an abundant species found almost everywhere throughout the country. It is extremely abundant during the late fall, winter and early spring along the Atlantic coast, and is everywhere sought after. In the interior it is plenty from the last of September up to the advent of cold weather, and under the name of scaup or blue bill is known to all Western gunners. We have found it very numerous between the Missouri River and the Rocky Mountains, and equally so during the winter in California. The flesh of this species is excellent.

On the Atlantic Coast broadbills are killed principally from batteries, or when flying across points, though in winter they are sometimes sculled up to during the night, when the discharge of two barrels into the thick flock will sometimes kill and cripple forty or fifty birds. They come well to decoys and furnish excellent sport.

*Fuligula affinis*. Lesser Scaup Duck, Little Blackhead, River Broadbill.

Exactly similar in coloration to the foregoing, but smaller. Length about sixteen inches.

This species, long a doubtful one, and by many authors considered identical with *F. marila*, seems to be a perfectly distinct form. We have never found any difficulty in distinguishing the two when in the flesh, though it must be acknowledged that size is the principal if not the only character which separates them. Dr. Coues says: "There appears to be something different in their range, the *F. affinis* being the more Southerly. Not that it does not in the breeding season reach as high latitudes as the West, but that its autumnal movement is pushed to the West Indies and Central America, where the true *F. marila* is not recorded as occurring."

The little Broadbill is not uncommon on the Atlantic Coast, but appears to be most abundant in the interior. We have seen them in great numbers on the Upper Missouri, and have found them breeding in Alkaline lakes in the mountains of Wyoming. They are shot by the same methods as broadbills.

*Fuligula collaris*. Ring-necked duck; Titled Duck. Male, head puffy, head, neck, except a chestnut ring around it; breast, back wings and tail, black; chin and under parts, white; speculum, gray; waved with black. Bill black, with a spring plumage, a white ring near tip, feet bluish. Female, head and brownish; face, throat and ring about the eye whitish. Length about eighteen inches.

The titled duck is not very abundant along the Atlantic coast, although every year a few are killed. They associate freely with the broadbills, from which, however, the males may be distinguished a gun shot away by the puffy crest which they erect when suspicious and just before taking

wing. On our Western waters they appear to be much more abundant. Many breed in the marshes of Illinois, though, no doubt, by far the greater number proceed the high latitudes for the purpose of reproduction.

*Fuligula ferina americana*. Red Head, Pochard. Male with head puffy; head and upper neck rich chestnut, lower neck, breast and upper tail coverts black, belly white, speculum gray; back and sides gray, thickly waved with black; iris yellow; bill rather short and wide like that of the broadbill, crossed by a black band near the tip; feet as in the preceding. The female has the black and chestnut of the male replaced by dark brown, and the waving on back and sides less distinct. Length about twenty inches.

The red head of North America differs from the European bird so slightly that it is classed by ornithologists as merely a variety of that species. Its range includes almost the whole of the United States, and it is especially abundant along the Atlantic seaboard and in the Western States. West of the Mississippi it appears to be less abundant, although we have taken it during the migrations in the Rocky Mountains and in California. There seems to be no record of this species breeding within our borders.

The flesh of the redhead fully equals in excellence that of the canvas back when the two species have fed on the same grounds, and we fail to see any reason for the very strong bias in favor of the last named bird. We would defy the most accomplished gourmand to tell one from the other when they appear on the table. The red head is shot by the same methods employed to bring to bag the black head.

*Fuligula callimera*. Canvas-back Duck. Male, head and neck dark chestnut, the former washed on chin and about the base of the bill with blackish brown, neck and breast black; otherwise as in *Fuligula ferina americana*, except that the black wavings on back and sides are much narrower and fainter, so that the general cast of the plumage is very pale—nearly white, in fact; iris red, bill longer than head and narrow, the nostrils in the middle, black. Feet dark. Female colored much as in the preceding species, but always to be known by the bill and head.

A question very frequently asked is, What is the difference between a red head and a canvas back? but we feel sure that no one who has ever had the distinguishing characters of the two once pointed out to him would ever have any trouble in separating them. Setting aside the differences of color, which in the males mark the two species unmistakably, the shape of the head and bill are so unlike as to be perfectly characteristic. The head and bill of the red head resemble very closely in shape that of the ring-necked duck. The outline from the tip of the bill to the crown of the head is quite deeply concave. The bill itself is shorter than the head and is comparatively wide. The profile of the canvas back on the other hand is but very slightly concave; the bill is very narrow and decidedly longer than the head, and has the nostrils in the middle instead of, as in the red head, in the basal half. The color of the eye is another distinguishing character, as is that of the back.

The canvas back is well known throughout the eastern half of North America, but is less abundant west of the Missouri River. It has been found, however, breeding at Turtle Mountains and in the Rockies by Dr. Coues and others. It is abundant in California in winter, where it associates more or less freely with mallard, broadbills and red heads. It is perhaps held in more esteem as a food bird on the Atlantic coast than anywhere else in the country.

[TO BE CONTINUED.]

### THE SENSES OF BIRDS.

EVER since reading an account of the experiments of the veteran Audubon regarding the senses that guide the vulture to its food I had taken it for granted that sight was the sole sense used by this or other flesh-eating birds; and my own observations had strengthened me in the belief. An incident that occurred a few days since, however, has convinced me that one bird at least has a set of olfactory even more delicately fashioned than his optics, though his eye is little less than a telescope in power. A horse belonging to a neighbor died one night last week, and the following morning the body was dragged to some distance and left uninterred. About noon of the same day I noticed a company of perhaps twenty crows, flying low, heading directly for the carcass. Arrived at the spot where the object of their search lay, they circled about a few times in the air, and then, oblivious to the fact that all over the land distant relatives of theirs were being served at Thanksgiving dinners, they gathered round the carcass and banqueted right royally.

This morning I visited the scene of the feast. The birds had, I found, torn a hole through the hide of the abdomen and devoured a portion of the viscera. I was surprised to see that the carcass lay in a shallow creek bed, from which the land rose gradually, but to a considerable height, in the direction from which the crows had been seen to come. The nearest woods, and the ones from which the crows undoubtedly came, are four miles away, and it immediately occurred to me that at such a distance the bird or birds must have been at a vast height if sight discovered the carcass to them. With the aid of a stick and a ruler I made a rough calculation, and satisfied myself that even at a distance of only two miles the body of the horse could not be seen at much less than 1,000 feet above the earth's surface. Of course, crows feed at such a height. I once saw one pursue a hawk directly upward till both birds were almost lost to view; but this was during the breeding season, and every one knows that ordinarily this bird is content with much less lofty flights. Such being the case, one can hardly doubt that the birds were guided entirely by the sense of smell; but how marvellously delicate must be the organs that could detect at such a distance, even with a favorable wind, so slight a taint as would arise from an animal not in the least decayed!

A few weeks ago, while in Southwestern Minnesota, I recalled noticing an instance of this same bird's acuteness of perception, which was probably no less remarkable than that just narrated. On the open prairie, many miles from any timber, a crow was seen by the body of a grouse which lay upon the snow. As usual he had commenced his meal by picking out the eyes of the "chicken." Crows were by no means abundant (at this season, at any rate) in the vicinity where this individual was seen; in fact, I saw only one other while in the State. It would be useless to attempt to surmise how far this bird may have seen or scented the frozen grouse. The latter doubtless perished during the recent unprecedented October storm, as did quail, coots and, I am told, even ducks.

If the senses of the crow are wonderfully acute, those of the hawk are no less so. It is to be questioned whethersome of these, as the harriers, may not be aided in finding their prey by the sense of smell, and I am inclined to think that the ear guides them to many a fine meal. Who that has hunted waterfowl has not, after firing into a flock of ducks, seen a hawk flying toward the spot, evidently attracted by the report, and intent on securing a bird at the expense of the sportsman? A popular notion attributes to the larger game birds a sense of smell so delicate as to warn them of the approach of man or any other enemy at a distance, provided they have the wind in their favor. I am inclined to think that this opinion is not well founded, but certainly no birds are possessed of better eyes and ears than the geese and cranes. The superior height of the latter gives them a wide range of vision, and they are, perhaps, the most unapproachable of all our birds. Every one who has paid any attention to the subject must have noticed that the shyness of birds is somewhat in proportion to their size. This is largely, no doubt, the result of experience or of inherited "instinct," those birds that have been long persecuted by man having learned to fear his presence, but partly I think, more especially in the case of the very smallest species, to defective vision. I have known small birds to be killed by flying against buildings, which of course they must have seen, but not until it was too late to alter their course. And I have seen a kinglet taken with the hand, to the great surprise and fright of the bird itself. I would by no means be understood as saying that any bird cannot distinguish a house or a man as such, at a considerable or even a great distance; the fact that they sometimes fail to do so is doubtless owing to a too close attention to business (insect catching) and to a lack of observation. The eye of the small bird is as well adapted to the work it has to perform as is that of the larger one; but it may be called "near-sighted"—it is not a telescope, but a microscope, and as such it is all that its possessor could desire. Observe a small flycatcher seated on a dead limb in the shady woods, or a warbler or kinglet darting about among the branches of an oak or elm; then see him dart here and there, pursuing in zig-zag course, and with marvellous rapidity, insects so small that we can scarcely detect their presence, and we cannot but observe that its eye is wonderfully acute. Contrast this tiny head with the long-ranged optics of the former, held in the stronger of the two, dragged the man up stream, tail foremost at a lively rate. I killed them and pulled them apart, but was obliged to exert considerable force—at least ten pounds—to do it. Now it will be nine months before snakes lay their eggs. Will some naturalist explain?

H. S. W.

"Homo" has some interesting notes on this subject in his letter published elsewhere.

HABITS OF SNAKES.—Taunton, Mass., Oct.—As I was walking along the brook about 150 yards below my fish pond, I saw a pair of water snakes fastened together. The female was two and one-half feet long and the male about two. The former held the stronger of the two, dragged the male up stream, tail foremost at a lively rate. I killed them and pulled them apart, but was obliged to exert considerable force—at least ten pounds—to do it. Now it will be nine months before snakes lay their eggs. Will some naturalist explain?

C. B.

## Fish Culture.

### STRIPED BASS WANTED.

WE are permitted to publish the following letter from one of the California Fish Commission to Professor Baird. The fish wanted are the striped bass or rockfish, *Roccus lineatus*, the fish not to exceed six inches in length. Will those of our readers who know where they can be obtained in quantity please communicate the facts to Prof. Baird, as he requests:

HON. SPENCER F. BAIRD, U. S. Commissioner Fish and Fisheries.

SMITHSONIAN INSTITUTION, Washington, D. C.

Dear Sir—I have from unavoidable causes been compelled until now to defer addressing you upon the subject of transporting to and acclimating in our waters the "striped bass" of your coast.

I have long had the impression that the great Bay of San Francisco together with the bays of "San Pablo" and "Suisun" connecting with it and the number of creeks running into them, affording a variety of qualities and conditions regarding temperature and saline properties together with feeding material, would be well adapted to the propagation and growth of the "striped bass."

Having this in view I last year opened a correspondence with Mr. Livingston Stone upon the subject of attempting the transfer of some small fish at the time of the bringing on of the lobsters. Many difficulties presented themselves in the matter of obtaining the small fry of the striped bass, which led me in my suggestion to Mr. Stone the probability of obtaining in the extreme lower waters of the "Navasota" or Shrewsbury River in New Jersey. Mr. Stone succeeded in obtaining a small number at the place designed by me and, with his usual skill, brought them safely to this coast and deposited them at the head of the Straits of Carquinez, the turning point of the fresh and salt water.

Some six or seven months after the time of placing in the water I heard that one of eight inches in length had been taken in the bay of Monterey, which is about one hundred miles south of this and is in connection with the Pacific Ocean. All of the circumstances were of so doubtful a character that I gave the rumor but little attention, until about the first of July, eleven months after the planting of the young fry—at the time about one and a half inches in length—in the Straits of Carquinez, there was brought to me a very handsome striped bass taken in this harbor, measuring twelve and one-half inches in length and weighing one pound. The fish was in the highest condition; the milt full and ripe,

and the flavor fully up to the best specimens of the fish at the East. The exceedingly rapid growth, indicating the adaptability of the waters of this bay to the development, together with the immense amount of shrimps which abound in this bay as furnishing abundant food here, I must acknowledge, infused me with almost an enthusiasm to have this valuable fish brought here in sufficient numbers to insure the breeding of them. I have heard of some experiments having been made in breeding them artificially. If that can be done we might, of course, bring them out as easily and in as great numbers as we now do shad, and my object in now writing you is to ascertain the probability of such an effort being successful.

If it cannot be done our only course must be to enlarge upon and extend the experiment of last year. The small fry can be obtained in the fresh-water heads of the Navesink, the Raritan, the Passaic, the Hackensack and in fact all of those small rivers which flow from the New Jersey coast into the Atlantic and the bays emptying into it. Will you be so kind as to give the matter some thought and let us have the benefit of it? The shad are a success, and we feel satisfied that so soon as they shall have reached such numbers as to insure contact we shall breed them in abundance.

With much respect I remain, yours truly,

S. R. THRECKMORTON.  
Chairman California Fish Commission.

#### SOME SINGULAR SALMON.

DOMINION OF CANADA,  
PISCICULTURAL ESTABLISHMENT,  
NEWCASTLE, Oct. 30.

DEAR SIR—I desire to acknowledge, with many thanks, the receipt of some fifty thousand California salmon eggs. They arrived here in first-class condition and are now at New York and shipment to Europe of a very large lot of these ova, all of which were reported to be in very fine condition. This success in your efforts in connection with fish culture, while it must be very gratifying to yourself, is likewise pleasing to myself, and no doubt to all others engaged in the industry of artificial fish culture.

I have to record a most peculiar circumstance in relation to our Ontario salmon fishery. I speak more particularly of those which have come into my stream here. The same falling off in numbers is felt here as has been the case in all the rivers and streams on the Atlantic coast. My reports received from the several officers in charge show a wonderful falling off. At the Saguenay, where formerly our requisite supply of some 3000 parent salmon were easily obtained in a few weeks in June and July, only some seventy-five could be captured during the whole season. On the Restigouche, the most famous salmon river we have, only some 600,000 salmon ova could be gathered, whereas in former years no difficulty was experienced in getting one and a half to two millions. At the Miramichi and Halifax nurseries the result is not yet known; no reports have as yet come in, but I fear a similar falling off will take place there as well. In connection with the reduced numbers of salmon at this hatchery, strange to say, only three males have yet been found in the stream; all that have yet been captured, or have entered the reception house, are immensely large females. We have enough of these on hand at present to give us 250,000 eggs, but we have not, nor can we find in the whole stream, a single male fish to impregnate these eggs with, should we strip them. What we shall do puzzles me very much; add to this the fact that the season is about over for fish to enter the stream. To-day I went down the creek with one of my men and caught some eighteen magnificent female fish, one of which was open stream, in broad daylight, could not find one male. This has been the case since the first entrance of the salmon this fall. There are any amount of beds; in fact, on many of the gravel beds the bottom of the creek is literally plowed up with the workings of these salmon. Another peculiarity is that not a single grilse has been seen, with the exception of one California grilse taken last night. In the fall of 1878 salmon of both sexes and grilse were very numerous—quite equal to the olden times, some of the best in the open stream. In 1879 they fell off very much in numbers, and this season they were very much reduced from last year, with the peculiarity of all being large females and no grilse. I mention these circumstances for your information, and they will no doubt appear to you as being very extraordinary. I can hardly venture to ask you for a cause, or even the theory of a cause, for this peculiarity with my fish. My only hopes are that when Professor Hind hears of it, with his love in relation to salmon (partly because the biology and spawning ones), will no doubt incubate some theory and how these phenomena have occurred.

I am also getting puzzled in mind about your California salmon; they are also turning a cold shoulder to me. The record, this season of 1880, is as follows: In April last my son caught a very beautifully formed one in the stream here while fishing for some suckers. It was about three pounds in weight; I have him yet. He has been kept in a small tank of spring water along with some trout, but we have never seen him eat anything yet; he is looking a little thin just now. One small trap net was set out in the lake this season nearly opposite my stream, and during my absence the fishermen reported that about a half a dozen California were taken, from four to six pounds. About ten days ago a female California was caught in this creek (spent), length twenty-eight inches—she was terribly battered up, and last night I caught a small grilse; together with these two fish have specimens of the *quinnat* (having never seen a full sized adult) these two last mentioned specimens cannot belong to that class. I should say they must be more like the *Salmo scottii*, hooked nosed salmon, or *Salmo canis*, dog-salmon, as each of them have three sharp hooked-like teeth at the extreme end of both the upper and lower jaws. I have never seen fish with teeth so strangely shaped, nor so peculiarly placed in their mouths, as these two fish have them.

I am fearful that I may have become tiresome to you with this long letter, but before closing it, might I ask as a favor whether it would be possible for me to obtain from you a few carp. I have some ponds which were originally made for nursery-ponds for young salmon, but finding that the temperature of the water rises so high in them in the summer, the salmonoid family all die. I have thought of using them for carp. The water for any extent can be supplied from the main creek, the ponds cover some three acres or more, ranging from two to four feet deep. Should I succeed in getting a few carp I would sink wells some eight or ten feet deep in them in which the carp could sleep during the extreme cold in winter. The water gets pretty warm in them in summer,

and a good deal of vegetable matter is produced in them, which I think would be well adapted for the growth of these fish. I have raised the goldfish, or golden carp, in one of them somewhat successfully. Being desirous of trying the German carp I shall feel greatly indebted to you if I could get a few pairs through your kind instrumentality. Again apologizing for this long letter, I am yours, very obediently,

SAMUEL WILMOT.

U. S. Commissioner, Fish and Fisheries.  
P. S.—If you would like a specimen of our Ontario salmon in the gravid state I shall be greatly pleased to forward one or more to you. I can only promise you two females, from the causes mentioned herein. Should you also like to have one of the lacinated, emaciated specimens of "Canadian Californias," I will send it also.

S. W.  
In connection with the foregoing letter, which we have been kindly permitted to publish, we think it proper to state that while at Berlin, attending the International Exhibition, we met Mr. Philippe Gancelier, *Ingénieur en Chef du Dept. des Travaux*, who practices fish culture at Epinal, France, who said that his experience had proved that dry impregnation produces an excess of females, while wet, or those of water, always brought a preponderance of males. We have no opinion to express on this point, and commend it to the consideration of Mr. Wilmot and other fish breeders.

THE PENNSYLVANIA COMMISSION.—We learn that the forthcoming report of the Fish Commission of Pennsylvania will be the first ever published in the State. It is pleasant to note the progress made not only in fish culture but also in ichthyological lore, which has been taken up by the fish culturist as a necessary adjunct to his profession. The new report will contain a description of Pennsylvania fishes by Prof. E. D. Cope, with forty illustrations. The culture of black bass has been so successful that Commissioner Hewitt is of the opinion that enough have been caught this season alone to exceed all the amount of all moneys appropriated by the State for fish culture, even if the fish were sold at five cents per pound. They have been introduced into many streams whose united length is estimated at 1,500 miles. Commissioner Reeder was unable to attend the last meeting by reason of having received a painful stroke from the limb of a tree while hunting.

SHAD HATCHING AND CAMP—*Aquidale Ponds, Wrentham, N. J., Dec. 4*.—Having been absent from home a large portion of the time for more than two months past, and when at home either overwhelmed with correspondence or sick, I have not had an opportunity to even take the wrappers of many of my newspapers, and a huge pile has accumulated. To-day I have been reading up eight different numbers of FOREST AND STREAM, as that is a paper which I go through page by page, advertisements and all. In the issue for October 7 I notice the communication of Mr. Livingston Stone confirming the statement of Mr. Seth Green in reply to a previous article of mine concerning the first hatching of shad at Holyoke. Mr. Stone doubtless saw, soon after the last date, my reply to Mr. Green's inquiry, showing how I obtained my information. Although this comes late, I improve the first opportunity to announce my faith in the statements of Messrs. Green and Stone. Referring to Mr. Green's experience I am sympathetic with him, for in my own persistent labor of love in connection with fish-culture I have encountered the same boorish opposition, ridicule and malignant cussedness in the way of pecuniary damage to my property, and this by comparatively intelligent individuals. I have for a month or more past been very busy distributing the Government carp in Southern New Jersey and Eastern Pennsylvania. Quite a number of parties have engaged to lay out a comprehensive system of carp ponds and are making arrangements to engage extensively in the new industry. Before many years the farmers of this region will think as much of their carp as they now do of their chickens or pigs, and well they may, for there is more money to be made in carp-culture than in either chickens, pigs or other live stock.

MILTON P. PERCIE.

HATCHING EGGS—*Bildeford, Me., Dec. 3*.—In your issue of Nov. 25 I notice that Prof. Baird is ready to distribute salmon eggs from Bucksport. If I knew the *modus operandi* of treating these eggs I would like to avail myself of the opportunity to place some in the Sago River this season. I have no doubt but that we shall have a fishery constructed at the falls here the coming summer. Can you give me through your valuable journal some instructions in the above matter, and say where they should be placed in the river, whether above or below the falls.

FERGUSON HAINES.

The eggs should be placed in hatching troughs, and kept from enemies until they hatch, say from ten to fifty days, according to their development and the temperature. They should then be kept thirty to fifty days longer until the umbilicus is absorbed and they begin to take food. If you have no troughs or experience you had better apply to the Fish Commissioners of your State, Mr. E. M. Stillwell, Bangor and Mr. Everett Smith, Portland, or to Mr. Chas. G. Atkins, Assistant U. S. Fish Commissioner, Bucksport, who may hatch them for you.

PROTECT SPAWNING LOBSTERS.—*New Bedford, Mass.*—Your article on lobsters in a late issue induces me to give some hints on the subject, which to me seem more to the point than the catching of lobsters. I know of no more alluring way to increase the number of lobsters is the catching of females during the spawning season. I have often when looking at a female lobster loaded with eggs wondered how many they would count. Whoever has counted the number of shot (No. 8, for instance) in a common charge can form some estimate of the number of eggs in a lobster of three pounds or more during the spawning season—tens and tens of thousands. It seems as though all the spawn carrying lobsters and their way into the pots—*it may be* to hide from their enemies. I have seen brought in by one boat tending pots as many as three hundred females loaded with spawn—three million of eggs! Many of the largest lobsters I have seen have been females with spawn—these are all counted and all go to market. What a wise law! to allow the killing of the mother fish and forbid

the destruction of those under two and one half inches. One day's fishing of one boat will under these circumstances destroy more lobsters than all the boats on the Atlantic coast in a whole season catching small lobsters. When the catching of female lobsters with spawn is prohibited then the nail is hit on the head, and not till then. All the most intelligent lobster fishermen I have met express the same opinion, and I think every one will see the reason. I spend three months of every summer among the lobster fishermen, where thousands are caught every day, and I know whereof I speak. Some curious facts in relation to the movements of lobsters are noticed at Noman's Land. They are taken having plugs used only on the coast of Maine, others from other points remote. Some seem to remain in one locality, and in midsummer school lobsters appear. When the water is clear they have been seen by the thousands, all coming from the eastward and moving with us much order as an army. Hoping this may call the attention of all interested in the subject, and that the FOREST AND STREAM may add another laurel to its crown for benefiting the community is the wish of a subscriber from its first number.

J. E. JR.

CARP ON THE TABLE.—The Centerville, Md., Observer says: "Last week Mr. Richard Holliday, desiring to taste the flavor of carp, drew from his pond two fish, one 1½ inches long and weighing one pound fourteen ounces, and the other 1½ inches long and weighing one pound eleven ounces, and invited Hon. James T. Earle, Dr. John C. Earle, Richard T. Earle and Samuel T. Earle to take breakfast with him. After giving the new fish a fair trial they all pronounced them equal to almost any and superior to many of our saltwater fish, having none of the flavor of the mullet or sucker fish, and equal to rock or perch. These fish were obtained from Fish Commissioner Huggett, just about one year from the day the breakfast was given. They were about only about two inches long, and have made their great growth since that time."

FISH CULTURE IN MICHIGAN.—A correspondent informs us that on account of storms and cold weather there has been a short crop of whitefish eggs in Michigan, and that instead of the forty millions which the commissioners were prepared to give they will only be able to gather some five million eggs. There were hopes, however, that if the weather improved a considerable addition could be made to this number.

## Sea and River Fishing.

### EATING NEGLECTED FISHES.

PENNSACOLA, Fla., Nov. 26.

Editor Forest and Stream:

I have read your editorial on "Neglected Fishes," in the issue of the 18th, with satisfaction, and am glad to see the matter brought before the public by so popular a paper as the FOREST AND STREAM.

That so many kinds of fishes are generally deemed unpalatable or unwholesome had long been a wonder to me, and an acquaintance of several years with the Italian, Spanish, French and Malay fishermen of the Gulf coast has not only not shared many of our prejudices, led me to observe their use of species which we condemn, and to make personal investigation.

Since it is about as cheap to catch choice fish as others on this coast, and the poor can as well afford such fish as bluefish, sheephead, mullet, etc., instead of skate, sharks, etc., it is rather curious that necessity that influences them to eat the latter.

The European fishermen, holding to the habits and manners of their own country, are doubtless the cause of this to the majority of American minds, peculiar taste. By association with them the natives of the coast have learned to add to their variety of fish-food and have also become aware of dainties which they once did not know of.

Therefore it is not strange that we find kinds of fish in quite common use on the Gulf coast that are thrown away on the North Atlantic coast, and which might, as suggested in your article, be utilized as cheap food for the poor. Since becoming interested in this matter I have not confined my curiosity to noting what others have done in the way of discovering new forms of fish-food, but have myself tried still more novel dishes and generally with good results.

During the winter of '79-'80 I was on a long cruise along the Florida coast with partly the object of securing as many strange specimens of fishes as possible. In catching these many of the common kinds were taken, which, as from meats were not always procurable, made up much a good meal. Early for change and curiosity and partly for the value of the knowledge in giving their histories, I had cooked quite a number of fishes that are not often eaten anywhere, as far as I know. Shore people were sometimes invited on board our vessel to dine, and it was very unusual to watch their astonished faces when catfish or equally despicable fishes were placed before them.

On one occasion, while going from Ocklawaha Bay to St. Marks, I laid out to feast the pilot on dainties of this sort. The cook brought in first a stew or chowder of minnows, very nicely prepared, which the pilot declined, but finally followed my example in eating heartily of Fried bill-fish and two or three other unusual forms were next presented, received with suspicion and then accepted and pronounced good; but when the cook was told to bring on the sturgeon eggs (farina pudding in disguise), the poor fellow wilted, and, thanking me, said that bread and molasses was good enough for his desert. It can be imagined that strange stories were told about us by the pilot on his arrival home.

Fearing that what I have to say will be classed among the fishy of the fish stories, I will endeavor not to drop into anecdote, as Silas Wegg is said to have dropped from prose to poetry, and will briefly mention some of the "Neglected Fishes" I know to be universally such, and which are prominent among these are the rays and skate, the pectorals or wings of which are the chief parts to be utilized. These when nicely fried or broiled are really superior fish food, resembling somewhat the flesh of the Southern flounder. At New Orleans rays appear daily in the markets during the spring and summer months when they can be caught, and seem to sell quite readily. Young individuals of the various species of sharks and rays are also cooked in any way that other fishes of their size are, and I have made it my duty to discover anything rank or distasteful about the small sharks that live near the shore.

Salt water catfish, which are excessively abundant on this coast, and are the pest of net fishermen and anglers, are, I consider, quite as edible as the red-fish or channel bass, al-

though they are not to be so easily prepared for cooking. Their flesh needs to be cooked longer than the most of salt water fishes, and is especially good in chowders. The skip-jack or lady-fish, a *scomberoides* of the South, is a very common fish and is seldom eaten because of its soft flesh and the bones, which are so numerous. The creoles of this vicinity occasionally eat them. The toadfish (*Batrachus tatus*), resembling somewhat the sculpin of the North, has very palatable flesh, which can be used to best advantage in chowders. A sea variety, recently described as *Batrachus tatus*, *subsp. pardus*, Goode and Bean, is considered a great delicacy among the French of New Orleans.

Garc, or bill fish (*Belonidae*), are very numerous on the southern coasts of this country, yet are not eaten in many places. I attribute the prejudice against them to their form and the color of their bones, which are of a greenish hue, for there can be no cause for dislike to their flesh, which is firm and sweet and can be very easily prepared for use. All whom I have known to test their edible qualities have spoken highly of them.

The sand-divers, goanards (*Trigloides*), and the yellow-tail (*Elagatis plumbeus*), are very fair food fishes, and are invariably thrown away in this country as valueless. The last mentioned is eaten in many places in Cuba, and at Havana appears in the market uncooked, and upon the streets cooked and all ready to be served to customers.

Many of the countless number of female fish commonly called minnows make agreeable and nutritious food when cooked in certain ways, and as they can be caught easily and in large quantities would sell cheaply. The Spaniards and Italians are very fond of these minnows cooked in soups or stews. Of this class I have tested with good results two or three kinds, chiefly *Chirocentrus penicillatus*, Goode and Bean; silversides or frigs, *Argenteus*, *Paralichthys grandis*, Baird and Girard, and *Cyprinodon variegatus*, Lac.

Among other uncommon dishes I have noted the use of the cow-fish (*Ostracion quadricornis*), as baked in its bony covering. Some species of *Tirodonotidae*, puffers or blow-fish and the squid.

This last is more commonly used than the other, and is highly esteemed by the fishermen of the Northern and Western Gulf coasts as cooked in soups. There are instances among the natives of the Gulf of Mexico of eating them even while yet alive, but is by no means a common practice.

If those of the readers of your valuable paper who are favorably situated, or spend some of their time on yachting and camping excursions would interest themselves in this matter and test the edible qualities of some of the unsightly fishes that they are in the habit of throwing away, I will venture to predict that they will be pleased often more than disappointed with the result.

SILAS STREANS.

THE DEATH TRAP IN SHINNECOCK BAY.

NEW YORK, December 7, 1890.

Editor Forest and Stream:

I have read with great interest your articles on "The Death Trap in Shinnecock Bay." Mr. Lane, referred to in the article in your paper of November 11, is mistaken in saying that the law was passed in 1877. The law was passed in 1877 (see Session Laws of 1877, chap. 362). The following is a copy, verbatim, of this law, taken from the Session Laws of 1877:

[Copy.] LAWS OF 1877, CHAPTER 362.  
An Act to empower the Board of Supervisors of Suffolk County to appoint three commissioners to locate an inlet from the Atlantic Ocean to the Shinnecock Bay in said county.

SECTION 1. The Board of Supervisors of the County of Suffolk are hereby authorized and empowered to appoint three commissioners to locate an inlet from the Atlantic Ocean to the Shinnecock Bay, within one year after the passage of this act, to locate an inlet between the waters of the Atlantic Ocean and Shinnecock Bay, in said County of Suffolk, and the said three commissioners so appointed shall have full power to locate said inlet at such a point as may be to them most best for the interests of the people residing on or near said Shinnecock Bay, and to prevent or prohibit the opening of any other inlet or inlets at any other point or points on said Bay.

2. Said commissioners shall hold office until their successors shall have been appointed, and shall be subject to removal at the pleasure of said Board of Supervisors.

3. Any person or persons who shall open or aid in opening any inlet or inlets between the Atlantic Ocean and Shinnecock Bay, contrary to the authority of the commissioners hereby appointed, shall be deemed to be guilty of a misdemeanor.

This is an important matter, and I have lately given it some attention, having recently been at Goodground and witnessed the evils mentioned in your articles. There has been no amendment to this law, and I can find no other law relating to this inlet passed since that year 1877.

The commissioners have, as I have been informed, "relocated" the inlet at a point east of the former location. This has given rise to dissatisfaction among many residents along the Bay for the reason, as it is claimed, that the inlet at the "relocation" will not run more than a few weeks; that it will certainly close in a short time, and then the head of water which has accumulated will have run out and a delay of many months will ensue before water will accumulate in the Bay sufficient to open another inlet. It is complained also that no steps will be taken by the commissioners to locate the inlet at the "relocation" until spring, and that the result of all this will be that the Bay will be ruined as a sporting resort. It seems to me, on reading the law, that the remedy for all this is simple and is in the hands of any of the residents who possess public spirit enough to carry it out.

First. This so-called "relocation" is entirely outside the authority of the commissioners. By section 1 of the law of 1877 it is made the duty of the commissioners, within one year after the passage of the act, to locate an inlet. This is the only authority given them to locate an inlet, and it is plain that the law of 1877 has elapsed, and they did not locate the inlet during the "one year," at the western point, and it was opened and remained opened till recently.

It is clear that the commissioners having in accordance with law "located" the inlet at the western point, as soon as they had done so were "functus officio" as far as locating the inlet is concerned, for the law gives them power to locate an inlet "at such a point as may to them seem best for the interests of the people residing on or near Shinnecock Bay." They decided that the western point was such a point, and having done so, and having located an inlet, their authority to locate came to an end.

Second. As it was almost the unanimous opinion of the residents near the Bay with whom I conversed that this western point was the only proper point for an inlet, the only point where one would remain open any length of time,

it seems to me the remedy for the present trouble to be in reopening the inlet at the spot where it was originally located by the commissioners—the only legal location ever made. There are many men ready and willing at once to go to work without compensation and dig out the inlet at the old location, but are deterred by fear of punishment under the 3d section of the law should they so do. This section provides that any person who shall open or aid in opening any inlet or inlets contrary to the authority of the commissioners shall be deemed guilty of a misdemeanor. It seems to me such fears are groundless. The commissioners have "located" the inlet at the western point, they having authority to prohibit openings only "at other points," all subsequent "relocations" being without authority and void, they have no right or authority to prohibit an opening at the point of original location. If the residents wish to save their bay as a shooting resort, let them some day this month go in a body to the western point, the point of original location, and dig out an inlet.

JUSTITIA.

RANGE OF THE CATFISH.

AS a further evidence that the statement of Dr. E. Sterling, of Cleveland, O., who is usually very careful and accurate in his assertions, in FOREST AND STREAM of November 11th, Vol. 1, page 387, that "the extreme Northern range of the catfish is but in Lake Erie," about Lake Erie is not correct, I wish to present to your readers the following facts:

My boyhood days were spent on my father's farm in Niagara County, New York, on the shore of Lake Ontario. And I used to frequently spend the pleasant summer evenings in fishing for eels and bullheads from the beach. Sometimes I would set my rod by fastening the butt in drift wood, or otherwise, leaving the baited hook in the lake over night, and generally had the whole line tied into a close knot with steel in intimate proximity as the result. But one morning, when I reached the lake, I found my rod with the tip nearly in the water, and could see what to my boyish eyes appeared to be a whale, but which proved to be only a catfish—probably *Ambloplites nigrificans*; although, of course, I cannot recollect, if I had known them, the specific characteristics well enough to be certain. It weighed 84 pounds, which made me high look among the boys as long as I lived there. The fish was white, with light belly, excellent.

Both the hook and line were of small size for eels, neither of which would have held him for a minute had it not been for the elasticity of the rod, which was set so as to give when it must, and take when it could. Another illustration of the fact that the rod should always kill the fish.

OKIOI.

Grand Rapids, Mich.

In a recent issue of your paper, Dr. Sterling says: "The extreme Northern limit of the catfish is, you may be certain, about Lake Erie." During the past summer I took a number of them in Lake Rosseau, Ontario, and in the Magnetawan River. Both these localities are considerably north of Lake Erie.

C. B.

December 7, 1890.

IS IT THE POLAR FLOUNDER?—The Belfast, Me., *Journal* mentions a strange fish which should be sent to Prof. Baird for identification. It says: "Mr. Collins has at his fish market in this city, a specimen of flounder entirely different from what are usually captured in our waters. For two years, late in the fall, this flounder has made its appearance in our harbor, and taken the hook quite readily." Mr. Collins says they are the deep sea or Arctic flounder. The fish run very large, weighing on an average one pound each. Another difference is that the deep sea flounder is now filled with spawn, while the inshore variety do not spawn until spring. The deep sea flounder is caught off the coast in traps, or flyers, as the fishermen call them. These traps are made something like a lobster trap in which fish food is placed to tempt them inside. When once within the power of the trap the fish is secured and is hauled in by the fishermen. They are a very excellent pan fish.

LEJANUS BLACKFORD.—In speaking of the immense numbers of this fish which have within a few years occupied a prominent place in our sea-board markets the *New Orleans Democrat*, says:

By a visit to our principal markets yesterday we learned that during the past week there was an enormous importation into this city of that highly-prized luxury and valuable article of food, the red-snapper. The supply of this fish along the whole coast is inexhaustible. The red-snapper grounds are estimated to extend 900 miles. It is only a question of labor what amount can be caught. They are found in countless myriads at all seasons, in a certain depth of water, say from fifty to eighty feet. They are caught with lines having a number of hooks, which are eagerly seized by the fish. It is pretty hard work to draw up these lines with such a number of these heavy fish attached to them. Windlasses are frequently used to draw them up. In a very few hours the wells of the snappers are filled with them. To prevent their floating, and keep them alive until the port is reached, it is necessary to reduce their bulk by compressing the large access of air accumulated in their long passage from a great depth of water in which they are brought to the surface. This is done by a small incision just below the gills, which operates as a vent through which the air escapes until the fish is reduced to its natural size, so that it sinks and keeps alive and healthy. It was through this simple suggestion that the red-snapper became a great commercial fish. Previously it was found difficult to bring them to market fresh. Now they can be caught in far greater abundance than any other fish. There is a large fleet and a large number of men employed in this fishery. As the value and cheapness of the red-snapper begins to be generally appreciated throughout the West, this industry will be greatly increased. With marriage and other clean transportation, we believe that in time this business will equal in its proportions and extent the cod and mackerel fisheries of Massachusetts. The abundance of the red-snapper in the Gulf is equal, if not superior, to that of the cod off the coast of Newfoundland. It is a far better fish than either, and involves less labor and expense in filling the demand and in transporting it fresh to any of the interior towns.

THE MARKETMEN are now receiving large quantities of game, both large and small. The largest portion is received from the following States: Kentucky, Massachusetts, Virginia, Maryland, New York, Iowa, Nebraska, Missouri and the Red River region.

Game Bag and Gun.

The man who thinks that he can afford to pay the farmer's boy more for quail than the boy is paid by the baggage-masters is invited to send his address to this office.

DISCUSSING THE GAME LAW.

THE regular monthly meeting of the Long Island Sportsmen's Association was held at the Royal Arcanum Room, Music Hall, Brooklyn, Dec. 10, President Chappell in the chair. Mr. Abel Crook reported that he had gone before the Supervisors of Queens County to address them on the subject of making a law in Queens County similar to the one now in force in Ulster County, which would prohibit the killing or shipping of all wild game for market except wild fowl. This created considerable discussion, a portion of the members thinking that such a law would make enemies of the farmers. Judge Lot said that a large majority of the farmers of Queens County were in favor of just such a law. It was finally decided to ask the supervisors of Queens County to enact it. The Coney Island Rod and Gun Club, Capt. W. L. B. Steers, President, with eighty members, was then elected by acclamation to the association.

Captain Steers thanked the association, and said that the members of the club were more expert with the rod than with the gun, but there were a few good shots among them. Judge Lot remarked that as the President of the Coney Island Rod and Gun Club was some on the rod he might have a chance to meet Seth Green and give him a proper "steer." Captain Steers was then elected a member of the committee on fish and game.

It was decided that the president should call a special meeting of the executive committee to appoint sub-committees. Mr. Crook made a motion, that was carried, to the effect that the association should apply to the Legislature for a charter of incorporation, which would give them the power to elect constables, to employ detectives, to purchase game and fish for breeding purposes, to punish trespassing, to furnish licences to shoot, and constituting each member of the association a game constable.

The prize committee reported progress, and were granted permission to increase their number if they saw fit. Mr. Nicholas Pike was then requested to address the meeting. Mr. Pike read the following paper:

"Members of the Long Island Association.—For the past year I have exerted myself as much as possible in gaining information from competent persons relative to our existing game laws. From my own observations also I am convinced that alterations and additions should be made to them to prevent the wholesale destruction now going on, not only of our game, but of our song birds, which at the rate it is now progressing must end in their extermination. Below I append the changes I would recommend in our game laws.

"Relative to the shooting of wild ducks and geese.—The use of floating batteries, machines or other devices whereby the gunner is concealed, or shooting therefrom; use of decoys or construction of bow houses at distance from the shore of more than twenty rods should be a misdemeanor of Long Island. Sailing for them, or shooting from sailing or steam vessels or structures attached to the same, should be made misdemeanors with added penalties throughout the State.

"The reason for which I recommend battery shooting to be discontinued is this: There are many persons in the Great South, Peconic and Shinnecock Bays who gun for a living, and gun incessantly from daylight till dark, and often far into the night through the whole season. Now it is well known to sportsmen that if ducks and geese are constantly disturbed at night or early morning while on their feeding grounds they will eventually desert the place. The late Governor once told me that it was his opinion that battery shooting was quite desecrating the sportsman's grounds yearly becoming scarcer and leaving their accustomed haunts. The law as it now stands for killing these birds between sunset and daylight, with or without a lantern, is all right.

"Curlews, godwits, willets, sandpipers, snipe and all birds commonly known under the name of snipe.—A stringent law should be passed prohibiting the shooting of these birds except between the 1st of August and the 1st of January. Spring shooting should certainly be forbidden.

"Quail.—A law should be passed prohibiting the shooting of quail on Long Island for the next three years. They have become so scarce of late years that there are comparatively few left. I am informed by sportsmen that trapping, robbing of nests and shooting out of season are rapidly exterminating them. In my rambles about the island I do not meet half a dozen in a week, where formerly in the breeding season I could hear them calling in every direction.

"Ruffed grouse or partridge.—I would recommend a law preventing these birds also from being shot for three years. Formerly they were very abundant on Long Island. Now they are so scarce I rarely see one anywhere, and if this law is not soon passed our partridges will soon be extinct.

"Woodcock.—The time for shooting this bird should be changed. It ought not to be molested until the 1st of October. I would like to leave it until the 1st of November (so that sportsmen should have no excuse for shooting young birds by mistake). If woodcock are shot before the 1st of October they are in poor condition, and have not acquired their full plumage. Some that I saw shot in August did not weigh five ounces, were thin in flesh and the primaries of their wings were not fully expanded; and I think that every sportsman will agree that the change is a good one.

"Rails.—Clapper, sora, Virginia and lesser rails.—There is no law relative to the protection of these birds, and I would recommend there being one prohibiting the killing of them for the next three years under a penalty of \$10 for first offense, and for second offense the sportsman in the county jail for three months. Rails, once so numerous about the marshes, creeks and rivers, are now scarce, and there should be no delay in passing this law. Although rails are very prolific laying from sixteen to eighteen eggs at a time, there is a regular system of robbing the nests by persons living in the vicinity of the marshes.

"Eagles, night hawks, martins, whip-poor-wills, swallows, woodpeckers, meadow larks, thrushes (*Turdus migratorius*, robin, excepted), warblers, and all the native song birds.—I would have the penalty for killing any of these birds, 1st for the first offense and for the second imprisonment for not less than twenty days nor more than three months in the county jail, and forfeiture of gun. One great cause of this wholesale destruction is the small boy, allowed to carry firearms, who shoots at everything that flies. Last summer I saw in

The next day found us at dawn far up toward the top of the rugged, wooded hills. We feared the dog would show being tired from the tramp of the day before, but no. One, unseen, gets up wild, and from now until dark the dog gives a succession of surprises in her capacity. Night comes and never met so tired, so satisfied, so triumphant, so boastful a gunner as me in counting out fifteen grouse as the result of two days' work from sun to sun. No one with any less good dog could secure the same result.

Feeling that the success of this hunt was entirely due to the comparative rest the birds have had for two years we record this to encourage the efforts of game associations to preserve the game in the country under their control, satisfied that districts now without a partridge or grouse will soon agree to accept plenty of sport for the outlay of time and money in the rigid enforcement of the game laws. BRISKEHOE.  
Maric, Dec. 6, 1880.

#### GEORGIA SHOOTING RESORTS.

AS the season has come when the question with many Northern sportsmen is, where good game sections are to be found, I will say a few words concerning this part of Georgia. I notice one of your correspondents is inclined to think that some at least of your correspondents have "axes to grind" when they call attention to localities particularly favored in the fall. Come, I can say positively that this is not true, so far at least as I am concerned.

In the matter of climate this section leaves but little to be desired. We are below the snow level—I might almost say below the frost line. We have had only one light frost this winter, and the atmospheric conditions are certainly peculiarly suited to those suffering from lung troubles, the country being almost entirely covered with a heavy growth of pines.

We have fairly good railroad facilities. Of course the traveler will fail to find the luxurious appointments of the great trunk lines North, but a not too fastidious person can and will be satisfied.

Let some doubting Thomas may think I am overdriving I will put it very mild while I speak of the game to be found in this favored section. Quail are to be found in great abundance everywhere, a good shot will find difficulty in bringing forty or fifty to bag in a day's shoot, and a man who hunts with the bag alone can do better than this. In some localities, indeed wherever they find food and suitable feeding grounds, snipe are plentiful enough to afford good sport. By this I mean a sportsman can kill twenty-five to thirty in a day. A few miles in any direction from any point will give the sportsman superb duck shooting, and if the sportsman will leave the line of railroad a few miles he can have quail, snipe and duck shooting all on the same ground. A few deer are to be found, and wild turkeys are fairly plenty.

Accommodations, price of same, etc., of course vary. The high-toned sportsman can find those suited to his taste, and the man who will be satisfied with good, clean, comfortable quarters and food can be suited as well.

The better class of our people will gladly welcome as friends and companions in the field all gentlemen who will report themselves as such. There is enough and to spare of sport for all who may come, and I will for the love I bear the guild of sportsmen cheerfully aid and properly introduce all who care to avail themselves of my services.

To those who desire more specific information I will be happy to communicate by mail. ALBERT WINTER.  
Cairo, Thomas County, Ga., Dec. 6.

#### THE INTRODUCTION OF GAME BIRDS.

WHILE noticing with interest the laudable efforts of gentlemen sportsmen and game protective associations throughout the Eastern and Middle States for the introduction and propagation of migratory quail, the thought has often presented itself, could not the efforts be better directed, and with a much fairer degree of success, toward the introduction of that noble game bird the pinnated grouse, or prairie chicken? In the case it is a bare experiment, dependent for its success upon whether they will migrate and return; while in the other, it is almost an assured success.

The rigors of our winters' deep snows and consequent scarcity of food is almost certain destruction to our quail, either native or imported, while the hardness of the pinnated grouse, coupled with its habit of taking to timber in the cold, enables it to adapt itself to the extremes of climate, as well as our own ruffed grouse, or "pinnated." That it is singularly fitted to withstand our severe winters is amply proven by the vast numbers found in Wisconsin and Minnesota, where their winters exceed ours both in duration and severity.

While I fear we must admit that the introduction of migratory quail has not met with that success for which it was hoped, yet it is a "step in the right direction," and I trust will lead to like experiments with both the pinnated grouse and California quail. As to their game qualities and the pleasure of bagging the one or the other there can be no comparison. Every sportsman who has shot ruffed grouse and our native quail knows with what additional pleasure he exhibits the spoils of his day's sport if among a goodly number of them he can also count two or three brace of *Bonasa umbellus*. They are a bird worthy the skill of our most ardent sportsman and in whose pursuit nothing but the staunchest and the best of dogs will reward the hunter with success. The pinnated grouse, while being more easily found and, as a rule, lying better to dogs, would be scarcely less difficult to kill as they would take to timber on being flushed), and when bagged but little inferior to its lesser cousin. Our diversified landscape of hills and valleys, barren mountains and cultivated fields would afford immunity from extremes of temperature as well as danger of extermination from dog and gun. An effort to introduce the noble grouse would meet with the hearty approval and, doubt not, substantial support of every eminent sportsman in the Eastern and Middle States. PINNATED GROUSE.

SULLIVAN COUNTY—Elmer, Dec. 5.—Monday, November 22, I hunted deer alone and killed a fine buck. He weighed 150 pounds. On Thursday of the same week I hunted again with a companion. In the morning I drove two fine bucks over the stand before George got there; and in the afternoon started and drove a fine pounder to George and he shot him dead. On Monday I hunted with two gentlemen from Hancock, Mr. Kelsey and James M. Wheeler. Mr. Wheeler shot a fine doe before 8 o'clock. Tuesday, George Dunlap and I hunted again and started ten deer, but did not kill any. It needs six men to hunt them here, but the season is at an end for this year. Partridge, rabbits and hares have not been more plenty for several years. HUNTER.

#### HE WILL MAKE AN AFFIDAVIT.

##### Editor Forest and Stream:

Some weeks ago I saw a controversy in your paper about trapped quail on Long Island. I know the letter-writer in yours of the 11th stated the truth, while the indignation of the Long Island Game Association, as expressed in your number of the 18th, appears to me rather uncalled for, at least in the face of my experience. For the benefit of the association I will state the facts and points.

On returning from the field trials Friday last on the early train, I think it was about 9 o'clock—really overlooked name of station—the newsboy offered me a dozen quail, which he told me the baggage-master told him to sell. I examined them carefully and they were trapped birds. The boy claimed ignorance of everything. All he knew was to sell his birds. Now I have no interest in Long Island, never pulled a trigger there nor expect to; but if my brother sportsmen of the Long Island Association want me they can call upon me at No. 43 New Street, New York. I will make any affidavit they want. I further give them these points: (1.) It is unlawful under our State laws to sell trapped quail. (2.) It is against the rules of the Long Island Railway for the baggage masters to carry anything except checked trunks—everything else must be carried by Westcott's Express. (3.) The Union News boys act contrary to rules by peddling for the baggage-master instead of his employees.

Now the proper thing is to complain at the railway office by calling upon Mr. Sharpe, complain at the Union News Company, and commence suit against the baggage-master and boy on the through train. Send a detective on the train for a few mornings and he will corroborate every word I say. Before closing I confess I can't understand why this illegal huckstering can be allowed. If that had happened in my county I would have stopped it long ago. There need be no complaint about an anonymous communication this time. A. E. GODFREY.

Guymard, Orange County, N. Y.

#### WILD GEESSE AT SILVER LAKE.

Boston, Dec. 6, 1880.

THE writer had the good fortune to be present at and take part in some shooting at wild geese considered very remarkable, and which might be thought of sufficient interest to be made known. The locality was Silver Lake, Mass., where so many regattas have taken place. The stand where the birds were shot at is on the west side, near the grand stand for viewing the races, and called Widgeon Point. The shooting was on Thursday last, Dec. 2.

Ten geese swam up off the stand, and all were shot, only one of which had to be shot over from the boat which went out to recover the birds. This was about sunrise. About 10:30 A. M. a large flock, twenty-one in number, were seen flying over, well up in the air, and by stirring up the live decoys noise enough to make them take to the water and they lit in the south end of the lake. After staying there some time they rose, and after wheeling several times within shot of the stand they went down in the water in a cove, almost within shooting distance, then swam up toward the beach in front of where seven of us were waiting, hardly daring to move for fear of scaring them away. When they were directly in front of us, swimming well together, the word was given, "Get ready! Are you ready? Fire!" and the contents of our guns poured into them only two or three made the least attempt to start, and they were shot at once, and the whole number, twenty-one, lay dead. The most remarkable part was that not one of them required shooting over from the boat.

This is said to be the most remarkable shot at geese from a stand ever known to be made in the county (Plymouth). I would also add that out of four bunches of geese decoyed to this stand—viz., eight, six, ten and twenty-one, forty-five in all—not one escaped. B. C. M.

SOUTHERN FLORIDA—Lafayette, Ind., Dec. 9.—In your last number of FOREST AND STREAM you speak of a party of gentlemen who intend visiting Southern Florida and endeavor to sail down the Kissimmee River and through Lake Okechobee near the Caloosahatchee River and eventually Charlotte Harbor and the Gulf. Have been through this section of Florida, and shall avail with interest the report of this party. Will you kindly give me the names of the members of the expedition? The old boat "Forest and Stream" was secured by our leader, Mr. Ingram Fletcher, of Indianapolis, at the time it was abandoned by your exploring party. Mr. B. H. Bessinger, by us several years in our trips through the Kissimmee country, do not think it possible to pass from Okechobee to the Gulf by boat at ordinary stage of water without making some long portages. Three years ago, after heavy rains and when Southern Florida was partially submerged, Messrs. Driggs and Peise (the former from Michigan and the latter residing near Ft. Basenger) made the trip by boat. The old "Forest and Stream" was an excellent boat and well adapted for exploring in the shallow lakes of Florida. She now lies a wreck on one of the islands in Lake Tahapekaliza. E. A. E.

WEIGHTS OF RUFFED GROUSE—Hornellsville, N. Y., Dec. 5.—I have just written to your correspondent not to send his plume to "Ruffed Grouse" or Chas. F. Kent, but the plume or rather to your cozier Fannie, for last Thursday, Dec. 2, she caught the king of all grouse ever seen here. I weighed after being carried all day and bleeding considerable, thirty-two and one-half ounces, so, you see, she is fairly entitled to the plume. The bird was weighed on five different scales, and hundreds came in to see it. It measured over eighteen inches from end of beak to end of tail. It was a cock. J. OTIS FELLOWS.

FOREST AND STREAM, Dec. 6.—I notice in last issue of FOREST AND STREAM your correspondent awards the plume of honor to Chas. F. Kent, of Monticello, New York, and to "Ruffed Grouse" of Ashfield, Mass., for killing a ruffed grouse that weighed one pound and thirteen ounces. If your correspondent will take the trouble to refer to "Frank Schley's American Partridge and Pheasant Shooting," on page 180, he will there find recorded that the average weight of the American ruffed grouse is one pound six to thirteen ounces. To give credit as far as I know this is the only work in the United States that gives the weight of this wild, hardy North American game bird. So, according to this valuable and estimable book, and authority's good teachings, for a sportsman to kill a ruffed grouse that will weigh one pound and thirteen ounces it is not outside of the general

limits of occurrences, but it is otherwise. It is more like the regular, every day run of things. HARRY WOODLAND.

THEY KNOW THE SEASON—Blossbury, Hunterdon Co., N. J., Dec. 6.—The month of November is past and we have done but very little shooting. Quail are not so plenty as they were thought to be during the summer. We could often find full coveys and many of them, but with Nov. 4, they disappeared and about Jan. 1, they again put in an appearance. Last fall I knew where there was a covey of twenty-four large birds, and hunted them every week, but never found them. I knew no one else had found them, and was confident that none had been shot. On Jan. 4, the whole flock passed across the road and ran along without fear of being molested. Grouse are in fair numbers, although few have been shot. Rabbits are plenty. Woodcock very scarce. We had very dry weather during July and August, or I think would have seen a few at least. About a dozen have been shot in this vicinity since Nov. 1. P. H.

THE HEN ISLAND CLUB—Taunton, Mass., Dec. 7.—The following is the score made by the Hen Island Club, located at Scaddings Pond, Taunton, Mass. The club were fortunate in bringing within shooting distance all the geese that struck the pond, thirty-eight in number, and captured at different times 8, 7, 2, 4, 6 and 6—total 31. The pond froze up Nov. 20, and the last six geese were decoyed to the ice forty-six yards from the stand and shot where they lit, a Colt 12-gauge gun killing one clean at that distance. The club use fourteen geese decoys. Ducks this season have been scarce and hard to decoy. Total of river ducks, 61; sea-fowl, 72. The club still remain at the stand waiting for stray flocks of geese, and pass the time in fishing and gunning in the woods. C. T. S.

GEORGIA—Elberton, Dec. 10.—Mrs. Oliver and Hafer, of our town, went out hunting a few days ago and bagged 60 partridges. We have several fine shots who bag from 50 to 100 in one day. Ducks, geese, fish and rabbits are plentiful. Deer, foxes and "coons" are scarce. Willie Snow, one of my friends, caught last spring three catfish, respectively 26, 26 and 27 inches in length, and the three weighed 24 lbs. We killed about the same time a bird of the fish-hawk tribe that measured 7 ft. from tip to tip. His bill was 6 in. In length, 4 in. in width, and his longest tail feather was 20 in. Can you tell me what its name is in your next paper? W. A. J.

Your description is insufficient.

OHIO—Franklin, Dec. 2.—Quail and rabbit shooting now in full blast. Snow is going off and it will be good hunting for a while. Some very good bags have been made. A few pheasants have been bagged within a mile of town. A friend showed me a very large spine bird this morning. The one he first killed in this county for some years. Mr. Van Van Horn killed three turkeys and twenty pheasants in Dark County last week. A very fine deer was received to-day by Mr. James Barklow from the wilds of Michigan as a present. It weighed 100 pounds and pulled 80 pounds with hide off. It excited the curiosity of the people very much, being very rare game in this place. C. A. M.

CONNECTICUT—Madison, Conn., Dec. 6.—Have been much interested in reading editorial in paper November 23 in relation to farmers on Long Island. The same arguments will apply here as elsewhere. If I can get time and some relaxation from professional cases I intend to give you some remarks relative to sporting in this vicinity, for if some measures of prevention are not soon taken game here will soon become extinct, as pot hunters and trappers have full swing here. Please answer the following query: Who makes the best glass-bait trap, and at what cost? and oblige D. M. W.

TEXAS—Indianola, Nov. 30.—For the past two weeks the weather has been so wet and cold and everything so full of water that almost all the fowl have left here. I fear, however, that up in the Post Oak country (there being an unusually heavy mast this season) the ducks are in countless numbers. I hope, however, to have better news if we can have some dry weather. Fine fishing, large quantities of sheep-head being caught. G. A.

A BIG BUCK—East Saginaw, Nov. 29.—I have just returned from a five weeks' hunt. Grayling fishing good. Deer hunting good: five hounds to every deer; so much for the gentleman sportsman. Killed one buck weighing 247 lbs., and a number of smaller bucks. If you can oversize that I know where there is one that will weigh over 300 lbs. I will try and get him next time. TRAPPER.

PENNSYLVANIA—Coopersburg, Dec. 6.—I returned home from a two weeks' hunt in Forest County last week, but cannot boast of success. Mr. J. E. Venk, editor of the *Forest Republican*, killed within a few miles of Tionesta a very fine fine pronged buck which weighed near two hundred pounds. Very few deer killed in that vicinity this fall, owing to the scarcity of snow. I did not see a deer. OTTO.

WEIGHT OF SQUIRRELS.—I have taken the trouble to carefully weigh all the gray and black squirrels I have shot this fall, and find the average as follows: Gray, 1 lb., 10 oz.; black, 1 lb., 14 oz. This is not weight, as soon after being killed. It seems to me that squirrels here are larger than I ever found them elsewhere. Will some one else please give average weight? Last week I shot three mallard ducks that averaged 3 1/2 lbs. each. J. F. L.

NEW YORK—Hornellsville, Dec. 5.—Chas. Margeson and three friends returned from a month's hunt in Michigan with seventeen deer. They have enough jerked meat to last a year, and antlers enough to stock a museum. Geo. Humphrey shot a fine deer here, the 20th ult. John P. and Frank Morris shot the best bag of ruffed grouse of the season on the 14th ult., eighteen, with thirty shells. J. O. F.

RHODE ISLAND—Newport, Dec. 9.—There is nothing to report in fishing, and but very little shooting has been done here the last two weeks. Birds very scarce. Mr. Chase and Mr. Anthony each shot a wild goose. They were lone birds, none others having been seen for some time. X. Y. Z.

The views of Mr. Pike respecting the game law are worthy of a careful reading.

THE FOREST AND STREAM's exposition of "Dittmar sporting powder" will be sent upon application.

## THE CHASE: ITS HISTORY AND LAWS.

BY THE LORD CHIEF JUSTICE OF ENGLAND.

[Continued from page 375.]

AN account is given by Xenophon of the natural habits of the hare, which even a naturalist might study with advantage, and in the course of which the author appears to be worked up to an enthusiastic admiration of the creature, the destruction of which is the very subject of his work. "So charming an animal is it that no one who sees it either tracked, found, followed, or caught, but must lose all thought of all else he sees. Various directions are given for the construction and use of the different nets, and for the breeding, choice and training of the hounds, which he divides into two sorts, one of which he describes to a cross between the dog and the fox, and of which he speaks with contempt; the other, which he calls the Castor hound—as being the breed with which Castor himself used to hunt—and of which a detailed description is given—probably the Spartan or Cretan hound, which would seem to have been of the same or a very similar species.

Xenophon next treats of stag-hunting, for which he recommends the employment of Indian hounds, as being large, strong, swift and high-couraged, and so best suited for work. But he proposes to pursue the sport in a way which would seem highly unimportant-like. He recommends the use of a footsore—a sort of wooden trap, the construction of which it is not very easy to understand or explain, but which the Egyptians appear to have used centuries before, and which Sir Gardner Wilkinson tells us the Arabs use to this day; to this contrivance a noose is to be attached. When complete, the trap is to be placed in the track of the deer, below the surface of the ground, and carefully covered over with earth and leaves, so that, stepping on it, the foot of the deer may be caught, and the animal, unable to disengage it, may be compelled to drag the wooden log after it. Coming afterward with his dogs and finding the trap gone, the hunter is to follow the track, and it will have led on the stones and ground, and with the aid of his hounds will soon come up with the deer, which, its progress being thus impeded, will fall an easy prey. Not but what, if it proves to be a stag, Xenophon advises that it should be approached with caution, as the animal can strike furiously both with horns and feet. It should therefore be killed from a distance with darts and javelins.

It is remarkable that Xenophon makes no mention of the use of the bow. Nor in treating of hare-hunting does he speak of the spear, which as we know from other sources, the Greek hunter used with effect to knock over the hare when he could get within reach of her.

The third form of hunting treated of by our author is that of the wild boar, which, as described by him, was of a formidable nature, and the preparations for which required to be of a corresponding character. The nets must be of greater strength. The heads of the javelins used by the hunter must be broad and sharp as razors, the shafts must be of hard wood. The spears should have an iron head, five palms long, strongly guarded by cross-bars. And the prudent advice is given not to hunt alone, but always in company. The hounds should be, not of a common sort, but Indian, Locrian, Cretan or Spartan. A Spartan hound, these hounds having apparently been remarkable for keen scent, is to be first employed to find the boar, the rest being carefully kept back.

Generally speaking, when found by a single hound, the boar, Xenophon tells us, does not condescend to rise from his lair. The hunters are then to take advantage of this to spread the nets around him; having done which they are to set the hounds on him, but, if possible, at sufficient intervals to allow him to pass between them, so that he may not kill or injure more hounds than can be helped, the object being to get him entangled in the nets, in executing which the hunters are to assist by shouting and throwing darts and stones at him. When he is well entangled in the net, one of the boldest and most skillful of the hunters is to attack him with his spear—spears of this operation, however, which requires great dexterity and care. The blow is to be struck with the right hand, while the spear is supported by the left. But in this dangerous sport hunters, as well as hounds, sometimes perished. We betide the hunter if the boar, by turning his head, should succeed in averting the stroke, and should knock the spear out of the hunter's hand. Great and imminent is then the danger. The only resource of the hunter is said to be to fall flat on his face. The boar will then come up to raise him with his tusks, in order to rend him therewith, and, if he fails in this, will trample on him, and possibly trample him to death. This wild struggle, being without tusks, will always, under such circumstances, endeavor to trample on the prostrate hunter. The peril can only be averted by some brother sportsman coming to the rescue and attacking the beast with his spear, and so diverting its fury from the fallen man. But this must be done with caution, lest the spear thrust at the boar should injure the man whom it is intended to protect. Many hunters as well as hounds, Xenophon tells us, found their death in this perilous amusement.

Lions and other beasts of prey were destroyed, Xenophon proceeds to tell us, as they could not well be hunted in these mountainous districts owing to the roughness of the country, by means of acornite, as poison, mixed with the food they liked, and placed near the water or other places they were in the habit of frequenting. Sometimes they were caught in pitfalls, a she-goat being tied to the apex over which the beast had to pass, to attract him by her cries. Sometimes the animals, coming down into the open country by night, were then surrounded by men and horses, and taken, not without danger to the hunters.

Xenophon concludes his interesting treatise by an eloquent but somewhat exaggerated eulogy of hunting. According to him, the chase is the source of health to the mind as well as the body. It increases strength, hardy, active, fit for labor, manly, bold, courageous; it prepares a man for the war and for their country's service; it diverts them from mischievous and demoralizing habits and pursuits, and, giving a healthy tone to the mind, tends to make men virtuous and happy.—*The Nineteenth Century.*

## SHOOTING MATCHES.

VINCENOWS, N. J., Dec. 1.—The Coaxen Glass Ball Club of this place held their monthly shoot for badge here to-day. Card's rotary trap, 18 yards, weather cold, stormy and disagreeable; 10 balls each; score as follows: W. S. Hilliard, 7; J. W. Haines, 5; H. E. Haines, 6; R. H. Erick, 8; S. S. Butterworth, 4; Capt. Haines, 8; F. S. Hilliard, 6. Capt. Haines won badge. **SHELDRAKE.**

REINBERG, N. Y., Dec. 8.—In a match between a gentleman of Rhinebeck and a member of the Rhinebeck Club, the latter to

break 24 balls out of 25 from a Card revolving trap, 19 yards rise, 6 balls from three notches and seven from last notch. The latter won to-day by breaking 25 balls straight. **P. J. M.**

NEWTOWN, L. I., Dec. 10.—The third monthly contest of the Audubon Gun Club for the club-badge, took place yesterday. The cold counts for the score not being up to the mark. Eight members participated in the match, who shot at ten balls each sprung from rotary trap, twenty-one yards rise; ties were shot off at three extra balls each:

S. Blackwell.....	0	0	0	1	1	1	0	1	6
James Heming.....	1	1	1	1	1	1	0	0	7
R. M. Field.....	0	0	0	0	0	1	1	1	5
L. B. Field.....	0	0	1	1	0	0	1	1	6
Robt. Allen.....	0	1	1	0	0	0	0	1	3
C. W. Field.....	0	1	1	0	1	1	0	1	7
Henry Eger.....	0	0	1	1	0	0	0	1	4
P. Phillips.....	0	0	1	1	0	1	0	0	5

In shooting off the tie between the two highest contestants, Mr. James Heming won the badge. **H. HUNTER.**

POINTAUX GUN CLUB.—At the last monthly match of the Pointaux Gun Club the members shot off the postponed ties of their Thanksgiving match, the contestants appearing being Messrs. Chorry at 25 yards and Schworer at 29 yards. The score was: Chorry, 15; Cherry, 12. For the badge shoot, 7 birds each, 22 contestants. Harry Miller had provided a fair lot of birds, some good drivers rising from the traps occasionally. Among the half dozen contestants who killed six birds each was Madison, the gunmaker, who, unluckily, had a hard bird on the sixth shot which fell dead out of bounds. Madison shot at thirty yards rise. At the close of the shoot at the seven birds it was found that there were four ties, the score being as follows:

Wingert, 30 yards.....	1	1	1	1	1	1	1	1	10
Dr. Talbot, 29 yards.....	1	1	1	1	1	1	1	1	9
Schworer, 26 yards.....	1	1	1	1	1	1	1	1	9
Van Staden, 22 yards.....	1	1	1	1	1	1	1	1	9

This left Secretary Wingert the victor for the day. The shooting was from five traps at handicap rise.

ALONGQUIN GUN CLUB, Dec. 6.—Semi-monthly shoot for a gold badge, 20 balls, 3 traps, 18 yards rise:

Jos. Hanna.....	0	1	1	1	1	1	1	1	10
Jas. Dunsell.....	1	1	1	1	1	1	1	1	10
W. H. Hill.....	1	1	1	1	1	1	1	1	10
L. Brenner.....	1	1	1	1	1	1	1	1	10
Geo. Williams.....	1	1	1	1	1	1	1	1	10
E. M. Burns.....	0	0	1	1	1	1	1	1	9
Thos. Longhery.....	1	1	0	1	1	1	1	1	10
John Male.....	1	1	1	1	1	1	1	1	10
F. Eckstein.....	1	1	1	1	1	1	1	1	10
Robt. Ald.....	0	1	1	1	1	1	1	1	10
H. Griswold.....	0	1	1	1	1	1	1	1	10

## The Kennel.

## CANINE OPINIONS.

HEARD IN THE STILLY NIGHT.

IT was night. The Eastern Field Trials were over. The great "go-as-you-please" for judges and reporters was at an end, and quiet reigned supreme. The sound of Tom Aldrich's voice pleading for "just one more twenty-five cent bid" was no longer heard in the land. The room was deserted, and only the empty bottles and a floor strewn with cigar stumps spoke that all but one that was human had at last sought a bed of rest. As I yawned and stretched out my arms, disturbing the clouds of stale tobacco smoke that hung heavily over where the battle had so furiously raged, I felt more like conquered than conqueror and made up my mind that before donning my slippers and slipping in between the chilly sheets, a turn in the lane would do me good. No sooner thought than done, and the frosty road soon gave back the echoes of my square-heel-and-toe. I had just got under full swing, discussing the problem of how many menials of scallips a single man could make before going to Heaven, when a strange murmuring sound brought me to a stand-still. A queer mumbling sound as if it came from human voices hidden in some crypt beneath the earth. A moment later I heard the word "Judges" spoken distinctly in half a dozen dialects, and then a howl went up that drew my attention to the barn where the dogs were kept.

"Great Lucifer," I said, "can it be possible that even the dogs have fallen to sitting up and talking the matter over?" That there was anything strange in the dogs having acquired the power of speech did not for one moment occur to me, for incessantly during one week I had heard such wonderful stories narrated of the intelligence of each individual dog that I was fully prepared for anything that might happen as far as canines were concerned. My hat, therefore, did not poise on the ends of my luxuriant locks, but the burning of my left ear warned me that some one was talking about me. Now, although curiosity is generally summed up among the long list of virtues belonging exclusively to women, yet I have known just as many men who have had a sneaking desire to know what was going on. So, silently, I crept up to the barn and applied the heated organ of hearing to a crack, just in time to catch the words of Iron Duke, who for the time seemed to have the floor:

"You see, it ain't a square deal. I've been spilled in gittin' ready for these 'ere dun trials. They'll spill any good dog. The judges, did you say, Glad? Well, that caps it. No more trials on my plate. When a feller gits in two heats to be downed by a duffer like Glen. That siffs it down. I know it all. It was a set up job and fixed beforehand. I'm done, bust up, when I ought to be a winner."

"A winner?" says Gladstone, "you'd be a healthy winner lot to me and Whit. alongside. It would take a right smart lot to get away with us. I don't reckon we came East to lose. A winner? Well I s-i-o-u-l-d s-m-i-l-e. Wouldn't we, Peep?"

"Hei hei! so we would, Pa," tittered Peep O' day.

"Ear me hout," said a gruff voice I knew at once as com-

ing from Croxteth, "it haint smellers I'm talkin' 'bout, but heorgs; did you see the swell chew the birds? That's what I calls too bad, 'thoud he be from same country and kind of related loike. I loike no such blarsted swell no pal o' mine. His lail rot for 'im to 'ave a place; and, Lass, you 'ere me tell you straight."

"That's too most awfully unkind to scold poor dear Sensation so," says Lass, "and alough he is no kin of mine he is so charmingly picturesque."

"By jove," chimed in the champion pointer, with a yawn.

"By jove, yes; on the bench I am called 'handsome Sensation,' but here I am called 'bloody Don.' With a few exceptions this crowd is quite too low for me. I don't mix with these kind of fellows at home, you know. In fact, if I met them in the street I wouldn't even wag my tail."

"Picturesque be blowed," growled Croxteth.

"Any crow butt that has knobs 'long his back loike bel handles to a tiniment house," says Raleigh.

"He thinks he's a masher," says Truin.

Here a very feeble voice was heard saying, in a squeaky tone, "That's so," which I recognized as coming from Jennie II.

"Thin judges," says Spy, "haint got no appreciation. I made the best pint of all of yer. I struck a schent right through old Duke, and thin they wint and pinalized me. And thin reporters! Oh! begorrah, what a gang. That Gladstone man with the bow-legs, which he says he got from ridin' to hounds too much when he was young, and that young Jersey rhuster with the red beard, the slaughters. Why don't yer say somethin', Nat? Smut and you have a right to equal."

"It's money that talks down our way," says little Nat, "and if we had 'em there it would be a different racket. They'd ought to see little Smut and me on ruffed grouse; it would make them sick. We ain't over-much on style, but we make up in nose. It ain't style that finds birds, it's nose, and when we come to a point it ain't no blue-blood point, with the tail wiggle, wiggle, wiggle, but we stiffen out our tails stiff and solid, as much as to say, 'Boys, come up and have a shot; we've got 'em'."

"And you let that's the way to point," says Grouse Dale, a Down Easter, too.

"Law!" says Isabella, of whom no one had taken any notice, "don't he talk sweet."

"He is the boss talker," says Glen, "and he ought to protest against this foul and most unnatural outrage."

"Indeed he should," said pretty little Bessie, "it's a burning shame, because Nat and Smut are small, that they should be set on."

"Shake," says Nat to Glen; and shake they did.

PEN PARAGRAPH.

## "MY EXPERIENCE WITH SETTERS."

FOR a long time I have been waiting for some practical sportsman to tell, through the papers, his and the general experience with setters as bird dogs, going into the details, which in this are so important, and leaving the glittering generalities to those who have in them an interest in not descending to particularize—or who do not know enough about it to do so—feeling confident that his experience would coincide with mine and save me the trouble of telling my story.

To begin with, I would say that I shoot only for pleasure, and breed dogs only for sport and because I love them, never having sold a dog in my life. From my earliest recollection I have been familiar with bird dogs. Long before I could carry a gun have I, day after day, ridden behind my uncles, who were ardent sportsmen and fine shots, and held their horses when the dogs would stand, while they shot the birds, and from the time that I was considered old enough to be trusted with a gun I have been the owner of a bird dog and spent a part of each fall in pursuit of quail, or partridge as we in Virginia call them.

When I can first remember, my uncles had a breed of liver and white pointers—descended from stock imported by the Randolphs of Cumberland and the Hoopers of Buckingham—large, strong dogs, with grand heads and long muzzles and hair as short as the modern breed, but coarse and harder to the touch, which were infinitely superior to any dogs I have ever seen. They were remarkably fast and capable of hunting every day for weeks; but the most remarkable thing about them, and the all-important thing in a bird dog, was nose, which enabled them to hunt always for the body scent, never stooping to foot or pottering in the least; and they never false-pointed or failed to exactly locate their birds. Most of them were taught to tree squirrels, and so inherent was the disposition to hunt with head up, and for the body scent, in them, that they would run through the woods at full speed and stop instantly, throw up their heads and bark without ever putting their noses to the ground or regarding the squirrel's track in the least, but smelling the animal itself in the tree. We managed to keep this breed more or less pure until since the war, and in 1871 I became the owner of the last of the blood in this country, a bitch some eight or nine years old, but showing even at that age all the characteristics of the breed, including retrieving for which they were also noted, for with them a dead or wounded bird was never lost. Not knowing where to find a mate for her I lost the stock. About this time, from reading the sporting papers and dog books the rage which was sweeping over England and this country, and nothing would do for me but a high-bred setter. Just then I met in the cars a gentleman from New Jersey returning from a shooting trip up the James River valley, who was equipped with a fine brood-loader and brace of slashing setters, and full of all the new kinks in the sporting world. From him I purchased a cross-bred Gordon and Irish setter. "Don" was a red dog, very handsome and large. He was fast enough, but had no nose and pottered and false pointed inveterately, and was worn out at five years old. From what I could learn from the sporting authorities, I concluded that the fault was in the cross of the two breeds, and the thing was to get it perfectly from Irish

or Gordon—the English was not thought much of, as Youatt had said that the English sportsmen had crossed their setters with the pointer, but the Irish had kept theirs pure—and as I always ride and hunt over a great deal of ground and the Irish were said to be perfect, save being too fast, I settled down on a pure red Irish, which I got after much correspondence with the dog men, a dog of the most approved form and color, and as blue a pedigree as an Irish dog ever had—Plunket and Rufus, Colleen and Carrie, Milner's Jack, Fitzsimon's Ruby, Hutchinson's Bob, etc. I got him in February at four months old, and never did a fellow look forward more impatiently for the time to come for me to try my canine treasure. On the very first day I took to the field with him and a little pointer bitch of the old blood which a friend had managed to get for me in Buckingham, hardly six months old, while the Irishman was full fifteen; and my utter chagrin she beat him in style, speed, nose and everything, from the beginning, all hollow. She never did it—done it constantly; she never potters—he always does. When she points you can always kick the bird up in front of her nose; when he points they are more likely to fly up from anywhere else than the direction indicated. Besides these two pedigreed setters, I have owned many natives and used a good many blue and natives belonging to others, and what I have said of them is true of them all. It seems as natural to them to false point, potter and point in the wrong direction as to cat; and I feel as if that I have never in my life seen a long-haired dog that was even half an ounce of bird dog. I know nothing of the Laverack or Llewellyn setters but what I read and hear of what is claimed for them. They are fine dogs and entirely different from other setters, and, being long-haired, ought to be superior to the pointer in rough countries and cold climates. I am now the owner of a pure Llewellyn bitch, just six months old, which is exceedingly promising. I shall give her every chance, and if she turns out like the others, I have owned my last shaggy dog.

December 1, 1880.

SOUTH SIDE.

## A HANDLER'S PROTEST.

PROVIDENCE, R. I., Dec. 6.

## Editor Forest and Stream:

After a tedious journey of two nights and a forced stay in New York during a rainy Sunday, I, with my two dogs, arrived home from what the New York Herald calls the most successful field trials ever held in this country. And now, after having been robbed by the baggage-master of two dollars to pay freight on the two dogs (when I had not an ounce of baggage besides), and having been wronged out of both honor and prizes at the late field trials, I feel as if I am entitled to shoot the man who ever sent me a notice of another dog show of any description; and I wish to say to the Eastern Field Trials Club that if they allow those prizes to go where they were awarded by the persons who acted as judges I cannot see how they can expect to have many entries at their third annual trials in 1881.

My object in writing this letter is to defend the true sportsman and lover of dogs from the judgment given at their late trials, and if I cannot show good cause why the dogs who were awarded the prizes should not have them then I am willing to forever after hold my peace and never wish the privilege of showing at any other dog show, either bench or field. But if I can, and the claim is not respected by them, then I propose to work as hard against them as I have heretofore worked for them—and I can claim the honor of showing at least ten trials during their various trials.

My first complaint is against the judgment in the twelfth (12th) heat of the trial, between the dogs Gladstone and Nat. I claim that Nat. was the best dog in every particular where the good qualities of a dog should be considered. My dog did not show quite so frisky a tail or the amount of speed in making back jumps over brush and briar as did the dog Gladstone, but put the two dogs down on open ground and Nat would out-speed him from morning till night. But the judges were against me and meant that I should not win, no matter how well my dogs did, as I can prove by ten who were old to the judges. I consider the dog Gladstone nothing but a trick dog and the man who handled him showed himself a trickster.

My second complaint is against the heat between Sensation and Smut (my dog), where I claim six points for Smut to nothing for Sensation; if refused to back Smut in most of them and then stole point after point and was credited by the judges when he should have been demerited. Finally, they decided that style beat me, a judgment contrary to all experience as given by the gentlemen who handled Sensation open and closed. I claim that the dog who was the best in my opinion, except the judges'. This they knew was the dog they were obliged to select to beat me, as the other fellow's chances would have been very bad had I been put down against him, and I would have been sure to have had second money and perhaps third, as according to the rules it would have brought both of my dogs together, and one of them was obliged to get second money. In the eyes of the judges this would not do, so I was desired defeated by Sensation. But the wise (?) judges again changed, for in the heat between Sensation and Gladstone the latter was declared winner, when every honest man there knew it belonged to Sensation. The whole heat was a mass of tricks by Gladstone's handler. These statements I have made can be proved by members of the club. I have positive proof that one of the judges told a blue-blood man (who was too honorable to keep it a secret) that he would not let such looking dogs as mine win, as they were so looking much like the Spaniards, and it was wrong to let them beat dogs who had been bred to do it, and to let only prices—this after they had promised the handler to let only the best dog win. If this is a sample of the best field trials this country ever saw, Heaven defend me from the worst.

Yours very respectfully,

T. M. ALDRICH, Handler Smut and Nat.

A CLOSE SHAVE FOR LINCOLN.—On last Wednesday (December 1), while Captain Joseph H. Dew was hunting near the railroad with Lincoln and some of his puppies, they caught a covey of birds right by the track. Hearing a train approaching, Mr. Dew took the puppies away, and calling Lincoln off he let him off in a corn field. Seeing him dash into the field in an instant, he saw a gat which was following him, and which had led him to victory in the hottest of contests, Capt. Dew paid no more attention to him, and had his hands full keeping the puppies from going back to the birds. Happening to glance back, however, to his consternation he beheld Lincoln, who, having circled and gone back, was standing as staunch as a rock, with his hind feet on the track. His whistle went to his lips

and a long shrill note was sounded, but the rumbling of the train prevented Lincoln from hearing, and he stood as rigid as if grim death were not bearing down on him at the rate of thirty miles an hour. Again and again Capt. Dew sounded his call which the old dog had never refused to obey, but to no purpose; he had to stand and see the smoking, snorting engine rushing on the dog of his heart, hearing what seemed to be inhuman shouts, and the old fellow never moved until the cow-catcher hurled him torn and bleeding from the track. Fortunately he was not killed nor were any bones broken, but the flesh was cut to the bone on his hind leg and numerous other flesh cuts of less consequence were distributed over his body. Capt. Dew brought him to town where Dr. Pillow sewed up his wounds and the old fellow laid his head on his master's knee and never moved, but moaned pitifully while the operation was being performed. Score Lincoln an even hundred for staunchness.—"The Columbia (Tenn.) Sentinel."

LARCENY OF A DOG.—Perth, Ont., Dec. 8.—In your issue of the 14th October, page 304, speaking of dog poisoning, you state that a man can be convicted of malicious injury to a dog. Of this there is no doubt, but you also say that a conviction cannot be had for the larceny of a dog on account of its peculiar habits. Now I should be sorry, if this is not the case, that your readers should be misled, as there are numbers of people who fancy that they can shoot or steal a dog when they please, particularly if it happens to be on their land at the time.

Now there is no statute in Canada which allows a dog-stealer to go free, and therefore the common law of England governs, and as that law no more excepts a dog than a sheep, we may safely conclude that dog-stealing is punishable just as any other stealing is. Neither is there any statute, as I believe, in the United States excluding the dog, and if not then the same rule will hold as in Canada. There is this to be said, however, that on account of the peculiar roving habits of the dog and his propensity to follow any one who caresses him, it may be difficult to prove larceny, but it is simply a question of proof, not of liability. In the Toronto Mail, under police court notices, which under the new *provision* are now being read, a recent case in point. A man was there brought up for stealing a dog, but proved that the animal was in the habit of following him, and got off on that ground only.

RIFLE.

THE GREAT AGE OF LAYERACKS.—Waterbury, Conn., Nov. 29.—In looking over the pedigrees of the famous Layerack setters, Countess, Fairy, Nellie and Pride of the Border, I have been astonished to find the great age of the dogs, when bred from the shortest line of descent, from the original pair in 1835 to Fairy in 1874, shows only five generations, giving an average age to the dogs, when bred from, of 9.2-5 years. The longest line shows but eight generations, or an average of 5½ years. It seems rather strange that these dogs should not only breed, but actually produce their best progeny at such an advanced age; since it must be supposed that the best were kept to breed from. Layerack's letter, from Vero Shaw's account of the setter, published in your issue of November 25, and explaining the liver color in the breed, may account for some of the ways which these long lived generations now fill. The wonderful pedigrees of the Layerack setters have long puzzled me, and I should like to know how they are regarded, generally, by setter-breeders. There can be no question about the high standing of the dogs, and the wonderful vitality of the breed shown in its crosses.

J. F.

ACCLAIM FOR SENSATION.—Richmond, Dec. 12.—Editor Forest and Stream:—I have for some time been a great admirer of your paper, and at this moment I never hesitated in pronouncing him naturally the finest specimen of English pointer in America. As a sire he has got more fine pups than any in America. I never saw him in the field, but I knew what he was capable of. I have a son of his, presented to me by our lamented friend Colburn, name Tom (Sensation ex-Colburn's Belle) and he is as good a dog as ever I want to see. All he lacks and he has 1,000 birds killed over him last fall. He was very soft when I began, but improves with every kill. Crossed upon the hardier breed of native pointers the pups are perfect. I have maintained and still maintain that Sensation stands to-day as the finest pointer dog in America.

JOS. S. WISE.

REPLY TO MR. BLOODGOOD'S CHALLENGE.—New York, Dec. 12.—Editor Forest and Stream: In answer to the challenge issued to the owners of Sensation and Gladstone, which has reached the Westminster Kennel Club through the columns of your paper, I have to say that although we should be gratified to afford Mr. Bloodgood the satisfaction he desires as far as the match between Sensation and Smut is concerned, yet the matter seems to us at present impracticable. The dog is now at the kennels at Babylon and his services as a stud dog are constantly in demand. Moreover, the season is now so far advanced, closing as it does on the 15th day of January, that it would be impossible to procure the services or of the dog's handler, who is now at Springfield, Mass., and give to such additional work as would fit him for the proposed match. Next year, if Mr. Bloodgood cares to repeat his challenge in season, we may be able to accommodate him. RONT. C. CORNFELD, Sec. W. K. C.

A GOOD DOG STORY.—Pt. Rowan, Canada, Dec. 5.—At the last sitting of the Dominion Court, held at Walsingham, Ontario, a case came up for hearing for damages laid at twenty-five dollars, which plaintiff claimed from defendant for shooting his dog. The lawyer for the plaintiff made a very eloquent address to the jury on the good qualities of the dog and dilated heavily on the value of dogs in general. A very well-bred setter happened to be lying just behind the Judge, and when the advocate was at the height of his eloquence the setter, roused from his apparent slumber and under the pretence of scratching his head, thumped the floor with his knee joint in quick and rapid succession. His honor turned partly around to the balliff, saying, "No applause in court." This impromptu *bon mot* from the Judge brought down the house and entirely nonplussed the lawyer for the plaintiff.

BLACKSTONE.

GYP AND THE FLY.—Let me tell a story of the reasoning power of dogs. Some years since I had a small black and tan terrier named Gyp. She had been taught many tricks, such as sneezing, rolling over, etc., etc., for performing which she was often rewarded, and whenever she wanted anything particularly she would go through her list of tricks and by this means usually succeeded in obtaining the desired object. One day Gyp was on an ottoman near a window; and

began to kill the flies on the glass. She killed all but one, which walked up above her reach. After vainly trying for some time to get it, she sat down and reflected for a moment, and then sneezed it to two or three times, looking up at the fly in the meantime most beseechingly; this, as you may be supposed, she tried rolling over to induce it come down. I regret to say that the fly did not yield to her allurements.

H.

—Mr. Isaac Yearsley, Jr., is shooting at Ridgeway, N. C., having with him Dashing Lion, Roxey Boy, Countess and Bessie. Mr. Yearsley has disposed of Little Lady to a party in the West.

## KENNEL NOTES.

BIRTH.

Bonnie-Rex.—Mr. Elliott Johnston's collie bitch Bonnie (Dowry's Lassie-Walt's Roy) to Lindsay's Rex—First New York Bench Show, 1880.

Gipsy-Gen. Jackson.—Mr. B. G. Seebach's (Peru, Ill.), Skye-terrier bitch Gipsy to his Gen. Jackson, on Nov. 26, 1880.

Moll-Blossom.—Dr. J. S. Niven's (London, Ont.), Gordon setter Moll to owners' Blossom, Nov. 26, 1880.

Prairie Queen II.—Blue Drake, Mr. J. H. Whitman's (Chicago, Ill.), three-quarter Layerack setter dog Blue Drake to his Prairie Ranger bitch Prairie Queen II.

Widge-Charm.—Mr. J. H. Whitman's (Chicago, Ill.), Layerack setter dog Widge to his bitch Charm.

Thunder.—Mr. J. J. Suellenburg's (New Brighton, Pa.), pure Layerack setter dog Thunder to Mr. J. H. Whitman's half Layerack and half native bitch Judy.

Carlo.—Mr. J. H. Whitman's (Chicago, Ill.), cocker spaniel dog Carlo to his Weston's bitch Mollie.

Belle-Croxteth.—Mr. A. E. Goddard's Croxteth to Mr. J. E. Hooker's black pointer bitch Belle.

Daisy-Jersey Duke.—Mr. E. A. Spooner's setter bitch Daisy to Mr. Justin von Leutenbach's champion Jersey Duke.

Polly-Sensation.—The Westminster Kennel Club's newly imported pointer bitch Polly to Sensation.

Dream-Sensation.—Mr. Jacob Pentz's lemon and white pointer bitch Dream to Sensation.

White-Sensation.—Mr. Luke W. White's lemon and white pointer bitch Grace, winner of first and second prizes at New York Shows, and dam of Belle, winner of first prize Nursery Stakes, Robin's Island, 1880, to Sensation.

NAMES CLAIMED.

Dash.—E. H. Lyford, M. D., Vinalhaven, Mo., claims the name of Dash for his black liver, white breast and white toes, cocker spaniel puppy, whelped Oct. 14, 1880, from the Blue Star Kennels of Mr. M. P. McKoon.

St. Regis.—Mr. Chas. S. Lincoln, Warren, Mass., claims the name of St. Regis for Irish water spaniel puppy, whelped Oct. 1, out of Lady by Lordport, Oct. 1, 1880.

Prion Calani.—Sarah Bernhardt—Calatonia, Ill., Dec. 6, 1880.—By request of Mr. E. Knell, of Moline, Ill. who has a prior claim to the name of Blue Bell, I claim the name Sarah Bernhardt for black and white bitch puppy by J. H. Whitman's Blue Dash and W. H. Mill's bitch Belle.

Robert the Devil.—Dr. A. McCollom, of this city, claims the name of Robert the Devil for his pure white setter dog, whelped Aug. 1, 1880.

Mattie May.—Dr. A. McCollom, of this city, claims the name of Mattie May for his pure white Sensation pointer bitch, whelped Dec. 10, 1879.

Dan.—Mr. Thos. J. Osborn, Du Quoin, Ill., claims the name of Dan for puppy out of Dell by Elcho II. recently purchased by him from London, Ont.

Colonel Shub.—Mr. M. P. McKoon, Franklin, N. Y., claims the name of Colonel Shubs for his liver and white seven months old cocker spaniel dog puppy out of Godfrey's Flirt by owner's Captain.

SALES.

Joe-Norah Whelps.—Dr. J. S. Niven, London, Ont., has disposed of the litter of Irish terriers out of Norah by Joe, as follows: Mr. John Tabrett, London, Ont., a dog; Mr. H. Crossman, New York, a dog; Mr. A. S. Kage, St. Louis, Mo., a bitch and Mr. J. H. Roseman, London, Ont., a dog.

Blossom-Moll Whelps.—Dr. J. S. Niven, London, Ont., has disposed of a Gordon setter dog puppy (Blossom-Moll) to Mr. Edwin Tursley, Hamilton, Ont.

Judge Rena Whelps.—Mr. W. C. Pierce, New Bedford, Mass., has sold a pure white bitch puppy by Judge out of Rena to Mr. Ritter.

Ringwood II.—Flora Whelps.—Mr. N. Elmore, has purchased from Mr. J. N. Dodge, Detroit, Mich., a fine white, black and tan beagle bitch puppy out of Flora by Ringwood II.

Joe H. Heyward, of Rock Hill, S. C., has purchased from Mr. Geo. E. Forner, his pointer bitch Arrow (Champion Bo-Sleaford Maid) in which Mr. Forner's imported Bang (Champion Bang Champion Linn), this is a valuable addition to Mr. Heyward's already valuable kennel.

Abey.—Mr. Herbert Luman, Staten Island, has bought Mr. E. C. La Montagne's (New York City), orange and white setter bitch Abby, (young Layerack-Dido). Winner of three seconds in New York, second in Boston, 1879, and first Philadelphia same year.

Flint.—Mr. H. Crossman, of New York City, has purchased from Mr. Geo. Waddington, Geneva, Iowa, setter dog Flint (Rufus-Fanny). Flint performed excellently at the Nebraska trials last October.

WHEELS.

St. Cecilia.—Mr. Chas. S. Lincoln's (Warren, Mass.), English blue Belton setter bitch St. Cecilia (Afton-Rose), whelped Nov. 1, six puppies by Hitchcock and Helmy's imported Frank II., by Frank out of Dolly. Frank II. is half brother to Dandie the noted Field Trial winner. Three of the pups are dogs and three bitches, two dogs black, white and tan, one dog liver and white, two bitches lemon and white, one black, white and tan. None of the pups are sold.

Fin.—Mr. B. G. Seebach's (Peru, Ill.), blue Belton terrier bitch Fin, whelped Oct. 22, three dog puppies by Pete, winner of first at St. Louis, Mo., 1880.

Gyp.—Mr. B. G. Seebach's (Peru, Ill.), imported Yorkshire terrier bitch Gyp whelped three dog puppies by imported Yorkshire terrier Spot, winner of first at St. Louis, Mo., 1880.

Rena.—Mr. W. C. Pierce's (New Bedford, Mass.), pure black pointer bitch Rena (Strong's Petre-Fredence), whelped Dec. 1, 1880, thirteen puppies, twelve dogs and one bitch. None of the pups are sold.

Diarmid.—Mr. D. W. Church's (Colorado Springs, Colo.), imported Scotch terrier bitch, whelped Oct. 15, four puppies, two dogs and two bitches by owner's imported Scotch.

Countess Gay.—Mr. Frank B. Fay's (Boston, Mass.), Countess Gay (Drake-Countess Vesta) has whelped three dog puppies by owner's Count.

Judith.—Mr. Frank B. Fay's Judith (Roy-Roy-Bell's) has whelped fourteen puppies, six dogs and eight bitches by owner's Count.

Countess Maud.—Mr. Frank B. Fay's Countess Maud (Dash II.-Onal) has whelped eleven puppies, eight dogs and three bitches by owner's Count.

Maud.—Mr. E. E. Shaw's (Bergen Point), black setter bitch Maud, whelped Dec. 12, eleven puppies, seven dogs and four bitches by Mr. Arthur Dorne's Chance. Maud is out of Countess's imported black and tan setter bitch by Don, and Chance was special prize at N. Y., 1880, for best black dog in show.

PRESENTATIONS.

Irish terrier whelp.—Dr. J. S. Niven, London, Ont., has presented an Irish terrier dog pup to the Rev. S. W. Young, Lewiston, Ont.

DEATHS.

Silent Partner.—Dr. A. McCollom's English cocker spaniel pup died the 8th inst.

J. C. HIGGINS' DASHING MONARCH.

## DASHING MONARCH.

**D**ASHING MONARCH is owned by Mr. John C. Higgins, of Delaware City, Delaware, and is a powerful young white and black setter dog. He was whelped August 25, 1878, and was bred by Mr. R. Llewellyn Purcell Llewellyn at Ormsby Hall, Lincolnshire, England. His sire, Dash II., was the most noted field trial winner in England. His dam, Countess Moll, she being by the celebrated Dan out of the equally celebrated Countess. Dashing Monarch thus combines the blood of the greatest dogs yet produced. He was imported last November a year, and arrived here on December 5, 1879. In the field Monarch has just shown what stuff he is made of, as winner of second in the All-aged stakes, and he has before him a grand future both in the field and on the bench. Considering that he has had but two months work in his life, he is a most excellent dog. The picture of Monarch is a grand one, and we had the pleasure of submitting it to Mr. Higgins, who regards it a "a speaking likeness."

Gladstone, the winner of first, is a son of Mr. Higgins' Petrel, a noted champion Laverack, so that, directly or indirectly, both first and second prizes in the All-aged stakes fall to the honor of Mr. Higgins' kennel. Besides other noted dogs Mr. Higgins owns Fairy II., the last exportation of Mr. Laverack to America. She is the dam of Mr. Snellenburg's Thunder, a dog which has done exceedingly well at this year's field trials at Lancaster, Pa.

**EASTERN FIELD TRIALS.**—We take great pleasure in presenting to our readers this week very excellent portraits of two of the winners at the late Eastern Field Trial Meeting. We have certainly spared neither trouble nor expense to give correct likenesses, and in order to do this we secured the best artistic talent. The sketches were made by Mr. E. Forbes, of this city, who has for years given his entire attention to the illustration of live stock. Both of the pictures, therefore, have been taken from the animals themselves, not from photographs or paintings, and each dog was given a careful stand or sitting.

By an unfortunate mischance the plate from which our picture of Champion Gladstone, winner at Robins' Island was to have been printed, was ruined just before going to press. We are, therefore, obliged to wait until next week before giving a portrait of that celebrated dog.

In our next number, also, we will publish the portraits of Mr. Max Wenzel's Chief and the Westminster Kennel Club's Sensation.

**NOVA SCOTIA KENNEL CLUB.**—The inaugural meeting of this association was held at Halifax, N. S., on December 1, when a Constitution and By-Laws were adopted. The committee reported that His Honor the Lieut. Governor had consented to become the patron of the club, and that His Worship the Mayor had accepted the position of President. It was decided to hold a dog show in the last week in February. In our next issue we will give full particulars.

Dr. Wm. Jarvis and Mr. Benj. F. Clark, returned last week from McKenzle, Tenn., where they have been enjoying fair quail shooting since the Vincennes trials. Noreen, Dr. Jarvis' last importation, is said to be as good as a jello, and took to her work most kindly.

## WHAT IS A COCKER?

CORTLAND, N. Y., Dec. 5.

*Editor Forest and Stream:*

As an admirer and breeder, on a small scale, of cockers, I am interested in the formation of a club and giving to breeders an admitted standard of excellence, that all owners and purchasers can then judge for themselves the merits of their stock.

As for myself, I would like to approach as near a sensible standard by careful breeding, mating, etc., as is possible. If I am not now upon the right track I will go back and take a new start, as I have made a choice of this variety and feel at a loss how to know the points to breed to that will make my dogs desirable and give them the greatest advantage at a bench show. It seems to me the cocker should be bred to a standard that will not sacrifice him in any respects as a field dog. Make the disqualifying weight of cockers such that good, strong, eligible dogs in all other respects would not be thrown out by being a trifle over size.

I wish to conform to the cocker size and weight in breeding, but for an all-day's hunt in the thick cover and over fallen timbers the small toy dogs will not fill the bill. Pardon me if I am trespassing. I claim only to be an amateur, but being a lover of the cocker spaniel I have my ideal, like many others.

I only hope a standard will be made by a corps of men that are both fearless and unselfish, not allowing their own or friends' favorite strains of cockers to have an undue influence upon them in making this standard. It seems to me that a fair way to begin this is for all breeders of experience and those who have taken pains to make this variety a study to furnish the committee a description of the cocker spaniel, as they understand it to be.

The articles which have appeared from time to time in your paper have all got some good points, but the soundest and best and most business like is from your Ann Arbor correspondent "Senex;" his ideas exactly covers the case, and in this way of selecting a committee no one individual can feel aggrieved, and I will cheerfully donate one dollar to defray expenses. I also like the suggestion of "Shamrock," Chicago, Ill., with respect to the \$50 prize, and I will freely contribute to such prize. But, "Shamrock," in regard to weight I don't agree with you. Pray what is a field or springer spaniel if a dog weighing 40 lbs. is to be called a cocker? I have seen cockers and field spaniels both on the bench and in the field in England, Wales, Scotland and Ireland, and have seen what they call a spaniel in France, but I have never yet seen a field spaniel that weighed over 45 lbs. Just look at the weight of winning cockers at bench shows both in England and America. I think you will find them under 30 lbs. McKoon admits and I concede that a cocker is to all intents and purposes a small field spaniel, but yet a cocker proper has a far better coat, a brighter color, finer hair, more silky in texture and a far handsomer head than the field or springer spaniel. And I think it is generally understood by cocker breeders that all those finer traits, such as color, size, shape, eyes, ears, legs and general make up, come from the King Charles, so that properly speaking a cocker is not a small field spaniel, far aside from size the build of the two types widely differ. Now, again, the weight question. I have owned, bred and shot over spaniels for over twenty years, and I have yet to see the dog at say 40 lbs. that can do any more work or any better than one at 25 lbs., all other things being equal, such as health, breaking, etc., with the single exception of duck retrieving; and for woodcock and ruffed grouse shooting in thickly matted covert, the smaller dog has a decided advantage. As for speed they are all fast enough, and are apt to be too much so, at least this is my experience. And now, Mr. Editor, let us have the committee proposed by "Senex" elected, and I would suggest to such committee to take Stonehenge as their guide, and I for one will be more than satisfied.

Franklin, N. Y.

ROBERT WALKER.

In your issue of Dec. 2 you give quite a number of letters on this subject, all of which refer to me more or less directly and some of which call for an answer. Mr. McKoon has a good deal to say (as usual), and I would like to see exactly what there is that is to the purpose.

Modern cockers have been "an established breed for between fifteen and twenty years." Established by whom?—by Mr. McKoon, I presume, who has a little way of denying every dog the name of "modern cocker" unless bred by himself. Well! he is welcome to the name, for simply "spaniel" will do me as well.

Would it not be absurd to restrict a cocker to a certain weight, when they are better to vary in size as they do at present? Now Mr. McKoon is getting off the track, for exactly what we propose to do is to let them vary in size more than they do at present, for as it is, a dog of thirty pounds or over stands no chance against one of twenty-four or twenty-five. Is any pointer penalized for his size? Do not pointers weigh any where from thirty-five or even thirty pounds up to seventy and eighty, and in one instance (if I am correctly informed) 130 pounds? And are not pointers divided into two classes, large and small? I will venture to say that there is no breed in which there is more latitude as to size than pointers, and there is no breed that needs latitude as to size more than the cocker, or field spaniel, for the very reason that Mr. McKoon states, viz., that different parts of the country need different sized dogs.

What we mean by its not being necessary for a man to own or breed cockers to be eligible for our club, is that many admirers and judges of cockers do not happen to own specimens, as is the case with "M. B.," though I hear that he intends getting some.

Because I do not happen to own any setters is that any reason that I should be debarred from a club having their improvement for an object, or that I should not be a good judge of the breed? Things would come to a pretty pass if every judge at a show should be obliged to own specimens of each breed he undertakes to judge!

Many thanks to Mr. McKoon for his kind opinion of the "highly respected and enthusiastic young man." My youth does not prevent me from knowing a little about dogs, for "age does not always bring wisdom"—more's the pity.

Now, in his next statement, "Such a club as this is intended to work to the advantage of certain parties," I beg to flatly contradict him. With the exception of Mr. McKoon (who knows which side his bread is buttered on too well) every breeder, owner and exhibitor of cockers will reap equal advantages in having competent judges, a clearer idea of what is a cocker and better divided and larger prizes given by the club.

Mr. McKoon insinuates that my dogs are not cockers by the following sentence: "But his experience is very limited in relation to cockers, and he has only bred a few spaniels of any kind in the short time he has given any breed of spaniels his attention." The only cocker I have, I suppose, is Madcap (black), by Dom out of Black Bess; Dom, by McKoon's Captain out of his Capar. Well! if Shell, Doctor, Cora, Flirt II., Black Bess, Beauty and others are not cockers I am content to call them simply spaniels, or, if you like, field spaniels, but this I know, that they fetch higher prices and have won more prizes (those that have been exhibited), under competent judges, than any one strain of spaniels in America.

Mr. McKoon again insinuates that Cora got more than her deserts at the last New York show. As she was an undeveloped puppy, just one day too old for the puppy class (had she shown been held on the original date), perhaps she did, but the judge said she was worth the other thirteen bitches put together, and there were two if not three of the McKoon strain there.

I suppose that the only competent man to establish a "compulsive rule"—who can reckon on the "co-operation of all cocker breeders in the U. S.," the great "I am" of the cocker world—is Mr. McKoon himself. Perhaps so, but if he does not choose to join our club there is still a small chance of its surviving, notwithstanding the overwhelming obstacle of his opposition. I am sure "all cocker breeders

D. S. GREGORY, Jr.'s, BELLE.

BELLE.

BELLE is owned by D. S. Gregory, Jr., of this city, and is a very handsome, clean-cut lemon and white pointer puppy of eleven months. She is by Sensation, out of Mr. Luke W. White's Champion Grace; she by Match out of Nell. A full pedigree of the sire and dam of Grace cannot be given at this time, but a letter from her owner, Mr. White, may prove interesting: "I have just written to the owners of Match and Nell for full pedigrees of both dogs. I think it will take time to get them, as the breeder of Match lives in England. About seven years ago I went to live at Plymouth, Conn. I saw then for the first time Match, a large handsome lemon and white pointer dog, with a head something like Sensation's. Mr. Oliver Bryant, the owner, let me shoot over him. He was a grand field dog, head up, fine nose and style. I spoke to Mr. Wm. Morton, the then owner of a black and white ticked bitch known as Fern's Nell. She was bred in Litchfield, Conn., from imported stock. Nell was famous in that part of the country for field qualities. The cross was agreed upon and my little Grace was the choice of the litter. I knew Grace would breed well to Sensation on account of his grand head." Belle cannot be too highly spoken of as a field dog. She is one of the best we have ever seen of her age. She easily secured the first prize in the Nursery stakes, and in the Puppy stakes fourth prize.

THE RUSSIAN SETTER.

[Reprinted from advance sheets of Yero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through Cassell, Petter, Galpin & Co., publishers, No. 596 Broadway, New York.]

ANY book professing to refer to sporting dogs would, we think, be incomplete if no reference were made by the author to the Russian Setter. This breed of dog is unquestionably rarely met with in these islands, but some years ago his appearance made a considerable stir among all followers of the gun. It is certain, too, that his services were in some quarters called upon to improve the English Setter, and therefore, in spite of the dog's rarity in his pure state, it is desirable that he should be treated of in a chapter by himself, though necessarily the remarks concerning him will be very brief.

Mr. Joseph Lang, writing to the *Sporting Review* in 1841, and dating from No. 7 Haymarket, thus alludes to the Russian Setter:

"In the season of 1839 I was asked for a week's shooting into Somersetshire by an old friend, whose science in everything connected with sporting is first-rate. Then, for the first time for many years, I had my English setters beaten hollow. His breed was from pure Russian setters crossed by an English setter dog, which some years ago made a sensation in the sporting world from his extraordinary performances. . . . Although I could not but remark the excellence of my friend's dogs, yet it struck me, as I had shot over my own old favorite setter (who had himself beat many good ones, and had never before been beaten) for eight years, that his nose could not have been right, for the Russians got three points to his one. I therefore resolved to try some others against them the next season, and having heard a gentleman, well-known as an excellent judge, speak of a brace of extraordinary young dogs he had seen in the Yorkshire moors, with his recommendation I purchased them. I shot to them in August last, and their beauty and style of performance were spoken of in terms of high praise by a correspondent to a sporting paper. In September I took them into Somersetshire, fully anticipating that I should give the Russians the go-by, but I was again disappointed. I found from the wide ranging of my dogs, and the noise consequent upon their going so fast through the stubbles and turnips (particularly in the middle of the day when the sun was powerful and there was but little scent) that they constantly put up their birds out of distance, or, if they did get a point, that the game would rarely lie till we could get it. The Russians, on the contrary, being much closer rangers, quar-

tering their ground steadily, heads and tails up, and possessing perfection of nose in extreme heat, wet or cold, enabled us to bag double the head of game that mine did. Nor did they lose one solitary wounded bird; whereas, with my own dogs I lost six brace the first two days of partridge shooting, most or them in standing corn.

"My friend having met with a severe accident while hunting last season, I determined to go to Scotland for the next three years. Seeing that my dogs were well calculated for grouse shooting, as they had been broken and shot to on the moors, and being aware of my anxiety to possess his breed of Russians, he very kindly offered to exchange them for mine, with a promise that I would reserve a pair of Russian puppies for him. . . . Since then I have hunted them in company of several dogs of high character, but nothing that I have yet seen could equal them. If not taken out for six months they are perfectly steady, which is a quality rarely to be met with. . . . I contend that for all kinds of shooting there is nothing equal to the Russian, or half-bred Russian setter, in nose, sagacity, and every other necessary qualification that a dog ought to possess."

Mr. William Lort, to whom we applied for information concerning the breed, writes in reply about the Russian setter:

"Roughly speaking, in appearance this dog is rather like a big 'warm' Bedlington terrier. There are two varieties of the breed, and curiously enough they are distinguished from each other by the difference in their color. The dark colored ones are deep liver and are curly coated. The light colored ones are fawn, with sometimes white toes and white on chest; sometimes the white extends to a collar on the neck. These latter are straight-coated, not curly like the dark ones. My recollection of this breed extends back some fifty years, and the last specimen I owned of it—a light-colored one—I gave away to a friend who would not take a hundred pounds for it.

"Their" noses never seem to be effected by a change of climate; hence their value in my eyes. I have worked them in September's sun and in January's snow, and they were equally good. They were some of the best dogs I ever had, and never varied; and under exceptional cases as regards the weather, we always had the Russians out. The only fault I found with them was the difficulty in getting new blood, for those we had showed evidences of scientific breeding, and a strict adherence to type. The fact that they were successfully crossed, to my knowledge, with English setters, satisfies me that they are really setters and not an allied breed. I may add that they are excellent water-dogs."

As a breed is so highly recommended by such sportsmen as the above, it seems marvellous that it has not been encouraged in a country like our own, which has been the nursery of sport for years. We cannot, therefore, express too strongly our conviction that the introduction of a dip of Russian blood would improve the working capacities of our English setters. At all events, the experiment is well worth repeating, and we trust that Mr. Lort, or some other gentleman equally looked up to in the canine world, will set the example, and try to still further improve our breed of setters. Unquestionably, the appearance of our dogs would suffer at first, but few sportsmen would regret the loss of good looks if an increase of working capacity was gained.

A scale of points is quite out of the question in treating of a breed of which so very little is known, and for a description of the Russian Setter we must take refuge under the wings of Mr. William Lort.

IMPORTED BULL BITCH.—The steamer *City of Richmond*, which has just arrived in this port, had on board a very excellent bull bitch, consigned to Mr. E. B. Goldsmith, the well-known forwarding agent, of 58 Wall street, this city. The bitch was imported by Mr. R. M. Livingston, of Rye Beach, N. H., and selected by Dr. Gordon Stables for him. Of the bitch Dr. Stables writes as follows: "I consider the bitch a very nice one. Her only fault is that she carries her ears rather high, so that a sire must be selected that has small ears. She has a splendid skull, good stop and nice mouth." The bitch arrived safely and is now on her way to her owner.

A DOG, A CHURCH FAIR AND A RAFFLE.—Trenton, N. J., Dec. 4.—I send you the result of a contest for my Newfoundland dog Duke, held at a church fair in this city. The contest was between two prominent fire companies, and excitement ran very high up to last evening, when it was decided,

in the U. S.) await with the greatest anxiety his "few lines on the breeding, rearing and breaking of cockers," but I doubt if they will convey the amount of "pleasure and benefit" which he seems to anticipate.

I have to thank "Shamrock" for his letter, which is such a contrast in its liberality and pertinency to the preceding one, and will gladly put the "Lachine Kennel" down for a like amount toward a special prize, though that comes more properly within the province of the club.

To "Senex" I will say that the only reason for my accepting the secretaryship *pro tem*, was in order that interested people might send me their names so that a list could be made of those to whom to send just such circulars as he suggests. How else are we to know to whom to send them? And FOREST AND STREAM is doing quite enough in giving us space without their going to the trouble (which I am willing to undertake) of compiling such a list.

I am much obliged to Mr. Fellows for his letter, and what he says is to the point.

To "M. B." also thanks are due for the letter from his friend, which is more exact (according to my humble opinion) than anything I have seen yet.

To "Cocker" I would say that we do not and did not intend to call a meeting now, but wished to get things in running order before the next New York show, during which show it would be best to hold the first annual meeting, as there would be more cocker men collected then than at any other time.

I find that I have got into this "cocker standard" business much more deeply than I intended, and will be better pleased to be in future referred to not by my name, but by my *nom de plume*, which I suppose is well enough known, of

Elisabeth, N. J.

DIDO.

FRANKLIN, N. Y., Dec. 4.

Editor Forest and Stream:

Have just read the several interesting letters in last issue of FOREST AND STREAM on the cocker question, which is so agitating the minds of the bench show class of cocker men at present. It seems to me as if "Senex," from Ann Arbor, has suggested a mode that appears the most feasible of any as yet presented to get at the matter, and in an easy, correct and satisfactory manner both to the breeders and those directly interested and to the breed itself, and should no better way be presented very soon I think it would meet with the approbation of all breeders and earnestly interested ones for the welfare of this breed. I do not say all intending exhibitors, however, as it never would be settled to their satisfaction it is evident. But should it meet with the approval of such breeders as P. F. Pitcher, Chas. Aden, C. B. Cummings, J. H. Whitman, Burr Hollis, Fred. Hoe, George D. Macdougall and others who look the matter calmly in the face and for the best interest of the breed and its future welfare, it will certainly meet with the approval of myself as well, provided, of course, that FOREST AND STREAM faces in to line with such assistance as is necessary to properly facilitate it; the expense of which I can assure you will be cheerfully canceled by the cocker men whose shoulders are at the wheel in this matter. Such circulars should need to be sent out. I should think, through the several sportsmen's journals of the land in order to reach all interested ones in the United States, and the committee of three chosen to make the standard should call through the sportsmen's journals for postal card views to show what their ideas of a proper standard is, and then this committee should carefully peruse these views and make a standard which ought to be accepted, of course subject to various amendments as time might reveal it to be advisable for its benefit, etc. As to color, any color belonging to the spaniel race should be eligible. Should this plan meet with the approval of others, and also your co-operation, further comments upon the various late letters published would of course be unnecessary.

M. P. McKoon.

A FINE MASTIFF.—Mr. D. A. Smieton, Cranford, N. J., has just returned from England by the steamer *Circassia* of the Anchor Line, which arrived in this port last week. Mr. Smieton brought with him a very handsome young mastiff, Zulu, by Champion Colonel, out of Diana; commended at the late Dundee Show. Zulu has a remarkably short head, and, in this respect, is a great improvement on most of the dogs that are bred in this country. The Dundee Show was declared by the judges to have an unusually fine class of mastiffs this year.

Average 80 yards .....	130	7-15
Average 60 yards .....	90	15-30

anchor in shallow water), and the ballast shall be on the keel as much as possible; she shall draw a little more than three feet of water, and the cabin "house" shall not have more than just sufficient height above the deck to admit of four small dead-eyes being fitted; her sails shall be on the same plan as those of the old boat, except that the mast shall be in two pieces, as described by "Sancelotti" in a back number of *FOREST AND STREAM*—so that by dropping the peak I can instantly change to a leg of mutton sail, instead of being compelled to reef in a sudden squall; the cabin and cockpit shall be much the same as in the old boat, except that I shall carry a light hatch on deck to put over the three-foot cockpit when I leave the yacht alone; every rope, even to the signal-balls, shall lead aft to the cockpit, and tiller ropes shall be led all the way around the boat, from bow to stern, so that I can steer her in whatever part I happen to be; her ground-tackle shall consist of four anchors, heavy enough to hold in a hurricane, and manila cables shall be used instead of chain; and lastly, I shall have a ten-foot canvas tender, which will be light enough to carry on deck and be easily shifted, containing four or five large, air-tight tin cans to make it buoyant in the event of filling. Thus rigged I think I shall be fitted for as long a cruise as a yachtman could wish to undertake. "Sancelotti," for whose opinions I have an exceeding reverence, grieves me by upholding an "Americanized yawl," with a tall mizen-mast and leg-of-mutton sail, and extended foremast with corresponding jib. I think such a rig would perhaps do where there were two or three sailors aboard, but in a heavy outside sea, with only one man to work her, the original English yawl, in my opinion, is the best craft that can be devised.

I have a late number of your *oil-drove* for yachting purposes. I do not use one, for I have been unable to procure one that would stand the rolling and trembling of a yacht at anchor with a sea running; but instead I have a large-sized alcohol stove, the reservoir being filled with cotton packing; and with this I can boil, fry, broil and even bake better than with any oil stove I ever saw. And I have been dicking when my rigging would be covered with ice, and by simply lighting the alcohol stove and putting over it a sheet iron drum for a heater I have made myself as warm and comfortable in my cabin as you are in a dining room at home. The only objection to it is the expense, which is a trifle more than that of a kerosene stove.

SENeca.

MEASUREMENT.

*Editor Forest and Stream:*—The letters which have recently appeared in your paper and your own comments thereon, tempt me to write a few lines on the subject of yacht measurement. I am the more inclined to this because your pen and pages have been used and with manifest effect to influence the construction of yachts of better dimensions and model than those of the prevailing type, more especially of the small class of yachts, and because the method of measuring has a direct and often very palpable effect in restricting the embodiment of good features in yachts, and of encouraging the development of other undesirable except as a means of gaining advantage in speed. Thus it happens that an English yacht will have a width of beam equal to less than 20 per cent, of her length, and those built here will sometimes exceed 40 per cent, with a corresponding disparity in their respective speeds.

Some of this difference may reasonably and properly be due to difference in water, but to any one who has watched the constantly increasing length and depth of English yachts and the contraction of beam it is a plain manifestation of their owner's willingness to sacrifice less of accommodation, and to incur increase of expense to evade the penalizing effect of a faulty measurement rule, which makes necessary an outlay for ballast to serve a purpose which might be better accomplished by giving the vessel a little more beam and better accommodations.

As to the matter of the cramping effect of the English rule, a yacht owner must receive from his builder a much smaller boat than he could get for the same money and invest a considerable sum in lead, or give up expectation of prize winning in regattas. While this cannot be charged against the rule that prohibits the production of dangerous class of yachts, or yachts that are heavily rigged and unhandy.

It is no uncommon thing for us to speak of the English rule as bad to the extent of being ridiculous. How is it with the rules here?

The effect of length measurement in developing the flat and wide variety has been so often the subject of your effective editorial comments that I will only say that I hope never to be caught out in one of those craft in a nasty sea and bad weather unless there is a port within easy distance to leeward.

There are, however, worse rules, I opine, than either the English or length rules, and after some study of the matter through many years, I have formed the conclusion that the very worst rule will

the full advantage of her increased size, and the lighter canvas of the small vessel may even tell against the large one. When the wind blows harder the larger vessel has the double advantage of being able to travel faster than is possible with the smaller one, and of standing up to her canvas better, or using more of it. In addition to this there are some minor gains, such as the smaller effect of sea waves upon her, and the reduced frictional effect of water to which motion has been communicated by passing over surfaces which it has reached earlier.

In building larger yachts we find that builders do not commonly avail themselves to the full extent of that rapid growth of stability which comes with increase of size, but accept in part as an equivalent a reduced beam and easier form adapted to higher speeds. They have of course an inducement to do this because, as has been said before, stability increases with size much faster than the area over which sail can be conveniently and effectively spread.

It will appear from the foregoing statement that a large vessel should allow time to a smaller one when such speed is attained that

waves of displacement and replacement are generated—when the surface traveled over is roughened by waves—when per square foot of surface it is necessarily less in the larger vessel than the smaller one.

If these premises are correct the conclusion follows that allowance for size ought to be greater in a strong wind than a light one, and greater also over a rough water course than a smooth one, and should be very little over a smooth water course in a light wind.

Some of the above conditions might be met by making the time allowance with special adaptation to the course, and by making it greater relatively when the water is rougher in short time, and consequently at high speed. There could be no difficulty in formulating this.

It might be assumed that as vessels of the same model increase their sail-carrying power and resistance in a ratio approximately known, that their displacement or tonnage would form a good basis on which to reckon time allowance.

Such an inference is correct only when the same type of vessel is in competition and can, I claim, only be relied upon for just so far when other parts of the rules for measurement insure that only such vessels shall be subject to the rule as have similar proportional dimensions. Otherwise the inference is as false and the operation of the rule as mischievous as it well can be. At this time when opinion is quite unsettled, it is, I think, important that no fallacy in regard to this matter should pass unchallenged.

A little attention to the subject will show that of the three dimensions which enter into tonnage or displacement the uses and effects of each are different from the other, and that they have different values as agents for the measurement of speed. They ought to be treated very differently, and to mix them up indiscriminately

is to my mind a make confusion of a kind that can produce only the worst results. It is, in fact, to follow the example of the old time man-of-war-men, who, to get rid of counting lent his measurer a handful of mixed gold and silver, and asked a like repayment.

I contend that no well proportioned vessel designed for comfort, handiness and sea worthiness, can by displacement or bulk measurement rule afford to allow time to another one designed expressly to win prizes in regattas over a summer course.

By giving the better qualities of a yacht it would, I think, not be difficult to design a vessel that should be notably successful under the conditions given. That we have not more yachts built of a worse than Mohawk kind is perhaps due to the smallness of the inducement afforded by one or two regattas in a season.

It appears to me that to tax free-board is especially inexpedient. That to tax displacement is inequitable, and inasmuch as it must chiefly operate to produce a limitation of depth such a rule is detrimental to good modeling.

As some help to the study of this question let us take the midship section of a well-known yacht, say the *Undine*, and see the character of the change which would be effected by an alteration of her proportions.

According to the draft of her in my possession, the *Undine's* deck could reach the water at an inclination of 13 deg. It will be sufficiently accurate for our purpose here—that of ascertaining the general character of the change in the yacht's stability produced by alterations in her depth and breadth—to leave out of account the true centre of gravity of that vessel, and to make our comparisons

in each case between the centre of gravity of the whole section, and the centre of buoyancy of each section inclined to an angle of 13 deg. The distance which separates horizontally the centre of gravity from the centre of buoyancy multiplied by the weight of the section as represented by the displacement, will, of course, give the force of the righting power at the angle shown, and the consequent relative ability to carry sail over such a sea. In the section A represent the *Undine*. B, the same vessel with

feet draught, and the same amount taken from beam. C, the *Undine* with two feet added to draught. D, the *Undine* with two feet added to beam. Let W represent the weight of each section, and L the length of the righting lever or the distance horizontally which separates the centre of gravity from the centre of buoyancy and we have the following:

$$\begin{aligned} A-W &= 1 \\ B-W &1.857 \times 1.4054 = .95 \\ C-W &1.514 \times 1.65 = .984 \\ D-W &1.142 \times 1.135 = 1.54 \end{aligned}$$

It will be seen that the addition to depth gives no such advantage for carrying sail as is to be got by increase of beam. That it is not equivalent to an exchange of it is shown by reference to B. That addition to depth without diminution of beam may fail to give advantage in stability, unless accompanied by increase of free-board, is shown by C. That addition to beam does add immensely to sail-carrying power on a line is shown by D.

That the loss of stability in narrow yachts is partly compensated, even in smooth water, by easier lines and smaller riggers, and that such boats are immeasurably superior and more handy is, I think, so palpable that the recognition of it must constantly increase.

Hitherto, however, notwithstanding that the N. Y. Y. C. is exceptionally conspicuous in taxing depth and free-board, and that ordinarily we have no limitation of these properties, our yachtmen and builders have shown no disposition to take more than a minimum of either. Our open yachts, the most extreme type of racing machine, usually have a draught of from 35 to 40 inches to foot of length, and are deck to water when inclined 12 deg. Larger vessels commonly have their decks to water at an inclination of 15 deg. Yacht builders will tell you they do not want too much boat. Nor do they want to get the sails too high. There appears to be a more healthy disposition growing, but I am afraid that it would not bear to be handicapped. The Seawanhaka Club has a rule that is probably the least objectionable in use. It takes into account beam and length only, and although the club contains some deep boats as well as shallow ones, it does not appear that the rule does one who needs to be encouraged to enter regattas, or that the ones with heavy displacement and great free-board take all the prizes. There can be no question that the introduction of a displacement rule would effectually shut out from competition this type of boat. In view of the extreme English rule, like the one now in use, especially where outside lead is permitted, it would be easy to show why the inducement is toward the most extreme, and why some penalty on depth or the favorite mode of ballasting would be a better basis for a restrictive rule. A much better alternative would be to relieve the boats from the cramping and injurious effects of the present rule, heavy tax on beam. If this were done and at the same time our own rules modified so as to encourage more depth and less beam, Mr. Archer would find that we had found the long and the short of the question, and better yachts would be produced in both countries.

New York, Dec. 4.

J. BROWN.

YACHTING NEWS.

**NEW YACHTS.**—Hardly has the season closed for one year, before the chips begin to fly in all the building yards in expectation of the new Prospects having returned to commercial careers, it seems more than likely that this winter will see a larger number of keels stretched than any yet gone by. The builders of Boston already have much new work in hand, principally of the smaller cruising classes of sloops which meet with so much favor along the rugged coast, and the list of new racing yachts is also very numerous.

Repairs promise likewise to be a long one. Near Boston, Van & Stanton have launched the new composite steam yacht for Mr. Lorillard already described in a recent issue, and they are getting out the plans for another seagoing steamer to replace the *Polynia*. Down on the Chesapeake Bay, the Chesapeake Yacht Club, which has been busy with one like the *Norma* of Mr. Godwin, while on the lakes the prospects are bright and a fleet of new yachts will be turned out in time for the Spring races. In California much activity is manifested in yachting circles. The new schooner *Aggie*, 30 ft. long, built for Commodore Macdonough, by Harlow Brothers, of Port Ludlow, W. T., having recently been delivered in San Francisco. The demand for steam yachts, especially for those of high speed, is brisk and the Herreshoffs of Bristol, R. I., have their hands full in consequence. Mr. Holland's new steamer is well advanced. She is 60 ft. long, 8 ft. beam, and of composite build, the boiler being of the coil type with a grate 42 in. diameter. Speed 15 miles. The cabin will be handsomely finished in hard woods, the saloon being 12 ft. long with a stateroom opening into it. Mr. Lorillard is having a steam launch of the same party.

Length, 30 ft., beam 5 ft., mahogany planked to the chert and ash inside. Her engines will be compound, taking steam from a coil. All the metal work will be of polished brass, including engine and boiler, and a speed of eight miles is guaranteed. This launch will probably be the best of her kind ever turned out in America and in point of speed and seaworthiness much superior to the usual run of launches of the old pattern. The well-known sloop *Sadie* is also in their hands for alterations.

Her opposite next year as a motor 64 ft. long and thoroughly overhauled and refurnished. This is the *Albatross* of the Herreshoff and Agnes class in the metropolitan waters. The Herreshoff Manufacturing Company have also just delivered to Messrs. Flint & Earl a steam launch for sporting purposes, her design and arrangement having been planned by the latter. She is 45 ft. long with 8 ft. beam, schooner-rigged and steams ten miles, compound condensing engines, twin screws which, by a novel device can be raised or lowered to suit the depth of water, the launch being able to sit in fourteen inches depth. The cabin is 12 ft. long, finished in cherry, oak, mahogany and California red-wood. She has been named the "Sport," and is now in active service on the Chesapeake, her owners bagging 180 ducks as the result of one day's shooting. Besides their yacht work, the company has a department for general engineering, including an engine for a draw bridge, machinery for the Albatross Gold Mining Company, and a portable pumping engine for the U. S. Fish Commission, the latter delivering 1,800 gallons a minute. The Commission will use the pumps for filling and emptying ponds in which the fish breeding is carried on.

**EXPERIENCE AS THE TEST.**—So much nonsense is in the air when and talked against outside ballast by those who have never been on board a yacht so fitted, that the imaginative brains of the patriots who despise what is obviously the most natural and most beneficial position for ballast will do well to note the result of English experience in this matter. There is no theory at all, but the very practice which they so much affect and possess so little. We quote from the *London Field*: "Putting the whole of the ballast outside was thought to be a bold experiment, but those who know how Lord Quinlan and his friends have performed would listen to no objections. And so the designers of Frede and Enterte, put practically the whole of their ballast on the keel, but the builder of Enterte was adverse to doing the same and Enterte, by comparison, suffered in consequence. The heavy weights, too, manna and Vandana, had a much more perfect position outside than had been previously attempted, with the single exception of Sirax, and that exceedingly comfortable yawl was undoubtedly improved in seagoing qualities by the increased weight of lead outside, and so no one who has understood the matter felt the least doubt about the manner the heavy lead keels were to perform in a sea, and all the old prejudice against outside ballasting has been, it can be assumed, swept away forever." It is about time that the timidity and stupid cant phrases against outside ballast in America were thrown overboard, and that the vessel builders be benefitted of more moderate beam by a low centre of gravity.

**DETROIT CANOE CLUB.**—The following officers have been elected: Commodore, C. B. Hull; Vice Commodore, F. H. Seymour; Treasurer, J. E. Winton; Secretary, W. J. Craig; Treasurer, J. E. Winton.

For Sale.

FOR SALE, one of Rushton's open canoes, 18 feet long, as good as new. Also, Lyman's bow-tackling rowing gear. Price \$100. Address: THOMAS CUNNING, Stamford, Conn. Dec'16.

## TRADE—"BEATS THE WORLD."—MARE. Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning papers, namely: THE OIL OF CROSCOTE. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1875, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Croscote are completely neutralized or destroyed, and the paper made saliva proof to prevent its being ingested. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK

## The International Exchange

READING ROOM,  
Madison Square,

C. A. O'Rourke, - - PROPRIETOR.

TO SUBSCRIBERS AND THE PUBLIC:

This institution will be opened soon in Madison Square, at the corner of Fifth Avenue, Broadway and Twenty-third street. Entrances, 953 Broadway and 186 Fifth Avenue.

The success of the enterprise is assured even on a metropolitan clientele. Among the hundreds of subscribers who have signed contracts of membership are the leading business and public men of New York. The Exchange will have among its customers a large proportion of foreign and American travelers.

Among the principal purposes of the Exchange are:

1. To keep on file every newspaper of any consequence published in Europe, Asia, Australia, South America, the West Indies, Mexico, the United States and the Pacific. Parties desiring to subscribe for any journal, to be sent to their homes or offices, can do so through the Exchange. Advertisements will, when ordered, be forwarded, for subscribers to the Exchange, to leading journals at any point.

2. To create a club in which subscribers may receive the news of the world promptly, obtain their letters, command the services of interpreters or guides, exchange foreign for American money, send telegrams to every part of the world, and facilities for transacting various kinds of business.

3. Subscribers can have orders executed for them by mail or telegraph, secure rooms at hotels and receive information in regard to rates, cost of travel, etc. The current general news of the day and also stock, mining, produce cotton and other quotations will be received at the Exchange and Reading Rooms by telegraph. Information as to official prices in any branch of speculative trade can be received at all times. Facilities will be afforded to those desiring to speculate by telegraph to do so over private wires, through responsible brokers. Direct telegraphic communication with the principal business exchanges.

The advantages of a General Exchange of this character are briefly stated:

1. A bureau of general and special information on financial and mercantile matters.
2. Information in regard to the modes of doing business in the different departments of the Government.

3. Statistics of the general government and of the various States, and also of foreign countries.
4. The Foreign Department will give information of the same character and furnish data of great value to the merchant and manufacturer, as to the state and character of trade in all parts of the world.

5. The City Department will give information on the City Government, its departments and mode of transacting business. Railroad, ocean steamer and steamboat directions to travelers. A general ticket office for travelers, where railroad and steamboat tickets can be purchased at the established rates, foreign arrivals and departures. A theatrical department, where notices of theatrical communication with leading theatres. Real estate can be advertised in the Bureau for sale or exchange, together with notices of auctions, houses to let, boarding houses and apartments.

Members of the Exchange can have their letters regularly and promptly collected from the General Post Office and placed in Lock boxes at the Exchange to be called for. Letters will also be called for at business places or private residences, and promptly mailed. The Exchange will be notified by telegraph of delays and postponements of mails; also when foreign mails arrive at the General Post Office, and when they will be distributed. Letters received at the Exchange for mailing up to the latest possible moment.

The Exchange will be notified of the arrival of Sandy Hook of steamers from Europe, the West Indies, South America, etc. The announcement of the arrivals will be bulletined in the Exchange. A register will be kept in the Exchange of the arrivals of travelers from Europe, the West Indies, Central and South America, Canada, the various sections of the United States, etc.

The Exchange will be open from 8 A. M. till midnight.

Subscription price, \$25 a year, \$10 per quarter, \$3 a month, payable in advance.

Cheques must be made out to the undersigned. Cash payments must be made at the Exchange, 953 Broadway and 186 Fifth Avenue.

No payments are to be made until the Exchange shall have been opened.

Send for Prospectus to

C. A. O'Rourke,

Manager N. Y. City Press Association,  
115 and 117 Nassau Street,  
New York.

Or to

GEO. M. HUBBARD,

155 Fifth Avenue,

WM. B. GREENE, who is well known among business men, is the only agent authorized to call on them to have contracts signed for membership of the Exchange.

Due notice of the date of opening of the International Exchange and Reading Room will be given.

GUNPOWDER!  
Dupont's Rifle, Sporting and  
Blasting Powder.

THE MOST POPULAR POWDER IN USE!  
Dupont's GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 10 canisters.

**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 10 and 50 canisters and six and 15 lb. kegs.

**Dupont's Choice Bore.**—Specially adapted for "Choice Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 1 being the coarsest. Packed in 6 1/2 lb. kegs and 10 canisters.

**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 10 canisters and 6 1/2 lb. kegs.

**Dupont's Rifle Fg.**—"Sea Shooting."—FFg. and FFfg. The Fg. for long-range rifle shooting, the Ffg. and FFfg. for general use, burning strong and moist. Packed in 3 1/2, 10 and 25 lb. kegs, 6 1/2, 12 1/2 and 25 lb. kegs. Fg. coarse, FFfg. fine. Dupont's Sporting, Mining, Superior and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Minnie, Hecaton, Culver and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

**F. L. KNEELAND, 20 Wall Street, N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFfg. for long-range rifle shooting.

The Hazard Powder Co.,  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG Ffg. and "Sea Shooting" Fg. in kegs of 25, 12 1/2, and 6 lb. and cans of 5 lbs. FFGF is also packed in lead 1 lb. canisters. Burns strong and moist. The FFGF and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" Fg. is the standard Rifle Powder of the country.

**Superior Mining and Blasting Powder.**  
**GOVERNMENT CANNON AND MUSKET POWDER;** also, **SPECIAL GRADES FOR EXPORT,** OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

### FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 23, 1880.

\* \* \* THE FOREST AND STREAM goes to press Wednesdays. Correspondents are requested to mail their communications so that they may reach us before that day.

DO NOT FORGET that a paid subscription to the FOREST AND STREAM for one year is a most appropriate Christmas gift.

THE PROPOSAL to require licenses from gunners on Long Island will meet the hearty approval of the better class of sportsmen, and as land-owners are to be excepted from the requirement, farmers will be equally pleased with it.

THE CABLE brings us the news of the death of Francis Trevelyan Buckland, or as he was best known, Frank Buckland, who was perhaps the most widely known writer in England on natural history. For several years he had conducted the Natural History columns of *Land and Water*, and through that paper and other mediums he had been remarkably successful in popularizing that study.

WHEN the FOREST AND STREAM was considering which one of many special features, that presented themselves, should be provided for its readers this Christmas week, nothing seemed more pleasing and appropriate than a collection of reminiscences of that famous coterie of writers, who contributed long ago to the old *Porter's Spirit*—the FOREST AND STREAM of its day. And it was most fitting, too, that these reminiscences should come from the pens of those writers themselves. We accordingly communicated with such of them as we knew to be still living, and our requests have been met by a most gratifying response, and we present to-day contributions from Gen. H. H. Sibley, Isaac McLehlan, Col. Thos. Pictou and S. C. Clarke.

These are the few who are left; the members of that band who have not passed away with their generation.

This reunion of famous writers, after the lapse of a quarter of a century, is a notable event in American sporting literature.

### CENTRAL FISH CULTURAL SOCIETY.

THE meeting, which is partly reported in another column, was a most interesting one, and was characterized by several important and highly interesting papers, which were followed by equally interesting discussions. We have urged the members to put their views in form of a "paper" which, prepared at leisure, fully represents their ideas, and is always correctly rendered in the local and other papers as well as in the Society's reports. This will be remedied next year, as a resolution was adopted which authorizes the executive committee to call on members for a paper, and then to prepare a programme in accordance with this plan.

Among the papers read was one by Prof. Forbes on the food of fishes in their early life, which has an important bearing upon pisciculture and the intelligent stocking of waters; one by Mr. Fairbank on the breeding of California salmon in fresh waters, something which has been done by him in Geneva Lake, Wis., where his salmon have not only lived but have actually spawned in the lake; one by Mr. Ballou on protection of fishes in Lake Michigan; one by Mr. Mather on the growth of carp in America, wherein he proved by many witnesses that in their new home their growth exceeded that of their native land three or four times; and one by Mr. Shaw on fishways, besides letters and communications from others.

One of the humors of the meeting was a joke on Commissioner Shaw, of Iowa, whose resemblance to General Garfield is so strong that strangers looked after him. One of the ways told a waiter at the hotel that the gentleman dining at the next table was the President-elect, and that the one with him (Commissioner Bartlett, of Illinois), with the huge moustache, was General Logan, and the fun lay in seeing the procession of darkies file by to get a look at the celebrities, and the astonishment of Shaw to see the pyramids of dishes containing all the delicacies in the house piled in front of him until no space was left for more.

We will publish the papers and discussions in full, from week to week, and afterward issue them in pamphlet form. The members of the Society recognized the labors of FOREST AND STREAM in the line of pisciculture, and the few who had not formerly taken it ordered it sent. It may be that the Society will never get the legislation it seeks from the general Government, but if it never accomplishes legislation of any kind it has a sufficient reason for existence in the diffusion of fishcultural knowledge, the exchange of ideas and the general waking up of the public to the value of fishculture through the press, which gives, as the Chicago local papers did, columns of discussions and extracts of the papers read and comments upon them.

### THE NATIONAL RIFLE ASSOCIATION ELECTION.

WITHIN a few days the life members of the National Rifle Association will be given an opportunity at the annual meeting of the association to fill a number of places in the Board of Directors. Common sense would seem to dictate that a change be made from the old plan of complimentary re-election of retiring members, and that an effort be made now if ever by the actual shooting men of the association to make the Board of Directors something more than a mere parcel of figure-heads, at least as a large majority. The affairs of the association have now reached a stage where it becomes an absolute necessity that somebody should do something. From being a live, healthy organization, leading rifle practice and infusing life into the sport, the National Rifle Association has degenerated into a mere empty shell. The military shooting on the one hand is entirely removed from the jurisdiction of the Board, and on the other hand the most popular all-comers' match of the year 1880 has been carried out not only without the actual co-operation of a majority of the Board, but with expressions of the liveliest disgust and opposition on their part. The fact now is that those who control affairs in the National Rifle Association are not in active and earnest accord with the men who do the shooting on the range. Every important step which has been taken has been forced upon the Board, and this unwieldy force of incapables have been rather a hindrance than a help to rifle shooting. A single energetic man could easily run the Creed-

moor range, and the only function which the present Board of Directors seems to fulfill is that of passing ridiculous resolutions at inopportune moments. The Palma has been virtually shelved through the weight of conditions laid upon it, and the whole question of international small-bore shooting has been dragged into a quagmire of confusion, and there dropped. Having the opportunity to become the dictator in all matters connected with rifle shooting in this country, the association, by an annual turn-over of its rules and regulations, has managed to make a match-shot "under the rules of the National Rifle Association" considerable of a risk unless everything passes off exceptionally smooth. The financial management of Creedmoor might come in for no small share of sharp criticism were we inclined to venture into that field.

The whole remedy for this state of affairs lies with the shooting men among the life members. There are enough such to select a good, live contingent at once, and ultimately to the weeding out of every fossil from the Board. There has been growling and grumbling enough, both on and off the range, at the neglect of those in control. The whining ones can now put their cry for reform into practical shape of ballots. Let them decide upon a list of men who thoroughly understand the needs of modern rifle practice, men who themselves know somewhat of the seemingly slight causes which may cause a man to turn with indifference from one range and seek another. Our plea for a "change" is no idle one, for affairs in the N. R. A. cannot well be worse than they are now, and in face of the fact the coming shooting season will determine whether the N. R. A. is to live or die. The infusion of new blood into the Board must be a help to its deliberations.

BANNERS and bunting and streamers, the boom of cannon and the flare of skyrocket, these are the attendants of our midsummer anniversary, the symbols of our national pride and patriotism. Each recurring holiday is marked by its distinctive and approved material expression of the sentiments which prompt to its observance.

And Christmas has its greens. This week our homes are decorated with the simple boughs brought in from the woodland and fragrant with the spicy odor of the forest.

There is much of significance in this, that for the memorial of that day which the Christian world has set apart for the commemoration of the one momentous event in its history, it rejects the decorations of art and finds in the simple gifts of nature its fitting and eloquent symbols of joy and cheer and hope.

It matters little when or where this custom arose. That it has lived and is year by year more widely adopted is an unconscious, perhaps, but none the less emphatic and true, expression of man's sympathy with Nature. It is the unerring token of her children's affection for Mother Earth.

MASSACHUSETTS GAME PROTECTION.—The Massachusetts Fish and Game Protective Association have appointed Messrs. Iris W. Adams, John Fattler, Jr., and F. R. Shattuck, a committee to superintend, if necessary, a revision of the Game and Fish laws of the State during the coming session of the Legislature. This committee invites correspondence from other similar committees of the different State Associations, or from individuals interested in the subject of fish and game protection, and will welcome any suggestions which may bear on this matter. Letters may be addressed to any member of the committee, in care of the Association.

WORDS, WORDS, WORDS.—When Carver was setting out for Europe, he prepared the way by a grandiloquent exchange of wordy challenges to Bogardus; and when the flood of newspaper notoriety thus secured was at its height the "Doctor" mounted the crest of the wave and rode into fame across the sea. After a prolonged absence abroad Carver appears again in the daily papers with more challenges to Bogardus. This means, we presume, that Carver is thinking about coming back to America. He is preparing another wave of newspaper notoriety, and when the sounding-line shows the requisite depth of water on the bar we may look for the redoubtable marksman to come sailing grandly into port.

TIDES—moon—moonshine. Carver challenges—words—words—words.

## A Christmas Reunion.

A VISION OF THE PAST.

IN the silence of my room, at this solemn noon of night,  
I sit and muse of other years, of years that were so bright.  
There's no light of lamp nor gleam of fire to dissipate the gloom;  
No star-spark nor a moon-ray the darkness to illumine.  
As down Time's dusty corridors I turn my wistful eye,  
Fond retrospect brings up the scenes of the days so long gone by.  
I seem to see before me, like old portraits on the wall,  
Sportsmen whose forms and features I can at once recall.  
As memory's magic wand I raise, the men of other days,  
Like apparitions of the past, come trooping to my gaze.  
I behold in this, my vision, each old familiar scene,  
Where we have tramped the meadows or trod the woodland green;  
Where we've scaled the breezy upland, or plunged in bosky dell  
In summer's heat or when the leaves of russet autumn fell.  
In hemlock wilderness, where roved the wild herds of Maine,  
Where antlered stag or tawny doe held ununmolested reign;  
Where the drum-beat of partridge or woodcock's startled cry  
Were heard in pine thickets down where the brook ebb'd by.  
And where lone Adirondacks their shadows wide extend,  
And the blue mountain enmits with the horizon blend;  
Where sparkling stream and crystal lake, like gems, the vale inlay,  
There, well equipped with rod and gun, we loved to take our way.  
And where the sylvan precincts of Illinois outspread  
Their measureless green pastures, where thick the grouse flocks  
Fed;  
Where myriads of wild pigeons and coveys of brown quail  
Filled grove and plain; where oft we'd keep the trail  
Fast by thy shores, old Ocean, by rocky reef and bar,  
In shelly cove, or where the sand-spit stretched out white and far,  
There, hidden in our boat, we'd sit in ambush for the night  
Of hovering bird or honking goose from day-down until night.  
And oft where ready marshes their league-wide meadows spread,  
And plover-call and curlew-cry were resonant overhead,  
There, oft amid those wary flocks, to deal out death we came,  
And home return'd with sumptuous wealth of migratory game.  
And when the winter days had come, and sports of field were o'er,  
And, gun and rod and dog dismissed, we sought our homes once  
more,  
We lo'd by fireside blaze to sit and there enjoy again,  
In genial talk, the noble sports of wood and flood and plain.  
Cale Roling, of old Boston, prince of fowling rare,  
Can I forget your royal sports, your skill beyond compare!  
Forget our "Acorn," "Cypress," in these recording rhymes,  
Then want to fill the sanctum of *The Spirit of the Times*?

Tall Son of York! O, Porter, who might forget thy name?  
What memories now brighten at mention of thy name!  
So eloquent in speech, so cultured in thy mind,  
A giant in thy form, as woman-soft and kind!  
And others, too, were there, renowned with gun and pen—  
Sibley and Pietron, Scott and Wilkes, all princes among men;  
Anthon and Clarke and Foster, and, chiefest name of all,  
Frank Forrester! What scenes those names recall!  
Poor Herbert! Who so brilliant, so versatile as thou.  
When in smiling mood or with a clouded brow?  
Ah, who so earnest in the field, amid the birds of air,  
Or where the trout and salmon gleamed in the sunny glare.  
These portraits of kind faces, those pictures of the past,  
Glow ever in my memory; to fade they will be last.  
But, alas! the dust and shadows of the grave have closed forever  
On many of these cherished lives in the long departed year.

Shelter Island, N. Y.

ISAAC McLELLAN.

### "THE SPIRIT" CROWD.

BY DR. THOMAS PHOTOS.

THIRTY-FIVE years ago *The Spirit of the Times*, the metropolitan weekly, for many years previously prosperous under the peculiar editorial management of William T. Porter, had attained the height of its popularity, celebrity and influence through its recognition as the "gentleman's newspaper" of the period, with a corps of contributors comprising numerous writers of local distinction in every portion of the country, whose productions, generally composed during moments of compulsory leisure and expressly designed for instruction or entertainment of a distinctive class of appreciative readers, first saw the light of day in this diversified sheet. The Porter brothers were men of decided ability and of rare literary attainments, genial, social companions and of extended worldly experience, and hence it was not surprising that when William, the "Tall Son of York" as he was familiarly designated on account of his remarkable stature, assumed control of *The Spirit's* columns, aided by the advice and literary co-operation of his more highly cultured brothers, it penetrated with invincible rapidity into the houses of turfmen, sportsmen, planters and country gentlemen, while being acknowledged in this metropolis as a standard for refined amusements.

It must be remembered that in those days, when the passing generation were inured with a decided predilection toward patriotism and a prejudice favoring social exclusiveness, professional gentlemen and those of habitual leisure were, as a general rule, not only ripe agriculturists, but enthusiastic admirers of field sports, tutored in admiration of the pastimes and diversions held in esteem by the gentry upon English soil. The sportsmen of forty years since were almost entirely dependent upon English publications, and those of a very high price, for current literature, and consequently one of the leading features of *The Spirit* in its initial issues had been a judicious reproduction of articles from the London *Sporting Magazine* and similar periodicals, the perusal of which fired the ambition of our native writers, who, ere lapse of little time, had the satisfaction of recording their contributions to *The Spirit* transferred to the Old World with laudatory comments upon the unexpected uprising of a sporting literature in an American wilderness. Such was the case particularly in the instance of Tom Thorpe's "Tom Owen,

the Bee Hunter," and the "Big Bear of the Arkansas," two sketches, descriptive of life in the Southwest, for which he had vainly sought a medium of publication at the South, where he was then dwelling a comparatively obscure editor. Upon advice of a friend the manuscripts were transmitted to Porter, whose appreciation of talent and humor and keen sense in detection of character, at once suggested prominent publication of the articles, which were, through his indorsement, reprinted extensively in popular journals, and finally adopted in England as types of hitherto unknown American characteristics. Through this fortunate chance in making a first appearance in *The Spirit*, and a subsequent contribution to the *American Turf Register*, likewise edited by William, Col. Thorpe acquired a profitable reputation, enduring up to the time of his death, inasmuch as he was among the very few sporting writers wielding a money making pen. *The Turf Register*, moreover, was the main cause of bringing into existence as a sporting author the Forrester as therein Herbert made his debut in his controversy with Cypress, regarding quail, continued in a series of articles, which, subsequently enlarged and embellished, laid the foundation for a number of papers upon American game printed in the magazines and forming the skeleton of his *American Field Sports*. Porter, personally, was no ardent disciple of the gun, but a most devoted worshiper of the rod, spending his vacations annually in making short journeys into the trout regions of Long Island, and the waters of Sullivan County, some of John Brown's Tract, usually accompanied by some genial friends of more practical piscatorial abilities than tendencies for literary exertions, prominent among whom could be remarked Henry Inman, the artist; Brough, the vocalist; Genio C. Scott and Lyman Derby, aspirants to leadership of fashion in the fabrication of male garments; Wilkins Kendall, of the New Orleans *Picayune*, yearly a visitor to our city during the summer months; Eschick, an excellent gentleman and representative sportsman, and several other Virginians, whose adventures, duly detailed orally upon their return, either in *The Spirit's* private office, significantly denoted "The Sanctum," or over a fish dinner of captured game, served up to order by Ned Windust, beneath his professional supervision, and in a quaint subterranean parlor, that unostentatious apartment of the Shakespeare, into which none save the elect of his patrons were suffered to penetrate, furnished the nucleus for the ensuing series of constructive anecdotal narratives, whipped into shape by friendly pens, the identity of the chief actors in which, although well known to members of *The Spirit's* coterie, being discreetly concealed from the general public who, devoted to business cares, could not be brought into appreciation of a professional man's devotion of time to apparently frivolous pastimes. Consequently when a really capable writer, dependent in a measure upon popular favor to sustain a professional reputation, thought proper to transmit a contribution to *The Spirit*, he cautiously assumed a *nomme de plume*, while resorting to devices to hoodwink his business friends as to cause of his temporary absence from town. Like William P. Hawes, whose lucubrations as "Cypress, Jr." have been compiled and edited by Frank Forrester with intent of securing a trifling pittance for his widow, William C. Barrett, whose fair fame as a lawyer has been of late years entirely obliterated by an act of unassuming dishonesty, was the son of a lawyer of high standing, and at the same time one of the most inveterate and skillful fishermen of his day, equally an adept with rod and pen, upon whose friendly advice, and at whose warm solicitation Frank Forrester was induced to undertake, and finally to complete his "Fish and Fishing," in which work, however, he was materially aided by "Dinks," a thoroughbred sportsman—Captain Spencer Peel, of the Royal Canadian Rifles. A fluent and versatile writer, Barrett persisted in preserving the pseudonym through a partial change in the aliases appended to his contributions and variation of his general style so effectually as precludes possibility of positive identification in their authorship. During the earlier days of his practice at the bar, finding it to be hopeless to resist temptation for indulgence in his favorite diversion, he would console clamorous clients through assurance of being called out of town to argue a motion before the Chancellor, so strong was his yearning for the prevailing sentiment among business men against their legal advisers being forth for "a day's shooting." Another clandestine contributor to *The Spirit* was the Rev. Dr. Bethune, who, however, mustered courage adequate for partial avowal of himself as editor of American edition of "Walton's Angler," much in demand with local bibliomaniacs hunting after the volume, on account of the revered annotator's reputation, with an impulse similar to that actuating acquisition of a black letter Julia Bayard.

It will be perceived that in those earlier days a sporting lawyer or a piscatorial divine stood in danger of excommunication were his proclivities to be honestly confessed, and hence came it that the inviting fields of sporting literature remained with us untill saved by surreptitious or disguised laborers, until Mr. Hawes and Herbert set a commendable example to ambitious aspirants through voluntarily unmasking their faces to an admiring public. Henry Wiman Herbert diverged from all contemporaries in the particular of being condemned to involuntarily literary servitude whereby to earn his daily bread, and for many years indulgence in field sports was rather a compulsory relaxation, necessary to relieve an unrelenting pressure upon an overtaxed brain than for the sake of mere amusement. It was fortunate for the sportsmen of America that Herbert chanced to be a man of very limited means, otherwise he would never have been forced into composition of these volumes during his post-mortem fame, for, during his life time, he toiled assiduously to attain celebrity as a classical and historical author, regarding his sporting contributions to magazines and newspapers as mere ephemeral productions to alleviate passing financial difficulties. Upon the "Roman Traitor" and "Oliver Cromwell, England's Great Protector," he placed his firmest reliance for a durable reputation, while upon "The Captains of the Old World" he bestowed more labor and research than upon the turf, as an amateur rider he had been beaten, however, on account of the superiority of the horse of his antagonist, the well-known Lovel Purdy, upon the Union Course.

When *The Spirit* was commenced by a gentleman named Fisher, who prided himself upon being brother to the famous

and precocious actress Miss Clara Fisher, it was announced to be conducted as a club of field sports, the Turf and the Stags," but, upon its falling beneath charges of William T. Porter, the literary department was assumed by Dr. Porter, who at one time was co-editor with N. P. Willis in a weekly, *The Corsair*, intended as a rival to the *Albion*. Among the compositors in *The Spirit* office was Horace Greeley, who was indebted to William, when foreman of the printing house of Bangs & McElrath, for the first employment obtained in this city, the duo having originally come from the same town in New Hampshire. Greely's first editorial essay appeared in *The Spirit*, clandestinely inserted during absence of the editors at the races, and was deemed to be so brilliant as to draw forth an injunction not "to do the same again." Some legal difficulties having occurred touching ownership of *The Spirit*, the paper was, at Greeley's suggestion, issued for a couple of weeks as *The New Yorker*, a title adopted by the "white-coated philosopher" when venturing into business for himself in conjunction with Henry J. Raymond, another of Porter's townsmen. The success of *The Spirit* as a literary journal was materially enhanced through perpetration of an ingenious hoax upon Porter, whose publication in good faith created somewhat of a sensation in the literary circles. Dickens having announced the publication of a new serial to succeed "The Pickwick Papers," which literary composition was initially designed to be a series of sporting narratives, a letter-press accompaniment to etchings executed by Seymour, whose "Sketches" had attracted much attention in England, some one supplied *The Spirit* with the opening chapters of "Boz's" new romance, the authorship being variously ascribed to Richard Adams Locke, Herbert, Lewis Glynod Clark, Clay the caricaturist, and other writers of disfloration, whose letters of reprobation, more or less indignant, contributed amazingly to the amusement of the imposition, when it was discovered to have been a transcription of an obsolete English sporting romance by an obscure lawyer's clerk.

Correctly speaking *The Spirit* could never be regarded as a sporting periodical, although well supplied with casual articles upon the game and field sports of our country, inasmuch as it aimed at being the recognized organ of the American Turf, to the prejudice of secondary interests. Consequently a vast majority of its contributors, resident out of town, were either authors of sporting narratives, or artists, painters, etchers portraying incidents in Southern and Western life and character, who remained almost personally unknown to "The Spirit crowd," as the habitual visitors to the office were familiarly designated, unless taking advantage of a casual visit to this city to pay their respects to the "Tall Son of York," who ever received them with a prodigal hospitality, minous to his financial prospects. The horse was the idol of William's admiration and no man ever endeavored to imitate the features of his equine favorites. *The Spirit* was published wholly by subscriptions of ten dollars annually—assuredly a very high price—and in part compensation the publisher presented to his patrons large steel engravings, suitable for parlor ornamentation, thus familiarizing the denizens of the rural districts with works of art indicative of a refined taste. Before the invention of Daguerre and the subsequent innovation of photography, all portraits were made by hand, and while an animal painter was more of a rarity than a Royal Academician. *The Spirit* was consequently forced to rely upon native-born genius and, through employment of Henry Inman, probably the leading portrait painter of his day, and Troyes, an animal painter (subsequently attaining a European celebrity), to supply elaborate paintings, whence were drawn designs for engravings upon steel on an extensive scale, contributing little toward advancement of a branch of art at present passed materially out of use.

Forty years since New York city may have been regarded as the centre of the turf interest at the North, for, singular to remark, a strong sectional feeling characterized our races from the earliest inception of that sport upon this continent, Virginia claiming representation of the South and New York that of the North from the days of the exciting match between Belsham and Honeysuckle, and more recent contests between Fashion, bearer of Northern colors, and Boston and Peyton, respective champions of a "solid South." During the spring and fall meetings of the Jockey Club, then held upon Long Island, the sanctum of *The Spirit* was a scene of edifying confusion as a neutral ground, whereupon the magnates of the turf, even men of distinction in paths of public life, assembled in harmonious communion. Prominent among these horse owners, and turfmen, were the Earl of Sefton, Col. William H. Johnston, of Virginia, a small-sized gentleman, with a superlative luxuriance of gray hairs, rather grandiloquently claimed as being "the Napoleon of the turf;" Wade Hampton, of South Carolina, the perfect type of Southern chivalry; Long, of Washington, and Dick Ten Broeck, of Kentucky, famous to the present hour through his trans-Atlantic experience. To meet these men of note our city produced such sporting worthies as Alderman Charles Henry Hall, a patrician, whose town residence had been converted into the famous Noble's Garden; Walter Livingston, owner of Trustee, a diplomatist of the old school, familiarly known as "the last of the white cravats;" William Gibbons, owner of Fashion, an enterprising stamship owner and indeed founder of Commodore Vanderbilt's immense fortune; and the Stevens brothers, subsequently identified in the promotion of yachting and development of engineering enterprises—a congregation of wealth, probity and intelligence the like of which, it may be well observed, we may never chance to see again.

#### Editor Forest and Stream:

Yours of Nov. 29 is before me. I should be glad to comply with your request for an article for your Christmas number, but I fear it will not be in my power, as I have been for many weeks laid up by an attack of rheumatism and neuralgia in my head, which prevents me from the use of my pen, except for short notes. When I was attacked, I was preparing an article for Forest and Stream, the end of which I cannot anticipate. This disease is the angler's special enemy, as I have good reason to know.

I think my cousin, Isaac McLeellan, and I are among the oldest writers on sporting subjects. I began more than fifty years ago, in the *Sporting Magazine*, published in Baltimore by J. S. Skinner, and have written for most of its successors.

As soon as I am able to travel (if ever) I expect to go to my usual haunt in South Florida, from which you will hear from me.

When my friend Hallowell left your paper I expected to lose my interest in it, but such has not been the case. I see no falling off, but rather the reverse.  
Very truly yours,  
Marietta, Ga., 1880. S. C. CLARKE.

## SPORTS OF BY-GONE DAYS.

Editor Forest and Stream:

The pen of "Hal a Dacotah," which you call upon to perform service for your Christmas time issue, has been so long unused in the sporting line that it is decidedly rusty. I must endeavor to burnish it for the nonce with what success you must be the judge.

*Arms, virumque cano, as old Virgil hath it. If I cannot sing as old the poet, I can at least tell your readers in plain prose somewhat of the men and of the arms they used in other days in their field sports.*

The co-contributors with myself to Porter's *Spirit of the Times* and other sporting journals more than a quarter of a century ago were Frank Forrester (Wm. H. Heribert), Kendall, T. B. Thorpe, Picton, Lewis, Audubon and others of more or less note. With Porter, Heribert and Kendall, I was personally acquainted; they all passed away years since to the undiscovered country.

"Their swords are rust,  
Their bodies are dust,  
Their souls are with the saints, I trust."

The writers I have referred to composed a corps which for ability and brilliancy in their particular department of literature has seldom been surpassed. Dwelling in different portions of the Union the aggregation of their experiences as from time to time made public had much effect in popularizing legitimate field sports, and in repressing the practices of pot-hunters now unhappily too prevalent in the land.

Our place of rendezvous when we were in New York city was Porter's editorial sanctum, where we discussed sporting themes generally and "fought our battles o'er again." Heribert enjoyed those reunions exceedingly, and seemed never to weary of listening to the narrations of those of us who had had adventures in the field. He was in turn a most entertaining and instructive companion, thoroughly versed as he was in the theory of hunting and fishing not only, but in all subjects of general interest. He was positive in his opinions and somewhat impatient of contradiction, but ready, nevertheless, to make the *amende honorable* when convinced that he was in error. On one occasion in reply to my statement that canvas-back ducks were abundant in Minnesota, he rather bluntly averred I was mistaken, as that fowl had never been found in his own; and he was in turn as familiar with aquatic birds, and if I failed to furnish him with specimens from this far off region which he would acknowledge to be the *simon pure*, I would willingly pay for the oyster supper for the company when next we met. He accepted the wager, and on my return home it was my fortune to kill a large number of canvas-backs, from which I selected a full-grown male and female, placed them in the hands of an expert to be thoroughly prepared and mounted, and I then detached the box containing the pair to Heribert at Cedar Rapids where he resided. When I again saw him in New York in the fall of the same year he frankly acknowledged that he had lost the bet, and forthwith invited those present to partake of the oysters and accompaniments, which they did, and a jolly time we had of it at his expense.

Heribert and myself had corresponded previously to becoming personally acquainted. He did me the honor to dedicate to me, in flattering terms, one of his charming works called *Down the River*, which was dedicated to Heribert, a sportsman and author which was peculiarly gratifying. I have always believed that there was some event connected with Heribert's self-exile from his native land which was never divulged, but which preyed upon his peace of mind and caused that deep depression to which he was subject at intervals, and which, combined with the infelicities of his domestic relations, brought about the final distressing catastrophe.

*Required in price.*  
Porter, *Spirit of the Times*, and Kendall were both true-hearted and genial men, as well as able and practical writers. They had hosts of friends, North and South, and were general favorites.

My own sphere of operations was far more extended than that of any of the sportsmen I have named, and hence the articles furnished by "Hal a Dacotah," although by no means remarkable for their literary merit, were sought for with eagerness, because of the novelty of the scenes he described and the interest of the field over which he roamed. That field comprised what are now known as Northern Iowa, the whole of the great State of Minnesota, lying west of the Mississippi River, and a part of Eastern Dakota. No white men inhabited this vast region, save the comparatively few who were engaged in the fur trade with the Indians. Here were to be found at all seasons of the year the buffalo, or bison, in countless numbers, great herds of the wapiti, or elk, the deer, the bear and the wolf, and not infrequently the caribou, and other animals. The streams abounded with beaver, otter, mink and other amphibious, and the lakes, of which there were more than seven thousand in Minnesota alone, were covered in the spring and fall with swan, geese and ducks of every variety. It was in this elysium of hunters that the youthful Hal, not long out of his teens, six feet in his stockings, athletic and active, a sure shot with rifle, shot-gun and pistol, and with an enthusiast in field sports, for successive years piled his weapons to the destruction of myriads of birds and beasts of the forest. His contributions to the sporting literature of the period were strictly truthful, but tinged with the somewhat romantic character of their young author. The interest manifested by the public in these effusions was enhanced by the fact that there was no other representative of the extreme Northwest in the group of writers referred to.

The position I held as one of the partners of the Great American Fur Company, having under my immediate and exclusive control the trade with the Indians on the west of the Mississippi, and the trade with the Indians on the west of the British Possessions on the north, and westward to the dividing ridge between the Minnesota and Missouri Rivers, enabled me to combine business with pleasure. There were many trading posts established at intervals through the country, which must be occasionally visited and inspected by me in person, and I performed these journeys on horseback, with a single French Canadian voyageur as my attendant, depending upon our guns for food. We sometimes found it convenient to pass the night in a trader's cabin at one of the trading posts, or in a Sioux lodge, but more frequently our camp was made in the open air, in a grove where wood could be obtained.

In 1847 I determined to explore the country north of the Minnesota River and west of what was termed the Big Woods, very little being known by the whites about it. There accompanied me eight white men and mixed bloods,

and after much persuasion I induced a Sioux Indian named *Downan*, or the *Singer*, to act as guide to the party, promising him protection in case we fell in with Chippewas, with which tribe the Sioux were at war, and a liberal compensation for his services if he proved himself competent and faithful. We were all mounted on tough and serviceable horses, and we relied upon our arms to furnish us with food. We crossed the Minnesota River at the Little Rapids, about forty miles above Mendota, without serious difficulty, the water being shallow. We then entered the woods, and traversing them under the protection of our guides, we made camp in the open prairie on the following day. The month was October, the woods and prairie had assumed the hues of autumn, and the weather being warm and pleasant, the party having secured sufficient game for supper, were in a merry mood, and made good headway towards the northwest. Deer and bear sign was plentiful, but the Indians had lately hunted there and killed or driven the animals away. The next day we traveled industriously, but fell in with no game of any kind, and we reached a lake, bordered by a thick grove of poplars, where it was decided to encamp for the night. Having eaten nothing during the day, and without provant for supper, the situation was anything but cheerful. The sun was disappearing in the west, when to our delight we heard among the poplars the peculiar chuckle of ruffed grouse when preparing to roost; and they were soon discovered and fifteen of them secured, which afforded a very satisfactory meal. That was the only day that there was scarcity of food during the entire trip, deer and water fowl being abundant. The route was continued along the verge of the forest until about noon of one of the days, we saw in the distance on the prairie a herd of elk, consisting of a hundred or more, lying down on the top of a hill. How to stalk them with success was the problem to be solved. There was but one chance in a score that it could be done, but I determined upon a trial. Leaving the rest of the party to care for the horses, none of which were fast enough to overtake the elk, I took with me a young half-breed and Downan, and started on foot. We were compelled to make a march of three or four miles to reach the only point from which to make an approach. The hill where the animals lay was precipitous on the side where we found ourselves, and if the valley between us could be safely crossed, we would be sheltered from sight by the brow of the hill. Stripping ourselves of all superfluous articles, we wound prairie grass around our bodies and crowned our heads with it. I kept the half-breed with me, and told Downan to crawl at a little distance in a parallel line with us, but under no circumstances to fire a shot or show himself until I arrived at the proper spot from which to make an approach. We lay through the grass for a distance of four or five hundred yards, and had reached the sheltered spot without alarming the game, when, to my unspeakable horror and indignation, I saw the miserable savage Downan rise from the ground, run rapidly up the hill, and discharge his double barrel. I was near enough to the herd for a certain shot, but the rising ground intervened, shutting it out from my view. I ran at full speed toward the Indian, intending to beat him soundly, but he was a fleet runner, and he disappeared from my sight in full chase of the elk and almost at gun-shot ahead of me. I felt like putting a bullet through the wretch, but he did not make his appearance among us until late at night, and my wrath had then subsided. What he had been doing in the meantime no one could tell, but when I questioned him the next morning he said he had followed an elk he had wounded, but did not succeed in overtaking it. I abused him heartily for his misconduct, and asked him why he had not waited for me before shooting. He replied that he could not see me in the grass, and I asked him about the chase. He told me the fellow failed to secure at least two of the herd, I can not conceive, for he was within twenty yards of them when he discharged his gun. I have oftentimes had my patience tried by the stupidity of fellow-hunters, or of my men, when instructed to perform some task requiring tact and caution in approaching game, but nothing ever occurred to me more irritating than the case I have related. We fell in with other elk in small numbers during the trip, but the country was so unfavorable for the hunt that we were unable to take them on horse or on one occasion proved a ludicrous failure.

After reaching the valley of the Sauk River and looking with pleased eyes upon a beautiful sheet of water, now known as Osakis Lake, and celebrated for the abundance and excellence of the fish it contains, the weather changed, threatening a storm, and I determined to return homeward by a more westerly route. On the second day thereafter a huge bear was killed by one of the party and the carcass proved a god-send to us, as we had no food. We traveled for two or three more days, overtook us and drove us to the shelter of the woods. Hunting was out of the question while the snowfall continued, and we had to make ourselves and our poor animals as comfortable as the paucity of covering material would permit. The large kettle of sheet-iron was kept upon the fire and supplied without intermission with the meat of the bear, which was our only recourse. The amount consumed by the party of nine while thus snow-bound was simply prodigious, there being little of the bear left for our wolves when we departed. Our course led us through the Kandiyohi region, noted for the size and beauty of its lakes and the fertility of its soil. The party arrived without accident at their homes, after an absence of twenty-two days, the only incident worth mentioning being the bagging of four large geese on the wing by the writer by a single discharge of his gun on horseback.

I first came to St. Peter, now Mendota, in the fall of 1834, the trip from the mouth of the Chippewa River, which was distant, having been performed in company with a gentleman named Hally, two hired voyageurs and a half-breed boy, all of us being mounted. I have heretofore given some details to the readers of *The Spirit of the Times* of the journey, which was fruitful of incidents, some ludicrous and some grave. Soon after my arrival I visited Fort Snelling and presented letters of introduction, with which I had been furnished by my army friends elsewhere, to the officers, and they secured my entrance at once to the society of the post. Thearrison was composed of five companies, with nearly a full complement of officers, several of whom had their families with them. There were four lieutenants, W., McC., P. and G., who, like myself, were unmarried, and who had formed themselves into a club, which they called the *bole-screw*. These youngsters were disposed to be fast, and some of their pranks were annoying to Major P., the staid and somewhat austere commandant, verging as they did upon insubordination and disrespect to the commanding officer. The officers amenable to the penalties of a court-martial. The two first and last whose initials are given met with an early death, the third fell a victim to yellow fever at Vera Cruz subsequent to his surrender to Gen. Scott.

After the lapse of several years Captain Martin Scott, fa-

mous as the best shot of his time, in or out of the service, was assigned to the command of Fort Snelling and he brought with him a score or more of thoroughbred dogs of different kinds. I had in my own kennels twenty-two canines, at the head of which was the matchless Lion, an Irish wolf dog, immortalized by Frank Forrester in his published works and in late years by Mrs. Jessie Benton Fremont in the columns of the *New York Sportsman*. The tastes of the new commandant and myself were so similar that it is not strange we became intimate, or that the dogs of the two camps formed a warm friendship, which lasted uninterruptedly until his death. He fell, as we all know, at the head of his regiment, while gallantly performing his duty on the bloody field of Molino del Rey, in Mexico, in the year 1847.

The Captain and I frequently hunted grouse on the prairies, and in the winter season we made fierce war upon the wolves and foxes which were attracted by the offal from the post. When we took the field with more than two score dogs there was music in the air and small chance indeed for any of the scavenger beasts in the neighborhood. There was a large timber wolf, distinguished by his size and by his peculiar dark color, which had baffled every attempt of Captain Scott and the other sportsmen at the fort to capture, although they had fleet greyhounds in their pack. I told these gentlemen that my dogs could catch and kill that brute, but they were utterly incredulous. It was arranged that I was to be advised when next the wolf put in an appearance, and not many days passed before the notice was served upon me. My wolves were forthwith saddled and I crossed the Minnesota River with my dogs, and was soon in full chase of the animal, which was so confident in his own powers that he disdained the shelter of the woods and took his course, much to my delight, across the prairie. Suffice it to say that Lion and his brother Boston overhauled the wolf after a short race of three miles and pinned him to the ground. When I reached the spot the wolf was in the agonies of death, and in a few moments ceased to breathe. I attached one end of my long silk sash to the hump in his saddle and found what I wanted. The wolf's neck, and thus accoutred I dragged the heavy carcass over the smooth prairie to the fort and exhibited it, to the discomfiture of the disbeliever and the triumph of my noble dogs.

On another day I received an urgent message from the Captain, by his orderly, requesting me to cross over with my dogs, as he had two wolves corralled upon the large island below the fort. I forthwith complied, and on my arrival I found the Captain had placed an entire company of soldiers upon the island of the strandy and hospitable shape of the island. The island was surrounded by open water except on that side. We went over on the ice, found and killed one wolf, and the other only evaded the onset of the dogs by plunging into the water, when he was carried by the swift current, despite all his struggles, under the ice.

My armory contains one rifle and three double guns, each of which recalls to my mind incidents of much interest in which it has played a prominent part. There are missing from my collection the rifle and the double gun, one of which I purchased from Capt. Scott of the care of his departure for Mexico. It was his favorite arm, and I used it with great care for several years and finally presented it to a warm friend, since deceased. It is now in the possession of his son, by whom it is valued as a family relic. The other was, next to my Willmot, the weapon I most relied on for ordinary shooting. It is responsible for the death of innumerable victims, from the lordly bison, through the gamut, down to the tiny jacksnipe. The excellence of the rifle, which I was bound for by our able and worthy Commissioners of Agriculture, my old friend General W. G. Le Duc, who witnessed divers feats performed with it in the field. I lent it to a fellow sportsman several years since and have never been able to recover it, which I very much regret, for that arm was my reliance in many a strait and never failed me.

There was enough of danger attendant upon the sports of my earlier years in this country to add zest and excitement to their pursuit. Albeit the great bands of Dakotas or Sioux upon the most part friendly and hospitable, there was being that they had no blood of white men upon their hands, they were the Ishmaels of the plains, regarding every red man who was not a Dakota as *prima facie* an enemy, and entitled to no mercy. The other tribes of course retaliated, and the white hunter was exposed to the peril of meeting their war parties, and of being robbed of all his property, if indeed he was fortunate enough to escape without the loss of his scalp. To say nothing of his liability to break his neck or his legs, or to be thrown from his horse while chasing the larger game, or broken and unfavorable ground, he was often in peril from the head long charge of a wounded bull (the writer himself having barely escaped with his life in an encounter of this sort, related in Porter's edition of "Hawker"). It must be borne in mind that the buffalo of the olden time was by no means the poor creature he now is, rendered spiritless and timid by the incessant reports of the repeating rifles in the hands of his persecutor. The savages seldom used carcasses in the chase, depending upon the equally deadly but silent work of the bow and iron-pointed arrow, which caused little alarm among the great herds. It needed little provocation to ensure an attack from the males even when unwounded, but the sting of a ball or an arrow, when not instantly fatal, was sure to be followed by a furious charge upon the assailant, and several Indians within my own knowledge fell victims to such onset. The stately bull regarded himself as the master of the plains, and was ready to do battle for the supremacy with any intruder. Prairie fires, when the grass became dry, were the dread of the hunter, and when driven before the gale it required the utmost exertions and skill of the most experienced to save person and property from the flames.

The transformation which has taken place in the vast country referred to as the scene of my early adventures in less than a generation is almost inconceivable. The white settlements were few in number, and confined mainly to that part of Minnesota's territory east of the Mississippi River. The great herds of deer were the dread of the hunter, and the great herds of elk disposed themselves flourishing towns and cities have sprung up, and thousands of stalwart farmers have established themselves and are furnishing the staff of life to the dwellers in less favored lands. Within ten miles of where I now write are more than a hundred thousand people embraced in the twin cities of St. Paul and Minneapolis, both of which are increasing in population and wealth with wonderful rapidity, and to which the great northwest is tributary. There are no buffalo and very few elk left in this immense State of Minnesota. Deer are abundant as are the Canada, pinnated and ruffed grouse which do not seem to suffer serious diminution, notwithstanding the annual raids made upon them by the sportsman and the pot hunter. The numerous lakes are still the haunts in the proper season of

multitudes of geese, brant and ducks, affording fine sport to the many possessors of breech-loaders in all parts of the State. My old, peaceable and well disposed Dakota friends after being made the victims for long years of broken promises, violated treaties and bad faith generally on the part of the government, were at length converted into cruel and thirsty savages who spread desolation and death along the frontiers of Minnesota and Iowa in 1862 and 1863, until, routed in successive engagements by the Minnesota forces under the command of the writer, many of them were captured and executed, and the remainder sought refuge in the British Possessions and across the Upper Missouri River there to await the fate which has befallen the Indian tribes successively as the wave of white immigration has reached and destroyed them.

In view of the benefits conferred upon the human race by the opening of this new Northwest to white settlement, the true sportsman will not regret that he has been deprived of many sources of pleasure thereby. He can still find opportunities for the display of his skill, even in the most populous parts of the State, although his sport will not be so perilous and exciting as was the chase of the greater and fiercer animals in the old time.

St. Paul, Minn., 1880.

HAL A. DAUGHTER.

## Natural History.

### OUR WATERFOWL.

*Bucephala clangula.* Golden Eye, Garrot, Whistler. Male, head puffy, dark glossy green, except white oval spot beneath and in front of the eye, which touches the base of the bill. Lower neck, under parts, a patch on the shoulder, most of the scapulars and wing coverts white; other upper parts black; tail, ash; bill, black; feet, yellow; length, over sixteen inches. The female has the head dark brown without white markings, and has the breast and sides gray, the black of the back replaced with dark gray.

The Golden Eye, or Whistler, as it is more often called on the Atlantic Coast, is abundant during the migration all through the Eastern States, but is not so numerous west of the Mississippi River. We believe that it has not been found in the Missouri River region, though it probably occurs in small numbers at some points in the Rocky Mountains, having been reported from that region in *FOREST AND STREAM* by Mr. Morton Grinnell.

The flesh of the Whistler is not regarded as particularly delicate, though much better in this respect than that of some of the species to be hereafter mentioned. It does not by any means confine itself exclusively to an animal diet, and sometimes feeds on corn and other grain. It is very expert at diving, and single birds, found feeding near the shore, may often be approached by running toward them while they are beneath the surface, and then dropping flat on the ground when they come up again. The Whistler sometimes comes up well to decoys, but we have usually found it rather an uncertain bird in this respect.

*Bucephala islandica.* Barrow's Golden Eye, Rocky Mountain Garrot. This species bears a very close resemblance to the preceding, but is generally regarded as a valid species. In the male the white loreal spot is larger than in *B. clangula*, triangular in shape, with one of its sides touching the whole side of the bill at the base. The white on the wing is divided by a dark bar. Otherwise similar to *B. clangula*. The female is with difficulty to be distinguished from the last, but perhaps has the dark bar across the white of the wing.

Barrow's Golden Eye was regarded by Audubon as the specimen plumage of the common Whistler. It appears to be much more Arctic in its distribution than that bird, and is everywhere rare in the United States. Its southern limit during the winter is given as New York, but on the shores of Canada it is said to be not very uncommon during that season. It has been taken in the Rocky Mountains by Mr. Henshaw as far south as Utah, though not abundant there. But little is known of its habits, and its breeding place is supposed to be in the Far North.

*Bucephala albeola.* Buffle Head, Butter Ball, Spirit Duck, Dipper, Salt-Water Teal. The male has the colors generally as in the Golden Eye. Head extremely puffy, iridescent, with green, gold and white reflections, without the white loreal spot, but with a white patch reaching from behind the eye backward, meeting its fellow of the opposite side behind. Female grayish or slate color where the male is black, with a trace of the white head patch.

The little buffle head is well known to every one who uses the gun, and needs no extended description. The full plumaged male is a very beautiful bird, while the female is, as Dr. Coues remarks, "an insignificant duck," in striking contrast to her highly colored mate. The buffle head is an expert diver and a very swift flyer. It does not often, on the Atlantic Coast, pay much attention to decoys. It is rather unsuspicious, and one may often row a boat up to within gunshot of the feeding flock.

This species is found almost everywhere throughout the United States, and in winter is very common. Although by far the greater portion proceeded to the British Possessions to rear their young, yet we found them breeding in Montana in the summer of 1874. No nests were found, but many broods of young still unable to fly were seen, and a number of specimens taken. This, we believe, was the first record of the breeding of this species within our territory.

*Harleia glacialis.* Long-Tailed Duck, South Southerly, Old Wife, Old Squaw. Tail of fourteen narrow, pointed

feathers; in the male the central ones very long and slender, about equalling the wing in length. The nail of the bill occupies the whole tip. The plumage in winter different from that of the summer. Male in summer has the back and the long narrow-pointed scapulars, varied with reddish brown, but changing in winter to white or pearl gray. General color, black; below, white from the breast back; sides of head gray. In winter the head, neck and upper breast are white, but the gray cheek patch remains, and there is below it a larger dark area. Bill black, with a yellow or flesh-colored bar toward the tip. The female is an ordinary looking grayish bird, without the long tail feathers or scapulars, but may be known by the shape of the bill, the patches on the head and neck and the wing without any white. Length varies with the length of the tail feathers from fifteen to twenty inches.

The Old Squaw, as it is usually called on this coast, is one of the most truly maritime of our ducks. It is very rarely seen except on the salt water, and seldom ventures even into the mouths of rivers except when wounded. There are a few instances recorded of its capture on inland waters—for example, on the great lakes—but these, in view of what is known of its range, can only be regarded as accidental occurrences. During the winter it is extremely abundant along our whole New England coast, and from the constant clamor that the birds keep up is derived the popular name, Old Wife. The title South Southerly is given it from a fancied resemblance of its cry to these words, but to make them at all like the note of the Old Squaw, the two first syllables must be spoken rapidly, and the third strongly accented.

The old squaw, though its flesh is very poor eating, is shot in great numbers along the coast, and, being a bird of rapid and somewhat irregular flight, affords very good sport. In the spring this species comes up well to decoys, and we have known of over sixty being killed in this way during a morning's shooting. The favorite method of killing them, however, is by forming a line of boats between the feeding grounds and the outer water, where they pass the night, and shooting them as they fly over. They rarely rise to any great height, and, as the boats are stationed only about a gunshot apart, many good opportunities are given the gunner. This method of shooting is also practiced with success for coots. It has been more than once described in these columns. The Old Squaw retires to the North to breed, and is said to rear its young on the fresh-water lakes of Labrador. We have good reason to believe that it sometimes breeds on the Connecticut coast, but it is probable that the birds which do so are wounded ones, which are unable to make the long journey to the North. This species is found on the Pacific coast, and is also a common bird of northern Europe.

*Campolennus labradorius.* Labrador Duck, Pied Duck. Bill extended toward the end by membranous expansion; cheek feathers rigid and somewhat scale-like. The male has the body and wing-tips black, a black collar about the neck, and a longitudinal black stripe along the crown of head; elsewhere white. Female, slaty gray; length, about two feet.

The Pied Duck is not spoken of by older writers as an uncommon species, but is now extremely rare. It is difficult to understand what can have caused the disappearance of this bird, but the fact remains that specimens now scarcely ever find their way into the collector's hands. During the last ten years we have never seen but one individual (a young male) in the flesh.

Sportsmen, therefore, who may be fortunate enough to secure specimens of this species would do well to have them preserved, and to record the fact without loss of time. According to Audubon the Pied Duck is a truly marine species, and rarely enters rivers. It is said to occur as far south as the Chesapeake Bay.

[TO BE CONTINUED.]

### MIGRATION OF THE WAGTAIL.

THE following letter contributed pseudonymously to the *Evening Post* contains much that will be new to most of our readers. The account is so interesting and so pleasantly written that we reprint it entire in the hope that it may elicit some expression of opinion on the subject from our own ornithologists:

In the autumn of 1878 I spent several weeks on the Island of Crete. On several occasions the papas—village priest—a friendly Greek with whom I spent the greater part of my time—frequently directed my attention to the twittering and singing of small birds which he distinctly heard when a flock of sand cranes passed by on their southward journey. I told my friend that I could not see any small birds and suggested that the noise came from the wings of the large ones. This he denied, saying, "No, no! I know it is the chirping of small birds. They are on the backs of the cranes. I have seen them frequently fly up and alight again, and are always with them when they stop to rest and feed." I was still skeptical, for with a field-glass I failed to discover the "small birds" spoken of. I inquired of several others and found the existence of these little feathered companions to be a matter of general belief among both old and young. I suggested that possibly the small birds might go out from the shore a short distance and come in with the cranes. "No," was the general answer, "they come over from Europe with them." I certainly heard the chirping and twittering of birds upon several different occasions, both inland and out upon the sea. But in spite of the positive statements of the natives, I could not believe their theory until convinced one day while fishing about fifteen miles from the shore, when a flock of cranes passed quite near the yacht. The fishermen, hearing the "small birds," drew my attention to their chirp-

ing. Presently one cried out, "There's one," but I failed to catch sight of it. Then one of them discharged his flint-lock. Three small birds rose up from the flock and soon disappeared among the cranes.

I subsequently inquired of several scientific men, among whom were two ornithologists, as to the probability of such a state of affairs. They all agreed that it could not be, and I, too, was forced to cling to my original judgment, that the matter got. Recently, however, while reading the "Gartenlaube," my attention was attracted to an article bearing directly upon the subject. The writer, Adolf Ebeling, tells the same story, and adds the statements of some ornithologists of distinction, which makes the whole matter so striking and interesting that I quote the paragraph from his book:

"Shortly after my arrival in Cairo I greeted various old German friends among the birds that I observed in the palm-garden of our hotel. First, naturally, was the sparrow, the impudent proletarian—I had almost said social democrat, to ease the whole world to-day has that bad word in the mouth. He appeared to me to be more shameless than ever in the land of the Pharaohs, for he flew without embarrassment on the breakfast table, and picked off the crumbs and bits from every unwatched place. But the mark of honor we paid to the wagtails, and in truth chiefly because we did not then know that the wagtails were birds of passage. We had thought that they passed the winter in Southern Europe, or at farthest, as many of them do, in Sicily and the Grecian Islands. That they came to Africa, and especially to Nubia and Abyssinia, was then unknown to us. This appeared to us extremely strange, nay, almost incredible, particularly on account of the peculiar flight of the wagtails, which it is well known always darts intermittently through the air in longer or shorter curves, and apparently, every few moments, interrupts its flight to sit again and 'wig its tail.' But there was the fact, and could not be denied. Everywhere in the Gardens of Cairo you could see them under the palms that border the banks of the Nile; on the great avenues that lead to the pyramids, nay, even on the pyramids themselves in the middle of the desert. And there it was that I first heard of this singular phenomenon.

"One evening we were sitting at the foot of the pyramid of Cheops, sipping our cup of fragrant Mocha and in jolly conversation, rolling up clouds of blue smoke from our Korani cigarettes. We were waiting for the sinking of the sun to make our return to Cairo. The deep silence of the surrounding desert possessed something uncommonly solemn, only now and then broken by the cry of a hawk or a screech-hawk far above us. Still higher the pelicans were grandly circling. Their flight, though heavy when seen from afar, possesses a majesty in the distance attained by no other bird. Right before us several wagtails were hopping around and 'tilting.' They were quite tame, and flew restlessly hither and thither. On this occasion I remarked, 'I could not quite understand how these birds could make the long passage of the Mediterranean.' Sueti Ibrahim heard this from our interpreter. The old Bedouin turned to me with a mixture of French and Arabic as follows, which the interpreter aided us to fully comprehend:

"Do you not know, Hadretch (noble sir), that these small birds are borne over the sea by the larger ones?"

"I laughed as did our friends; for at first we thought we had misunderstood him; but no; the old man continued quite seriously:

"Every child among us knows that. These little birds are much too weak to make the long sea journey with their own strength. This they know very well, and, therefore, wait for the storks and cranes and other large birds, and settle themselves upon their backs. In this way they allow themselves to be borne over the sea. The large birds submit to it willingly; for they like their little guests, who by their merry twitterings help to kill the time on the long voyage.' It appeared incredible to us. We called to a pair of brown Bedouin boys pointed out the wagtails to me, and inquired:

"Do you know whence come these small birds?"

"Certainly," they answered: "The Abu Saad (the stork) carried them over the sea."

"At supper in the Hotel du Nil, I related the curious story to all present, but naturally enough found only unbelieving ears.

"The only one who did not laugh was the Privy Councillor Jengling, the famous African traveler and, excepting Brehm, the most celebrated ornithologist of our time for the birds of Africa. I turned to him after the meal, and inquired of his faith. The good, royal councillor smiled in his caustic way, and with a merry twinkle remarked: 'Let the others laugh; they know nothing about it. I do not laugh, for the thing is known to me. I should have recently made mention of it in my work if I had had any strong personal proof to justify it. We must be much more careful in such things than a mere story-teller or novel-writer; we must have a proof for everything. I consider the case probable, but as yet cannot give any warrant for it.'

"My discovery, if I may so call it, I had kept to myself, even after Heuglin had thus expressed himself, and would even now maintain silence on the subject had I not recently discovered a new authority for it."

I read lately in the second edition of Peterman's great book of travels the following passage:

"Professor Roth, of Munich, related to me in Jerusalem that the well-known Swedish traveler, Hedenberg, made the following interesting observation on the Island of Rhodes, where he stopped. In the autumn tide, when the storks come in flocks over the sea to Rhodes, he often heard the songs of birds without being able to discover them. Once he followed a flock of storks, and as they lighted he saw small birds fly up from their backs, which in this manner had been borne over the sea. The distance prevented him from observing to which species of singing birds they belonged."

Thus wrote the famous geographer, Peterman. Professor Roth and Hedenberg and Heuglin are entirely reliable authors. This was a matter of great curiosity to me, and after I found others had made similar observations, and expressed them in print, I thought they would be of no less curiosity and interest on this side of the Atlantic, and equally deserving of publication. I hope that some of our connoisseurs and experts may be excited by this to extend their observation in this line also. The instinct of animals is still, in spite of all our observations and experience, almost a sealed book to us. By a little attention we might hear of still more curious things in this field.

PROCEEDINGS U. S. NAT'L MUSEUM.—Volume II. of the proceedings of the U. S. Nat'l Museum, for 1879, published under the direction of the Smithsonian Institution, contains a vast amount of new and varied information. Messrs.

Goode and Bean, either severally or jointly, contribute a very considerable portion of the matter published in the volume, and their investigations comprise the fishes of Alaska as well as those of Florida and the Gulf of Mexico.

The fourth installment of Dr. Cones' Ornithological Bibliography, which appears here, relates strictly to faunal publications which treat of British birds, and will be of the greatest value to ornithologists abroad as well as in this country. The present volume also contains valuable papers by Dr. Jordan, the late Dr. Brewer, Mr. Oscar Hanger, Dr. Kidder, U. S. N., Dr. Merrill, U. S. A., Professors Verrill, Smith and White, and a number of others.

We shall have occasion to speak further of this volume at a future day.

**SOCIETY OF AMERICAN TAXIDERMISTS.**—The first competitive exhibition of the Society of American Taxidermists is now being held in Rochester, New York. The exhibition is being held at No. 63 State street, in that city, and is said to be very fine, no less than twenty-five of the members having specimens of their work on view. The judges are Prof. J. A. Allen, of Cambridge, Mass., Dr. J. B. Holder, of New York, and Mr. W. E. D. Scott, of Princeton, N. J. The following is a list of the prizes to be given:

To best piece in entire exhibition, silver medal. To second best piece in entire exhibition, bronze medal. To best general exhibit, bronze medal. To second best general exhibit, diploma of honor. To each exhibit in Class A—Taxidermy proper—which shall stand at 85 or over, diploma of honor. To each exhibit in Class A which shall stand at 75 and under 85, a certificate of merit. To grotesque groups and animals grotesquely mounted, diplomas and certificates will be awarded at the discretion of the judges. To the handsomest article of ornament or use, a diploma. The second handsomest article of ornament or use, diploma. To the best exhibit of accessories to Taxidermy in each section, diploma. To second best in the same, at the discretion of the society, certificate.

**THE GEOGRAPHICAL SOCIETY AT RAY.**—New York, Dec. 14. —Editor *Forest and Stream*: In one of the recent bulletins of the American Geographical Society, an address, delivered before it by the Earl of Dunraven, is published under the title of "Moose and Caribou Hunting in Colorado." The worthy member who superintends or edits the publications of the Society may be a most excellent geographer, but his knowledge of natural history is lamentably deficient. Moose and Caribou in Colorado? Well, that will be a revelation to the brotherhood of sportsmen and naturalists, as it most assuredly will be to the noble Earl, who is accredited with the address, for there is no man who speaks with more authority upon moose and caribou than the Earl of Dunraven. How he will wince when his friends twin him about moose-hunting in Colorado; and what misconceptions will prevail among those ignorant heretofore that this noble deer is to be found in that State, for the seal of authority of so eminent a body of scientists could not well be disputed! Let me advise the Society to call in this publication.

NATURALIST.

**SNAKE SWALLOWING ITS YOUNG.**—Baltimore, Dec. 14. —Editor *Forest and Stream*: In the summer of 1877 I was spending my vacation in the country. One afternoon several boys and myself took a walk, and while returning we saw a snake which was getting out of our way, so we prepared for battle, and came out victorious in a little while. The snake was not very long, not over fifteen inches in length, but it seemed to have a lump in the abdomen, and on taking it to the village store the storekeeper said he (more likely she) had swallowed a toad. We then determined to dissect it, and on procuring a knife ripped it open, and to our surprise found it to contain twenty-two small snakes of the same species. They were all alive and about six inches in length. Where did they come from? The species was *Eubonia stridula*, or Garter snake.

F. G. NIEWIARER.

**AN ALBINO RAT.**—A correspondent sends us a clipping from the Cincinnati *Enquirer* which is as follows:

A curiosity is on exhibition at Firth's drug store at this place, Madison, Ind. It is in the shape of a full-grown milk-white rat, with pink claws and jet-black, bead-like eyes. He was caught by Robert Quail, of Brookings, in a trap.

## Sea and River Fishing.

**WHICH SALMON IS BEST?**—We find the following question and answer in the *Deutsche Fischerzeitung*, of Stettin, Germany, "Is the California salmon equal in quality with the salmon of the Elbe or the Oder?" What is the relative rank of the following fishes in regard to flavor—Rhine, Elb, Oder, Vistula, North Sea, Northern, Swedish, Californian and Canadian, salmon, and which are best to smoke? Answer: Who is in position to have all these different sorts upon his table? This can only be answered by the largest fish dealers. Some idea may be formed from the price. The Rhine salmon is, above all, the first, finest and fastest. The California salmon comes to us only preserved in boxes and is not found fresh in our markets. Those here are for breeding salmon, and so are of great value and cannot be compared. The North Sea salmon are like the Elbe and Weser salmon. At the Fishery Exhibition in Berlin there were fish from Sweden labeled "Waener salmon," which must be lake trout, *Trutta lacustris*, that do not go into salt water. The "strandlachs," or "silverlachs," of the North Sea is the sea-trout, *Trutta trutta*, and are very good. For smoking the best will show themselves the best. We will be thankful if we can obtain further information from our circle of readers."

This question has been raised in America, but California is so distant from Eastern markets that the salmon have to be sent in refrigerators and do not appear so well. Natives of California claim excellence for their fish.

\* In German markets the name of the river is always appended to the salmon, as Rheinlachs, Oderlachs, Elblachs, etc., and the fish from certain rivers have the call at better prices. They claim to distinguish the fish even when smoked.

## BASS FISHING IN CENTRAL NEW YORK.

SYRACUSE, Nov. 29.

I HAVE had so much pleasure in reading your fishing correspondence that I feel like evening the thing up to-night; because if we who enjoy the tales of others' fun don't tell a story or sing a song, we don't deserve to remain in the company.

We have some good bass grounds right here, and all around this Salt City. Baldwinsville, Fulton and Minetto, on the S. & O. R. R., Tully Lake, on the S. & B.; Oak Orchard, Brewerton and Caughdeny, on the Syracuse Northern, the "Wide Waters" (reached by the N. Y. Central to Kickville, and then by foot or wheels for a couple of miles) are all places of note among our bass catchers. And if one doesn't care to go more than a street car's journey, let him "take in" Onondaga Lake, he can take out plenty of bass. Your penman saw one string during the past summer that contained an aggregate of about twenty-three four-pounders. This catch was made in an afternoon by two fishermen, one using grasshoppers and crabs for bait, and the other enjoying the fun much more without a bit of bait, landing two of the "big uns" and a fair share of the mess.

But what I had in mind was to relate the adventures of three Syracuseans at Caughdeny (pronounced "Cockynoy" by the people thereabouts) one day last August. This is a little hamlet on the Onondaga River, and its existence is due chiefly to celebs. The river along there is from three to five feet deep—just right for wading. The eel catchers have erected their weirs through about half a mile of the river, where the bottom is composed of good-sized stones and gravel. That is the sort of bottom where we expect to find the big mouth, or "Oswego" bass in this region, and the rifles made by the eel weirs make the place look like a fly-fisherman's paradise.

Our trio took the evening train from here for Brewerton, fifteen miles, and went to bed at Wadsworth's. We had made arrangements with "George," the ownerman, to be on hand at four the next morning with all the necessities for the day, including bait, tackle, cooking utensils, pork, potatoes, coffee, etc., etc. In the morning by the first light, and a little sooner we were on our way down the four-mile stretch of river, with our trolling spoons out. We didn't catch a pike or a pickerel, but Prof. P. made some excellent shots with his carbine. It was no doubt fun for him, but the little "tip-ups" he slaughtered were no good for dinner, and seemed to be enjoying themselves along the shore before meeting with those bullets.

We got to the eel weirs soon after old Sol showed his broad face, and prepared for biz. Two of the party waded in with their rods and flies, while the others remained in the boat to see how the chub, bass, pickerel, pike and what-not (don't know the scientific name) liked their style of handling bait.

About seven o'clock we all met on narrow island between the river and the "cut," where George was ready for us with a large fire of glowing coals, with cups, plates, knives, forks, etc., laid out on the grass in a shady spot, "duly waiting" for the fish to arrive. Well, we had enough! But you have all had a fish breakfast under similar circumstances, so why make you wish that winter was over by dwelling on the scene? Doesn't it seem as though the whole inner man must be a vast stomach when you come to think over what can be laid away at such a time?

It was a pretty hot day, and George was ready for us with a large fire of glowing coals, with cups, plates, knives, forks, etc., laid out on the grass in a shady spot, "duly waiting" for the fish to arrive. Well, we had enough! But you have all had a fish breakfast under similar circumstances, so why make you wish that winter was over by dwelling on the scene? Doesn't it seem as though the whole inner man must be a vast stomach when you come to think over what can be laid away at such a time?

I won't give you the figures for fear of arousing unbelief, but will state, in general terms, that we took home to our friends two baskets full. Will leave the size of the baskets to be inferred, on account of the fear aforesaid. We had enough left over, however, to make a large and juicy supper when we got back to Brewerton.

The fishing in the waters adjacent to Syracuse, Oswego and Utica is growing better every year, thanks to the efforts of the officers and individuals interested in bringing about such a state of things. The fishing clubs of the country, of Onondaga, Oneida and Oswego mean business and the fish stealers are finding it out. I think there is no better bass fishing in the State than can be found in the lakes and rivers of this locality. Next summer I hope to just revel in it.

STENOS.

**THE FISHERIES QUESTION.**—Professor Hind, of Windsor, N. S., who was an official of the Halifax Fishery Commission and some months ago made charges that the statistics used in the British case were false, has had printed in pamphlet form a letter addressed to the Governor-General of Canada, in which he makes charges of a broader character. He says that not only were the statistics presented to the commission false, but the official blue books of Canada bearing on the fish trade with the United States were systematically falsified for a series of years to produce results that would serve the purpose in view. Exports of the United States were made to appear much less than they really were, for the purpose of making out that the province benefited little by the free admission of fish into the States. Pious items of exports to foreign countries were produced to make it appear that the provinces were less dependent than they really were on the American market. Other fictitious items were inserted to make it appear that the Americans found a large market for fish in the provinces. The letter is lengthy and very elaborate and gives many comparisons and calculations leading to the conclusions already stated. It is alleged that these falsifications began soon after the treaty of Washington was made. The correct returns appear to have been sent from the various provinces to Ottawa and there to have been manipulated in the manner above stated. Professor Hind claims to be fully able to prove all he says before a committee of the House of Commons.

**GIVE US A PLAIN LAW.**—Editor *Forest and Stream*: I note in your last issue the decision rendered by Judge Riegel, of Syracuse, involving the right of use of "any device other than a hook and line" in the taking of fish in the fresh waters of this State, which is in exact opposition to a decision rendered in the Supreme Court, August 14, 1880, by Hon. Wm. C. Ruger, also of Syracuse, upon the same question, viz.: the right to use nets, weirs or seines in the fresh waters of the State. The latter decision appeared in the *FOREST AND STREAM* of October 7. Now, as a most earnest sportsman,

and one desiring the fullest legal protection possible, I propose this question, in view of these recent conflicting opinions, both emanating from legal gentlemen of high standing and known ability. If the law of 1880, Chapter 531, is liable to such varied construction, should not the Legislature of 1881 revise the work of the past winter, and give us a plain and explicit terms a new, simple and effective act with relation to the protection of fish and game within this State? According to our present light, an attempt to suppress poaching or illicit hunting or fishing, under the existing law, is a good deal like tossing a penny for a decision; should it come heads we win, but if tails we lose. The law affords no positive law, and consequently no protection. F. E. H. Oswego, N. Y., Dec. 10.

**BRITISH COLUMBIA FISHERIES.**—Victoria, B. C., Nov. 15.—We have read so much of the great stride in pisciculture made by the United States Fish Commission in equipping a steamer to follow the fishes in their spawning and hatching them on board that we are about to apply the principle to the canning of fish, that is, to take the cannery to the fish instead of transporting the fish to the cannery. A company is about to be formed here to build a steam floating fishery, which can follow the different runs of fish from one river to another and put them up in this in the freshest possible condition. The salmon-canning business is not as good as formerly, the business is overdone to some extent and we will have to hatch more extensively before long. S. H. R.

**TROUT IN OREGON.**—Our correspondent, S. A. Bob, now in Empire City, Oregon, writes that he has been enjoying himself in trout-fishing in Millicoma River. Empire City is in Coos Bay, about 200 miles south of the mouth of the Columbia River and 400 miles north of San Francisco and can be reached by steamer from the latter place in forty-eight hours. He tells us that there are two runs of trout there, the first taking place in April and May and the second at the end of August. Red and yellow-bodied flies are the favorites, and during the height of the season the catch per rod will be from fifty to seventy-five fish, averaging two pounds, the largest reaching from three to four pounds. They take the fly readily and many have the appearance of the *Trutta marina*, or Irish sea trout, although other trout are plenty.

**HATCHING THE GRAYLING.**—Anglers will learn with pleasure that the Michigan Fish Commission are about to hatch this fish in its native streams and attempt to save this elegant fish from the extermination which threatens it from its limited range and delicate organization.

## Fish Culture.

### THE CENTRAL FISHCULTURAL SOCIETY.

FIRST DAY.

**THE** second annual meeting of the Central Fishcultural Society was held in the rooms of the Grand Pacific Hotel at Chicago on the 15th and 16th days of December, 1890. A few members gathered at 10 A. M., when, in consequence of the absence of others who were expected on later trains, it was decided not to open the session until 3 P. M. At that hour the meeting was called to order by the President, Mr. N. K. Fairbank.

The attendance throughout was small, but lacked nothing in enthusiasm and interest on that account. Members came and went as business engagements pressed them. The following were present during a part or the whole of the proceedings, the names being given in the order of their arrival: E. R. Miller, Mich.; Frank N. Clark, Mich.; Fred Mather, Forest and Stream; Prof. S. A. Forbes, Ill.; Major J. M. Crumme, Colorado; B. F. Shaw, Iowa; Wm. H. Ballou, Ill.; N. K. Fairbank, Ill.; H. W. Welsher, Wis.; J. Smith Briggs, Ill.; S. P. Bartlett, Ill.; Dr. W. A. Pratt, Ill.; H. F. Douseman, Ill.; D. Cameron, Minn.; A. E. Lytle, Wis.; E. L. Brown, Ill.; C. E. Rollins, Ill.

The following letters were read:

MUSEUM, SALT LAKE CITY, Utah, Dec. 10.

MR. PRESIDENT AND GENTLEMEN: It would give me much pleasure to meet you at the second annual meeting of the Central Fishcultural Society, at Chicago on the 15th inst. This will not be possible, my museum duties requiring my presence here. I cordially thank you, and must content myself with reading the account of proceedings in the *FOREST AND STREAM*, which reaches me regularly and brings me into acquaintance with piscicultural and other interesting matter outside of Utah and from all parts of the world.

With hearty wishes for the prosperity of the Central Fishcultural Society, its President, to whose care I commit this letter, and success to attend its Corresponding Secretary, I remain, JOSEPH L. BARFOOT,

Curator and Fish Com. of Utah,

EAST SAGINAW, Mich.

MR. F. MATHER,

COR. Sec. Central Fishcultural Society, Chicago: My Dear Sir:—Acknowledging your courteous invitation to attend the 2d annual meeting of the Central Fishcultural Society, permit me to express sincere regret that business engagements will prevent my attending, and also to assure you of my interest and hearty co-operation in the objects of your association. Fraternally yours, H. B. ROYCE, Sec. Mich. Sportsmen's Assoc.

CINCINNATI, Ohio.

Dear Sir—I am in receipt of an invitation to attend your meeting, for which receive my thanks. I very much regret that an engagement at Washington to attend a meeting of the Board of Managers of the National Soldiers' Home prevents my attending. Trusting that at some future time I may be able to attend your meeting, I remain very sincerely yours, L. A. HARRIS, Commissioner of Fisheries.

ELLSWORTH, Kansas.

HON. M. K. FAIRBANK, President:

Sir—I expected to have met with the society at its present meeting, but cannot do so. Kansas is moving slow but sure advancement in the science of fish culture, although we realize our littleness in the great work that is to be accomplished by the friends of this important enterprise.

multitudes of geese, brant and ducks, affording fine sport to the many possessors of breech-loaders in all parts of the State. My old, peaceable and well disposed Dakota friends after being made the victims for long years of broken promises, violated treaties and bad faith generally on the part of the government, were at length converted into cruel and thirsty savages who spread desolation and death along the frontiers of Minnesota and Iowa in 1862 and 1863, until, routed in successive engagements by the Minnesota forces under the command of the writer, many of them were captured and executed, and the remainder sought refuge in the British Possessions and across the Upper Missouri River there to await the fate which has befallen the Indian tribes successively as the wave of white immigration has reached and destroyed them.

In view of the benefits conferred upon the human race by the opening of this new Northwest to white settlement, the true sportsman will not regret that he has been deprived of many sources of pleasure thereby. He can still find opportunities for the display of his skill, even in the most populous parts of the State, although his sport will not be so perilous and exciting as was the chase of the greater and fiercer animals in the old time.

HAI A DACOTAH.

St. Paul, Minn., 1880.

## Natural History.

### OUR WATERFOWL.

*Bucephala clangula*. Golden Eye, Garrot, Whistler. Male, head puffy, dark glossy green, except white oval spot beneath and in front of the eye, which touches the base of the bill. Lower neck, under parts, a patch on the shoulder, most of the scapulars and wing coverts white; other upper parts black; tail, ash; bill, black; feet, yellow; length, over sixteen inches. The female has the head dark brown with white markings, and has the breast and sides gray, the black of the back replaced with dark gray.

The Golden Eye, or Whistler, as it is more often called on the Atlantic Coast, is abundant during the migration all through the Eastern States, but is not so numerous west of the Mississippi River. We believe that it has not been found in the Missouri River region, though it probably occurs in small numbers at some points in the Rocky Mountains, having been reported from that region in *FOREST AND STREAM* by Mr. Morton Grinnell.

The flesh of the Whistler is not regarded as particularly delicate, though much better in this respect than that of some of the species to be hereafter mentioned. It does not by any means confine itself exclusively to an animal diet, and sometimes feeds on corn and other grain. It is very expert at diving, and single birds, found feeding near the shore, may often be approached by running toward them while they are beneath the surface, and then dropping flat on the ground when they come up again. The Whistler sometimes comes up well to decoys, but we have usually found it rather an uncertain bird in this respect.

*Bucephala islandica*. Barrow's Golden Eye, Rocky Mountain Garrot. This species bears a very close resemblance to the preceding, but is generally regarded as a valid species. In the male the white loreal spot is larger than in *B. clangula*, triangular in shape, with one of its sides touching the whole side of the bill at the base. The white on the wing is divided by a dark bar. Otherwise similar to *B. clangula*. The female is with difficulty to be distinguished from the last, but perhaps has the dark bar across the white of the wing.

Barrow's Golden Eye was regarded by Audubon as the specimen plumage of the common Whistler. It appears to be much more Arctic in its distribution than that bird, and is everywhere rare in the United States. Its southern limit during the winter is given as New York, but on the shores of Canada it is said to be not very uncommon during that season. It has been taken in the Rocky Mountains by Mr. Henshaw as far south as Utah, though not abundant there. But little is known of its habits, and its breeding place is supposed to be in the Far North.

*Bucephala albeola*. Buffle Head, Butter Ball, Spirit Duck, Dipper, Salt-Water Teal. The male has the colors generally as in the Golden Eye. Head extremely puffy, iridescent, with green, gold and violet reflections, without the white loreal spot, but with a white patch reaching from behind the eye backward, meeting its fellow of the opposite side behind. Female grayish or slate color where the male is black, with a trace of the white head patch.

The little buffle head is well known to every one who uses the gun, and needs no extended description. The full plumaged male is a very beautiful bird, while the female is, as Dr. Cones remarks, "an insignificant duck," in striking contrast to her highly colored mate. The buffle head is an expert diver and a very swift flyer. It does not often, on the Atlantic Coast, pay much attention to decoys. It is rather unsuspicious, and one may often row a boat up to within gunshot of the feeding flock.

This species is found almost everywhere throughout the United States, and in winter is very common. Although by far the greater portion proceed to the British Possessions to rear their young, yet we found them breeding in Montana in the summer of 1874. No nests were found, but many broods of young still unable to fly were seen, and a number of specimens taken. This, we believe, was the first record of the breeding of this species within our territory.

*Harvelia glacialis*. Long-Tailed Duck, South Southerly, Old Wife, Old Squaw. Tail of fourteen narrow, pointed

feathers; in the male the central ones very long and slender, about equalling the wing in length. The nail of the bill occupies the whole tip. The plumage in winter different from that of the summer. Male in summer has the back and the long narrow-pointed scapulars, varied with reddish brown, but changing in winter to white or pearl gray. General color, black; below, white from the breast back; sides of head gray. In winter the head, neck and upper breast are white, but the gray cheek patch remains, and there is below it a larger dark area. Bill black, with a yellow or flesh-colored bar toward the tip. The female is an ordinary looking grayish bird, without the long tail feathers or scapulars, but may be known by the shape of the bill, the patches on the head and neck and the wing without any white. Length varies with the length of the tail feathers from fifteen to twenty inches.

The Old Squaw, as it is usually called on this coast, is one of the most truly maritime of our ducks. It is very rarely seen except on the salt water, and seldom ventures even into the mouths of rivers except when wounded. There are a few instances recorded of its capture on inland waters—for example, on the great lakes—but these, in view of what is known of its range, can only be regarded as accidental occurrences. During the winter it is extremely abundant along our whole New England coast, and from the constant clamor that the birds keep up is derived the popular name, Old Wife. The title South Southerly is given it from a fancied resemblance of its cry to these words, but to make them at all like the note of the Old Squaw, the two first syllables must be spoken rapidly, and the third strongly accented.

The old squaw, though its flesh is very poor eating, is shot in great numbers along the coast, and, being a bird of rapid and somewhat irregular flight, affords very good sport. In the spring this species comes up well to decoys, and we have known of over sixty being killed in this way during a morning's shooting. The favorite method of killing them, however, is by forming a line of boats between the feeding grounds and the outer water, where they pass the night, and shooting them as they fly over. They rarely rise to any great height, and, as the boats are stationed only about a gunshot apart, many good opportunities are given the gunner. This method of shooting is also practiced with success for coots. It has been more than once described in these columns. The Old Squaw retires to the North to breed, and is said to rear its young on the fresh-water lakes of Labrador. We have good reason to believe that it sometimes breeds on the Connecticut coast, but it is probable that the birds which do so are wounded ones, which are unable to make the long journey to the North. This species is found on the Pacific coast, and is also a common bird of northern Europe.

*Camptolenus labradoricus*. Labrador Duck, Pied Duck. Bill angled toward the end by membranous expansion; cheek feathers rigid and somewhat scale-like. The male has the body and wing-tips black, a black collar about the neck, and a longitudinal black stripe along the crown of head; elsewhere white. Female, slaty gray; length, about two feet.

The Pied Duck is not spoken of by older writers as an uncommon species, but is now extremely rare. It is difficult to understand what can have caused the disappearance of this bird, but the fact remains that specimens now scarcely ever find their way into the collector's hands. During the last ten years we have never seen but one individual (a young male) in the flesh.

Sportsmen, therefore, who may be fortunate enough to secure specimens of this species would do well to have them preserved, and to record the fact without loss of time. According to Audubon the Pied Duck is a truly marine species, and rarely enters rivers. It is said to occur as far south as the Chesapeake Bay.

[TO BE CONTINUED.]

### MIGRATION OF THE WAGTAIL.

THE following letter contributed pseudonymously to the *Evening Post* contains much that will be new to most of our readers. The account is so interesting and so pleasantly written that we reprint it entire in the hope that it may elicit some expression of opinion on the subject from our own ornithologists:

In the autumn of 1878 I spent several weeks on the Island of Crete. On several occasions the papas—village priest—a friendly Greek with whom I spent the greater part of my time—frequently directed my attention to the twittering and singing of small birds which he distinctly heard when a flock of sand cranes passed by on their southward journey. I told my friend that I could not see any small birds and suggested that the noise came from the wings of the large ones. This he denied, saying, "No, no! I know it is the chirping of small birds. They are on the backs of the cranes. I have seen them frequently fly up and alight again, and are always with them when they stop to rest and feed." I was still skeptical, for with a field-glass I failed to discover the "small birds" spoken of. I inquired of several others and found the existence of these little feathered companions to be a matter of general belief among both old and young. I suggested that possibly the small birds might go out from the shore a short distance and come in with the cranes. "No, no," was the general answer, "they come over from Europe with them." I certainly heard the chirping and twittering of birds upon several different occasions, both inland and out upon the sea. But in spite of the positive statements of the natives, I could not believe their theory until convinced one day while fishing about fifteen miles from the shore, when a flock of cranes passed quite near the yacht. The fishermen, hearing the "small birds," drew my attention to their chirp-

ing. Presently one cried out, "There's one," but I failed to catch sight of it. Then one of them discharged his flint-lock. Three small birds rose up from the flock and soon disappeared among the cranes.

Subsequently inquired of several scientific men, among whom were two ornithologists, as to the probability of such a state of affairs. They all agreed that it could not be, and I, too, was forced to cling to my original judgment, and let the matter go. Recently, however, while reading the "Gartenlaube," my attention was attracted to an article bearing directly upon the subject. The writer, Adolf Zebeling, tells the same story, and adds the statements of some ornithologists of distinction, which makes the whole matter so striking and interesting that I quote the paragraph from his book:

"Shortly after my arrival in Cairo I greeted various old German friends among the birds that I observed in the palm-garden of our hotel. First, naturally, was the sparrow, the impudent proletarian—I had almost said social democrat, because the whole world to-day has that bad word in the mouth. He appeared to me to be more shameless than ever in the land of the Pharaohs, for he flew without embarrassment to the breakfast table, and picked off the crumbs and bits from every unwatched place. But the mark of honor we paid to the wagtails, and in truth chiefly because we did not then know that the wagtails were birds of passage. We had thought that they passed the winter in Southern Europe, or at farthest, as many of them do, in Sicily and the Grecian Islands. That they came to Africa, and especially to Nubia and Abyssinia, was then unknown to us. This appeared to us very strange, nay, almost incredible, particularly on account of the peculiar flight of the wagtails, which it is well known always darts intermittently through the air in longer or shorter curves, and apparently, every few moments, interrupts its flight to sit again and 'wag its tail.' But there was the fact, and could not be denied. Everywhere in the Gardens of Cairo you could see them under the palms that border the banks of the Nile; on the great avenues that lead to the pyramids; nay, even on the pyramids themselves in the winter. As the desert advanced there it was that I first heard of this singular phenomenon.

"One evening we were sitting at the foot of the pyramid of Cheops, sipping our cup of fragrant Mocha and in jolly conversation, rolling up clouds of blue smoke from our Korani cigarettes. We were waiting for the sinking of the sun to make our return to Cairo. The deep silence of the surrounding desert possessed something uncommonly solemn, and now and then the hoarse cry of the hoarse fish-hawk perched above us. Still higher the pelicans were grandly circling. Their flight, though heavy when seen from near, possesses a majesty in the distance attained by no other bird, light before us several wagtails were hopping around and 'titting.' They were quite tame, and flew restlessly hither and thither. On this occasion I remarked, 'I could not quite understand how these birds could make the long passage of the Mediterranean.' Sheikh Ibrahim heard this from our interpreter. The old Bedouin turned to us with a mixture of French and Arabic as follows, which the interpreter aided us to fully comprehend:

"Do you not know, Hadretch (noble sir), that these small birds are borne over the sea by the larger ones?"

"I laughed as did our friends; for at first we thought we had misunderstood him; but no; the old man continued quite naturally:

"Every child among us knows that. These little birds are much too weak to make the long sea journey with their own strength. This they know very well, and, therefore, wait for the storks and cranes and other large birds, and settle themselves upon their backs. In this way they allow themselves to be borne over the sea. The large birds submit to it willingly; for they like their little guests, who by their merry twitterings help to kill the time on the long voyage."

It appeared incredible to us. We called to a pair of brown Bedouin boys, pointed out the wagtails to them, and inquired:

"Do you know whence come these small birds?"

"Certainly," they answered: "The Abu Saad (the stork) carried them over the sea."

"At supper in the Hotel du Nil, I related the curious story to all present, but naturally enough found only unbelieving ears.

"The only one who did not laugh was the Privy Councilor Heuglin, the famous African traveler and, excepting Becham, the most celebrated ornithologist of our time for the birds of Africa. I turned to him after the meal, and inquired of his faith. The good, royal councillor smiled in his caustic way, and with a merry twinkle remarked: 'Let the others laugh; they know nothing about it. I do not laugh for the thing is known to me. I should have recently made mention of it in my work if I had had any strong personal proof to justify it. We must be much more careful in such things than a mere story-teller or novel-writer; we must have a proof for everything. I consider the case probable, but as yet cannot give any warrant for it.'

"My discovery, if I may so call it, I had kept to myself, even after Heuglin had thus expressed himself, and would even now maintain silence on the subject had I not recently discovered a new authority for it."

I read lately in the second edition of Peternan's great book of travels the following:

"Professor Roth, of Munich, related to me in Jerusalem that the well-known Swedish traveler, Hedenberg, made the following interesting observation on the Island of Rhodes, where he stopped. In the autumn tide, when the storks come in flocks over the sea to Rhodes, he often heard the songs of birds without being able to discover them. Once he followed a flock of storks, and as they lighted he saw small birds fly up from their backs, which in this manner had been borne over the sea. The distance prevented him from observing to which species of singing birds they belonged."

Thus wrote the famous geographer, Peternan. Professor Roth and Hedenberg and Heuglin are entirely reliable authorities. This was a matter of great curiosity to me, and after I found others had made similar observations, and expressed them in print, I thought they would be of no less curiosity and interest on this side of the Atlantic, and equally deserving of public notice. I hope that competent amateurs and experts may be excited by this to extend their observation in this line also. The instinct of animals is still, in spite of all our observations and experience, almost a sealed book to us. By a little attention we might hear of still more curious things in this field.

PROCEEDINGS OF THE U. S. NAT'L MUSEUM.—Volume II. of the proceedings of the U. S. Nat'l Museum, for 1879, published under the direction of the Smithsonian Institution, contains a vast amount of new and varied information, Messrs.

following the subject further, but have been requested to do so by an old subscriber to your valuable paper, one of the most successful sportsmen either in this village or this island. I was prompted to first notice the subject by recollections of my friend and neighbor, suggested by the article on "Trapped Birds on Long Island." I have, as a farmer's boy, trapped as much game as my boy on Long Island, and have no reason to be ashamed of my ability in that direction. I have, however, never violated any law, nor would I do it, no matter how unjust the law might be.

Near where I was brought up was an old farm, on which were several low places, swamps, affording an excellent cover for game. A gentleman from your city, a well-known newspaper man, and, if I mistake not, a valued contributor to your paper, used to either hire the farm or come to the vicinity during the hunting season. He was always welcomed by the farmers and their boys, and his departure was a source of regret to them. The sign "No Shooting Allowed on these Premises" had no terrors for him. He gunned everywhere. We boys used to tell him where quail or partridge were most plentiful, and we always knew, and it is unnecessary to add that he always found plenty of game and as a natural consequence plenty of sport. Now I shall give the reasons why he was so well treated. First, he was a gentleman, not a pirate. Second, he was a true sportsman. He knew a pointer from a setter, he did not gun with "black and tans," and never killed small game, such as robins, sparrows, etc. He identified himself with the people and interested himself well in the vicinity with local affairs. He used to riddle our hats with shot, "just for fun," shoot crows and hawks for us and occasionally give us a rabbit or odd bird that he might chance to kill. He never disturbed our traps or snares, often setting them for us. On one occasion he put a crow in a spring pole. We were delighted and appreciated the joke by showing him a flock of quail when we discovered its author. He never, to my knowledge, threw down a pair of bars, shot toward a farmer's house, nor permitted his dogs to disturb the poultry. He was a true sportsman.

In striking contrast to him are the improperly called "true sportsmen"—properly the pirates—who hire a "gunning dog," borrow an old fowling piece, and on Thanksgiving or Christmas make a raid upon the Long Island farmers. They are a disgrace to the name of sportsman, and I have no doubt that God answers their purpose just as well.

They tramp over the farmer's fields, throw down his fences, fill his cattle with shot, shoot at his house as quick as anywhere, kill anything from a sparrow to a chicken, not sparing cats or dogs. They not only violate the game laws, but steal almost anything they can get away with. If they do not kill themselves, or get killed by some sportsman like themselves, they return to the city, usually at least three-quarters drunk, with their game bags filled with stolen goods complaining because farmers' boys have captured game which they had not sufficient skill to get. Could I describe scenes which I have witnessed in smoking cars or trains returning to the city during the gunning season it would be a disgusting picture. True sportsmen know and respect the rights of land owners, and as a rule welcomed in agricultural districts, but the "visiting gunner" who does not know or regard the rights of the land owner is an unmitigated nuisance and will be eventually exterminated.

Unjust laws produce disregard for all law. If the poor farmer or his children are deprived of the right to take game (in which, if it is common property he has the first right) in their own primitive way they will do all they can to prevent the wealthy, the transient sportsman from taking with his more perfect, and therefore more deadly appliances. I know whereof I speak and I do not believe that there have been 1,000 quail caught on Long Island in traps or snares in any one year during the last twenty years. If it is not the farmers' boys, nor real sportsmen who are exterminating both game and song birds, it is piratical gunners who periodically overrun the island. The readers of the FOREST AND STREAM are, as a rule, real sportsmen, who would not prosecute a poor farmer's boy for catching such low and common game as rabbits in his primitive way "just for fun." Gentlemen are not, as a rule, at all discouraged by seeing the notice forbidding trespassers, and, upon the permission can usually be obtained from the owner of the property if he is satisfied that his rights are respected. I hope you will continue your efforts to weed out "Malays running amuck" from "real sportsmen," and thereby annihilate if you do not entirely do away with the antagonism which in many sections exists between the farmer and huntsman.

The intemperate movement in the good work must come from the sportsmen. The farmer has absolute protection in the law against trespassing, and in no case bring the career of the sportsman to a close. Land game is concerned to summary. You may be assured of my hearty co-operation in your efforts to bring about a thorough and satisfactory understanding between the farmers and true sportsmen, and I speak not for myself alone, but for a number of farmers in this vicinity and other parts of the island. J. H. GRIFFITH.  
East Rockaway, Dec. 10.

I have been reading your plan of preserving game birds and making the sportsman and land owner mutually interested with much interest. Your plan is a good one and I heartily believe it will be most applicable to the present conditions of the West, although many farmers have their lands posted; in Indiana and Illinois there is very little difficulty in obtaining permission to shoot if the sportsman proceeds in the right manner. The mode of procedure should be this: If possible see the parties upon whose lands you may wish to shoot before you intend going out, and in a gentlemanly manner ask permission to shoot, assuring them that you will not shoot among or toward their stock, and will leave the fences and gates in as good condition as found. If you obtain their permission go to their houses when you go out to shoot, and let them know who it is that is shooting on their premises, and if you can spare a few pieces of the game that you have killed on their lands leave it at the house of the owner, and the next time you wish to shoot you will have no trouble in obtaining permission. This is my way of proceeding, and I have no difficulty in obtaining permission to shoot on any lands I may wish.

But there are some farmers who are very selfish, and no amount of promises of good behavior would gain you the desired permit. In such cases in almost every instance your plan of a fair remuneration would bring them over to your wishes, and would cause such men to take pains to rear and protect the birds for the shooting fee, and it is right for them to demand the remuneration if they wish it. They raise, protect and feed the birds from their crops, and no gentleman sportsman will refuse. Almost all the ill-feeling between the

sportsmen and farmers has been caused by rowdy men who have shot into stock, left fences down and gates open, having no respect for the farmer or his property. Where such cases have occurred you cannot ensure the owner for posting his lands against hunters. If they would all observe the Golden Rule in their conduct there would be much more friendly feeling between both parties. Every hunter is a trespasser upon inclosed lands, whether there is existing game law or not unless he has permission; and they should bear in mind that it is a privilege granted them, and no right that they may possess. R. E. S.  
Newport, Ind.

In reading your paper one would think that a farmer was anything but a gentleman and a law abiding citizen. There are farmer sportsmen here who do more to protect game than all the sports of the cities. I have known them to feed quail in winter for many weeks, and to protect them from hawks and other enemies; and then to be called pot-hunters. I never saw our baggage cars loaded with snared birds or any other game; but it may be so for all I know. There is not a trap or net in this neighborhood that I know of but we have some birds here we expect to turn out next spring. All the birds that we wing here we keep and turn out in the spring to keep our stock up. It is some trouble to us to doctor them up, but we save a great many.

Our woodcock law here is a robbery to us, because all the birds leave here about the 15th of June and go North. We can't shoot them, and so Northern men get all of our birds. But we must keep still because we are farmers and don't know anything! If we raise game we look upon it as ours, but we don't want to be hogish if our friends want to come and see us they are welcome, but they must not think hard of us because we can kill more game than they can. That seems to be the most trouble. If they hunt the same way that we do they can get game too, but they are afraid of getting scratched and spoiling their hands in the briars. I hope that our city friends won't think so hard of us farmers; we are not so bad as we look. Yellow Dog.  
Keyport, N. J.

Allow me to add my name to the list of those who are willing to pay more to the farmer for quail than he can realize from trapped birds. Until real protective associations are established in every county who will employ an agent at a fair salary whose only duty will be to see that the game laws are enforced and all offenders brought to justice, it is the only way to save the quail. I know from experience that the farmer will trap quail as long as he can find a purchaser, and under the present management and enforcement of the game laws the only way is to make it an object for him to stop. Your journal has become indispensable to me. If you will send a specimen copy to Wm. Shapter, South Grange, I think he will subscribe.

South Orange, N. J.  
I have read with great pleasure your articles upon the establishment of new relations between the gentlemen sportsmen and the farmers of Long Island. If the scheme can successfully be accomplished—and I see no obstacle in its way—you will receive the hearty thanks of many to whom the resources of Long Island have heretofore been almost closed.

The waterfowl have been always accessible, but when one tired of marsh or beach and longed for a tramp through wood or stubble, the brave voice or almost universal posting warned him off. Please add my name to your list.  
Custom House, New York, Dec. 7.  
W. W.

#### OUR ROCHESTER LETTER.

ROCHESTER, N. Y., Dec. 17, 1890.

THERE is about a foot of ice covering the waters of this county, and as may well be supposed there is not much activity in the sports. Now then a foolish duck that neglected the warning of instinct to go where it is shot, on the shore of Lake Ontario, or on the rapids of some stream, and yet covered with ice. The wild fowl that remain here are hard pressed by the severity of the weather, as was demonstrated one day this week when two flocks of ducks dropped in the water of the reservoir that supplies the city, and which is within the city limits. On the same day a flock of wild geese were seen hovering over the reservoir as if they were waiting for their wings in its water, which as it comes from a deep-water lake resists the encroaching influence of the frost long after other quiet sheets are frozen.

In this county a law passed by the Supervisors prohibits grouse and quail shooting for three years from the autumn of 1879. This operates to prevent any shooting near the city, except by the few who go out for hares, of which there is, or was, a good supply this season. Hunting them with ferrets has reduced the number greatly, since the snow enabled the hunters to track them to their burrows, and there is every prospect that the selfish and short-sighted ferreters will "kill the goose that laid the golden egg" by exterminating the breeding hares, and so spoil their sport for future years. The markets are full of "cotton-tails," and examination not revealing any shot wounds on them, the inference is that they have been snared or taken in bags with the aid of ferrets. It is next to impossible to punish the persons guilty of thus violating the law. There are also a great number of ruffed grouse and quail hanging up in the markets and restaurants, and I fear that they did not die from honest powder and shot, but by the pot-hunter's snare.

Several sportsmen residing in this city were on shooting trips to the West this fall, and found game abundant in Ohio, Indiana and Michigan. They relate stories of famous sport among the quail and ducks of our favored sister States, in which a good day's shooting may still be had without walking over a county. Our Western friends of the gun should be wise in time, and if possible take measures to perpetuate the advantages of the West for the purpose of enjoyment of shooting. I thought years ago that the plan recently proposed by FOREST AND STREAM, of renting the privilege to shoot on farms, would before long prevail in this country and become necessary, if any game is to be preserved at all. I hope we shall never see the oppressive and undemocratic game laws of England disgracing the statute books of these States, but there is a vast difference between limiting sport to a few, and allowing indiscriminate slaughter of birds in and out of season. We should try and find the golden mean.

What I have written above about the sportsmen reminds me that although most of the visiting sportsmen—not statesmen—have returned home, one distinguished member of the fraternity followed the example of the birds and went south in time to avoid the cold. I speak of Robert Tangney, the fishing-tackle maker, well known in New York, an old genus of French descent, born in Ireland and a cosmopolitan

by inclination. He started with two boys for Florida a few weeks ago with the intention of "doing" that State this winter in a canvas boat of his own construction. I heard from him a day or two ago and he was then on the St. John's River with a good prospect ahead. I commend him to the good offices of any of your readers who may chance to meet him. He will entertain a sportsman with tales of trout-fishing in the lochs of Ireland, salmon-fishing in Norway or adventures with the alligators and sharks of the South. A diver made to tie a fly does not exist, and he is a good shot. A catalogue of his outfit would occupy too much of your space, but it included four guns, two or three thousand feet of netting, fish lines by the mile, fish hooks without number, some made of half-inch steel, for alligators and sharks. He expects to make the trip pay by fish and collecting bird skins, alligator teeth and other rarities.

The organization and first annual exhibition of the American Society of Taxidermists took place here this week. The exhibition is now in progress and the election of officers was held yesterday in the rooms of the Monroe County Sportsmen's Club. The meeting opened with an address by Frederick S. Webster, of this city, who traced the progress of the art from its earliest history to the present. Prof. W. E. D. Scott, of Princeton, N. J., on behalf of the Judges' Committee, offered the congratulations of the judges on the exhibition of the display made at the first exhibition. The Constitution was adopted and the following officers elected for the ensuing year: President, W. E. D. Scott, Princeton, N. J.; Vice-President, F. S. Webster, Rochester; Secretary, Wm. T. Hornaday, Rochester; Treasurer, F. A. Lucas, Rochester. Standing Committee: Thomas W. Fraine, William G. Smith and J. F. D. Baily, Rochester. The society has six honorary members, one corresponding and thirty-seven active members. The latter are scattered through five States. The catalogue of the exhibition contains a list of 239 entries, representing some thousands of specimens. I must omit a detailed description of the exhibition, to which it would be difficult, if not impossible, to do justice in words. It is in a large room on State street and as its attractions become known the attendance of visitors increases daily. Every zone on the globe was drawn on for contribution to the specimens exhibited, and you may imagine that the display is rich and brilliant. Birds, beasts, reptiles, fish, innumerable about everything that can be produced by the taxidermist's skill is shown. The largest creature in the list is a fine bull bison and the smallest I recall, except the insects, is a tiny humming-bird. Between these extremes the variety is infinite.

The city police court has a case before it of some interest to your readers. A certain man is under arrest and will be tried next week on charge of allowing some valuable dogs, which he was boarding, to starve to death. One dog he had was a black setter named Sport. This dog died, and others he had are reduced to skeletons. Sport was valued at \$80 by his owner, Isaac Weighell, who left the dog with the accused last summer and found out a few days ago that the dog was dead and that others were in danger of death from the same cause. One of these is a bitch—Lulu, blue belton—said to be out of a Gordon setter sent by the Prince of Wales to Henry Milwood, of Chicago. Her hair had nearly all fallen out and the bones were pressing hard to come through the skin, which was covered with a scurf or scabs. The prisoner says the dogs have mange. Weighell, the owner, who is thoroughly acquainted with the diseases of dogs, says it is not mange, but ill-treatment, that afflicts the living dogs and killed the ones that are dead. E. R.

#### OUR DETROIT LETTER.

I HAVE just come from an interesting interview with a party of deer slayers, and such enthusiastic fellows I never saw before. One of them is at this moment skinning a deer of his own killing, and he swears by the recollections of the last two weeks that he is going to have that skin lined and ornamented and spread in front of his bed for a morning for good luck.

To save space I will condense my interview and give it you as succinctly as possible in narrative form, simply explaining that I shall employ the language of the captain of the party instead of my own.

"Our party," began my special informant, "consisted of A. J. Rogers, Superintendent of Police of Detroit; Ed. H. Gillman, John E. Long, Frank Edye, of Detroit; Wm. McSweeney, of Frazier, Mich., and James Moore, of Toledo, O. We had come there making a winter campaign, and had already perfected the details preliminary to a campaign in the big north woods of Mich., and started out from Detroit, November 25, with dogs, Winchester rifles, wet and dry supplies in abundance, and an unlimited stock of hope, happiness and appetite. We took train at 10:10 p. m. on the Detroit and Bay City Railway, arrived at Bay City in time for an early breakfast, and after a maternal cigar, left at 8:30 a. m. on the Mackinac division of the Michigan Central Railroad in the paternal care of conductor James English, one of the most amiable and careful of railroad patriarchs. Osego Lake was our immediate objective point. This is about two hundred and fifty miles from Detroit, as I estimate it. We reached there in the evening and stayed over night at a most comfortable inn where the accommodations were on the most liberal and homelike scale, and where we had a night of delicious and refreshing sleep in needed preparation for the next day's fatigues. We were going fifty-two miles almost due north into the woods to a point which we subsequently christened Rogers Lake in honor of our chief, who proved to be a dandy in camp, a splendid cook, a man of inexhaustible good humor and a dead shot, the result of years of experience in the army and on the plains of the Far West. (He is an old Californian overlander.)

"That was one of the toughest journeys I ever had, and our adventures, if you had room for them, would fill the FOREST AND STREAM for a month. Well, we loaded up a team and left at 10. Two of our fellows had sore feet—no kidding, no sore! They had no shoes, and the rest of us actually couldn't stand it to walk so the rest of us took turns about in walking and riding all day. We made twenty miles by noon, when we ran plump into E. O. Avery's lumber camp, and the first man I met was J. N. Tiff, a well known New Yorker who spends a good deal of time at Alpena and who was there on his way East. I can't quite describe that meeting, but you bet we made things lively there for a time. The team had become dead fagged, so what Rogers did was to have Avery do it, and give us our own team and send us rejoicing on our way to his other camp, and as we with a letter of welcome to his Superintendent, Black Jack McDonald, whose cheery voice we heard at exactly 9 o'clock, a. m. Such a supper as he set out for us! And would you believe it, he turned himself out of quarters and insisted on

giving us the whole camp. Such hospitality one don't encounter except among men with the true instincts of the sportsman, even if he does happen to be a lumberman. I would like to linger over our stay there, but the yarn spinning must not stop for such reminiscences now.

Sunday morning November 23, found us again moving. At mid-day we stopped at Potter's camp for dinner, fed the cattle, and at a quarter to four once more cracked our whip, and with a hoi! for the merry good green wood! a good-by to the Potter campers, a few whoops of satisfaction, away we went bounding along on the roughest road man ever lived to conquer. At Miner's farm, which we reached at 6 o'clock P. M., we were joined by Joe Kurtz, who was henceforth to be our guide and captain. Joe is a character—a regular backwoodsman, lithe, strong, swift, with the organic grace of the catamount, eye of the eagle, nerve of a lion and a nature as rugged as the man is picturesque. His cabin is only a few miles from Miner's and we were soon domiciled. The place is of logs, but comfortable, even if it is only fourteen feet square, and boasts besides the bed a table nailed up to the side, and some rather primitive but mighty useful cooking utensils. Including Joe and his partner "Back" (Albert Bofo) another genuine son of the forest, eight of us bunked in the one room. My chum and I were well fixed with ball-bags, blankets and deer skins, and I don't want a better bed than we enjoyed all the nights we passed there.

"Daylight found us stirring. Deer signs were plentiful and, marshaled by Joe and Back, we went to business. Nine days we stayed, and during that time we six killed twenty-six of the prettiest deer I have seen this season. Our chief killed four, Gillman and Mcweeney killed five each, and Long, Moore and Eddy killed the remainder. Four of them and twenty-two of the ones we brought to town, besides one live one which we are going to present to the city for Belle Isle Park. Those nine days were certainly among the most enjoyable I can recollect, and all the party feel in the same way about the trip. I shall have to give Mcweeney the honor of first blood, but after that we divided the honors with fraternal equality. Long was accused of a slight attack of 'back fever,' but he took the joke in good part and gave us all practical demonstration of his nerve and coolness in the midst of the most glorious exciting sport.

"Eat well, I reckon. Our solid consisted of venison, pork, potatoes with the jackets on and unlimited at that. We broke camp December 8, paid Black's camp a visit on our return and reached Otsego Lake (where we were to take train) in a heavy snow storm, all broke up and ready to tumble into bed at 6 P. M. on the 9th. Horses, men and dogs were well cared for by Mr. Briuk, of the Otsego Lake house. He is a man who knows every inch of that country, and can cheerfully recommend the best sportsmen as one they had better heed if they go that way.

"Now we are back in town and I am going to bed just as quick as I can get there."

So spoke the jolly hunter, and if our friends will come this way I have no doubt that they will be even better entertained by the recital at first hands than I was. It is a tale to stir the sportsman's blood, and I only wish that I could have tasted some of the pleasures of that memorable fortnight among the antlered nobility of Michigan's splendid forests.

G. P. G.

#### THE LACKAWANNA ASSOCIATION.

SURABTON, Pa., December 11.

THE gentlemen of this city are not devoted to the interests of trade and manufacturing entirely, despite the fact that coal and iron are our staple products, but among them many who find time to devote the active care of business to chase the antlered monarch of the glen or hook the gleaming meteor of the brook. The time has passed when one could find good trout fishing within ten minutes' walk of the city's centre, for the polluted water pumped from a hundred sulphurous shafts has poisoned the most of our streams to such an extent that no living creature can abide therein; neither can a deer be started up in the course of an easy walk from town. The various species of game have changed, and a half-day's journey carries the eager hunter into the wild forests of Sullivan or Warren.

The rapid development of this section, with its consequent inroads upon fish and game, threatening their utmost extinction, led to the formation, about a year ago, of the Lackawanna Game and Fish Association, the members of which are pledged to assist in every way in the development of sportsmanlike pursuits. To this end frequent meetings are held at which topics upon the range of timely subjects are discussed, and particular attention is paid by the association to the protection and development of game. To this end carefully compiled abstracts of our game laws have been distributed among the farmers, and many of the best lakes and in the county are being stocked with choice fish under the direction of members of the club. Trout and land-locked salmon have been supplied to all parties asking them for stocking purposes, and some thirty of the lakes in this and adjoining counties have been plentifully sown with wild rice with the intention and hope of inducing the wild duck to make his habitat there.

The association is under the presidency of Dr. I. F. Everhart, a born naturalist, whose knowledge of woodcraft and game lore is inexhaustible, and whose taxidermic collection of native birds and beasts is unquestionably the finest in the State, the Doctor having made the postural peculiarities of his subjects a study.

Last night the association gave its first game dinner, inaugurating therein a custom which is meant to be carried out yearly hereafter, at which almost all its members were present, and which was carried out with consummate skill of arrangement and detail. The large dining-hall of the Wyoming House was the scene of the reunion, and the bill of fare embraced every seasonable dish of game indigenous to this locality as well as a noble contribution from friends at the Far West. The preparation of the various dishes was perfection, and that the eating was not only a pleasure but a duty. I notice the menu that you may decide for yourself upon its comprehensive character, only regretting that the taste and the flavor of the several dishes cannot be transmitted also. One of the curiosities of the evening was the wildrice, which was served boiled dry so that every grain stood individually plump and firm, and which was served with squirrel and French peas. This rice has a delicious flavor, more pronounced than the cultivated variety, and yet of a peculiar delicacy, and it was unanimously declared to be a fine article of food far exceeding in character such preparations as oatmeal, hominy, cracked wheat and other familiar farinaceous dishes. This wild rice was obtained from Canada.

The dinner was served in courses, and lasted from half-past nine P. M. until after one o'clock. Toasts were proposed and

responded to as follows: "The Lackawanna Game and Fish Association," by Dr. J. F. Everhart, the President; "Quail and Grouse Shooting," by Cornelius Smith, Esq.; "Deer Hunting," by Col. A. B. Blair; "Game and Fish Protection," by Mr. H. E. Hess; and "Fox Hunting," by Mr. Chas. R. Smith. Fun and anecdote enlivened the evening, and the occasion was one replete with pleasure, from which the members separated with renewed encouragement in their work, and a determination that next year's dinner should be far surpass this as the present one exceeded anything hitherto attempted here.

An admirable feature in the contribution of this association is that no expense is permitted to be incurred unless there is money in the treasury to pay the same, so that the "cancerous leprosy of debt" can never fasten itself on the society's prosperity. It is doing its work in the right way, and because of your well known approval of all that conduces to the welfare and encouragement of sporting interests I venture to send you this account of the first annual dinner of the Lackawanna Game and Fish Association. H. E. H.

#### SQUIRREL SHOOTING.

MACON, Mo., Dec. 12.

IN your issue of December 9, "Sancho Panza" has introduced the subject of squirrel shooting, for which I extend my hand. I am sure squirrel shooting is fine sport, that none need be ashamed of, and hope to see the subject kept up in your valuable paper.

I began my shooting career a long ago with my grandfather's old flint-lock Kentucky rifle, and have enjoyed the sport in all its shades and colors, and have found it to possess many attractions and pleasures not found in other kinds of shooting.

In my youthful days we used rifles altogether, and in those days a man that would shoot a squirrel through the body was looked upon in about the same light that a pot shot is now.

In my shooting career I have encountered many of the best and experienced Sancho Panza speaks of. Have often exhausted every means at hand in order to induce his shrewdness to step around on my side of the tree without succeeding. We have only two kinds of squirrels here, the fox and gray. The gray is much more shy than the fox squirrel, and much harder to induce to come around on your side of a tree. When you see a fox squirrel take a tree, if you will remain perfectly still for five or ten minutes you will be very likely to get a good shot. The fox squirrel is much up to his ears in his curiosity to know what has become of you will induce him to look around on your side. I have often secured a good shot in this way, and often scared them around by throwing a stick into the leaves beside the tree. This will not always do, but I am satisfied that "Sancho Panza's" plan will almost always work to a charm. Very few men know how to hunt squirrels. Most men are apt to hunt too much, and too much is worse than not enough. To hunt successfully you must hunt very carefully and very slow, remain entirely still at least one half the time. Any one can see much better among the leaves and branches of the trees by standing still. Sit down on a log or stump, every few hundred yards, and remain just fifteen or twenty minutes, and you will often have you patience rewarded by seeing one of the little rodents jump up on the side of a tree, and skip along on a log near by, or, perhaps, see one caper out on some of the lower branches and begin to bark or chatter.

I agree with "Sancho Panza" that it requires considerable skill to shoot a squirrel running on the ground, or a fallen tree, and particularly on a worm fence. There is no use in trying to follow the motion of the squirrel in a worm fence. Catch sight at a corner he is approaching and fire the instant he arrives. In shooting at them running from one tree to another among the topmost branches, aim to get in your work just as you can make the spring from one limb to another, but don't feel disappointed if you miss, for I assure you that you have no dead sure thing.

It is fine sport to shoot them in the fall, when they begin to cut down hickory nuts. Go out into the hickory timber early in the morning, or late in the afternoon, and stand still for a short time, and if there are any near you the falling particles of hulls striking against the leaves will soon inform you of their whereabouts. It takes a strong shooting gun, and a full choke at that, to bring them down from the tops of some of the trees in this part of the country; they frequently get entirely out of reach of an ordinary muzzle-loader in the hands of the tyro.

As it is in order now, I will relate one of my exploits in squirrel shooting. Last October, myself and Capt. Jno. London (the reason I mention Capt. London is that I may have a witness) went squirrel hunting on the Chautau River. We took our traps and traps, and went down the river. I found four up one tree, and I fired and killed it, but it hung to the side of the tree a few seconds, as they often do. Just as I had slipped in another shell and closed my gun, I saw another rear the top of the tree, which I shot and killed, and just as I fired the second shot squirrel No. 3 started to run, and I gave him the other barrel, and had three falling at one time.

Some writers say squirrels lay up a store of nuts, etc., for winter use, which I think is a mistake. I hope to hear more on this subject.

BORDER BEFFAN.

#### TEXAS CHRISTMAS TURKEYS.

NEW ROCHELLE, N. Y., Dec. 10.

THE editor of the *Henrietta Shield*, Clay County, puts the matter thus: "Thanksgiving turkeys were not numerously circulated in these parts yesterday. The weather has been too cold to go out and shoot them."

From this we see that the wild turkey is, of all others, "the bird" in Texas, looked for to grace the holiday tables. But what say you, "ye daring sportsmen," to this very charitable evidence? "Too cold to go out and shoot them." I shudder! They were evidently not much hunted and taken along their fryings, but, in their joyful mood around their camp-fires, and in their utter forgetfulness of Christmas the turkeys they killed found their way into these pans, and so "evaporated," of course. That's the trouble, no doubt; and very naturally too, for you well know how alluring the odor of turkey cooking around the camp-fire is, especially on a cool, bracing day. This is surpassed only by the taste of a bird.

Speaking of the toothsome merits of the turkey reminds me of the Frenchman's description of it; he was found of a square meal. Said he, "The turkey is one very inconvenient bird; he is a little too much for one person, but not quite enough for two." And this was said of the tame turkey, not of the game wild one. Query: What would he have said of the juicy, fat, wild turkey? Just enough for one, of course.

The same paper says, "A load of wild turkeys was recent-

ly brought into town and sold at fifty cents apiece. They are reported to be abundant in the West." Only think of buying nice wild turkeys, some weighing fifteen to twenty pounds, no doubt, for fifty cents. This would exactly pay for five boiled eggs in some of our fashionable eating houses I observe, however, that the price of turkeys has risen since I was in that country. I used to buy from the wild Indians large, fat gobblers for twenty-five cents, and the smaller ones for ten and fifteen cents. But this was in 1854-5, when there was not a solitary resident in this northwestern part of Texas.

A cold snap, commonly called "a norther" in Texas, is just the best time possible to hunt them. They then huddle together and are quite confused and easy to kill. They do not see, like Northern wild turkeys, to stand the cold weather with indifference. I now recall a short hunt I made for them during one of these northers. It was from Fort Belknap, lying in the same region of country. In two evenings we shot, mostly by moonlight, six round dozen, when we ceased firing, withdrew and carried off the dead. We had enough for all, and as many as our wagon could accommodate. I made use of my trusty rifle, and by moonlight brought them down at every shot from their high roosting-places among the trees. I placed them directly between me and the moon (two days from the full), aimed a little low on them, pulled the trigger, when they came tumbling to earth. This was at the crossing of the Clear Fork of the Brazos River, main road, and not far from where Fort Griffin is now situated. The month, December. I mention all this mainly to stimulate the good sportsmen of Clay County, to good deeds for Christmas and New Year's days. I hope to hear through the *Shield* a most favorable account of them, and that lots of plump gobblers, with all the *et cetera*, have circulated most freely, not only there but everywhere else on the coming holidays. Especially may the editor of the sporting journal, *Forest and Stream*, 39 and 40 Park Row, N. Y. city, be blessed on these days. We know him to be deserving and very modest.

H. W. MERRILL.

#### THE SOUTHAMPTON CLUB.

THE Southampton Sportsmen's Club was organized in 1874, and duly incorporated under the laws of the State of New York. The membership is limited to twenty and comprises some of the leading and most thorough sportsmen in New York and Brooklyn.

The club has leased for a term of years the exclusive right of shooting over a large tract of fine quail and woodcock country, consisting of farms at Southampton on the east end of Long Island, and is pursuing the only true course for the proper protection of game and the preservation from ignominy of the principles of old time sportsmanship.

Included in the property of the club are all the necessary paraphernalia to a complete rig for duck shooting on Shinnecock Bay. Also a beautiful fresh water lake about two miles square, which will be thoroughly stocked with black bass this coming spring. A game keeper is employed permanently to watch over the premises, detect and report to the club poachers, snarers and persons shooting out of season, for the purpose of prosecution, and almost several arrests have been made and eminent counsel engaged to punish offenders for violating the game laws.

In winter the birds are thoroughly fed and by this means kept alive through the severe weather; and the good results of this plan have been fully attested by the peaceful and happy whistle of the cock in the spring and the abundance of game in the fall. A bag of from ten to twenty-five head being a fair result for a good day.

During the opening week of the present season there was a very fine display of setters in the field belonging to the members; the most noted being the Hon. Townsend Cox's blue Bel on Ned; Edward G. Whitaker's English white setter Mito, an extraordinary quail and woodcock dog; D. T. Kennedy's Irish setter Sankey and Henry M. Leverich's black and white setter Ben. The two latter are magnificent rangers and exhibit extraordinary powers of endurance and keenness.

During the winter months fox hunting is a very enjoyable feature, the club owning several fine fox hounds and genuine wild red foxes being plentiful on that part of the island.

It is only through such associations as this that the shooting in the vicinity of New York can be preserved and sportsmanship relieved from the odium attached to it by the persistent massacre and wanton destruction of the poor little domesticated pigeon, and the absurd, useless and oftentimes aimless breaking of glass balls.

The large clubs of New York and vicinity, both for shooting and the protection of game, seem to have entirely lost sight of the real object of their organization and have degenerated into a system of periodical dinners and post prandial bombast, and with many members "going shooting" is synonymous with nocturnal Bacchanalian revelries with whiskey for ammunition and the only game "poker."

If the clubs really interested in pursuing their favorite pastime in a sportsmanlike manner were to emulate the example set them by the Southampton Sportsmen's Club they would find themselves on the true path to honorable, healthful and humane enjoyment.

NIMROD.

#### THE LONG ISLAND ASSOCIATION.

AN adjourned meeting of the Game Law Committee of the Long Island Sportsmen's Association was held at the Fountain Gun Club Rooms, 404 Flatbush avenue, Brooklyn, last Saturday evening, Capt. W. L. B. Steers in the chair. The question on the size of the mesh of nets created considerable discussion. It was finally decided that whatever size mesh was adopted, the word "square" should be inserted after the word "inches." It was resolved that the committee should have the honor to send a memorial to the Legislature to Albany, as near the assembling of the Legislature as possible, for the purpose of recommending to the Speaker of the House a committee on the game laws for Long Island. Mr. Barnett Phillips spoke in regard to the alarming decrease in fish, and cited some statistics that were almost incredible. Also that the Association must work together and hasten slowly in order to secure proper laws to protect fish and game.

The Secretary was instructed to write to Mr. A. E. Godefroy in regard to the trapped quail that he saw on a Long Island railroad train, and ask him to furnish information on the following points: The name of the boy that was selling the quail, the name of the baggage-master, proof that they knew the birds were trapped, and in what county they saw

\* Texas papers please copy.

Messrs. F. R. Hyer, J. Pentz and W. A. Coster were appointed a committee to arrange the rally. The nominations of officers for the election in January was next in order, and a number of candidates were nominated for each office. The meeting then adjourned.

#### PITTSBURGH DOG SHOW.

THIS show will take place on January 17, 18 and 19. The entries will close on January 6. Major J. M. Taylor, of Lexington, Ky., as we have already stated, will be the judge. The St. Charles Hotel has been selected as the headquarters for the committee and sportsmen, and under the management of Mr. Charles Lincoln, the show promises to be a grand success.

The prizes are for champion English setter dogs, \$20; bitchess \$20. Imported English setter dogs, \$20 and \$10; bitchess the same. Native English setter dog, \$20 and \$10; bitchess the same. English setter dog puppies under 12 months, \$10; bitchess the same. Champion Irish setter dogs, \$20; bitchess the same. Irish setter dogs, \$20 and \$10; bitchess the same; dog puppies \$10; bitchess the same. Champion Gordon setter dogs, \$20 and \$10; bitchess the same. Dog puppies, \$10; bitchess the same. Champion pointer dogs over 55 lbs., \$20; bitchess over 50 lbs., \$20; dogs under 55 lbs., \$20; bitchess under 50 lbs., \$20. Pointer dogs over 55 lbs., \$20 and \$10; bitchess over 50 lbs., \$20 and \$10; dogs under 55 lbs., \$20 and \$10; bitchess under 50 lbs., the same; dog puppies under 12 months, \$10; bitchess the same. Irish water spaniels, \$10 and \$5. Cocker spaniels, \$10 and \$5. Field spaniels, other than cockers, \$10 and \$5. Fox hounds, \$10 and \$5. Beagles, \$10 and \$5; puppy under 12 months, dog or bitch, \$10. Dachshunde, \$10 and \$5. Fox terrier dogs, \$10 and \$5; bitchess, \$10 and \$5; puppies, \$10. Greyhounds, \$10. Scotch deer hounds, \$10. Mastiffs, St. Bernards, Newfoundlanders, Siberian or Uln, rough-coated shepherds, smooth-coated shepherds, bull dogs, bull terriers, sheep terriers, pug, Scotch terriers, black and tans, Yorkshire terriers, King Charles or Blenheim spaniels, Italian greyhounds and miscellaneous classes, \$10 to first and \$5 to second in each class.

The special prize list will be published next week.

Address all communications to Chas. Lincoln, Lock-box 309, Pittsburg, Pa.

#### PREVENTING DISTEMPER.

Editor Forest and Stream:

In one of my late letters to Forest and Stream I wrote of M. Pasteur's (of the French Veterinary College) discovery of a means of vaccinating chicken cholera in connection with my article referring to the modifying and preventing of distemper in dogs by the same or a similar method. It may be of interest to your readers, certainly to the scientific ones, to learn of M. Pasteur's proceeding with the feathered race, as showing how feasible it may be in the case of the canine malady.

The gentleman in question has finally disclosed his famous result, so long awaited, and we copy from the *Cincinnati Enquirer* the following: "We have before us the text of the publication presented simultaneously to the Academy of Science and the Academy of Medicine. This revelation consists in the attenuation of the virus by simple contact with heat-mosphere. In effect it is the simple change of the mode of culture of the parasite, whereby the stages of its development are elongated. In this way the virulence of the virus is progressively diminished until, as the author says, 'we obtain a true vaccinal virus which is not dangerous to the animal, but is the forerunner of the disease, and protects against a mortal malady.' The author declares further: 'It is not to be believed that these attenuations of the results occur with fixedness and mathematical regularity. In some experiments the virus consists to exhibit considerable virulence even after the lapse of five or six months. The cause of this difference, however, becomes apparent on examination. Very often a high degree of virulence ceases suddenly with the death of these microscopic parasites. The slightest disturbance in the habitual conditions of the culture, or the presence of the virus in the air, is the necessity of 'temperization,' which M. Pasteur invokes in passing, as the true cause of his silence to the present time.

"The attenuation of the virus is the capital fact. But what is the real cause of the diminution of the virulence?

"The cultivation of the parasite requires as a necessity an absence of air. This parasite is therefore one of those which M. Pasteur has already characterized *exclusively*. It cannot develop in the presence of the air. Is it then the oxygen of the air which reduces the intensity of its virulence? Does the parasite undergo such attenuation in the presence of oxygen as to suffer modification in its effects?

"This hypothesis was easily verified by experimentation. For it is true that in the experiments conducted by Pasteur, with all his characteristic precision and delicacy, the virus kept in hermetically sealed tubes lost none of its poisoning power, while that exposed to the air gradually lost it altogether. The problem we study thus resolves itself," said M. Pasteur. "It is the oxygen of the air which enfeeblies and destroys the virus."

"And further he adds:

"We have here probably more than one isolated fact. We have come into possession of a principle. We may hope that the inherent action of oxygen, a natural force present everywhere, may show the same efficiency with regard to the virus of other diseases. The widest generalization should be made at once of this method of enfeebling the virulence. It details a virtue from the cosmic order of things, so to speak. May we not, indeed, attribute to this fact the limitation of epidemics in our times and in the past?"

"This modification induced in virus by the action of the atmosphere has been long known and appreciated. We have, for so long a time as we have had it, protected vaccine virus from the air in every way. Exposure to the air destroys it. We keep from the air by wrapping in lead foil, we seal it hermetically in glass tubes by the aid of the flame of a lamp."

In the first article we read referring to M. Pasteur's discovery it likewise stated that vaccination was resorted to in France for distemper in dogs, but particulars were not given. We believe, however, that before long it will be, if it is not already, as efficacious as the vaccination of the human patient for smallpox; but we are not so sure that vaccine matter is the true virus. The widest generalization should be made of this method of enfeebling the virulence. It details a virtue from the cosmic order of things, so to speak. May we not, indeed, attribute to this fact the limitation of epidemics in our times and in the past?"

Hoxo.

#### WHAT IS A COCKER?

ANN ARBOR, Dec. 12.

Editor Forest and Stream:

I have canvassed the various views presented in late issues of your valuable and "high-toned" paper touching the standard of the modern cocker, and while I appreciate the one great object that seems to animate all these writings, I see in some of them a decided leaning rather to their own strain of dogs than to the fixing of a universal standard that shall govern all classes. I know it will be found a difficult, possibly a thankless, task to adjust the various opinions as to the weight, size and the manifold points that are to make up correct judgment in preparing this standard. Therefore men of mature judgment, men who have spent many years of their lives in studying the nature, habits and physical proportions of this bright, beautiful dog, men who can see by that knowledge, gained by long and familiar experience with the cocker, what is required to form this standard in order to bring him up to the perfection demanded, should be put on this committee. The more I hear from those interested in this subject, both through your paper and from private correspondence, the more I am convinced that we will have either an excellent and judicious criterion from which to judge the modern cocker, or we shall have an abortive method which will be erroneous, impracticable and unsatisfactory to all save those, perhaps, who are especially and particularly interested. Now let me say here that I ask no preference in this matter, nor will I have anything more to do with it than to open the way to see that the right men are placed on this committee. I have no axe to grind, and I hope what I may say will be construed as meaning only a deep and abiding interest in the cocker; to lift him out of the slough of uncertainty and doubt into an honorable and creditable position where he shall stand among dogs the peer of the best and inferior to none. That he possesses the highest and best traits of canine quality, both for the field and the house, there is no one who knows this intelligent and beautiful dog will deny, and they who know him best through long years of familiarity and educational receptivity will be the proper ones to stand in judgment on his standard. To feel that the great credit is due to "Learn" for bringing the best and the best of the best cockers to light, and to feel that the credit is due to the friends of the cocker, but I cannot agree with him when he puts into nomination as the standard-bearer of this important principle one so young and of so little real knowledge of the cocker, when there are so many prominent men and excellent judges whose names have never been mentioned, nay, have been entirely ignored. I am not opposed to Mr. Macdougall personally, but only as a representative of a principle which many others understand better than he. I think I know the tone and the temper of the best cocker breeders in this country, with whom I have had some correspondence on this very question of a standard. I know that if this suggestion of "Learn's" nomination is insisted upon, the whole affair will terminate in a grand fizzle, and we will be further from the end than before. I think you, Mr. Editor, as the representative of the oldest sporting paper now published, should take the initiative, and either adopt my views, which are broad and liberal, or suggest some other which will appear to be a good sense judgment of those who have been interested in the breeding and culture of the cocker. If as some others claim that the cocker is "a mongrel" or a "made breed," then certainly it is a difficult and important task to place him just where he belongs, which will require all the observation, tact and judgment possessed by those whom long years have made competent to undertake the work. Now, Mr. Editor, I hope we shall hear from you, and that you will take such interest in the preparation of a standard for the cocker that has heretofore neglected you, for bringing the best and the best of the best cockers will cut no unimportant figure in bench shows hereafter if justice and right is done him, but if these are made subservient to private intrigue or individual advancement, it is far better to let the matter rest where it is than to engender animosity and create a fictitious standard that will degrade this bright and beautiful dog to the vilest

"Mongrel cur of small degree."

We want no "club" such as has been talked about; we want no "prize of \$50"; we want no "bench show" judgment as at present recognized; in fact, we want nothing to do with "fixing up a cocker" that comes nearest to our present standard, until there is a just and sound standard to judge him by. Who that has read about the judgment of the cocker in our "bench shows" already had, who that has seen the impotent and lame decisions that have caused the blush of shame to mantle the cheek of him who knows the cocker, will acquiesce in these recommendations, so devoid of good judgment, so recalcitrant to the knowledge of what truly belongs to this grand little dog. While we have such breeders and lovers of the cockers as McKen, Whitman, Cummings, Pritchard, Allen, Hunt and others too many to individualize, I trust his good qualities will be appreciated and the genius of his dogship will be kept spotless and untarnished from the machinations of schemers and selfish propagandists. Let us have men, not boys, to fix the status of the modern cocker; then let us all do whatever lies in our power to cultivate and bring these field and house pets up to a commendable standard. Let us all, who are true friends of the cocker, work right up to the standard that shall embrace the good of the breed, its future usefulness, strength and beauty, place him where he belongs in the strain that shall elevate him to a higher destiny and prove him not to be the least valuable acquisition to the true sportsman. I will assist with money and influence to erect such a standard if you will give the cause publicity and help us on to the acquisition of a better status than has heretofore governed the cocker. I believe the largest breeders, from obvious causes, are, as a rule, most worthy to be appointed on this committee. Now is the accepted time, and let all true friends of the cocker strike while the iron is hot and can be molded into perfect and just instrument for the preparation of a cocker standard.

SENEX.

THE COCKER CLUB.—1182 Chestnut Street, Elizabeth, N. J., December 14.—DEAR SIR: As you have doubtless seen in the columns of FOREST AND STREAM the proposal to establish a club in the interest of cocker breeders and exhibitors, and the request that I should act as Secretary *pro tem.*, to which I have acceded, I take pleasure in laying before you the general outline of what is proposed to be done. You will readily understand that these ideas are by no means fixed, and it is the province of gentlemen who may join the club to make any proposition they may desire to have placed before the associate members. I send you the views which have been presented to me and have been talked over by myself and friends in this neighborhood, and these most applicable to

attain the desired end. First I will state the objects of the club, which are as follows:

The framing of a standard for the judging of cockers and spaniels.

The offering of extra premiums at bench shows at which suitable classes are given, and where the show authorities will select competent judges from a list compiled by the club.

In England several clubs exist, such as the Mastiff, Bulldog, Fox Terrier, Irish Terrier, and Dandie Dinmont Terrier, and the good they have done in advancing the breeds to which they are devoted is incalculable. Such being the case, we can hardly do better than accept them as a guide for us in forming our club. A gentleman of this city, who was one of the originators of the Irish Terrier Club, has given me the following information as to how that was formed and what the club did:

A circular letter was sent to every person known to be interested in the breed, and from the list of those who expressed a willingness to accept a dozen was struck off as a committee of management, and sent around for the vote of the members. My informant says that such a large committee was found to work slowly and much delay business, and that one of seven would expedite matters materially. The whole management of the club and the election of new members falls to the lot of this committee. Having thus formed their club, the Irish Terrier committee men waited upon the English Kennel Club committee, and expressed their willingness to give additional prize money, together with medals, provided the Kennel Club would select from a list of half a dozen names one gentleman to act as special judge of the breed. This the Kennel Club readily undertook to do, as thereby they were assured of a better premium list, and also of the support of the prominent breeders as exhibitors. The same course has been adopted ever since, and by the instrumentality of the Irish Terrier Club committee classes are given at many shows where none were provided before, and the breed has now become one of the most popular in the estimation of those who like a game terrier. An annual meeting of members is held once a year, when the new committee is elected to act for the year then ensuing.

It is just such a club as that that we require here to do away with the present very much diversified types of field spaniels and cockers as seen at our bench shows, and get some harmony in our exhibits by knowing what we must all recognize as the standard. It is not my province to advance any views as to the standard. That remains for the committee to do. All I am desirous of doing is the procuring of your name to put on the list of members. The annual dues will be either \$2 or \$3, as determined by the committee, and as an entrance fee will likely be required from those who join after the organization of the club, it will be an advantage for you to give me a favorable answer at your early convenience, besides that I want to get things in running order as soon as possible. Yours respectfully,

Geo. D. MACDOUGALL.

THE COCKER CLUB.—We should be pleased to comply with the suggestion of "Senex" and those who have seconded his request that the FOREST AND STREAM should send out circulars to the cocker breeders had that request not come to us after we had already received and published Mr. Macdougall's assent to "Learn's" nomination of that gentleman as Secretary *pro tem.* To so interfere would be ungracious, and indeed we believe that the opposition to "Learn's" nomination has arisen from a misapprehension of just what our correspondent really meant. To put cocker breeders into communication with each other it is necessary that some one individual shall do the clerical work. Mr. Macdougall has expressed his willingness to perform that labor, and offers to act as a temporary secretary until those who are interested shall by their ballots appoint the secretary and committee of the proposed club. The cocker breeders who join the club have it entirely within their power to elect whom they please. The FOREST AND STREAM hopes to see a large enrollment in the proposed club and a competent secretary put into office by the ballots of the members. The whole direction of the club must be in the control of a majority of its members. Let that majority decide by their votes.

FRENCH TRUFFLE HUNTING.—The following extracts, taken from a letter recently printed in the *Times*, are of interest to dog lovers. The gathering of truffles gives bread to a considerable portion of the peasantry in the neighborhood of Bordeaux, and the account of how the dainty is found is an attractive one. The extract is as follows:

The ground is red, a trifle stony, and not over productive. The good peasant has to toil and moil, and then gets but a poor return. He carefully selects the richest spots, those that are warmed by the sun, and then he plants his crop. It is used to be a notable vine country, and people made a good living with their vine crops; but alas! the terrible phylloxera came and destroyed the grape, and things were going, at least with those who owned vineyards, from bad to worse. It became then a necessity that many of the peasants who worked in the vineyards should find some other pursuit. But necessity is the mother of invention, and the peasants, who had long known that truffles existed in their grounds, now set about looking for them.

A man alone cannot always find a truffle. In this country the assistance of that animal, sometimes associated with good St. Anthony, is dispensed with. Perigord truffle-hunters still worship the pig as the great discoverer of the cryptogram. The pig has a rare nose, but he is a glutton. Think only of the many lovely truffles these brutal and gluttonous pigs have surreptitiously devoured! There has been heard a crunch, then a grunt of satisfaction, and the truffle is there which, had it been rescued from the animal's jaws, would have graced the windows of the great Chevet in the Palais Royal and attracted all Paris, has gone for ever, to simply please the indiscriminating appetite of a hog. Our peasant here employs a dog, and the instinct of the animal and the intelligence of the man are combined.

The dog himself is no special breed. We call him a *griffon*. Let him be of the size of a pure race. You would pass him by without comment at your dog show. I know in New York you have gone crazy about dogs, and truffle-hunters, and I have a profound admiration for the great skill this poor

P. H. BRYSON'S GLADSTONE

little French griffon shows. I would put his fine nose and instincts on a par with your best blooded stock. A griffon, then, has a delicate sense of smell, and all that has to be done is to educate him. Catch him spoiling a truffle! He would no more do that than would a retriever chew up a woodcock. In order to educate the dog he is scantily fed, and only given bits of bread or pieces of meat which have been rubbed with truffles. One might say that though the dog's face was scant it was well flavored, and quality took the place of quantity.

In hunting for truffles with a dog, the animal quarters, leaving not a foot of ground uncovered. He comes to a full stop, and points whenever he noses a truffle. He not only points, but sets to work to find the truffle. He whines and commences to scratch, and if the truffle is not too deeply imbedded he will drag it out. Whenever he flutters one, or has indicated the place where a truffle is discovered, he is rewarded. Besides being called "good dog," he is given a piece of cheese or a fragment of cake.

## GLADSTONE

**CHAMPION GLADSTONE** is owned by Mr. P. H. Bryson, of Memphis, Tenn. He was bred by Mr. L. H. Smith, of Strathroy, Canada, and was whelped July 23, 1876. Gladstone is by Llewellyn's Dan out of Higgins' Petrel; he is a blue Belton and weighs about fifty-five pounds. He is powerful in the loin, fore-arm and hind quarter, with plenty of chest and the very best shoulders, and the most perfect feet. He won the Puppy stakes at the Tennessee Trials held at Nashville in 1877, by a score of 64; out of a possible 66, the highest score made by any single dog in the United States. He won third with dog Whip in the Brace stakes at the same meeting, also second with the half brother Lincoln at Nashville, in 1878, in the Brace stakes. It is claimed he is the fastest all-day dog in America. In the race against Joe, Jr., at Florence, Ala., December, 1879, owing to a broken tail, he could not be hunted for two months before he ran. His speed and bottom were so apparent the judge for Joe, Jr., stated after the race that Gladstone was a third faster than Joe, Jr. One thousand dollars to five hundred was offered at the end of the second day that Gladstone could beat Joe the third day, but this offer was declined. He ran through this race with his broken tail galled in mud. He was entered in the Free-For-All at Vincennes, in November last, and sold in the pools almost equal to the balance of the field, which was composed of some of the best dogs in America. A snow-storm prevented the race.

He won first in the All-aged stakes at Robin's Island, on the fourth of this month, in a class of twenty-seven dogs many of whom were the finest in the East. He has never been beaten on the bench, and numbers the following as his winnings: Champion First in Open Class; Special for best English setter, and Special for best setter of any strain, St. Louis, 1879. Champion and Special for best setter of any strain, Boston, 1878; Champion and Special for best imported setter of any strain, and Special for best setter imported or native, Baltimore, 1878. Mr. Bryson has perhaps had the highest offers for Gladstone ever made for any setter in the United States, but he refuses to sell him at any price.

**IRISH WATER SPANIEL KENNEL.**—Messrs. Whitman and Oloot, Chicago, Ill., have named their kennel of Irish water spaniels, Excelsior Irish Water Spaniel Kennel. This kennel, comprised of Champion Barney, said by J. S. Skidmore to be the best dog of the breed ever sent to America; the

dog Mike, also imported from Skidmore's kennel, and winner of several prizes on the Bench in this country, together with the bitch Bridget, imported from Richard White, Dublin, Ireland; Lady and Queen of the River, descendants from the noted Sinbad, make a kennel equal if not superior to any in America. It is believed to be the only one having two first class stock dogs imported from the best kennel in England.

## KENNEL MANAGEMENT.

23 **HAMMER-LOSS.**—My bitch got out while in heat and was lined by a mongrel. She now has puppies three days old. What can I do to get her in hunting shape? Ans. Kill the puppies and dry up the bitch.

23 **G. H. B., Nashua, N. H.**—What shall I do for my pointer puppy eight months old? About three months ago he had two fits and I thought he had worms and gave him areas out and followed it up with castor oil. He passed blood. To-day he had a fit and ran around the room and snipped and bit for about two minutes and then came to himself again. Ans. The puppy needs plenty of exercise which will probably put him all right.

24 **T. A. G., Esopus, Ulster Co., N. Y.**—The best book on dog training is by Col. Hutchinson. English edition \$3.75, or same combined with treatment of dog diseases by Duks and Mayhew, American edition, \$3. We can furnish either.

25 **J. P. S., Leavenworth, Kansas.**—1. Can you tell me some safe cure for distemper? I have used various remedies, but have found that they often left the dog in bad shape. 2. I have a dog that is just recovering from a very severe attack of the mange. I used Glover's mange cure on him after trying almost everything else, and now he seems in perfect health; no fever, appetite good, but his hair does not seem to start. He has been apparently perfectly well for over three weeks now, but the hair obstinately refuses to come out and he is still as bald as a billiard ball. 3. Please give me the pedigree of Dr. Aten's Glen. Ans. 1. There is no specific for the cure of distemper; each case requires special treatment. 2. Try crude petroleum, rubbing a little in at a time. A friend of ours recently was very successful in its use. 3. Of course, if the roots of the hairs are destroyed nothing will do any good. 3. Dr. Aten's Glen is out of Mullin's Belle by Colburn a Dash. Dash by Putnam's Dan out of Valentine's Fannie. Dan by Paul Mead's Dash out of Putnam's Nell. Fannie out of Talcott's Nell by his Sport. Nell by W. Watson's black and tan dog out of Munkittrick. Mullin's Belle by Polhemus' imported Duke out of Jane. Jane by Robinson's Jack out of Thompson's Belle. Jack by Putnam's Dan out of Palmer's imported Belle. Thompson's Belle by Rodman's Dash out of Fannie. Rodman's Dash by Paul Mead's Dash out of Palmer's Belle.

26 **H. W. H., Lowell.**—I have a hound twelve months old whose eyes are small. Five months ago a cat scratched one eye; since then it has run a great deal. Both eyes have been quite weak. The hound then became unwell and at times refused to eat. The dog has been fed on fresh meat. What shall I do for him? Ans. Feed no meat for a month, and wash the eyes with tepid water twice a day.

27 **F. M. P., Madison, N. J.**—What can I do for my coon dog? I have owned him four years. A year ago he commenced coughing very badly and I supposed he had caught cold, but he has kept that cough now for a year. He at times tries to choke something up, but he does not succeed. A gentleman recently told me that he has seen coon dogs in the South troubled with exactly the same thing, and that the cough is caused by hair getting in the wind pipe. Ans. The dog should be carefully examined by some competent surgeon to ascertain if there is a foreign body that can be removed. See Dr. Dancer, Central Hotel, Orange, N. J., he will make examination.

## KENNEL NOTES.

## NAMES CLAIMED.

**Ree.**—Mr. John W. Woodruff, of Chicago, Ill., claims the name of Ree for Irish setter puppy out of Dell by Elcho II. recently purchased from Dr. J. J. Jennelle, Du Quoin, Ill.

**Rap.**—Mr. Edmund Orgill, of Brooklyn, N. Y., claims the name of Rap for pointer dog puppy out of Clymont (Flake-Lily), by Rocket (Claude-Baump).

**Rival.**—Mr. Edmund Orgill claims the name of Rival for pointer bitch puppy out of Clymont by Rocket.

**Rowell.**—Mr. Edmund Orgill claims the name of Rowell for pointer dog puppy out of Ruby (Flake-Lily), by Home (Sensation-Lose).

**Ruby.**—Mr. Edmund Orgill claims the name of Ruby for pointer bitch puppy out of Ruby by Home.

**Melody.**—Mr. Edmund Orgill claims the name of Melody for beagle bitch puppy presented to him by Gen. Rowell, Carlisle, Ill.

**Tuck.**—Mr. Edmund Orgill claims the name of Tuck for fox terrier dog puppy by Nip out of Wasp.

**Dee.**—Mr. Edmund Orgill claims the name of Dee for fox terrier bitch puppy by Nip out of Wasp.

**Grip.**—Mr. Edmund Orgill claims the name of Grip for fox terrier dog puppy by Nip out of Crib.

**Klea.**—Mr. Hugh L. Willoughby, of Saratoga Springs, N. Y., claims the name of Klea for his black with white markings cocker spaniel bitch puppy, whelped Nov. 18, 1880, out of Dolly by Wildair.

**Tear.**—Mr. Byron B. Fowler, Glenn's Falls, N. Y., claims the name of Tear for his thoroughbred St. Bernard puppy, whelped June 10, 1880, out of Mr. Alfred Brunet's Gretchen by same owner's Don.

**Palsey.**—Mr. M. H. Clark, Clarksville, Tenn., claims the name of Palsey for Irish water spaniel puppy out of Lady, recently purchased from Messrs. Whitman and Oloot, Chicago, Ill.

**Cockatoo.**—*Gypsy.*—In our issue of December 2, Mr. S. G. Bovington's name was published. Mr. S. G. Bering, Jr., we wish to make correction, and state that Mr. Bovington claims the name of Gypsy for his bitch puppy out of Burt by Heck.

## SALES.

**Elcho II.**—*Dell Whelp.*—Dr. J. J. Jennelle, of Du Quoin, Ill., has sold to Mr. John W. Woodruff, Chicago, Ill., a red Irish setter dog pup by Elcho II. out of Dell.

**Irish Ranger.**—*Irish Countess Whelp.*—Dr. J. J. Jennelle, of Du Quoin, Ill., has sold to Mr. L. F. Kelly, Princeton, Kan., a red Irish setter bitch pup by Irish Ranger out of Irish Countess.

**Judy and Sandy.**—Mr. M. H. Clark, of Clarksville, Tenn., has purchased the Irish water spaniels Judy and Sandy from Mr. W. H. Holabird, Valparaiso, Ind.

**Sally.**—Mr. F. F. Pitcher, Riverside Cocker Spaniel Kennel, Claremont, N. H., has disposed of the cocker spaniel bitch Sally (Ship-Faury) to Mr. G. Wilson. Sally was bred by Mr. L. J. Weston.

**Flirt.**—Mr. F. F. Pitcher, Riverside Cocker Spaniel Kennel, Claremont, N. H., has sold to Mr. Wm. Lee, the cocker spaniel bitch Flirt out of imported Juliette by imported Ship, whelped May 25, 1877.

**Bob-Flirt Whelp.**—Mr. F. F. Pitcher, Riverside Cocker Spaniel Kennel, Claremont, N. H., has sold to Mr. S. Porter a dog puppy out of Flirt by Bob.

**Dan.**—Mr. C. Du Tour, of Cincinnati, Ohio, has purchased from Mr. H. R. VanderSmith the red Irish dog puppy Dan, out of Bausch by York.

**Countess Bear.**—The Montview Kennel, Columbia, Tenn., has sold to Mr. B. H. Farnell Llewellyn, South Ormsby Hall, Lincolnshire, England, Countess Bear (Dan-Countess).

**Mike.**—Mr. W. R. Wells, Jr., Chatham, Ont., has sold Champion Irish water spaniel Mike to Mr. J. H. Whitman, Chicago, Ill.

**Rabbit and Squirrel Dog.**—Mr. N. Elmore has bought for Mr. Chas. H. Chase, of Nashua, N. H., a fine rabbit and squirrel dog.

**Douglas and Thistle.**—Mr. John Davidson, of Monroe, Mich., has sold Douglas and Thistle to a Western gentleman.

## DEATHS.

**Laird.**—*Hamilton, Ont.*, Dec. 15, 1880.—I had named the Gordon setter received from Dr. Niven, Laird. You will be sorry to hear that Laird died on the 7th inst. very suddenly, showing no symptoms of disease.

E. TINSLEY.

**ENGLISH FOX HUNTING.**—The item to which this caption was given last week, and with which it was intended to appear, was this:

The Chidding fold hounds, of which Mr. J. Godman is master, met at Bromley, near Guildford, on November 18. A fox was soon found, and the hounds were in full cry when

MAX WENZEL'S CHIEF.

## CHIEF.

on coming to Alden's Hollow, the whole pack went over the brink to the bottom of the hollow, a depth of nearly forty feet. Two of the hounds were killed, and eight others seriously injured.

CHIEF is owned by Mr. Max Wenzel, of Hoboken, N. J., and is a very fine, well made Irish setter dog of fifteen months, and his having been trained with good judgement, landed him at the head of his class in the Puppy Stakes. He is by champion Berkeley out of champion Duck, both sire and dam being owned at this time by Mr. A. H. Moore of Philadelphia. Chief won second in a class of twenty-seven entries, N. Y., 1880. Hissire, Berkeley (Elcho-Loo II.), was whelped July 10th, 1876, being bred by the St. Louis Kennel Club, and has won the following prizes: Hampton, Iowa, 1877, second prize, puppy stakes, nineteen entries; St. Louis, 1878, first prize, open class; also following specials: best brace with his dam, Loo II.; best pair with Loo II.; best kennel with Loo II.; best setter of any age or breed bred in America; best setter bred in the United States. Boston, 1878, champion prize; also specials; best pair with Loo II.; best kennel with Loo II., etc. New York, 1878, champion prize. St. Paul, Minn., 1878, champion prize. Philadelphia, 1879, champion prize; also special for best Irish setter dog; St. Louis, 1879, champion prize, also special, with Duck, for best pair of Irish setters, and special for best Irish setter dog; New York, 1880, champion prize; St. Louis, 1880, champion prize, also special for best Irish dog or bitch in the show

Duck (6209 English Kennel Club Stud Book), the dam of Chief, was imported by E. F. Stoddard, of Dayton, Ohio, and bred by Dennis Reidy, Esq., Castle Island, Kerry County, Ireland. She is by King's Erin, out of Rose. Her winnings are as follows: Before importation, Birmingham, 1875, first prize; Brighton, 1876, second prize; Wellington, 1876, first prize; Nantwich, 1876, first prize, and champion cup for the best sporting dog exhibited. Since importation she has won: St. Louis, 1877, first prize; St. Louis, 1878, second prize; Boston, 1878, first prize; Baltimore, 1878, champion prize; St. Paul, champion prize; Detroit, 1879, first prize; and special prize for best Irish setter dog or bitch; St. Louis, 1879, champion prize, and also special for best Irish bitch and, with Berkeley, special for best pair of Irish dogs. It will thus be seen that Chief comes of "mighty purty stock."

## The Rifle.

HON. O. F. WINCHESTER.

[From the New Haven Palladium, Dec. 11.]

THE American flags, displayed at half mast yesterday morning from the turrets of Winchester's armory, announced to the gathering workmen and the passers that the genius which had conceived that great enterprise, and the hand that placed in motion its swift flying machinery, lay palmed in death. The death of Governor Oliver Fisher Winchester was not a surprise to those who were aware of his feeble condition for the past few weeks, yet, as is natural when a life that has been busy and eventful with enterprises closes, the community stops for a moment to review that life and regret its dissolution.

Although the most active, prosperous and useful portion of the Governor's life has been spent in this metropolis of Connecticut, he was not a native of the State, being born in Boston in November, 1810. Living in Boston under its peculiar influence for a considerable time he naturally became imbued with a knowledge of the importance of education as a bulwark for our republic, for the maintenance and progress of which he gave such tangible support in later life. The early years of his life gave evidence of that energy and enterprise which produced the success which crowned his life-work, and made him such an important factor in the commercial and manufacturing interests of the city of his adoption. At seven years of age he left the city for farm life, attending school in the winter and working upon the farm in the summer. At fourteen, with these limited means of education, he was apprenticed to a carpenter. Faithfulness and broadness of character marked this epoch of his life, as in all subsequent periods of his existence, and six years later he went to Baltimore as a master builder. Although a mere youth he took the contract for building a church, which he consummated with success. In 1837, then twenty-seven years of age, he changed his business and opened the first men's furnishing store in Baltimore. He remained there eleven years, when, in 1847, he came to this city, and since then his life and enterprise have been well known by the older inhabitants of the city. As a natural outgrowth of his business in Baltimore, he invented a perfectly fitting dress-shirt and obtained a patent for it in February, 1848. He immediately began the business of shirt-making, a new business for those times, and was located on State street, in what is known as the old Garfield building, only half of which is now standing. Patronized at first by appreciative friends his business soon increased, eliminating in the extensive factory on Court street, between Olive and Union streets, and his partnership with J. M. Davies. The enterprise was a success, sewing machines taking the place of hand labor, and hundreds of thousands of the patent shirts were produced. It was here that the fortune which was the basis of his other enterprises was amassed.

In 1857 he became interested in a new fire-arm invented by Benjamin F. Henry, of Centerville, and a company was formed for its manufacture. The shop was located on Artisan street and Mr. Winchester was a large stockholder. The name of the company was the Volcanic Arms Company. The enterprise did not prove a success, and Mr. Winchester purchased the entire stock and formed a new company in 1860, under the name of the New Haven Arms Company. He was selected as its president, and immediately assumed control of its affairs. This may be said to be the beginning of that great business which is now known the world over, and which has added so much to the commercial strength of the city, giving employment for a longer continuous period of time to more people than any other enterprise ever conducted in this city.

A sketch of the rise and progress of this enterprise would almost be a record of the improvement in fire-arms for the past twenty years. Mr. Winchester was progressive and eagerly sought out the latest improvements and inventions, calling to his aid and the aid of the company, at the head of which he stood, the most improved machinery for manufacturing the goods. In 1865 a special charter was obtained, and with a capital of \$500,000 the Winchester Repeating Arms Company was established. New inventions were adopted at this time, and the Winchester repeating rifle soon came to be known as a standard fire-arm. The principal improvement was one designed to facilitate the transfer of the cartridge from the magazine to the barrel. Improvements were made in 1873, and still further in 1876, the latter being called "The Centennial." In 1872 the company began the manufacture of cartridges, which forms a large element of its business. It need not be added that in every respect this enterprise is a success, and brought to the founder and mover of it all a large fortune. This fortune, however, was not for self alone. Mr. Winchester was a liberal man and contributed largely to various worthy objects.

In 1876 he gave to Yale College the tract of land of thirty-six acres north of his residence, for which he paid \$90,000. This was donated for the establishment of an astronomical and physical observatory. This tract of land is one of the most eligible for residences within the limit of the city, and will in time bring to the college many times its cost to the donor. He also contributed liberally to other departments of the college, more especially to the scientific school. He was connected with the Calvary Baptist Church, and assisted materially in the erection of the beautiful house of worship at the corner of York and Chapel streets.

He was a friend to all plans of education which would uphold and benefit the people. As a man occupying a prominent position in the city and always interested in its welfare, he was naturally drawn into politics. His first public position was councilman from the old Fourth Ward in 1853. He was also a presidential elector. In 1866 he was nominated and elected lieutenant governor of the State on a ticket headed by General Joseph R. Hawley for governor.

Governor Winchester early became interested in pomology and floriculture, and, as his fortune increased, made a practical use of his tastes in the beautiful grounds on Prospect street surrounding his residence. These are the most extensive and most beautifully kept grounds in the city. No expense has been spared to make them complete productions and artistic in arrangements. Here in his beautiful and palatial home, surrounded by the luxuries of all that could be accomplished by a skillful gardener sustained by liberal means, Governor Winchester passed the twelve months of illness under the tender care of loving friends and relatives. From the broad windows are extensive views to inspire the heart and please the imagination. To the west and south the rugged front of West Rock, with outlines melting away into the dense forests of Edgewood, while nearer, the great armory, teeming with life, showed its long line of walls and its banners of curling smoke. City and country, forest and plain, meadow and stream blend to make the view a delightful one. Governor Winchester was endowed with wonderful perseverance and indomitable courage; he saw the red and golden streaks of sunshine where to others it was cloudy and overcast. He was a representative of what may be accomplished by hard and honest labor by every American boy. His death was the result of a stroke of paralysis which he sustained about a year since. Although unable for the past twelve months to give his attention to his business, he was confined to the house but a few weeks previous to his death. He leaves a wife and a son and a daughter—William W. Winchester, intimately connected with his father in the arms company, and the wife of Thomas G. Bennett, secretary of the company.

## RANGE AND GALLERY.

CREEDMOOR—Dec. 18.—The Christmas match which took place to-day was another of those very attractive contests on the same plan as the popular match which was had on Thanksgiving. The shooting was at 200 yards, State model rifles, and the match was open to everybody. There was some uncertainty growing out of the naming of the match, some of the marksmen having an idea that the shoot was to take place on Christmas Day. There were 119 original entries for the match, and the re-entries ran the total up to nearly 700. The day was very cold and a cross wind made holding somewhat difficult, but with so many excellent off-hand shots present it became necessary to hold very close if any expectation was had of getting into the hundred prize drawers. Rifles were loaned and ammunition furnished free for the match by E. Remington & Sons, and the long list of prizes included many articles of large, aggregate value from leading houses. The conditions made the aggregate of two scores necessary to a record, each score to consist of five shots. Willie Robertson outdid himself and the records of Creedmoor by putting in a perfect score of five consecutive bull's eyes at 200 yards, while another score of 21 gave an aggregate of 46 points. When the scoring had

AMATEUR, Maryland.—Use a No. "0" Newhouse trap for skunks. Set near the mouth of the hole, and partially cover with grass and leaves. Bait with a piece of fresh meat. February and March are good months to trap the skunk.

LOWER BUNK, Windsor Locks, Conn.—I. We do not know the name. It is probably one put on a low grade of gun. 2. The price paid was probably sufficient, but of course it is impossible to answer such a question with certainty.

SCRIBER, Philadelphia, Pa.—There is no strict line between amateur and professional shooters. There are a number of men who are recognized as professionals; and each club must exercise its option in barring shooters from its matches.

CENTON, Chicago.—If your friend is not satisfied of the true nature of the "Dittmar sporting powder" ("refers only to blasting powder") send him one of our pamphlets which contains all the important FOREST AND STREAM articles on the subject.

G. H. T., Mount Kisco, N. Y.—1. Please inform me if migratory quail can be purchased in this country? Where and at what price? 2. Where can 100 native quail be bought and price? Ans. 1. No. 2. We know of no one who can supply them.

T. W. C., New Haven, Conn.—What is the best journal published in Florida giving information about the cultivation of oranges and other fruits of that region? Ans. The *San and Press*, published at Jacksonville, will probably give you the desired information.

FUNE, Atlanta, Ga.—You will find West Point, in White County, a good point to start out on a trapping expedition in Arkansas: game there, otters, coons, minks and wild cats. Send stamped envelope to C. L. Lindley, at that place, and he will give you all needed information.

N. E., Granby, Conn.—What class did J. N. Dodge's beagle bitch Belle win first prize in at Philadelphia, 1879? Ans. Class 42 for beagle bitches. First prize, \$15. No. 377, Dodge and Baker, Detroit, Mich. Belle (not Belle) white, black and tan, one year. Bred by Darwin out of Milley.

J. E., New York City.—Will you let me know the advantages of "hollow pointed bullets"? Are they adapted to target practice? Ans. They are intended to flare out on striking heavy game and by the great shock and tearing of parts produce instant death. They are not used for target practice.

CONSTANT READER, Brooklyn, L. I.—How much will it cost to import a pair of beagles from Europe? What would the duties amount to? Ans. Address E. B. Goldsmith, 58 Wall st. He can give you all information. See advertisement in Kennel column. We do not know the firm you mention.

MELAGRIS.—There are several patterns of turkey calls. Perhaps some of our Southern friends can instruct you better than we can how to make them. One style, the most simple, consists of a short piece of Spanish cedar through which is driven a nail, and across the head of the nail is drawn a piece of slate.

F. B. R., Elmira, N. Y.—Is there any paper published in the West that is devoted exclusively to sheep raising in California and New Mexico, or any paper that can give me any information on the subject? Ans. Write to the National Association of Wool Manufacturers, No. 95 Milk st., Boston, Mass. We know of no such paper.

J. N., Boston.—1. We can draw no comparison between the two makers, save to say that the English are altogether superior. 2. It has been satisfactorily demonstrated that a 28in. barrel will shoot as well as one of 30 or 32 inches. The only advantage of the longer barrels is the better possible sighting, while on the other hand the weight is increased.

C. S., Muncy, Pa.—1. A No. 10 gauge gun will, other things being equal, shoot better than a No. 12. 2. This is the reason why a distinction is made against the use of them. 3. The 28in. barrel will shoot as well as the 30in. barrel. 4. Your 28in. 8lb. gun will answer for pigeon shooting. 5. Carver is in England. We do not know when he proposes to return to this country.

NEW SUBSCRIBER, New Bedford, Mass.—1. Put your brass shells in a dish with hot water enough to cover them. Then add 2ozs. oxalic acid and let them stand half an hour. Wipe off outside and dry them thoroughly by putting in an oven. Then prime. For oxalic acid you may substitute  $\frac{1}{2}$ lb. muriatic acid, as before, and after ten minutes efferecing rinse, drying before you prime them.

PHEARANT, Harrisburg, Pa.—1. While hunting grouse the other day, after having carried some in my hunting coat, I discovered a curious looking fly in my sleeve. I inclose the same for your examination. Will you please inform me whether it is the so-called grouse fly. 2. Also, whether grouse so infected are fit for use? Ans. 1. Yes. 2. Undoubtedly. The fly does not render the birds less valuable for food.

SHELLS, Boston, Mass.—You omit to give gauge of your gun and it is therefore impossible to direct you about the loading. You can find out for yourself by practical tests with a target for pattern and penetration. The rules for loading vary with different gauges; by experimenting you may satisfy yourself what is required. Use wads two sizes larger than the size of your metal shells. Shells cost \$2 per box of 20.

J. P. S., Leavenworth, Kansas.—1. Can you supply me with Vero Shaw's book? 2. Has he published any article on the fox terrier? 3. Can you recommend a reliable cure for demerol? Ans. 1. Address Messrs. Cassell, Petter, Galpin & Co., 696 Broadway, New York. They are the publishers of Mr. Shaw's illustrated book of the dog. 2. Yes. 3. There is no specific remedy for demerol. Each case is different and requires special treatment.

SOUTH WEST VIRGINIA.—1. Where did Frank Forester (Herbert) reside? 2. What was his rank by birth as an Englishman? 3. What were his social qualities? 4. Ought not his Sporting Scenes and works of fiction of same nature to be ranked among the foremost of the kind in English literature? Ans. 1. In this country, at Newark, N. J. 2. He was the son of an English clergyman, William Herbert, Dean of Manchester; and the grandson of the Earl of Carnarvon. 3. Read "The Spirit Crowd" in this issue. 4. Yes. The Petersons, of Philadelphia, publish some of his works.

J. A., Jr., Indianapolis, Ind.—How can I get the California salmon trout which go to salt water and return like the salmon? I would like to introduce them into a stream in Connecticut and have tried to get the Commissioner of that State interested in them, but have failed. Ans. We are not sure just what fish you mean. If it is to be had at all it can probably be obtained from Prof. Baird, U. S. Fish Commissioner, to whom we have forwarded your letter. He has the California, or quinnat, salmon eggs in October and will have the eggs of a trout which unfortunately has several common names in the East. It is the *Salmo trutta* and is called by the following names: "California trout," "rainbow trout," "California mountain trout," "McCloud River trout" and, we believe, "red band trout." This may be the fish you mean by "California salmon trout."

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpeting, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Ad.]

## PUBLISHER'S DEPARTMENT.

## FURS AND FASHIONS.

The well-known firm of C. G. Gunther & Sons, No. 184 Fifth Avenue, New York has a most extensive and choice assortment of fashionable furs and fur-lined garments. The firm gives special attention to mail orders and does a very large business with out-of-town customers. The house sets the fashion in furs for the metropolis; and enjoys, besides this distinction, a very high reputation both for the character of its workmanship and for its business integrity.

See adv. of Novelty Pocket Scale. Geo. Betts, 575 Broadway. Holmboe Shooting Suits. Uphogrove & McLellan, Valparaiso, Ind. Hop Bitters purifies the blood and removes all pimples and eruptions.

One of Wilson's Adjustable Chairs would make an elegant hotel chair. See adv.

NOT STRANGE.—A Philadelphia firm writes to the FOREST AND STREAM: "We would remark that we hear more from our advertisement in your paper than from all our others put together, if this is of any satisfaction to you."

FOREST AND STREAM,  
A WEEKLY JOURNAL.

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

Published by FOREST AND STREAM PUBLISHING COMPANY, Nos. 39 and 40 PARK ROW (Times Building), New York.

Hotels and Routes for Sportsmen.

"THE FISHING LINE."

TAKE THE  
Grand Rapids & Indiana R.R.  
Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE  
Trout, Grayling, and Black Bass Fisheries,  
AND THE  
FAMOUS SUMMER RESORTS AND LAKES

NORTHERN MICHIGAN.

The waters of the  
Grand Traverse Region  
and the Michigan North Woods are unsurpassed,  
if equaled, in the abundance and great variety of  
fish contained.

BROOK TROUT abound in the streams, and  
the famous AMERICAN GRAYLING is found  
only in these waters.

The fishing season begins May 1 and ends Sept. 1.  
The GRAYLING season opens June 1 and ends  
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE,  
also abound in large numbers in the  
many lakes and lakelets of this territory.

The sportsman can readily send trophies of his  
skill to his friends or "club" at home, also for  
packing fish can be had at many points.

Take your family with you. The scenery  
of the North Woods and Lakes is very beautiful;  
the air is pure, dry and bracing. The climate  
is peculiarly beneficial to those suffering  
with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing  
the average in countries now enough to  
afford the finest of fishing.

During the season Round Trip Excursion Tickets  
will be sold at low rates and attractive train  
facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free of  
charge.

It is a joy to make sportsmen feel "at home"  
on this route. For Tourists a Guide (an attractive  
illustrated book), of 40 pages, containing full  
information as to accurate maps of the Fishing  
Grounds and Lake Cards, address A. B. LEECH,  
Gen. Pass. & Ticket Agent, Grand Rapids, Mich.

LOT B.

FOUR W. & C. SCOTT & SON, PREMIER QUALITY.

Top lever, double bolt, extension rib, bar rebounding double notch locks, pistol grip stock, horn head piece, solid name plate, Damascus barrels, choke bored; in English sole-leather case, lined with billiard cloth, with canvas cover over case.  
No. 4, 12 bore, 30 inch, 9 1/2 lbs. \$190  
No. 6, " " 9 1/2 lbs. \$190  
No. 8, " " 9 1/2 lbs. \$190  
No. 9, 16 bore, " " 10 1/2 lbs. \$200

LOT C.

FOUR W. & C. SCOTT & SON.

Quality next Premier. Made to special order by W. & C. Scott & Son for Jos. Butler & Co., and are so marked on lock plates, but have W. & C. Scott & Son stamped on body of action, and are equal to the Premier quality, except not so highly engraved.  
Top lever, double bolt, extension rib, bar rebounding double notch locks, pistol grip, horn head piece, solid gold name plate, Damascus barrels, in best English sole-leather case, with tan canvas cover over case.  
No. 10, 12 bore, 30 inch, 8 1/2 lbs. \$150  
No. 11, " " 8 1/2 lbs. \$150  
No. 12, " " 8 1/2 lbs. \$150  
No. 15, " " 9 lbs. \$150

LOT D.

SIX W. & C. SCOTT & SON.

Top lever, double bolt, bar rebounding locks, Scott's patent compensating lump, scroll fence percussion, the laminated steel barrels, handomely engraved and finished.  
No. 14, 12 bore, 30 inch, 7 1/2 lbs. \$160  
No. 15, " " 8 lbs. \$160  
No. 16, " " 8 lbs. \$160  
No. 17, 16 bore, 32 inch, 9 lbs. \$165  
No. 18, " " 30 inch, 9 1/2 lbs. \$165

These guns in Lot D must not be confused with Scott's "special" and other cheap qualities, as they are in every way superior to the cheaper made guns of the present time, having compensating lumps and better material in every way. The former price was \$225.

LOT E.

ONE W. & C. SCOTT & SON.

Double grip, under guard action, finest laminated steel barrels, highest quality throughout, pistol grip stock, 4 bore, 42 inch, 13 lbs. \$300

We do not believe there is another gun equal to this in this country for heavy shooting. Former price, \$350.

LOT F.

ONE J. D. DOUGALL, HIGHEST QUALITY.

Top lever, double bolt, bar rebounding locks, (Jos. Brazier's best), patent fore end, Damascus barrels, choked on "Dougall's Express System," 19 bore, 31 inch, 8 1/2 lbs., chambered for 2 1/2 inch shell, \$390.

LOT G.

TWO E. M. REILLY & CO., LONDON.

Top lever, double bolt, bar rebounding locks, Scott's patent compensating lump, finest Damascus barrels, elegantly finished guns throughout.  
No. 20, 16 bore, 30 inch, 8 1/2 lbs. \$155  
No. 21, 16 bore, 31 inch, 8 1/2 lbs. \$145  
Former price, \$400.

LOT H.

FOUR WESTLEY RICHARDS & CO.

Top lever, bar rebounding locks, extension rib fastening.  
No. 22, "C" quality, 12 bore, 30 inch, 8 1/2 lbs., patent fore end. \$125  
No. 23, "C" quality, 12 bore, 32 inch, 7 1/2 lbs. \$125  
No. 24, "C" quality, 10 bore, 30 inch, 8 1/2 lbs. \$135  
No. 25, "A" quality, 10 bore, 32 inch, 8 1/2 lbs. \$145

LOT I.

TWO WILLIAMS & POWELL.

Top lever, extension rib, patent fore end, pistol grip, Damascus barrels, choke bored, finest engraving, highest finish throughout.  
No. 26, 16 bore, 30 inch, 10 lbs. \$110  
No. 27, 16 bore, 32 inch, 8 1/2 lbs. \$110  
Former price, \$350.

LOT J.

TWO NICHOLS & LEFEVRE.

"C" quality (1150 lbs.), N. & L. action, extension rib fastening, patent fore end, pistol grip, fine Damascus barrels, choke bored.  
No. 28, 16 bore, 30 inch, 9 1/2 lbs. \$115  
No. 29, 16 bore, 32 inch, 9 1/2 lbs. \$115  
Former price, \$120.

LOT K.

ONE W. R. POPE, HIGHEST QUALITY.

Top lever, double bolt, extension rib through extractor, bar rebounding locks, pistol grip, patent fore end, finest engraving throughout.  
No. 30, 12 bore, 30 inch, 7 1/2 lbs. \$225  
Former price, \$350.

LOT L.

EIGHT W. W. GREENER.

Side snap action, bar rebounding locks, fine laminated steel barrels.  
No. 32, 14 bore, 28 inch, 6 1/2 lbs. \$45  
No. 33, " " 29 inch, 6 1/2 lbs. \$45  
No. 34, " " 30 inch, 6 1/2 lbs. \$45  
No. 35, 12 bore, 28 inch, 6 1/2 lbs. \$45  
No. 36, " " 29 inch, 6 1/2 lbs. \$45  
No. 37, " " 30 inch, 6 1/2 lbs. \$45  
No. 38, " " 30 inch, 7 lbs. \$45  
No. 39, " " 30 inch, 7 lbs. \$45

These guns are all cylinder bore for field shooting. Former price, \$55.

TRADE—"BEATS THE WORLD."—MARK.

**Old Judge Smoking Tobacco.**

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: THE OIL OF CREOSOTE. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking in the mouth. The unprecedented popularity of the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Try them and you will use no others.

Manufactured by **GOODWIN & CO., 207 and 209 Water St., NEW YORK**

## GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1b canisters.**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1b and 5lb canisters and 6 1/2 and 15 1/2 lbs kegs.**Dupont's Choke Bore.**—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 7 being the coarsest. Packed in 6 1/2 lbs kegs and 1b canisters.**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1b canisters and 5lb kegs.**Dupont's Rifle Fg.**—"Sea Shooting."—FFG, and FFGF. The Fg. for long-range rifle shooting; the FFG and FFGF for general use, burns strong and moist. Packed in 5lb, 1b and 5lb canisters, 6 1/2, 12 1/2 and 15 1/2 lbs kegs. Fg coarse, FFG fine. Dupont's Sporting, Mining, Superior and Blasting Powders of all sizes and descriptions. **Special Grades for Export.**—Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.Agencies in all the cities and principal towns throughout the United States, represented by **E. L. KNEELAND**, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.The Hazard Powder Co.,  
MANUFACTURERS OF  
GUNPOWDER.**Hazard's "Electric Powder."** Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.**Hazard's "American Sporting."**

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine-grained, quick-burning, for upland prairie shooting. Well adapted to shot guns.

**Hazard's "Duck Shooting."**

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

**Hazard's "Kentucky Rifle."****FFG Fg.** and "Sea Shooting" Fg. In kegs of 15, 25, and 60 lbs. and cannot 5 lb. FFG is also packed in 1 and 1 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" Fg. is the standard Rifle Powder of the country.**Superior Mining and Blasting Powder.****GOVERNMENT CANNON AND MUSKET POWDER;** also, **SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.**

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 30, 1880.

\*. The FOREST AND STREAM goes to press Wednesdays. Correspondents are requested to mail their communications so that they may reach us before that day.

You are making a mistake if you neglect to file your FOREST AND STREAM, and to have the successive volumes bound. They form a library which cannot be duplicated.

—This is an excellent time to call the attention of your friends to the merits of the FOREST AND STREAM. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

BEFORE these lines meet the eyes of our more distant readers the midnight bells will have tolled the Old Year into the past, and 1880 will have been succeeded by 1881.

We wish our readers a Happy New Year.

§ WE INVITE a careful reading of Col. Nicholas Pike's paper relative to the protection of song and insectivorous birds. The writer of that address speaks directly to Long Island farmers, but the facts cited apply to other agricultural districts as well. The system of protection urged for the lands adjacent to the great heterogeneous population of the two cities, New York and Brooklyn, will recommend itself to the good judgment of right-thinking sportsmen.

AMONG THE AMENITIES of editorial life are the kind words of cheer which friends send to us in approval of our endeavors to maintain for the FOREST AND STREAM a high standard of excellence. Especially do we value these expressions of appreciation when they are written by those whose long experience in the active labors of journalism lend an additional emphasis to their words. We publish this week such a letter of mid-winter gratulation, written by Gen. D. H. Bruce, editor of the *Syracuse Daily Journal*. Coming to us as it does spontaneously, and from such a source, it is a compliment indeed.

#### GAME PROTECTION IN WYOMING.

SOME TIME since we called attention to the formation in Wyoming of a Game Protective Association, and expressed the hope that it might do for that territory the work which was undertaken too late in Colorado.

We are happy to learn on the best authority that the prospects of this new association are most encouraging. The Wyoming Stock Growers' Association is lending all its influence to further the good work, and has in a body joined the Game Protective Association; moreover, the stock growers have pledged themselves as individuals to prosecute violators of the laws, and from such action on the part of such a body of men the best results are to be expected.

The worst slaughter of game in Wyoming does not come from the killing by skin hunters, for in the rough mountains which constitute so large a portion of that territory it is impossible to get green hides to market, as they have to be packed long distances on the backs of mules. Parties of hunters from the East, men who slaughter simply for count and to boast of their bags when they get back to civilization, are the ones toward whom the Game Protective Association must turn its attention.

The great extent of territory to be covered by the Association, and the fact that it is but sparsely settled, make it clear that, no matter how earnestly its members may work, they cannot do all that is necessary in patrolling the country and looking out for law-breakers. What is imperatively needed is a small mounted police force to ride the mountains and take cognizance of the doings of the hunting parties that may be traveling through the country. Mr. Moreton Frewen, now in this city, is endeavoring, with the co-operation of that veteran sportsman, Mr. Sam Ward, to secure a small appropriation from the general government, by means of which such a force may be engaged, and we trust that his efforts may be successful. No one, who has not traveled for successive years through the mountains of the West, can form any just idea of the rapidity with which, in many sections, our large game is disappearing. We trust that Congress may take this matter up and give it favorable consideration without delay. It is one which requires attention.

The amount to be expended is so trifling in comparison with the good that may be done by it, that it is difficult to understand how any thoughtful man can be doubtful as to the advisability of making the appropriation.

#### THE BRITISH RIFLE CHALLENGE.

THE invitation to visit Wimbledon and contest there in a friendly long-range match, which was sent by the chairman of the Council of the National Rifle Association of Great Britain to the President of the National Rifle Association of America, still remains unacted upon. This is owing to the fact that there has been no meeting of Directors or members since its receipt, nearly a month ago. The proposal to have another American team visit the leading English range meets with general acceptance. One of our contemporaries, expressing its approval of the match, says that "If the mountain will not come to Mahomet, Mahomet must go to the mountain. \* \* \* It must not, however, be forgotten that though America may accept this challenge and a team visit Wimbledon next year, the emblem of national pre-eminence in long-range shooting, the 'Palma,' still remains in America. \* \* \* Until the 'Palma' is won by a foreign team the title of champion cannot pass from America." Another journal of prominence says of the situation:

This communication arrives in good season, and we hope that it will be presented at the annual meeting of the life members in January next for the combined action of the association. \* \* \* There can be no reason why America should not take up the challenge and send a representative team to Wimbledon in June, 1881. American riflemen are well satisfied that unless we send a team to Wimbledon the 'Palma' will have to be placed on the shelf. Yet America, in the face of its numerous victories, can well afford to be magnanimous, accept the challenge and send over a team in 1881. If this letter is placed before the life members of the association there is not a particle of doubt that it will be accepted unanimously, in which case the several committees on practice, ways and means, etc., can be selected from the active workers of the association and the team carried to a successful formation.

The suggestion for a reference of the whole matter to special committees, made up in large part at least of mem-

bers of the association outside of the Board of Directors, is a good one. With such a management there is some prospect of a creditable showing being made at Wimbledon, and if those who are put in these positions of responsibility recognize that there are shooting men in other parts of the Union than New York, and on other ranges than that of Creedmoor, a great stumbling block in former matches will be avoided. If indications are to be relied on this match will be the one which will most try the ability of our shooters. The shooting men in the management of the Wimbledon gathering have not been unmindful of the methods on our American ranges. They have, they think, caught the secret of American team success, and are now prepared to add their experience to our system and assume the position which they so long held at the head of the world of marksmanship. There is no reason, however, for American riflemen to fear more than a close, well-fought battle; and, win or lose, a failure on our part to take up the challenge promptly and in the most liberal spirit can only be attributed to a narrow-minded policy or a prejudice ruinous to the best interests of American rifle shooting. For the first time we have the opportunity to hear the British Lion in his den, and our only ambition should be to give him an effectual reminder that in many points connected with long-range rifle practice he is woefully behind the age.

#### NOSE AND PACE.

CAN it be true that the breeders of pointers and setters, particularly those of the last named breed, are sacrificing nose for pace? To us, who have witnessed the field trials of this year, this question seems full of interest. While thinking this matter over we have fortunately found, in our advance pages of Vero Shaw's book, a paragraph on the subject that exactly meets our views of this very important point. It is as follows: "In field trials a fast dog looks flash, and by his superior pace can cover more ground, and therefore increase his chance of finding birds. The natural result of this is, that such a dog defeats his slower but surer companion, who keeps steadily plodding on throughout the trial, and would do so throughout the day without a fault, and probably would wear his gay companion down in half a day. That such a thing is done at every trial a reference to the reports thereof will amply testify, and thus, we trust, will have the effect in time of causing steps to be taken to remedy the evil. Field trials are such excellent institutions in themselves, if properly carried out, that every step should be promptly taken to prevent fashionable prejudices from doing any injury to the class of dog which is meant to be benefited thereby."

These are sound words and to the point, and are especially applicable to shooting as practiced in the East. What are field trials for? Are they to introduce to public notice some particular strain or strains of dog that will in a short-lived heat dazzle the eye of the inexperienced sporting public, much as the last scene of the pantomime does the school-boy during holiday week? Are they to be run in the interest of breeders to make a profit, and enable them thus to find a ready market for their stock, or are they to be run for the benefit of professional handlers? Looking at it in one light, it certainly would seem that there was a tendency that way. How many of the *bona fide* owners of dogs run last autumn handled their own dogs, or even could handle them if they would, and how many owners trained the dogs that were run? This is a question that needs no reply. It therefore cannot be expected that owners who, for some reason or another, are not personally acquainted with the individual traits and dispositions of their own stock can be competent judges of how their dogs should be bred for perfect working and the most thorough killing and lasting qualities. We despise a slow, poking dog; yet in a week's shooting we have seen more birds killed, and a beat swept cleaner over a tortoise of this kind, than over the bounding hare alongside. Of course it is a novel luxury for the tyro, who knows no better, to see a dashing fellow skim after him field after field, until he brings up standing on a bevy of quail or a brood of grouse, and if the net ends there it leaves a lasting impression. But take the slow and sure, the dog whose nose has not been sacrificed for foot, and beat out the same fields and find birds in each which the lightning dog failed to scent and passed, and which is the better dog? If there could be

devised some way at field trials to show up the number of birds passed by these air-splitters, it would rather astonish more than one of the hill-side critics. It has been well said that field trials are new in this country, and to judge from the expressions uttered by "a large majority" of spectators, one would be led to believe that for the first time in their sporting career they had positively witnessed a dog pointing out of a book or a chromo. We cannot say it is quite as bad as what Mr. Winkle said:

"What's the matter with the dog's legs?" whispered Mr. Winkle. "How queer they're standing." "Hush, can't you?" replied Wardel, softly. "Don't you see they're making a point?"

But it is something like this: "How grand," says one. "Glimpse your eye on his tail, how stiff," says another. "How staunchly he smells them; this is indeed a sight really worth traveling a thousand miles to see," says number three. And these encomiums are paid Master I'do simply because he has pinned some poor wretched, scared-to-death bird, when going up wind, and simply pointed it as he should, "because it's his nature to." It is now the skilled newspaper man gets in his fine work, and shakes the hand of the cheerful owner, whose feelings are way up in the seventh heaven until he is informed that his dog has lost the heat! It is pleasing incidents like this that help to interlard field trials with interest and break in upon their monotony, but it is dreadful humbug nevertheless.

Now, if any one can detect our saying in the foregoing that we do not believe in fast dogs that have good noses, let him write us down as but a sorry sportsman. But what we contend is this: that first of all comes the nose, and that speed is but a secondary consideration. Therefore, is not pace in the Eastern Field Trial rules rated too highly? We advise breeders not to sacrifice nose and bottom to obtain the qualities of a quarter-horse.

#### "IDLE TIME NOT IDLY SPENT."

IT was tantalizing enough to know that there were scores of eyes surveying our well-placed decets and winking at each other with airs of superior intelligence, as much as to say "Bless my boots! but that fellow on shore is oppressively fresh this morning. He had better get out in the sunshine and evaporate a little."

They are whimsical fellows; to-day they are inconceivably ignorant, as confiding and verdant as a plow boy on his first visit to town, becoming a victim to the most transparent lures; to-morrow they have become regular sharpers, detecting immediately the game sought to be played upon them; and again, the following day they have relapsed into their verdancy and the simplest fraud deceives. This was one of their knowing mornings, for they evinced an obstinate determination worthy of government mules not to take hold, but even a government mule can, with proper treatment, be prevailed upon to develop decent qualities. Stroke him with the hair and all that sort of thing before emphasizing your language and actions. If that does not suffice put a rope around his neck. The trout may avoid your flies, as impecunious dead beats avoid their creditors, but they can be brought to terms by having some luck, using a little diplomacy and other things. At your first cast, all the care and caution of a suppliant; at your first strike, the manner and action of a dictator.

Like the miller fluttering about the flame did these beauties coquette with the decets we offered them. It was an exhauster, almost an annihilator, of patience; but at last we heard an old trout say "Oh! you wicked little fellows, stand aside and let your poor old father show you how the thing is done. Now watch that Grizzly King. Here goes."

The youngsters, inexperienced and boisterous, had been threshing around like so many flails more intent on mischief-making than the more serious and important business of providing for the inner fish; but the old gentleman had a double object in view. First, his idea of cunningness in capturing the delicious looking fly; and second, the more selfish one of pandering to his appetite. Number one was a grand success, for coming up under the fly he quietly and quickly sucked it in and made no splash until the hook, responsive to the twist of the wrist, convinced him that his second idea was an epicurean fizzle. Of course the youngsters stood one side and said "Old Smarty, you have got yourself in a fine pickle and won't be bothering the boys any more. Get out of it, if you can. You are like many an older fellow; think you know it all, but now you have learned that the world moves and that old fish like old fogies may sometimes get left behind. Egad! it is cold to-day."

The old gentleman makes no reply. He had exciting business requiring his immediate attention. He seemed to have pressing engagements everywhere and was trying to keep them all, developing an astonishing amount of energy in the fractional part of a second. It was a regular game of Simon now up, now down, and then wig-wag. Merrily whistles the line as away he goes like a courser at the prick of spur. He displayed no appreciation of the esthetic quality of the sport. His conduct evinced a leaning toward the practical. He would condemn theories and escape, no matter how, to the home that has sheltered him for many a year.

"Confound you," he cries, "come over here. I'd like about three minutes of your company and I'd drown you." "You egotistical old scoundrel, you want to get us overboard and out there with your first dorsal fin, but we mean to fight it out here. When ze Frenchman hunts ze tigare,

ah! ze sport is grand, magnifique! but when ze tigare hunts ze Frenchman—ou! i zero is ze very devil to pay."

Vainly he endeavored to outmaneuver us. All the expedients of which he was master were brought into play, but humoring his eccentricities and scrupulously guarding against any possibility of his escaping a firm, yet yielding, hand nullified all his resources, and then the fatal net enveloped him. Toss him on the green grass. "There he is, fresh as a bride; the Dolly Varden fish, beautiful in its speckled splendor. Silver belly, pink fins, yellow sides "bedraped" by crimson hail," all marvelously contrasted and blended, and shading off into the deep rich brown of his back and glancing like the rays of a prism.

"Well, this is worth living for!" you exclaim, and can well believe with Sterne that "it is better to do the idlest thing in the world than to sit idle for half an hour." MILLARD.

MAN differs from all other animals in that he smokes, and among men who smoke they are distinguished for their good taste who use Kimball's Vanity Fair. This excellent brand is growing in favor among those who are capable of judging what good tobacco really is. And for this increasing popularity we need not look further than the inherent excellence of the product.

#### KIND WORDS.

STRAUSE, N. Y., Dec. 27, 1880.

Editor Forest and Stream:

I have just finished the reading of last week's FOREST AND STREAM, and I cannot resist my inclination to thank you for it; and I am sure that I only voice the opinion of all your readers in expressing the opinion that the paper, as now conducted, is a credit to its editors and publishers, and to American zeal, ability and enterprise. I am sure it has no equal either in this country or in Europe, and so good and instructive a publication might enter every household with advantage to the occupants, for its tone is excellent, its columns are clear, its matter is nearly all well written, and its teachings on various subjects would make a valuable textbook every month. You deserve the congratulation and encouragement of every one of your readers. Editors get plenty of hard knocks and but few compliments, and I want to record myself among the number who have only kind words of approval for your excellent work.

D. H. BRUCE.

#### THE TILSTON MEMORIAL FUND.

New York, December 23.

Editor Forest and Stream:

I have to acknowledge the receipt of further subscriptions to the "Tilston Memorial Fund," as follows:

Previously acknowledged.....	\$165.00
John Hone, Jr.....	5.00
Dr. N. H. Holmes.....	5.00
Dr. N. H. How.....	5.00
Dr. J. W. Byrnie.....	5.00
W. H. Levering.....	5.00
M. T. Roberts.....	5.00
Proceeds of P. C. Olin's painting of "English Snipe".....	\$50.00
Less amount paid for frame.....	1.00
<b>Total.....</b>	<b>\$250.00</b>
Less amount paid for postage.....	80.00
<b>Net amount of Fund.....</b>	<b>\$170.00</b>

which was sent to Mrs. Tilston on the 21st inst., and for which we have her receipt. The committee would also give credit to Mr. Willy Wallace for his contribution of printing and stationery, the value being \$25. Yours truly,

FRED. N. HALL, Sec'y.

Mrs. Tilston has recovered \$5,000 from the Harlem Railroad Company, the owners of the Madison Square Garden where Mr. Tilston lost his life. For the injuries sustained by himself at the Garden, Mr. Walter Webb has recovered \$4,500; and this with a generosity worthy of the highest praise he has presented to Mrs. Tilston.

### The Sportsman Tourist.

#### PIROUQUING ON THE SQUATOOK.

THIS uninviting and homely little hamlet, scattered about the confluence of the noble river St. John with its tributary the Madawaska, is the portal to a region new, perhaps, to the New York sportsman, but well worthy his attention. The latitude of Edmundston, or Petit Saut, is about three hundred miles more northerly than that of Paul Smith's in the Adirondacks. Not more than seven miles distant runs the line which divides the Provinces of Quebec and New Brunswick, while the neat farm-houses and rich lands which one sees on the opposite shore of the John belong to the sovereign State of Maine.

Here and for many scores of miles up and down the St. John a narrow strip of cultivated land, for the most part rich and carefully tilled for generations, borders each bank of the river, but back of that for hundreds of miles, especially to the northward and northeastward, stretches an unbroken wilderness—a wilderness whose forests, though much stripped of their ancient glory, the pine tree, are still rich with a noble growth of firs and are still the home of the moose and the caribou, while its streams are thronged with aristocratic fish—with the salmon and the trout.

Petit Saut is a typical Upper New Brunswick village. Even on a sunny autumn day like this the aspect of the place is unutterably inhospitable, cold and cheerless. It comprises about forty buildings, including a court-house and a church. But it has no village street, not a shade tree, nor a square foot of turf. Each house stands aloof from every other. Nothing indicates community among the buildings. No two dwellings are in a line, but each seems to edge away from the other and turn a cold claspboard shoulder to the rest of the village. Long-legged and long-eared pigs, a hideous breed, are the specimens of animal life most frequently met with on the streets. To enjoy life in Edmundston one must get the village out of sight, either in the recesses of mine host Whitney's comfortable inn, or looking out, with the town behind, on the serene and steady sweep of the broad St. John or the tumult and foam of the Madawaska as it leaps its *petit saut*.

The New Brunswickers up here, Frenchmen though they be, relatives of Evangeline perchance, make no beautiful thing.

But this homely Edmundston is the threshold to a world of rare natural beauty.

It is impossible in this limited space to describe all the trips that may be made from here, trips rich in sport and scenery. From here they start for the "Green River trip," for the "Fish River trip," for the "Squatook" or "Round the Lakes trip." Any of these excursions may be according to the measure with which the tourist or sportsman is blessed with time. It is proposed here to briefly describe the "Squatook trip," *à la mode*.

It is proposed that the traveler has his choice between the flimsy and readily upset birch canoe and the invulnerable birch bark, but also as readily upset pirogue. Choose the latter. It consists of a log twenty feet long or more, hollowed and moulded into a scimitar-shaped and most savage looking double bow. But it is a good servant when dexterously managed as it invariably is by the French guides.

These French guides are the very flower of backwoodsman. They are mostly the descendants of those Acadians who, after the cessation of their homes by the peace of Utrecht, fled from the new masters of the soil far into a more hospitable wilderness. They can for the most part neither read nor write, and speak almost exclusively French with variations. For instance, *ver* is "vart" with them, *bien* is "bang," *toi*, "toid," *pres* "pret," *fruits* "fret," etc. Their artificial surroundings are, as we see in Edmundston, excessively homely. And yet—by what subtle influence preserved?—one finds in them, in all their mannerisms, the characteristic politeness and polished manner of the French gentlemen. In sunshine or in storm, dry or wet, fed or hungry, they are always deferential, gracious and *empressé*. It is delightful to hear the courteous tone with which they emphasize "*Merci monsieur*." Ah, their manners are different from those of the no less good guides of Maine and the Adirondacks. Besides, these French guides are scrupulously neat, and give you a clean and comfortable life in camp. They are good cooks, very cheap, costing only from one to two and a half dollars a day. At the same time it must be admitted that they are seldom good sportsmen; that in fishing they have a consumable penchant for the seine and spear and are strangers to the fly, and that in hunting they are decidedly inferior to the dirty and unutterably homely Algonac Indians, a few of whom still furnish inspiration for nightmare in these regions.

You start up the Madawaska, a guide apiece, luxuriously reclining in the bow of your pirogue, facing your course, and behind you, deftly and swiftly poling you up the steady current, your strong and graceful Frenchman. Amidships are packed the impediments—*but* the guides call them—a tent, utensils and the usual food for a camping party. So you go seventeen miles that day, over fair fishing grounds most of the way, with no notable rapid to obstruct you, and now and then the excitement of a shot at a stray duck, wild or domestic; for along the river there is a string line of farms fringes the bank. That night you camp on the bank of the stream at the beginning of a portage.

Early the next morning you are awakened by the volubility of the French spoken by a Mr. Lynch, of Cork, who monopolizes the portage business, and who straightway fastens his oxen to the bows of the pirogues and without ceremony hauls them over and through rocks, roots and trees, and thence to Beaulieu Lake. Next morning the pirogues, still intact, are launched in the lake and the Frenchmen, at the bottom of its outlet, Beardsley Brook—but the brook is not more than three inches deep. Then the guides taking the place of the oxen of yesterday, drag the ponderous craft foot by foot, plowing a furrow between the bed rocks of the stream. It is impossible sufficiently to admire or praise the undamagable qualities of the pirogue. The little brook is beautiful enough, and you may catch a creel full of small trout if you choose to trade ahead of the tumult and din of caused by your flotilla; but it is a hard and tedious day's work, and every one is glad when the tent is pitched and you are told that the worst three miles are over.

On the morrow you resume the brook, which is now deep enough to float the pirogues, but so narrow that the dense alders, through which it flows, completely overlook it. For several miles you crouch down and are pushed through a greenwood tunnel. But all this time the stream is growing. At last it suddenly widens, breaks away from the alders in a great rift, and the pirogue is free. The tumult and din of the end of the trip is plenty of sea-room, and "twenty miles a day," if you like.

Presently, as you float on, with a great silent host over yellow sand, the Squatook river springs upon the little brook and devours it, and now you are on a noble trout stream none colder nor clearer in the world. It is abundant in water, clear, deep-pooled, well sifted and fed by scores of icy little brooks—an ideal home for the *Salmo fontinalis*, thence day by day you are paddled or poled over beautiful lakes, some of them superb water courses. You may follow down stream, and there are more than a hundred miles of it. Scarcely a wilderness in the world can furnish more exquisite lake scenery than that of the Fourth Squatook and Yuladi, more varied and beautiful streams than the Upper Squatook and Yuladi rivers. You pitch your tent whenever and wherever you like. You are not confined to one camp spot as in most other wildernesses. You carry your whole camp easily with you, you live in the entire rigidity as wherever spot or scenery beckons to you, as you glide along, you pause, pitch your tent, and are at home.

Memories of stationary camps in the Adirondacks are odious, after this *voyageur* life. You can paddle or pole, you can hunt or fish, or, if you like, you can be an idler and lounge in a good seat in nature's theatre, while the receding banks for hours and hours shift their exquisite scenery for you. Every now and then the excitement of a rapid will cause you. The rapids are not particularly dangerous, but they are swift. At the very best they yield to the rush of the water, and dart down the boiling and tossing incline, you clasp the boat and cease to feel interested in scenery. But the guides understand the rapids, and to see them stand erect in the stern of the tossing boats, playing the pole with inconceivable swiftness; here dodging a sunken rock, there holding the pirogue in the foam and roar, until a counter current can turn its bow into the "down" direction, and then boldly push it up, till their force into the very thick of the tumult of waves, is the most interesting sight of the trip.

Finally, you step out of your pirogue, back at Edmundston again. You have been carried down over a hundred and fifty miles of lake and river, the lakes ranging from thirty to a few miles in length; and the streams from three feet to three hundred yards in width. Speckled trout abound everywhere, reaching as much as seven pounds in weight—in isolated instances. There are quantities of lake trout—*ogogo* or *tuladi*, as they are here called. A few moose, some caribou,

bou, innumerable bears, thousands of ruffed grouse (fifty is only a fair bag for one man in a day here), spruce partridges, wild ducks, are the game of the region.

To reach Edmundston from New York, go to Bangor, Me., thence to Woodstock, New Brunswick, and thence to Edmundston, all by rail.

People who are getting tired of the Maine woods and the Adirondacks, will find it worth their while another summer to try a "trip" from Edmundston. W. D. EDMONDS.

Edmundston, New Brunswick, 1880.

## Natural History.

### OUR WATERFOWL.

*Histrionicus torquatus*. Harlequin Duck. Bill in this species very small and short, the whole tip occupied by the nail; the tertiaries are curly. Male in color deep lead blue, fading into brown below; sides of head chestnut, as are also the sides of the body posteriorly; a lengthwise stripe on crown of head, and the tail black. Patches of white are present on the head at base of bill, on the side of the occiput and of the breast and of the tail. Two on the neck, one on each side, almost meet, forming a nearly complete ring. There are other patches of white on the wing, and a collar of the same color about the throat. The speculum is violet and purple. Female less strikingly marked; bluish brown, paler below, and changing to white on belly. A white patch before and one behind the eye. Length sixteen inches.

The little Harlequin is one of the most curiously marked, and one of the most beautiful of our ducks. It is a Northern species and is rarely even in winter taken as far south as New York. Although during its migrations it is found only on the salt water we know that it occurs in the Northern Rocky Mountain region where it breeds. Dr. Coues states that in August, 1874, he found broods still unable to fly on streams flowing into Chief Mountain Lake.

The Harlequin is said to be quite abundant on the Northern coast of Maine and thence northward. On the north-west coast, especially in Alaska, it is also reported as very abundant.

This species is still rare in private collections. It is a somewhat difficult bird to secure, as it is a most expert diver, sometimes diving from the wing at the flash, and being so quick in its movements that when on the water it will often disappear beneath the surface before the shot reaches the spot. On the North Atlantic coast the males of this species are called lords and the females ladies.

*Somateria stellata*. Steller's Eider Duck. "Head white with a pearly gray tinge, a green occipital band, and a black chin patch and eye ring; collar round neck and upper parts, lustrous velvety black, the lengthened curly scapulars and tertiaries silvery white on the inner webs, the lesser and middle wing coverts white, the greater coverts and secondaries white-tipped, inclosing the violet speculum; under parts rich reddish brown, blackening on the belly and crissum, fading through buff to white on the breast and sides, where there are black spots. Female reddish brown, blackening below, varied with darker on the head, neck and fore parts; tips of greater coverts and secondaries alone white, inclosing the speculum. Length about 18 inches" (Key to N. A. Birds, pp. 291-2).

Steller's eider duck is a bird of our northwest coast, about which but little appears to be known. Although ornithologists have long known of its existence, comparatively little appears to have been written about its habits, though these perhaps do not differ markedly from those of the common *S. mollissima*. The present species is not likely to come under the notice of any of our readers, except those who reside in British Columbia or Alaska. Any sportsmen, however, who may meet with it would do well to make a note of the fact, and to contribute what additions they can to our slender stock of knowledge of the habits of the species.

*Somateria fischeri*. Spectacled Eider. "Male black or blackish, the throat, most of the neck, foreback, wing coverts, scapulars, tertials and flank patch white; nape and occiput green; a whitish space around the eye, bounded by black. Female said to be brown, varied with darker, the chin and throat whitish, the eye-patch obscurely indicated; after the summer moult the male is said to be like the female. Length about two feet." (Key to N. A. Birds, p. 292.)

The Spectacled Eider is another Northwest Coast bird, which is not likely to come under the notice of sportsmen. It is said to be common about St. Michael's in Alaska.

*Somateria mollissima Dresseri*. Eider Duck. Bill with two long processes extending up on the forehead from each side of the upper surface of the bill, the broad feathered surface extending down between them. Male in spring dress white, creamy on breast and tinged with green on the head. Lower breast, belly, back, tail, quills and a forked patch on crown black. Female has bill smaller, and is brownish or chestnut, barred and speckled with black. Length about two feet.

The eider duck is known to every one producing the famous eider down of commerce. It is not particularly abundant with us though occurring in winter as far South as New York, but not in any great numbers. They are usually found associated with the species of *Edemia*, called on the New England coast coots, which in their manner of flight and in some of their habits they closely resemble. On the Mas-

sachusetts coast they are more abundant, and from there northward may even be called common from October to April. Specimens are found occasionally in the New York markets.

The down for which this species is so famed, and which has led to its being semi-domesticated in some localities, is plucked from the breast of the parent birds to cover and keep warm the eggs during the absence of the mother. The American bird was for a long time regarded as identical with the European, but was separated from it a few years since by Sharpe, and this decision appears to have received the approval of our best American ornithologists.

*Somateria V-nigra*. Pacific Eider Duck. Exactly like the last except for the presence of a V-shaped black mark on the chin.

This species, if such it be, is only found in the North Pacific. It may require to be regarded only as a variety of the common eider duck.

*Somateria spectabilis*. King Eider. Bill with a squarish knob on its upper surface near the base. Male in full plumage black, including a V-shaped mark on chin, a frontal band and space about the eye; neck, anterior portion of body, part of interscapulars, part of wing coverts and linings and patch on the flank, white; throat washed with creamy, sides of head with green, crown and nape with bluish ash. The female resembles that of *S. mollissima Dresseri*, but may be distinguished by the peculiarities of its bill.

The range of the King Eider is about identical with that of its plainer cousin, and it occurs in winter as far south as New York. Both this and the common eider are sometimes taken on the inland waters of this State and on the St. Lawrence River, and there are several records, we believe, of their capture on the great lakes.

*Edemia americana*. American Scoter, Coppernose. In the male the bill is shorter than the head and swollen on its upper side toward the base. It is black at tip, the swelling being of a bright orange color. Plumage of male, black throughout. Female has bill wholly black, general color sooty gray, much paler on belly and sides; feet brownish with black webs. Length about two feet.

The genus *Edemia*, to which this and the next two species belong, includes those black sea ducks, known along our Atlantic coast as Coots. In this genus the males have the plumage black, with or without white spaces, and the bills of all are wide at the tip and curiously swollen toward the base, and in the males are highly colored. They are provided with very thick heavy plumage, are good divers, and feed almost wholly upon shell fish. As might be imagined their flesh is not especially delicate, but nevertheless they are shot in great numbers on the coast during spring and fall by gunners, who make more or less use both of the flesh and the feathers. Birds of this group are sometimes found on fresh water.

The Scoter is perhaps the least abundant of the three species of this genus, although it occurs in considerable numbers all along our shores. The full plumaged male is quite a striking bird, but the female is the very reverse. The term Coppernose is strikingly applicable to the male, as any one who has ever seen the living or dead bird can testify. The Scoter occurs occasionally on our inland waters.

*Edemia fusca*. Velvet duck, white-winged Coot. Bill swollen above toward base, the feathers in the middle line reaching nearly or quite to the nostrils, those on the side not so far; bill black at base with a broad orange or pink tip, shorter than head. Male, black with a spot of white beneath the eye, and a large white wing patch. Female, sooty-brown, paler below and on sides of head and neck, with small white wing patch. Bill, black, rather larger than the preceding species.

The white winged coot is with us decidedly the most abundant representative of its genus. It usually reaches New York and Connecticut waters early in October, and remains until the middle or last of November when it proceeds further southward. On its return journey it does not become abundant until the first of May, and early in June the flocks may still be seen passing to the northward. On the Connecticut shore these birds are called Bell tongue, or Bell tong, coots, for what reason we are unable to say unless from some fancied resemblance of the thick, fleshy tongue to a bell in its shape.

*Edemia perspicillata*. Surf Duck, Sea Coot, Skunkhead. Snufftaker. Bill swollen on sides as well as above toward base. A narrow strip of feathers in the middle line reaching nearly to the nostrils, but no feathers encroaching on the bill at sides. Bill about as long as head; in the male in life orange-red, pure white on sides with a large circular black spot on each side at base. Plumage of male black with a triangular white space on the forehead and another on the nape. Female has bill black, the feathers in the middle line not reaching as far as nostrils; plumage sooty brown, fading to pale gray below, with patches of dull white before and behind the eye. Size of the Scoter. Variety *troubidgeri*, of the Pacific coast is slightly different with a smaller bill and the frontal white patch smaller.

Two of the local names of this bird are quite striking, and somewhat interesting as showing how readily even the most unobservant people seize on the salient points in a bird's appearance, and from these points give it a local name. Skunkhead, of course, refers to the contrast of colors on the head of the bird, and is precisely paralleled in the name skunk bird, sometimes applied to the bobolink, *Dolichonyx oryzivorus*,

while Snufftaker as evidently points to the bright orange red of the bird's bill about the nostrils.

The surf duck is almost as numerous in our waters as the velvet duck and arrives a little earlier in the fall. On their first coming they pass most of their time far from the shore but later draw into more shallow water where food is more abundant and to be had with less exertion. At this time they are shot in great numbers as they come up well to stools, and fly low over the water so as to afford good shots to the gunners in line.

[TO BE CONTINUED.]

### ✓ EFFECT OF COLD AND HEAT ON FISHES.

THE following quotations, taken from Dr. Kidder's Report on Experiments upon the Animal Heat of Fishes, will be found very interesting. It had been assumed up to within a short time that the temperature of a fish's blood was that of the water in which it lived, but Dr. Kidder has shown, as already stated in these columns, that this assumption is erroneous and that the temperature of the body is higher than that of the surrounding medium. In his report, published in the Proceedings of the U. S. Natl. Museum for 1879, he quotes freely from different authors to show the different conditions of heat and cold under which a fish may live, and some of these we give below.

Mr. Jesse tells of a friend who saw a gold fish which had been frozen into a block of ice and afterward thawed into life.

Dr. Richardson relates that the gray sucking carp, common in the fur countries of Arctic America, may be frozen and thawed out again without injury.

Porch have been frozen and transported for miles, returning to life when thawed, and John Hunter says, "that these (fishes) after being frozen still retain so much of life as when thawed to resume their vital actions, is a fact so well attested that we are bound to believe it."

Mr. J. W. Milner (Assistant Fish Commissioner) had a mud minnow (*Umbria linei* [Kirt.] Gunther) which was frozen within solid ice in an aquarium globe, three or four times, and each time regained its vitality upon being thawed out. Instances similar, to the foregoing can be adduced indefinitely.

The only hibernation which is definitely known to occur among fishes, says Professor Goode, takes place in the fresh water lakes and streams of cold regions. The fishes are driven by cold into the deeper waters and there remain in a state of torpor, proportional in degree to the amount of cold which they experience. Hibernation does not appear to be in any case a voluntary act. The fishes do not become torpid of their own accord. They avoid it as long as they can and only succumb when they are deprived of the means of escape. They never become torpid when there are greater depths to which they can retreat.

Dr. C. A. Abbott reports of the fresh water mullet (*Myzostoma oblongum*): "No degree of cold seems to affect the movements of this species, and hundreds can frequently be seen under the ice, moving slowly along the bed of the stream, feeding upon the wilted remnants of pond lily and splatterdock plants. \* \* \* This applies also to our common roach (*Stilbe americana*) which, to a less extent, braves the chilling waters of our streams throughout the winter and, in consequence, suffers from the persecution of the three species of pike (*Esox reticulatus*, *fasciatus*, *porosus*) inhabiting our streams."

See also Mr. Rudolph Hessel's observations upon the winter torpor of the carp. This appears to be a true hibernation, during which, although the fish takes no food in some climates from October until March, there is no diminution in weight.

On the other hand fishes are reported as living and thriving in water at an exceedingly high temperature; high enough to produce death by coagulation of the albumen in their blood and tissues, unless there is some provision by which their interior parts are maintained at a temperature lower than that of the surrounding water. As the existence of any protection analogous to that afforded to mammals by the function of perspiration and evaporation seems obviously impossible to animals living in the water, it is difficult to understand in what way such a reduction in temperature can be produced and kept up.

Thus Humboldt and Boupland observed living fishes in hot water thrown up from a volcano and showing a temperature of 210 deg. F.

Desfontaines found a *Chromis* in the hot springs of Cafsa, in Bombay, the water in which showed 80 deg. R. (97.6 deg.), and Shaw afterward saw small mullet and perch in the same springs.

Saussure saw eels, rotifera and infusoria in hot springs at Aise, in Saxony, in 1790, at a temperature of 113 deg. F.

Bruce says that at Feriana, the ancient Thala, are springs of warm water without the town, where he saw small fishes, four inches long, not unlike gudgeons. The temperature is not noted, but he says: "Upon trying the heat by the thermometer I remember to have been much surprised that they could have existed, and even not been boiled, by continuing so long in the heat of this medium."

Facts mentioned by Somerset induced Bronconnet to make some experiments on the degree of heat which river fish are capable of enduring. Details of the degrees of heat are not stated, but many species lived several days in water too hot for the hand. \* \* \* \*

Prof. Goode writes: "In warm countries an analogous

phenomenon (to hybernation) takes place, which has been called *aestivation*. When the lakes and streams are dried up by the heat the fish seek refuge in the deepest pools, and when they too are dried up they bury themselves in the mud at the bottom and remain torpid until the rainy season refills the reservoirs and revives them."

Day reports that on January 18, 1869, he visited a large tank which was then almost dry, having only about four inches of water in the centre, while the circumference was hard enough to walk on. The soil was a thick, tenacious, bluish clay, from which, fully thirty paces from the water and two feet below the surface, were taken five living fishes. Two were *Ophioccephalus punctatus* and three were *Rhinocodon acaule*. They were covered with a thick adherent slime. "All were lively and not in the least torpid." Day also reports *Amphiprion cuchia* as having been dug up under similar circumstances. Mr. Whiting, chief officer of the western province of Ceylon, informed Sir Emerson Tennant that he had been twice present when the peasants had been digging up fish of nine to twelve inches long, full grown and healthy, which jumped on the bank when exposed to the light.

Batrachians, tortoises and land snails are commonly found in a torpid state during the hot and dry months, a state which may truly be called *aestivation*, but which differs decidedly from the condition of activity described above as observed in buried fishes, and for which there is no very obvious explanation.

The instances cited are sufficient to show that the popular belief that fishes possess no animal heat of their own rests upon well attested observations. At first sight it is difficult to understand otherwise how these animals can undergo the extremes of heat and cold which they have been known to undergo and continue to live. Yet when the adaptability of birds and mammals, whose nominal range of body temperature is so extremely narrow compared with that of fishes, to extremes of heat and cold is fairly considered, the necessity for this inference seems not to be so very obvious. And no one appears to have tried the experiment of subjecting the same individuals to great differences of temperature whereby the immense effect of inherited adaptation would have been thrown out of the account.

#### THE BASKING SHARK.

SEVERAL years ago a basking shark was captured at Topsail, in Conception Bay, about twelve miles from St. Johns. It was thirty feet in length and fifteen feet in girth at its thickest part. Unfortunately before I heard of the matter and reached the spot the fishermen had cut it up for the sake of the oil it contained. In all the museums of the world there are at present only four specimens of this shark, and had this one been preserved the captors would have got a high price for it, as naturalists take a great interest in this singular sea rover, which is rarely got hold of. Under the circumstances I did the best I could. I secured a portion of the skull which luckily had been cut into several pieces. Some of the vertebrae, the fins, and above all the curious appendages on the gills which are arranged like the teeth of a comb and are believed to serve as filters in collecting from the water the small marine organisms on which the fish lives. I also secured some of the teeth, which are very small, not more than 3-10 of an inch in length—this species of shark being harmless, and living on the minute creatures with which the waters of the ocean abound. I sent a portion of these fragments to Prof. Turner, Edinburgh University, one of the most eminent anatomists of the day. He is Professor of Anatomy in the University of Edinburgh, and author of the article on "Anatomy" in the new edition of the Encyclopedia Britannica. He was very much pleased to receive these portions of such a rare fish, and after examining them he prepared an elaborate paper on the subject, which he communicated to the Royal Society, Edinburgh, in March last, and which he has since published in the *Journal of Anatomy and Physiology*, Vol. XIV.

In this article he says: "Having been engaged some years in the study of the structure of whalebone I was desirous of examining these appendages in this shark to see if they corresponded in structure with the plates of Balen. It was with great satisfaction, therefore, that I received from the Rev. M. Harvey, of St. John's, Newfoundland, during the autumn of last year along with a number of other interesting objects of natural history presented by him to the Anatomical Museum of the University, a portion of one of the comb-like fringes which he had removed from the gills of a basking shark captured off the coast of that island. The specimen of the comb-like appendages of the basking shark presented to me by the Rev. M. Harvey was 6½ inches long. It consisted of 154 flattened plates which varied in length from 4½ to 5 inches. Each plate possessed a semi-lunar base attached to the mucous membrane of the branchial arch, and this membrane passed for a short distance between the bases of the plates. The plates were grayish brown in color and with a smooth, shining surface, and they were so brittle as to be easily snapped across. The general arrangement of the plates was, indeed, not unlike that of plates of whalebone, and it can be readily seen that they fulfil the role so generally ascribed to them of readily allowing the passage of water through their interstices, and of preventing the passage of small organisms which may be suspended in the water. When the semi-lunar base was examined microscopically it was seen to contain a network of canals. The anastomosing network of canals was prolonged from the base of the plate into the slender shaft, where the canals terminated in a single elongated cavity occupying the centre of the shaft. The solid matrix of the plate bounding the anastomosing canals and central cavity had the translucent, somewhat granulated character one sees in the matrix of bone or the dentine of teeth. The matrix was permeated by multitudes of fine branching tubes. These tubes had the appearance and general mode of arrangement of dentine tubes, but they were nearly twice as large as the tubes of human dentine and were separated from each other by a larger proportion of matrix."

After a minute and lengthened description which could only be appreciated by students of anatomy, Professor Turner arrives at the conclusion "that the structure of these

plates leaves no doubt that their type of structure resembles the dentine of a tooth," and "therefore these plates differ in a marked manner from those of whalebone."

"Along with the comb-like branchial appendages Mr. Harvey also sent me a portion of the dentary border of the jaw with the teeth *in situ*. The teeth were arranged in seven rows and were embedded at the base in the mucous membrane. Each tooth was not more than three-tenths of an inch long and a little less than two-tenths of an inch wide at its base. They were conoid in shape, with sharp-pointed free ends, somewhat flattened on the anterior and posterior surfaces, and without serrations. In its structure the tooth, like the semi-lunar base of the plates of the comb, consisted of a hard, translucent dentine externally, and of a central core in which were numerous anastomosing canals surrounded by a matrix containing characteristic dentine tubes. These canals collectively represented the pulp cavity. The chief difference between the plate and the tooth was this, that in the plate the canals formed ultimately in its shaft only a single central cavity, while in the tooth the anastomosing arrangement of the canals was preserved up to the apex of the core, and no single pulp cavity existed."

Professor Turner concludes his paper in the following terms: "The presence of bodies possessing the structure of teeth on the gills of the basking shark is not so aberrant an arrangement as might at first sight appear. It is well known that a row of teeth is situated on each branchial arch in many of the osseous fish, so that there is a tendency among fish for dental structures to arise in connection with the mucous membrane covering this part of the skeleton. The peculiarity in the basking shark, therefore, is the excessive development which the branchial teeth undergo, a development which is correlated with the small size and simple form of the maxillary and mandibular teeth, with the non-predacious habits of the fish and with the particular nature of the food on which it lives." He remarks on the fact that hitherto though "scattered notices of these curious fringes have appeared in the periodical zoological literature of various countries, systematic writers on fishes have in their treatises ignored the existence of these appendages, notwithstanding their importance in connection with the food and habits of this shark, and their constituting a most important structural peculiarity."

The publication of this important paper by Professor Turner will remedy this defect, and will have the effect of calling the attention of naturalists to one of the most curious and interesting arrangements in the economy of this inhabitant of the world of waters.

St. Johns, N. F.

M. HARVEY.

#### ANOTHER CAPTIVE WOODCOCK.

MONTREAL, December 17.

Editor Forest and Stream:

A gentleman yesterday picked up on one of our up-town streets a live woodcock. The bird is still alive and is in perfect condition as regards flesh and plumage, being quite equal in size and weight to the birds we get toward the close of the season here, that is about the end of October. He, however, had a wound across the skull, at the root of the bill, which may have been made by a telegraph wire or a shot striking him sideways. Where this bird came from is a mystery. The latest date at which woodcocks were killed in this vicinity this year was about the 10th or 12th of November, which is later by a week than usual.

Since the 14th of November we have had enough snow for constant sleighing, and the mean temperature in the day time (8 A. M. to 6 P. M.) has only been above the freezing point for eight days during that time. Of course, if the mean temperature for the twenty-four hours were taken, the figure would be much lower; but I have not got the statistics at hand. From this it will be seen that the weather has been so severe that it is most incredible that a woodcock could have existed through it.

Some of our local sportsmen are of opinion that this bird has been lying near a spring in the thick recesses of a swamp, or other warm place, where he managed to pick up a living, while others think he must have escaped from captivity. Many of your readers here would be glad to have your opinion in the matter.

The bird is now in the possession of Mr. W. V. B. Hall, restaurant keeper, St. James street, eats well and appears to feel quite at home.

H. R.

The woodcock I wrote you about the other day, which was picked up in the street here one week ago, is still alive and "doing well." It has been well supplied with worms and with a quantity of raw meat, both of which it eats with apparent relish. To-day many persons were greatly interested at seeing it "boring" for worms.

Mr. Hall, who has the bird in his possession, requests me to ask, through your columns, for information as to the best kind of a cage to keep the bird in; also as to the best method of giving him food, whether or not he should have access to water, and, in fact, for any reliable information regarding the care of woodcock in captivity. Perhaps some of your readers may be able to supply the desired information.

H. R.

We presume that the bird has been living, as suggested, near a warm spring hole in a swamp, and that he hurt himself by flying against a telegraph wire, when at last he was obliged to start for the south. He is certainly a very late bird, though not altogether unprecedentedly so. We once started a woodcock in Connecticut Dec. 24.

If the cage for the bird is to be a large one it should be low, and should be lined on top and along its upper sides with cloth, so that the bird may not injure himself by lying against the wires and sides. The larger the cage the more likely the bird is to do well, but the wilder it will remain. The cage should not, we think, be over a foot or fifteen inches high. The bird should have water, of course. Some interesting facts in regard to this bird in captivity will be found in the *FOREST AND STREAM* of August 12 and 26, 1880.

Please keep us advised as to the welfare of the bird.

PINE GROSBREAK IN MINNESOTA.—Boston, Dec. 19.—On the 11th December I received from my friend, G. F. Benson, Esq., Lake City, Walsh County, Minnesota, a fine pine grosbeak (*Pinicola enucleator*), the only individual of this genus seen in this locality for twenty years. It is perhaps worth noting.

W. P. M.

#### MORE ABOUT SQUIRRELS.

IN the interesting article of "Antler" in your issue of December 2, 1880, entitled "Something About Squirrels," he mentions the respective habitat of the gray and black squirrels as being distinct. However it may be in Tennessee, they certainly occupy the same hunting grounds in some sections of this State. In my last exploit at squirrel shooting near Memphis, Onondaga County, I bagged five blacks and seven grays within a square mile of territory on the same day. In Chataqua County, a few years ago, I saw in a single stroll eleven blacks and not a solitary gray. In the more easterly county of Saratoga the grays seem to preponderate, although I once shot a couple of blacks there. The guides in the "Brown Tree" country tell me that they never see the black, although the gray is an occasional visitor.

Parke and Godwin (I think) Audubon mention the young of the black and gray being found in the same nest. I have never seen this actually verified, but should suppose the natural result of such a cross would be an albino. Some time since a pile of this sort was mentioned in your columns. It has always seemed to me that the main diversities between the two species (or colors) are that the black is slightly less in size and more agile and sly than the gray. I have also observed that the black always "drives" or chases the gray.

The wide range of this interesting wood denizen is somewhat curious. In New Granada, Ecuador, Peru and Northern Chili I have shot a gray squirrel of about the same size and general contour as ours, the only apparent difference being a white circular spot, of the area of a silver half-dollar, commencing just back of the ears and extending over the neck and shoulders. They bark or "squal" like our own species, and plunder the "caceros" and fields in the same reckless style. Although usually found in the high woods there, yet I have seen them on the cactus plains, miles away from umbrage or water. In the latter locations they probably feed on the juicy and ready fruit of the cactus plant, as there is no other sustenance, even for a horned toad, on such arid plains. The little muscis are termed in those Southern latitudes, according to locality, "Ardillos" or "Monos." We Yankee hunters used to style them "Padres," from their fashion of back-hair, much to the holy horror of the natives. Seneca Falls, N. Y., Dec. 8.

E. K. WILSON.

The black and gray squirrels are regarded merely as different colors of the same species. The South American form referred to is an entirely different species.

I wish "J. B. L." (Nov. 10) hunting ground had appeared to enable me to locate the place of his large squirrels. I think his scales may have weighed incorrectly to have an average of 1 lb. 14 oz. for black and 1 lb. 10 oz. for gray squirrels. I have never seen black ones so heavy anywhere, nor gray ones either, except in Wisconsin, Illinois, etc. The large fox squirrels of these States will hardly average 1 lb. 14 oz., unless all are old ones. I have weighed strings of gray and black, but not of the black. My weighing scale averaged 1 lb. 9 oz. for the large gray of Wisconsin, and 1 lb. 14 oz. for the fox. I would estimate the weight of the black at about 1 lb. 14 oz. They seem about the same size wherever I have found them, but smaller in Canada if anywhere. I cannot say my scales were correct, but it strikes me they were. At any rate the fox is fully one-third heavier than the black. I will take the trouble to find his weight soon and report it.

While hunting in Wisconsin this fall I killed a black squirrel (in appearances) nearly as large as the fox, but on examining closely I found him to be clearly a cross of the fox and black, which accounted for his size. So in Central Illinois I chanced to kill another specimen of this cross, and nearly as large as the fox, but the smaller jet-black parent I did not see, and of about two-thirds the size of these killed.

Westchester County, N. Y.

H. W. M.

Many years ago it was my fortune to shoot two gray squirrels of such extraordinary size as induced me to weigh them. One, 35 inches in length, 2½ lbs.; the other, 26 inches, 2½ lbs. I have since shot many hundreds, but none exceeded 2½ lbs.

C. L. W.

LOCKED HORNS.—A correspondent who writes from Toronto, sends us a cutting from a Peterboro' paper as follows: "Mr. F. Lillierap, of Lakeland, made a very strange discovery last week while hunting in the woods in the vicinity of the boundary between the township of Harvey and Burleigh. His attention was arrested by a large gathering of ravens and crows, which were holding a council in a large open space. The rabble excited his curiosity, and a close inspection was made, when the carcasses of two very large bucks were found lying on the ground with their horns entwined or locked. It was quite evident that these deer had been engaged in a deadly combat. In this fight their horns must have interlaced, and in this position the stronger had thrown the weaker on to his back. This change of position created a leverage which fastened the two sets of horns inseparably together. In this sad plight they must have died without any possibility of escape, as victims to their own pugnacity. Some of the hunters went the next day and secured the two sets of horns, but the carcasses were useless."

Such occurrences are not so uncommon as to excite any very great surprise, though of course they do not often come to the notice of hunters. We have seen a few pairs of horns so locked, one of which resisted all efforts to separate them.

HABITS OF THE BEAVER.—I see your Canada correspondent gets after me on the beaver question. All right. Let every gray-haired hunter of the Eastern, Western or Middle States who has killed his hundreds of deer, reflect on the many regions he has hunted in where deer were fairly plenty. Were there not old "beaver dams" in every section? And were there any beaver in our forest here, I might tell you, and even more than I got my first deer in fifty years ago, and even in Pennsylvania that can offer very fair deer-hunting. Each and all can show the old beaver dams, but I cannot find that there has been a live beaver in any of them in sixty years. I know there are some beaver in Canada; I think there are a few in Northern Maine, also in New Brunswick and in the South. These are the exceptions, and they will vanish long before the last deer has passed I believe like the beaver. I have seen a few in the near neighborhood of New York or Chicago. I would as soon live in Bedlam as either of them. Have spent ten days in the deep primal forest where I never spent one in cities or large towns, and

have lived more in bark or even brush shanties than in hotels or boarding-houses.  
But *inimporte*.

NESMECK.

A QUESTION ABOUT RUFFED GROUSE.—*Hills of Ligonore, December 13*.—If the female ruffed grouse is driven off her eggs during the period of incubation, in what way does she make her exit from her eggs and nest? Is it by taking wing and bounding off, or by taking heel and running away? And in what manner does she return back to them again, on foot or on the wing? I stand ready to answer these questions correctly when called upon, but before I do let us have the views, opinion and experience of other sportsmen and ruffed grouse shooters on the subject.

HARRY WOODLAND.

We have seen the female ruffed grouse leave her nest, but before giving our experience we would like to hear from others.

WEIGHT OF BLACK-TAILED DEER.—I have a very reliable story told me from New Mexico, where a black-tailed deer is said to have been shot weighing about 500 lbs. What is their heaviest weight?

G. B. R.

Black-tail deer probably never reach any such weight as that mentioned, and we doubt if they ever run much, if any, over three hundred pounds. We should be glad to have some definite facts from our Western readers on this subject.

LATE KINGFISHER ON LONG ISLAND.—*New York, Dec. 20*.—*Editors Forest and Stream*: While walking near Flushing, L. I., yesterday afternoon, I was very much surprised at hearing the cry of a kingfisher, *Ceryle alcyon*, and a moment afterward I saw the bird perched on a branch overhanging a brook in a swamp.

The only open water being a part of this same brook, everything else being frozen, it seemed almost incredible that the bird could obtain the requisite amount of food. Is it not very late to observe this bird on Long Island?

ROBERT B. LAWRENCE.

## Fish Culture.

### THE CENTRAL FISHCULTURAL SOCIETY.

FIRST DAY CONTINUED.

THE discussion on the subject of securing national legislation for inter-State waters, such as the Mississippi River and the Lakes, having closed Mr. Miller offered the following resolution:

Whereas, This society has lost a valued member since its last meeting in Prof. James Wood Miller, of Wankegan, Ill., an assistant to the U. S. Fish Commissioner, who was both a fish culturist and a scientific man, therefore be it

Resolved, That the Secretary of this society prepare a letter of regret and enter it in the records of the society, and send a copy of it to Mrs. Milner. Carried.

MR. CLARK moved that no papers should be read before the society except those prepared by persons who are members of it.

MR. FAIRBANK.—"That seems to me to be hardly fair. I have written to gentlemen who are not members asking them to write us something to be read here, and have no doubt that such letters would be interesting."

MR. CLARK.—"Mr. President, before putting the question, I ask to be allowed to explain my motion and the reasons for making it. I can see that such letters will be interesting, but hold that the writers should become members of this society in order to obtain the privilege of either reading papers before it or of sending them here to be read. I make this motion entirely in the interests of the society, with the object of increasing its membership and thereby extending its influence. I do not know who, if any, outside of the society, have sent papers and hastened to make the motion before such papers were made known, in order to prevent the motion from having a personal application."

MR. BARTLETT.—"I object to the motion, and would invite papers from all who may feel an interest enough in our good work to prepare one and send it to us."

MR. MILLER.—"I would make all who send us papers honorary members of the society."

MR. FAIRBANK.—"I hardly think it would be wise to pass this resolution. We might get some of our most valuable hints from outside the society."

MR. CLARK.—"I am willing to admit this, but think that since the admission fee has been reduced to one dollar, and the annual dues to fifty cents, the least a person who is interested in our cause can do is to join us. I have no paper to read, and will be glad to hear all that others have to say on the subject, but there are men here who have come nearly a thousand miles at an expense of time and money to be present here and it does not seem fair to admit others who stay at home to equal privileges, and I would compel these men at least to join the society and help support it by the small sum named, even if they never attend the meetings."

The President then put the motion and it was lost.

MR. MATHER proposed Prof. Spencer F. Baird, U. S. Commissioner on Fisheries as an honorary member. Carried.

MR. BALLOD found no power in the constitution allowing the society to elect honorary members.

MR. MILLER moved that the constitution be amended so as to allow of the election of honorary members by a majority vote and that Prof. Baird be enrolled among them. Carried.

The Secretary then read a communication from Mr. H. W. Welscher to Mr. N. K. Fairbank as follows:

There is no longer any doubt in regard to the impregnation of California salmon eggs that have been reared in fresh

water. I have impregnated a few hundred, which now show embryo fish plainly to the naked eye.

MR. MATHER.—This note of Mr. Welscher's is a most important one. It proves that the California salmon not only live and thrive in the fresh waters of Geneva Lake, Wis., but that they develop eggs and will breed there."

MR. MILLER.—"I have known of this some time. We have in the ponds of the Michigan Fish Commission some salmon which have spawned a few eggs. Mr. Welscher's case is more interesting because he has more."

MR. FAIRBANK.—"This subject of the growth and spawning of the *guinnat* salmon in fresh water is a very interesting one to me and I will have something to say upon this subject to-morrow, when I will have my experience written out in the form of a paper which I will prepare."

MR. LITTLE exhibited a drawing, in full size, of the fish which was recorded in the pages of the FOREST AND STREAM of Oct. 7, 1890, as follows:

GENEVA LAKE, WIS., SEPT. 23.

I have sent to-day to Prof. Baird a very fine specimen of a California salmon weighing eight and a half pounds, a female, full of developed ripe eggs. She was taken by Mr. Welscher, who has charge of my hatching and ponds here, on Monday last, in the small creek which empties into the lake. The day before he saw seven or eight together, which he judged would weigh from eight to twelve pounds each, but had no means of capturing them at that time. It begins to look like breeding salmon in fresh water, but I shall not assert it for a fact until I know; but I will assert my belief in it now. I do not believe that salt enters into, or is an essential element in the problem. I believe that with clear, deep water, and plenty of food, the salmon will propagate in fresh water.

N. K. FAIRBANK.

MR. CLARK.—"It is of great interest to know that this fish will breed in deep, cool lakes. I have kept them in small ponds in great numbers, as many as ten thousand, and never found a ripe female, although ripe males were common."

PROF. S. A. FORBES, of the Illinois State Laboratory of Natural History, then displayed a series of oil paintings of Illinois fishes, from which the plaster casts of the Institution were to be colored, which were much admired. Also a few of the casts which were colored.

The meeting was then adjourned until the next morning at 9:30.

[The entire proceedings, papers and discussion will follow as fast as we can find room for them.]

### REPORT OF THE TENNESSEE COMMISSIONER.

THE following is the report of Commissioner George T. Akers to the Governor of Tennessee. Mr. Akers has done much good work at no expense to the state, and we think it is time that he had an appropriation to enable him to go ahead and fill the water with food for the people:

NASHVILLE, TENN.—To His Excellency, Gov. Albert S. Marks: Sir—My report as Fish Commissioner must necessarily be brief. No previous General Assembly having ever made any appropriations to enable the Commissioners to engage, to any extent, in replenishing the streams of the State with desirable varieties of food fish, they have been unable to do anything in that regard.

Hon. S. F. Baird, Fish Commissioner of the United States, has, on his own account, within the last three or four years, placed some shad fry in the Cumberland River, and salmon in the Tennessee River. How these have done I have no present means of knowing, but from the results in other streams and localities, I have no doubt will prove, in due time, a very admirable addition to the fish supply of those streams.

The U. S. Commissioner, last winter and the present, has had the kindness to send me for distribution in this State, eleven hundred German carp fry, which I have sent to various points in our State, gratuitously. The reports I have from those distributed last season are of the most encouraging character, representing them as healthy and growing exceedingly well. I entertain high expectations of the outcome of this new variety of fish. In addition to being a choice fish for the table, they are adapted to ponds, pools and small lakes, and thus can be localized and multiplied to any extent, which is not so much the case in those requiring swift-running water. They require but little attention, are very prolific, and grow to large size. The persons who now have possession of them in this State most generally assure me they have good and wholesome habits for them, and being able to protect them on their own premises, it is hoped the liberality of Prof. Baird will result in such increase that in a comparatively short time the State may be generally supplied with them. Having been furnished at the expense of the General Treasury and myself I have held that those who received them are in some sense custodians of them for the public, at least so far as to furnish the fry to others when they have reached the period of multiplication. I have great hopes of the carp becoming the chief home growing fish for the table in our State.

The artificial propagation of the best varieties of fish is no longer a matter of speculation or experiment. It is as simple and certain as the reproduction of any land animal, and has become a fixed industry. All the streams of our greatly favored State are largely depleted of their once abundant supply of game fish.

In a few years, and at a comparatively small expense, they might be restocked and retailed with bass, juck, trout and the larger and better varieties of perch.

Virginia has tried it successfully. Streams in that State, which a few years since were useless, now are full of the choicest kinds, easily obtained and cheap to the consumer.

Tennessee might easily do the same thing. But to do so, it will require the expenditure of some money in the establishment of one or more hatcheries. The amount of money required would not be great, compared with the great benefits derived.

After the work of stocking our streams is accomplished, the hatcheries might be abandoned, or sold to individuals to be continued as private enterprises.

In the event the Legislature should consider favorably such a work there is one essential and indispensable prerequisite, and that is the enactment of laws, protecting fish in every stream in the State, from the least to the greatest, and from

their sources to their mouths, or as far as they may flow within the State. Without such protection by stringent laws, rigidly enforced, I undertake to say that you can accomplish nothing. Our laws heretofore have been partial and local, whereas they ought to apply everywhere in the State.

To illustrate, protect fish in Maury and Bedford counties only, and you can never stock Duck River with fish; because Coffee, Marshall, Hickman and Humphries will be at liberty to take out what you may put in.

Local protection is not protection. It must extend equally everywhere within the State to be of any value whatever.

The Virginia authorities are at this moment deterred from attempting to stock the streams in her southwestern borders, which flow into Tennessee, for the sole reason that our State offers no protection to them after crossing the line, and they regard it as a waste of time and means to send fish into those streams.

In this connection I will add, that while the establishment of hatcheries would, in my opinion, be the quickest and best way to replenish our streams with the better and more choice varieties of fish, and heartily recommend that course for adoption; yet, I believe that adequate laws for protection of the fish in our waters would enable our native varieties, in the course of time, to multiply and become abundant, so that they would be easily and cheaply obtained. Whether anything else is done by the present General Assembly, I would most earnestly and urgently appeal for the passage of laws for the protection of fish in all the waters of our State from the wholesale and often wanton destruction, which had been so long practiced as to render our waters, in many places, almost entirely bare of this wholesome and palatable article of food and beautiful object of sport and recreation to a great many of our work-week people.

If such laws are enacted and enforced we could reasonably call upon the United States Commissioner for a share of such as he finds all well in localities such as these. He has already signified to me that he would cheerfully give us the right to supply in land-locked salmon, which would do well in our waters, and other fish desirable, if the authorities of the State would bear the expense of distribution and give proper protection.

When the fact is understood and appreciated that the main object proposed is to provide a plentiful supply of cheap and wholesome food, for the use of all, rather than furnish an opportunity for sport or pleasure, the scheme will be heartily approved.

Very respectfully,  
Geo. F. Akers,  
Fish Commissioner.

### FISH CULTURE IN NEW HAMPSHIRE.

I SAW in FOREST AND STREAM a letter from a New Hampshire correspondent speaking of a peculiar disease he had noticed in certain fish taken from Webster Lake, in Franklin, viz., small hard concretions or lumps scattered through the flesh of the fish. A few days afterward I met the gentleman who wrote the letter in the cars and told him that when I got an opportunity I would write you and tell you of a similar case which I noticed some forty years ago in the perch and sunfish (*Pomoxis vulgaris*) in Cold Pond, in this State, lying in the towns of Asworth and Unity. It think it was in 1849 that in company with half a dozen other boys I visited this pond for a day's fishing, which, so far as quantity went, was a very successful one, as we caught a good round bushel of the above named fish, but forgetting them home and cooking them they were found to be entirely inedible, being full of these little hard concretions, about the size of a pea, not only in the flesh but in the membranes of the fins between the spines. It was not till many years after that I had an opportunity to visit that pond again, and then in 1866, I think. We found the fish all right, but in much fewer numbers than at the date of my previous visit. What the precise disease I never knew, but of its existence and final disappearance I can affirm. I notice one or two other things in my last number of FOREST AND STREAM which have brought my pen to my hand this morning. I also notice a letter from Mr. Ferguson Haines, of Biddeford, Maine, in regard to stocking the Saco River with salmon. Two years ago the New Hampshire commissioners placed 20,000 young California salmon in the head-waters of that river, which are in the State of New Hampshire, and if Mr. Haines can get the young fish from Mr. Stillwell or Mr. Smith he had better plant them in New Hampshire, say in Conway or Madison, whence they will push their way down the Saco and return to the sea. If proper fishways are provided at the river at the dams in Saco and Biddeford and other places in the State of Maine. We have not taken as many salmon at Plymouth this year as we expected to, owing to the severe drought in the Penigewasset, which kept back the later run of fish, but we took nineteen, running from ten to eighteen pounds weight, previous to July 9, and only three after that date. From these we secured over 60,000 eggs, and there have been a large number undoubtedly deposited naturally in various places in the Merrimack and Penigewasset by the salmon which have been seen in numbers all through the summer, in the deep holes and at the mouths of the spring brooks, all the way up the river, from Lawrence to New Hampton. The State of Massachusetts has just sent 200,000 salmon eggs from the Penobscot to the Plymouth hatching-house, and we expect more, so shall undoubtedly turn out 300,000 young Salmon in the head-waters of the Merrimack next spring. In addition to these, we expect to distribute 100,000 brook trout and 100,000 Schoodic salmon, and we have made a new venture by taking 100,000 eggs of the fish commonly called the "shad water" at Lake Winnepesaukee, which fish is neither more nor less than a genuine "coregonus," or a local variety of the whitefish, which is a native of Winnepesaukee. These we shall divide with Massachusetts, and hope to naturalize in other of our New England waters. We expect to hatch and plant at least 750,000 young fish of different varieties next spring. One more thing. I see a letter from New Bedford about spawning lobsters. We passed a law in this State in 1878 prohibiting entirely the taking of female lobsters while carrying their spawn, and it would be well if the other New England States would follow our example.

INTELLIGENCE OF CARP.—We are permitted to publish the following letter written from Roslyn, Queens Co., N. Y., to Mr. Eugene G. Blackford, State Fish Commissioner:

"The carp came in good order this A. M., and I have just been to the pond and, with my hired man, broken the ice and taken out of them a lot of new brood. I have the evidence of their nationality—I call them 'German Philosophers.' They really showed something more than instinct—intelligence—for they quietly arranged themselves in a semicircle, a deliberative assemblage, and in the situation. They did not shoot away 'pell mell,' but after a few seconds

moved, as if to the manor born, in a dignified way toward the decayed leaves and mud at the bottom.

"I know you would have been interested or amused had you seen them. The pond is on the estate of the late W. C. Jewett, and our neighbor, T. Clapham, Esq., who probably knows who is interested in trout culture. My husband, the late Joseph W. Moulton, introduced planting of oysters in Hempstead Harbor (our bay) in 1835-6. It is now a profitable business here, but he was laughed at for sending a sloop for oysters to plant. In 1837 he procured trout from Ronkonoma Pond and from another source, but the experiment was a failure. I wish he had lived to see the success of Mr. Clapham. I hope this matter of the German carp will succeed. I am an old lady and do not expect to see a five-pounder.

"Nevertheless, as it was so much obliged to you as I expected to see them on my table. J. M. S. MOULTON."

DUNKER'S FISHERY CALENDAR.—Each year Mr. W. Dunker, editor of the *Fischerei Zeitung*, Stettin, Germany, issues his calendar. The one for 1881 is now before us. It is a small volume for fish culturists, fishermen and fish dealers, giving the popular names of fishes in those languages, as well as their scientific names, and much other information concerning the subjects to which the book is devoted, all for the sum of one mark (twenty-four cents) in paper, or one and a half marks bound.

PROTECT SPAWNING LOBSTERS.—*South Norwalk, Conn.*—J. E. Jr., strikes the nail on the head when he says in his note "Save spawning lobsters." The law now existing in some States, that lobsters under a certain length shall be returned to the water, does not cover the ground. What we want and must have if we are to have any lobsters, is a law to prohibit the sale of spawning lobsters, and if caught returned at once to the water. It is a mystery to me that the men engaged in this business cannot see that they are killing the goose that lays the golden egg. It does not take an expert to see that for every spawning lobster taken hundreds are destroyed, and as your correspondent from New Bedford says, "All the lobsters seem to run in the pots." For the benefit of those who are interested in this subject I will give my observations on the decrease of this most valuable sea food taken from Norwalk and Five Mile River. Five years ago with one pot well baited I could catch all the lobsters I wanted for use in my family. This year it would take a half dozen pots to do so. What is the cause of this? you will ask. The answer is simple: Parties in Norwalk and Five Mile River are making a living at lobster catching during the summer months, and all the spawning ones are sent to market with the other catch, and the result is they are growing very scarce, and if it continues a few years longer lobsters in our water will be a thing of the past, as it will shortly exterminate them. Let the FOREST AND STREAM which has worked so many reforms agitate this most important question, and let us all who are interested in this matter join hands in doing the same, until the spawning lobster is protected by law. Suppose we kill the spawning male and female, there would be no more eggs, and it will be the same with our lobsters if the spawning ones are all to be destroyed. I should be most happy to correspond with any parties who are in accord with me on this subject with the view of having the lobster protected.

FRANCIS BURRITT.

FISH FOR NEW YORK WATERS.—*Rochester, N. Y.*—The New York State Fish Commissioners desire to announce that they are now ready to receive orders for the brook trout, and California mountain trout from any parties who wish to procure them for the purpose of stocking public waters in this State. All applications must be addressed to the undersigned, giving a description of the waters, and where they are located.

Information will be given as to the suitability of the above fish for the waters desired to be stocked.

Orders will be received until March 1st, 1881.

SETH GREEN, Sup't, N. Y. State Fish Com., Rochester.

We are permitted to publish the following:

Mr. Seth Green.  
Sir:—The trout you sent me two years ago last spring were put in Lake Harkness. There was no fish of any kind in the lake. I was up there this month and saw trout up the brook above the lake that would weigh one-half to three-quarters of a pound, they were on the spawning bed.

FLY FISHING FOR BLACK BASS.

INDIANAPOLIS, Ind., Nov. 29.

Editor Forest and Stream:  
A careful reading of the articles in your valuable paper on fly fishing induced me to try my luck with the fly. One afternoon in August last, equipped with nine-ounce rod, reel, silk line, six-foot leader and a half-dozen flies of different patterns and of the most approved make, I sought the banks of White River, striking the stream at the Blue Banks, a noted resort for black bass, where I often had good success with bait and where I knew there were some monsters. Putting my tackle together after what I considered to be the most approved method, not omitting to break one tip in

the operation, which had to be replaced with a spare one, I commenced whipping the stream in the shallow, swift water below the deep pool, using a silver doctor for the stretcher and a brown hackle for the dropper. At the second or third cast I hooked my first bass, and at the fourth I hooked another, and I landed him in fine style. In less than an hour I caught several more, none over one pound in weight, the first taken being the largest of all, but I gained some lasting experience in taking the last one. I was standing on the bank of the stream and casting below me, when I saw a fish rise and miss the flies. Moving back from the bank and carefully walking down the stream until opposite the point where I had seen the fish I made cast after cast with no success, till at last, after he had been up and try another place. Before doing so I thought I would take a look at the flies as they drifted past me and see if they really did resemble anything in the land of the living. Imagine my surprise as I saw the flies drifting down the stream, gradually sinking to the bottom, to see a bass following, with what appeared to be great curiosity, with body slightly bent and all the fins working. He deliberately took the hackle and came to the surface. Going up the stream I waded as far as possible into the deep pool under the Blue Banks and made a cast to a larger boulder opposite me in quite deep water, allowing the flies to sink below the surface, and was awarded with a straightening of the line that indicated a fish. A slight turn of the wrist fastened the hook, and I discovered there was something lively at the other end of that line. Thinking to check him a little I pressed the line against the rod with the ball of the second finger of the right hand, but it did not work. My little boy, some twelve years old, says, "Father changed hands and put his finger in his mouth and said 'Ouch'!" but I guess he was excited and "does not now remember, if he ever knew" what took place. I know the line burned my finger like a hot iron, and momentarily gave the fish an advantage I was slow in recovering. My excitement was not lessened when he broke water and showed himself three times in succession high in the air. Having had no experience in this kind of fishing I was not sure how much strain the tackle would bear. I had no fear of the line, but that single leader and the light rod seemed just then a bad combination. Determined to do my very best, putting my thumb on the reel I gave him nearly all the resistance of the rod. Up to this time he had had everything except the hook all his own way; but the resistance of that light rod was more than he had bargained for, and it soon checked his rapid career and changed his direction so that I was enabled to take up a little of the line. This trial of strength gave me some confidence in the rod and tackle. Keeping a steady strain upon the line and gaining more and more confidence, I found I could to a great extent control his motion, and at last made him circle around me time after time, his efforts becoming weaker, occasionally varied with a sudden rush and leap from the water.

Having no landing net I was somewhat puzzled how to get him. I had the fish all right, but knew I could not lift him from the water with that tackle. Fortunately the water shoaled gradually at the lower end of the pool over a sandy bottom free from obstacles, so in the end I grounded him fair and square with his head out of water on the shore, and wading up took him out by the gills. He proved to be a small mouthed black bass and weighed four and a half pounds.

Such was my fish experience with the fly. From that day until the advent of cold weather I used the fly and met with satisfactory success. I have caught many small mouthed black bass that would weigh four and a half pounds, but none larger. Although nearly every old fisherman in this locality has taken them weighing six pounds and more I have not yet had the good fortune to ever see one of that size. On several occasions during the latter part of the season I fished from a skiff with another party who was using live bait (minnows and craw fish) each time coming off the victor with the fly, and am perfectly satisfied with the superiority of the fly over all other kinds of bait for bass fishing in this locality during the summer and early fall months.

Now I would like to say a word for those lovers of the sport who cannot always select the time and place to try their skill, but do occasionally get a day off—I would advise all such when starting out for a day's sport among the bass to provide a box full of grasshoppers. If on reaching the fishing ground the bass will not rise to the fly, cut the body off from a silver minnow, or other bait, and attach the grasshopper, insert the point of the hook in the head of same, and pass it through two-thirds of the body lengthwise, and bring the point out on the other side; slide the grasshopper well up on the hook, cast and allow to sink; nearly all kinds of fresh water fish will take it readily, including the cat-fish of the different species. If the disciple does not desire to mutilate one of his choice collection of flies he can easily make a minus the body, and still the same fly as described. Old fisherman who know the haunts of black bass will not be troubled with the smaller tribe, and if they have not tried this bait before will be astonished with the number and size of the take.

GRINGO.

## FISH SLAUGHTER IN CANADA.

OTTAWA, Dec. 17, 1880.

Editor Forest and Stream:

Recently I had occasion to correct some misrepresentations concerning the salmon fishing and the Canadian fishery laws published in the *Forest and Stream* by an English sportsman named Mr. Eardly-Wilmot B. Holt. I have now to refer to misinformation circulated by an experienced American angler well known to your readers, Mr. Geo. Dawson, of the *Albany Evening Journal*. The distinction made between Mr. Holt's and Mr. Dawson's publications rests on the fact, that the former's assertions profess to be based on actual observation, and the statements of the latter seem to be founded on hearsay.

THE FOREST AND STREAM of 25th ult., under the heading of "Killing for Count," Mr. Dawson says: "Last year three titled Bunkies from England killed 600 salmon on the Cascapedia. Most of these were taken thirty or forty miles from any habitation where they could be utilized. The result was that most of them had to be buried as offal. But this disgraceful fact did not accompany the published score which went the best catch on record, and as proof of the great skill of the fellows who perpetrated the slaughter."

The angling party on the Grand Cascapedia last year consisted of the Hon. Chas. Ellis, Mr. Iveson and Captain Percy. These gentlemen reared the stream for \$600. Their score was very high, but nothing improper was supposed to be connected with this extraordinary catch. If any of the fish caught by them were wontonally wasted, as alleged, it would be an infraction of the fishery laws, rendering them liable to

severe penalties and summary expulsion. It is the business of the local Fishery Overseer to enforce these consequences, for which purposes among others, he is invested with magisterial authority. Mr. Dawson's article was therefore promptly referred to him with a request for explanations. Overseer Dimock is the chief fishery officer at Cascapedia, and during a series of years has proved attentive and trustworthy. In answer to such reference he states positively that not one of these fish was spoiled or wasted, but that the whole catch (apart from daily consumption) was given away to settlers on the river, and to employees of the party, there being thirty men, each of whom received one fish, and that the fish were at the close of the fishing. About three-fourths of the fish he adds, were taken in the lower pools. Mr. Dimock's report is corroborated by the affidavits of several persons who are certified to us as credible witnesses, being themselves engaged on the river at the time, and the same men who cured, or carried and delivered the salmon.

The accomplished author of "Pleasures of Angling" will no doubt be gratified to learn that in this particular at least he has been misinformed. "Killing for Count" being in no sense sufficiently objectionable from a true sportsman's point of view even when qualified by the necessary care and unusual, but commendable, liberality which I am assured were manifested in the present instance. Yours truly,

W. F. WITCOMB,  
Commissioner of Fisheries, Canada.

## THE GREENBRIAR.

WASHINGTON, D. C., Dec. 1880.

THE Greenbriar River in West Virginia was stocked with bass, as you know, several years ago, and in September, 1879, I was the first to sample the stream with a fly, and was rewarded by several good baskets.

"This fall I passed through Roncovec on my way to the woods, and I found the people all posted as to bass. The fishing was excellent this year. One man caught 500 during the season. The largest went to 43 lbs. weight. The superintendent of our mill having informed me that it was 'no use to go for them, with the weather so cold,' my fellow anglers had just walked away with certain leaders and flies I had sent down to him by request that he might learn to fish properly. To correct his views I rigged up my trout rod, and from a pool just below the mill I took two at once of 23 lbs. weight. The fish having fortunately taken the dropper, a great many very large bass were taken lower down the Greenbriar, and at Richmond's Falls on New River where I heard of one 54 lbs.

I do not think the bass will be as numerous next season. The stream having been recently stocked, of course contained a lot of undisturbed minnows, chubs, etc. Now since the bass got large enough to catch—and they will jump at a fly when only two inches long—the small fish have been devoured until there is not a minnow to be seen high or low, and the bass have worked up and down in search of pastures new. Of course there will be plenty of bass in the stream, but only as many as the normal supply of food will sustain. There will soon be another as prolific season for the angler as was this of 1880. I spent several weeks on my trip living on venison, etc., etc., including a variety from coon to turkey. Among other trophies of the chase was an eagle 6 ft. 9 across the wings the head of which I have had set up by Kridler. I did not look after any panther as there was no snow. O. CLAY.

## "A WATER-GLASS."

IN looking over "Atlantic Islands," a very pleasant book by Mr. S. G. W. Benjamin, I find the following account of an instrument used by the inhabitants of the Bahamas in gathering sponges: "The sponges (says the author) are two or three fellows, one of whom is the diver, and the other the sponge ascertained by means of a water-glass, which is a simple oblong box a foot square, open at the upper end, and containing a pane of glass at the other; on holding this perpendicularly over the water one can see everything through it as clearly as in an aquarium—fish, sponges, coral or shells."

We are not told the length of the box, or the kind of glass used, or the depth of the glass end in the water; but the present use of the water-glass and the netting over it, thus handy and easily wielded, and not costly in construction. Why has not some angler, or enterprising fish culturist, or naturalist introduced this implement among us? An instrument which would enable us to watch fish beneath the waters—to see all their movements—how they spend their idle time—in a word, lay open to us their whole existence, would be a great boon to the naturalist. But talking one day with an inveterate disciple of old Frank about such an implement, "Why," he said, "that would spoil all our fun. Now, when I throw my minnow in the water, I forthwith begin to imagine there are a half-dozen or more huge bass eyeing my bait, and each meditating a deadly attack upon him. And I keep on imagining this, expecting every moment to see the cork disappear, and the very loveliness of this expectancy is what stirs a thousand pleasant musings in my head and makes angling to me so delightful with my bescope no more fairy fancies, we should see at once what a rare fish no fish, and we should have no brilliant hopes." "But then," said I, "we could go where we could and catch them." "But that," rejoined my friend, "would not be fair to the fish, and I'm in favor of the fish having a fair chance, and I love my dreams." M.

RANGE OF BLACK BASS AND CATFISH.—*Orleans, O.*—Dr. Garlick says in FOREST AND STREAM that in company with Judge Potter, of Toledo, he has fished the waters of the Sault Ste. Marie rapids and their surroundings for many years and neither of them ever captured a black bass in that locality; nevertheless I have seen at the "Sailor's Encampment" on this river, twenty miles below the rapids, many black bass taken. In 1863 H. C. Gaylord, of this city, while fishing for trout in Goulie's Bay, north shore of Lake Superior, caught two black bass with the fly. They were well grown fish, weighing 24 lbs. each. I saw numbers of this fish at the Portage, Point Keweenaw, in 1859, and persons who are also in the vicinity of Ontonagon on the south shore of this lake.

I am yet in search of the most northern range of our catfish. Perhaps the waters of the Mississippi will be found to carry this fish furthest in that direction. In case it is found in waters north of the divide, that flow into the Arctic seas, please let us hear from the captor, and also have a description of the fish and its habits in that locality.

DR. E. STERLING.

have been killed and shipped to market on previous years as late as March. In the winter and spring of 1877 two hunters, now living near Indian Lake, killed fifty-two deer by crust hunting, leaving thirty of them to rot in the woods. Mr. Palmer is now out on snow shoes watching the yarding grounds for violators of the law.

Last week three men went into the grounds of Mr. Erastus Corning, near Albany, N. Y., with ferrets. They were not looking after Mr. Brayton, State Game Protector, but were more particularly seeking rabbits. When Mr. Brayton appeared they had an engagement elsewhere and could not stop to see him. In their hurry to get home they had not time to gather up all the ferrets, and one is now awaiting an owner in the hands of Mr. Brayton.

DITTMAR POWDER REVERBERATIONS.

BROOKFIELD, N. Y., Dec.

Editor Forest and Stream:

Many thanks for your articles on Dittmar powder. I was about to get some. For downright fearlessness when in the night Forest and Stream is ahead.

H. L. G.

OSWEGO, N. Y., Dec. 10.

Editor Forest and Stream:

Good for you on Dittmar powder. You have undoubtedly saved the lives of scores of sportsmen. Please send me your pamphlet upon the subject of their compound.

F. E. H.

OTTAWA, Dec. 15.

Editor Forest and Stream:

While I am writing you this note let me say that I was extremely pleased to read your able exposure of the Dittmar powder, and I fancy most sportsmen read your articles with feelings similar to my own. Had the company gone on there would have been plenty of "cripples" among the sportsmen as well as the birds.

H. H. S.

SPENCER, Mass., Dec. 11.

Editor Forest and Stream:

Much interested in your Dittmar powder articles. Many thanks for your faithful and thorough exposure. You have made many new friends hereabout and strengthened old ones. A paper at once so faithful and so fearless deserves a large increase of circulation, and I am confident will have it. Please send me copy of the articles; will distribute to our club should you send several.

A. S. W.

PITTSBURGH, Dec. 14.

Editor Forest and Stream:

I congratulate you on the Dittmar powder articles; the good you have done the sportsmen of the country is uncalculable. No words in reply will or can answer the exposure. All sportsmen who value life or limb will let the cursed stuff alone. I have had much experience with it, and had resolved on this action before your exposure, on account of the uncertainties it had with it, and your article confirms my wisdom. I. R. STAYTON, Sec. Penn. State Field Trials Assn.

MARSHALLTOWN, IOWA, Dec. 12.

Editor Forest and Stream:

To say that I am pleased with your journal will convey but a very faint idea of my regard for its valuable articles and its purity, freedom and fearlessness. No, you don't need to shake up Dittmar; he shakes himself up enough in his own statements. I have to thank you for your exposure of "this tamed down stuff," as I was just about to send for some, but have changed my mind. I had heard of many accidents with it, but supposed it was the result of carelessness in loading; but am convinced to the contrary by Dittmar's own statements.

R. H. W.

WINDSOR LOCKS, Conn., Dec. 23.

Editor Forest and Stream:

The cold weather has put a quietus on shooting. We suppose the attention will be turned to fishing through the ice in the Connecticut River. We are informed that bass are freely taken by spears through the ice. About Christmas there will be some shooting by law-abiding sportsmen, as game cannot be shot until January 1. We wish to say that your word in regard to the Dittmar powder case. First, we thank you with all our strength for your exposure; for, although we are amateurs, we still have handled many guns and burned some powder, and we might have tried Dittmar in the future had you not exposed it so well. We know there are "Three True Blues" who will ever thank you.

LOWELL BENK.

NEW ROCHELLE, N. Y., Dec. 15.

Editor Forest and Stream:

I have read all that has been written in your paper about the Dittmar powder. From the beginning I distrust its practical utility for the rifle or shot-gun. After about four years' hesitation I bought one pound to satisfy myself about it. This seemed, on trial, to give no velocity to the bullet. I represented this to the dealer from whom I purchased it, who said the fault was in the loading. My dollar was gone, and I had the stuff on hand. I considered myself sold, and closed the canister for good.

It was not only a cheat to sell this powder in the way it was done, but a crime deserving the highest punishment. I am glad you made war on it, and I only wonder you did not do it before.

Your article of exposure was so complete as led me to say: "The jig is up. Good-by, humbug Dittmar powder, forever." The sale of it was truly a "sawdust" affair. Your petard blew it "sky high." Thank God! When I get time I will tie my canister to a twenty-pound stone, row far out into the Sound and sink it so deep that the lobsters cannot find it.

M.

Editor Forest and Stream:

Forest and Stream deserves well of sportsmen for its exhaustive report of the Dittmar powder. Many times I have been on the point of using it, but always the silent monitor bird let it alone and be content with black powder. At there came a time when I ceased to desire to use it. Two of my acquaintances had the one a rifle, the other a shotgun, burst at the breech using it. The owner of the rifle came near losing his shooting eye. The other man escaped with a bad shaking up and temporary derangement. Neither of the men have made a statement of the matter in print. Why, I do not know, unless it be because they had really recommended it to others as every way safe, and so

were ashamed to do so. I think, judging by these two instances, that a very small per cent. of such accidents have been reported. Now that the manufacturers have issued their pamphlet, would it not be a good point to "carry the war into Africa," and request, through your columns, the names of parties who have suffered in consequence of using the powder?

TRAPPER.

THREEING GROUSE.—I have been a good deal interested, not to say amused, at the ideas and experiences of different writers about the treeing of grouse, because it happened that my first grouse shooting was over a treeing dog. He was as good as I have ever seen, and I have seen a few good ones—not many, for the hardest dog to find these days is a good pleasure dog, as we call him in Pennsylvania. Hounds, setters, pointers and cockers may be found by any who will seek—and pay; but a pleasant dog comes by nature. He is rarely to be had, and there is no sure way of training him to it. "Old Frank," the last good one we had here, may serve to illustrate what such a dog can do. Four of us made a camp on Marsh Creek, where pleasantries (grouse) were plenty, with a fair show of woodcock, and our team consisted of a well-trained pointer and Frank. We had all the success we wished; in fact, were obliged to let up and send twenty grouse home to save them. But the point I wish to make is this: Out of forty-two ruffed grouse that we shot, ten were killed over the pointer or taken by snap shots, and thirty-two were fairly treed, marked and barked at steadily by Frank until some of the party could get in for a shot. A few left after they were fairly treed, being scared out of tree by the hunters; but they usually sat still as statues until shot off. How a dog finds the right tree, goes to it and gives tongue steadily when the bird has flown out of his range of sight for fifty rods is one of those things no fellow will ever find out. But he does it.

NESMITE.

MICHIGAN—Escanaba, Delta County, Dec. 15.—December 6 was a poor day for bears. I was out after ruffed grouse. My dog found a bear den. I got one old one and three cubs. To-day I was up the railroad a few miles and when near home my dog, as usual, ran ahead and came back to meet me. Soon after getting in the house he had a fit and lay on his sides and quivered. I gave him some oil. Soon he got up and went and lay down in the snow. I went to him, when he got up again and walked part way to the house and had another fit, from which he never recovered. I saw nothing unusual about him through the day. To-night I have found two places where he rolled and tumbled about a good deal before he came to meet me. I am at a loss to know what was the matter. I forgot to say I took him up and laid him on a blanket, and when I would just touch him he would spring and jerk fearfully, yet he did not move off the bed, and would look up so wisely to me. He has been my constant companion for four years and two months, either in the boat, or on the cars, or in the house, or wherever I went. It looks foolish to mourn for a dog, yet I can't help it, as he has been my only companion for nearly two years. Now I am alone and shall never have his joyous bark again.

P. S.—Mr. Chas. Bishop and partner killed an old bear and three cubs a few days before I killed mine.

A VILLAINOUS PRACTICE—Savannah, Tenn., December 21. The weather for the past week has been like spring, and as a consequence the quail shooting has been unusually good. I was out two days and bagged thirty-three quail, one hare and a solitary duck that I flushed in the creek. My shooting was done over a young pointer untrained until this season. With an older dog the bag would have been much heavier; as it was I lost several birds that were killed but not retrieved. Given a thick cover, a water-tipped December quail, and you have a problem whose solution is rather difficult for a "young'un." The river is reported swarming with ducks and geese. As I write this a norther is blowing and the snow is falling thickly; if this weather holds for a few days there will be plenty of sport for the large bores and heavy metals. I wish to mention here the villainous habit practiced by the passengers and officers of the boats on our river of banging away at the geese and ducks from the decks of the steamers, killing many and frightening many more, with the effect of making the fowl so wild as to deprive true sportsmen of much good sport. As the boats never stop to get the game killed, it is wantonly wasted. Such reckless destruction of valuable game cannot be too warmly denounced.

WILL.

NEW JERSEY GAME—New Bedford, N. J., Dec. 12.—Editor Forest and Stream: I am sure that you would confer a benefit upon the public if you would take notice editorially of the necessity for a revision of our game laws. From all parts of the State the reports show that game and game birds are fast disappearing, and there is no doubt that, if the law does not interfere, a year or two more will leave us without any game. New Jersey has in past years been noted as furnishing plenty of game, a source of revenue as well as amusement. If this is to continue, the game laws must be made more stringent. I find that those best informed on this subject generally agree that the time has come when a close period should be established for at least two or three years, during which time it should be made unlawful, under heavy penalty, to kill or trap any woodcock, quail, rabbit or pheasant at any time of the year. Such a measure seems absolutely necessary, and especially for this section of the State, from which the quail have almost entirely disappeared, although it was formerly a sportsman's paradise.

J. H. B.

PROTECTION FOR WILD PIGEONS.—St. Elie, St. Maurice Co., Quebec, Dec. 13. In one of the late issues of your paper I notice a correspondent inquires the whereabouts of the wild pigeon. Unless an effectual stop is put to slaughtering the birds on their breeding grounds they will soon become a thing of the past.

They are becoming exceedingly rare in this part of the country, where they were once as numerous almost as the leaves of the forest. I have seen but four specimens of the bird this season, and with many of your readers mourn their rapid extermination. It seems to me that something ought to be done toward their preservation, either by the enactment of wholesome laws in the different States where they resort to, or by the purchase of the woods where they breed. As they are a migratory bird, all sportsmen throughout the States and the Dominion are interested in their preservation. Let us join hands north and south, east and west, and see what can be done.

JEAN.

A VETERAN SPEAKS.—It would seem that your remarks in relation to the handling of guns by sportsmen are not called for. It's an old saying that "Experience is a hard school

and fools will learn in no other." Let them have a little of the "Experience" and if they live through it they will find the way to the breech and probably stay there.

For the community at large, a few remarks from you in regard to the manner in which would-be sportsmen and boys carry their guns through the woods and roads might prove to be of great service. In my section of the country the rule appears to be to carry the gun over the shoulder, and about level, so that in case of accidental discharge something would be sure to be hit.

I think one is more sure of coming out unharmed on a road infested with highwaymen than one infested with young sportsmen. The first, though he aims to do so, probably won't hit you, the last is pretty sure to.

AN OLD SUBSCRIBER.

GUNS, NEW AND OLD.—Putnam, Conn.—I usually hunt through hammocks with light rifle strung at my back and a shot gun in hand. I have often met my fellow sportsmen with their \$50 or \$100 rifle and shot gun of from \$100 to \$200 value that would scarcely notice my rifle of \$20 and shot gun of \$15, but whenever shot to kill my gun had claims they were obliged to respect. My hunting and fishing pleasures I must lay aside, for I am now three-score and eyes fall pure, and my hand trembles. Over forty years ago I shot the partridge on the wing with a flint-lock King's arm, when you would have to hold about four feet ahead to allow for the flash-bang. However, I recollect at one time of killing three out of four shots and without a dog. Had I then the convenient gun we now have I could have killed a great abundance, for game was plenty in the woods forty years ago.

G. F. WILLIS.

LATE SNIPER.—Tolland Co., Conn., Dec. 24.—We all read that the Wilson snipe is a migratory bird, still this is not strictly true. The ground is frozen solid, and all water, except running brooks, likewise; on such brooks they are now here. I have shot them this week, as have others. I have learned from the farmers that they remain all winter. I would not have believed it had I not seen and shot them myself. Partridge and quail scarce, and too cold to shoot anyway.

MARS.

We killed on Saturday, December 18th, an English snipe (*Gallinago Wilsoni*) on Wawayanda Mountain, N. J. It was living along a spring brook and was in good condition. Another was seen by an acquaintance on Monday, the 20th inst., near the Rutherford's creamery in the Vernon Valley.

RHODE ISLAND—Newport, Dec. 18.—Four Wilson snipe were shot on our island Dec. 12. Is this late or early?

X. Y. Z.

MICHIGAN DEER SHOOTING.—East Saginaw, Dec. 23.—Last week Gary Fleming and one other gentleman from East Saginaw went out six miles from Saginaw City hunting. They killed fifteen partridge and one bear. Bruin was brought to bag with a 16-bore gun, loaded with fine shot.

Mr. Richter, a taxidermist, of East Saginaw, has set up 250 deer heads since the hunting season opened, and up to the 15th of December, and has plenty of work on hand waiting.

There has been more deer killed in Northern Michigan this fall than ever before. About two years more at this rate and the hunters will have to seek other localities besides the North Woods to hunt.

HUNTER.

'SHOT AND GLASS BALLS.—Bridgeport, Conn.—I am using soft shot, and think they have a tendency to stick to a glass ball and not glance as the chilled shot do. Suppose a ball be hit on the side by a chilled shot, the shot is so hard it cannot get hold of the ball. On the other hand, if a soft shot hits a ball on the side it will batter just enough to cling to it and be more liable to break the ball than a chilled shot. In bird shooting I think soft shot superior to chilled for the reason they must cling closer to a bone and be more apt to break it than chilled shot. But in every case they must make a larger wound than chilled.

C. M. A.

NEW YORK, Hay's Corners, December 20.—Not a wild goose has been seen here in Seneca the past fall to my knowledge. I have made numerous inquiries in regard to them. They passed here last spring, but although stopping more frequently than usual, none were brought to bag, owing to my knowledge. All kinds of game is very scarce here, and quail indeed scarce, also partridge, squirrels, rabbits. All kinds of game have become almost extinct; there have been at least six hunters to one bird the past season here.

L. E. W.

ILLINOIS—Dudley, Edgar County, Dec. 22.—Deer plentiful here as before for years. One man has killed nine in last three weeks and another five. I have brought down four myself, mostly found in cornfields. Winter set in very suddenly and caused a great amount of corn to be left unhusked. This is a grand place to chase fows. All we lack is the dog with bottom and gameness to keep to the track. Prairie chickens and quail plenty. Ducks of no kind have made their appearance yet.

G. J. B.

ITS EDUCATING INFLUENCE.—Please send specimen copies of your paper to the names given below. If I can secure a good circulation for your paper in the country I think it will be the means of educating our sportsmen up to a higher standard of sporting excellence. I know it has done this for me, and I have been an ardent sportsman all my life.

C. S. W.

NORTH CAROLINA—High Point, Dec. 25.—For the benefit of those wishing the information I would say there is too much snow in this State for shooting.

J. N. D.

SHOOTING MATCHES.

WASHINGTON GUN CLUB.—Inaugural match on the new club grounds at Ridgewood Park, Christmas Day; 2 traps; 5 birds each; 25 yds.; ties at 30 yds.

First Match.

Hugh Cartkott	1	1	1	1	1
John Coffey	1	1	1	1	1
W. J. Brooks	1	1	1	1	1
W. L. Wilde	1	1	1	1	1
Dr. Metcalf	1	0	1	1	1
J. H. Brooks	0	0	1	1	1

\* Divided first prize. † Divided second prize.

Second Match.

Win. De Nove	1	1	1	1	1
John Coffey	1	1	1	1	1
Dr. Metcalf	1	0	1	1	1
J. Dickling	1	0	1	1	1

THE LEONBERG DOG IN NEWFOUNDLAND.

SOME readers of *FOREST AND STREAM*, will remember that I gave an account in its columns of the introduction of the celebrated Leonberg dog into this island. The attempt to introduce the new breed was made under the most favorable circumstances. Three puppies were selected by Count Esseg, of Leonberg, Wurtemberg, Germany, the breeder of the new race, for the express purpose of trying the effect of the Newfoundland climate and a further infusion of Newfoundlander blood. The puppies were ten weeks old when brought here by a vessel of mine, and in due time grew up into magnificent animals, distinguished for their immense size, beauty of form, gentleness and sagacity. The Leonberg dog is slow in coming to maturity, and the Count did not wish them to breed until their third year, when they were fully grown. Unfortunately we lost the male by a dose of strychnine which he accidentally swallowed, but Count Esseg, when he heard of our misfortune, replaced him by a still finer specimen. These circumstances and other mishaps retarded the propagation of the breed here, but it is now fairly established, and will multiply rapidly, as we have about a dozen young animals in addition to the three imported. Some of the young are grown up and breeding. So far all are the result of a cross between the Leonberg and Newfoundland dog, and the progeny appears to be a decided improvement on the original stock, the increased dash of Newfoundland blood improving the appearance and good qualities of the offspring. The climate evidently agrees with the breed, and the variety thus produced promises to be of great value. A litter is shortly expected by Diana, one of the female dogs originally imported, now breeding for the first time, though nearly four years old. She is a beautiful creature, twenty-eight inches high at the shoulder, five feet in length, weighs 107 lbs. and is exceedingly gentle and intelligent. She is by far the handsomest dog in St. John's. Her owner says he would not part with her for \$200. We expect her progeny will be very superior. The owner of one of the best breeding kennels in the city, has offered \$80 for him. The puppies are eagerly sought after, and when six weeks old sell for \$20 to \$30. The price is rising as their value is recognized. Arrangements are made to have a good number of litters during the next two years of the pure Leonberg breed in order to keep up the purity of the stock and to compare the result with the crossing above referred to.

It may be well to state that the Leonberg dog was reared since 1846 by Count Esseg, and that it was the result of a crossing of a Leonberg dog with a greyhound. The dog of St. Bernard Mount, which latter he has improved by the great wolf dog from the Pyrenees, where the first Bernardine dog originated. The Leonbergs are the largest race of long-haired dogs who unite sagacity with size and beauty. They have carried off the highest prizes at the leading dog shows of the world. They are not subject to madness—no case having yet occurred among them. They often reach a height of from 30 to 40 inches, and weigh considerably over 100 lbs. (Since the color and shape of the puppies, wolf gray or black, the latter having often a double or split nose. They are much sought after by the nobility and gentry of Europe, and for a well trained Leonberg from £50 to £100 sterling have been given. The Prince of Wales possesses one of them, which he is said to prize highly, and another is a favorite with the Empress of Austria. They are prized for their beauty, intelligence, strength and faithfulness. Their greatest virtue is their love of children.

Since the foregoing was written I have learned that Diana has presented her owner with nine puppies, of which six are preserved, and that Gumo is also the mother of six, so that our Leonberg dog colony now numbers twenty-seven in all. In the course of a few years, if due care is observed in preserving the breed pure, this new and superior race will have multiplied considerably, and will ultimately establish here an exceedingly valuable breed of dogs, which will supersede the miserable mongrel tribe into which the Newfoundland dog has here degenerated. M. HANVET.

St. John's, Newfoundland.

HOW TO TRAIN COLLIES.

DECEMBER 20.

Editor *Forest and Stream*:

In reading the various sporting journals of the day I frequently see articles upon the subject of educating and training setters, pointers and spaniels generally, but I cannot remember ever seeing anything upon their education and training of my favorite dog, their non-sporting brother the Scotch collie, who, in his sphere, is as useful and valuable as any member of the canine race. And now, since the success of the collie trials held under the auspices of the Pennsylvania State Agricultural Society, at Philadelphia, in the latter part of September, and as it is more than likely that they will be repeated another year, and that other agricultural societies will follow suit, and inaugurate one of the attractions of their shows, I think it will not be amiss to give you my ideas in regard to their education and training.

I have owned collies all my life—good, useful and well-trained dogs—and in my walks and drives they are my constant companions. My collie is a mischievous and fun-loving rascal, and even when well trained this love of mischief will show itself. There is now curled up at my feet one of the handsomest collies in America. She has been shown at several dog shows and has always been placed, and the cur is a first-rate worker on stock. She is always under my buggy when I am driving, "except" sometimes I allow two others to follow for a frolic and exercise. Now, here the "except" comes in. If by chance this crew spy a cur on the road the mother collie will be off like a shot; out she goes from under the buggy, passing between the front wheels and horse, throws her head back and gives a sharp, quick bark or two, as much as to say, "Come on, Punch and Judy; here's fun for us, and away they go like a thunderbolt, and the cur is outwitted and tumbled about in the dust. Well, it's all over in a jiffy and they come trotting back, I suppose laughing to themselves. I point my finger at her and say, "Aren't you ashamed of yourself?" Her head goes down, tail between her legs, she snarls her chops, whines, "Yes, but it was so much fun I could not resist the temptation; I'll not do so again—until next time," and next time the same thing is repeated.

For the first six months or so the puppy is allowed to do pretty much as he pleases, so long as he keeps his long nose out of the cabbage-pot, doesn't suck the eggs or worry the pets, for Master Collie is a busy-body and is nearly always in some kind of devilry; but even at an earlier age than this the collie may sometimes be seen gathering the chickens in a corner of the lot and manœuvring them as his ma does the sheep.

As a general rule we commence their education about the tenth month of their age; but we sometimes see them younger than this working stock like old stagers. I have one in my eye now that at five months old would go to the pasture field, containing about sixty acres, drive out the cows and bring them home, a distance of over one mile. At six months old she was working sheep and obeying every sign and motion of her master.

The first thing I do is to make the dog love me. I treat him kindly, never kick nor strike him and never deceive him. I talk to him and let him know he knows every word I say. There is a great deal to assure you in this "love me." When he loves me and understands me I take him into a room and there teach him to follow close to heel, to stop at a whistle, to lie down when told, to go forward by motion of hand and to either right or left. I always stop my dogs with a whistle, to attract their attention before giving an order by mouth or hand.

When I consider my youngest house-broken, that is, when he obeys my motions and whistle, I take him with sheep—confined in a lane—and allow him to drive them with me, and by motions I keep him moving from one side of the lane to the other—when we are at the end of the lane I say "Around them" motioning the way up the side and go with him and show him. When round them I stop him with a whistle, make him lie down, and leave him; I then go in front of the sheep and tell him, "Bring them along." If he comes too close to the sheep, I stop him with a whistle, and say "Keep wider" or "Slower." These lessons I repeat until I consider him nearly perfect in driving up and down the lane, then commence to teach him to go from where I stand at one end of the lane to the other and bring the sheep to me, this I do by motioning the way and saying "Far away;" and if he does not go I go with him and show him what to do. When behind the sheep I make him lie down, and I go to the spot where I first gave the order and from there whistle him to bring them along. When he does this work to my satisfaction I then allow him to the fields to drive the sheep from pasture, and here I repeat all my former lessons to him; I teach him to jump back and forth over a fence, and to bark when told, but never to bite; and when he attempts to use his teeth I punish him. Now as to punishment, as I said at first, I never kick nor strike—I catch the collie around his nose and give him a shake or light tap on the ear with my hand, a cross word will cover him all on one.

There is one thing I never like to do, that is to commence working my puppy on cattle. As a general rule it will not do, as the dog becomes too severe and it gives trouble to, afterward break him of this habit. I commence first on sheep, and when he will work them carefully I can then allow him to drive other stock.

Now one other point and I am through. The old adage, "Too many cooks spoil the broth," applies to Master Collie. If you wish your dog thoroughly trained, only one must work him, and that one I insist must be patient and teach him quietly and gently. If you wish him spoiled and made worthless allow the whole family to work him and you will succeed in this admirably. COLLIE.

THE SCARCITY OF REALLY GOOD HUNTING DOGS.

TO the casual observer, who reads in the weekly edition of your valuable paper the record of breeding, births and deaths of the canine family, it looks as if the country would soon be overrun with fine bred dogs. This manner of breeding has been going on for years; still, to secure a really fine field dog is no easy task, even though what would be considered by some an extravagant price is offered. To others besides myself these questions may have presented themselves. What becomes of the thousands bred? Why is it so hard to get a really first-class field dog? My answer to the first is that of the thousands bred but few arrive at maturity. The lills to which the canine race are subject are legion, and the care in breeding, which is best practiced naturally impairs the physical stamina of those bred; they easily succumb to nearly any ordinary disease. Those that live have not, in my estimation, justified the great praise that has been bestowed upon the imported breeds as field dogs. To be sure now and then an extra fine one is brought out at a field trial, but these cases are the exception rather than the rule. By many Gladstone has been looked upon as the best setter in America. The sporting papers have been full of his praise, while Joe Jr., who in a cross one native stock, has beat him at all trials, but is seldom mentioned. The reason may be that one is a Llewellyn, the other not. To produce a really first-class field dog does not in my estimation depend so much on whether he is a Llewellyn, Laverack or cross of either or native stock; for whatever breed, I believe the sire and dam must be from strong, healthy stock, with intelligence and unsurpassed hunting qualities.

Some consider speed the great requisite, while others consider a fine nose or superior to excessive speed of the two. Give me fair speed with fine nose, in place of excessive speed and poor nose; the former will find more birds and give more pleasure in a day's shooting than the latter. But the standard for speed has, by the field trial rules, been set so high that what any sportsman would call a really first-class dog to get game over stands but little chance to win, consequently breeders have been trying to produce as fast dogs as possible, ignoring some of the qualities which, to an ardent sportsman, are of more value. Having produced the whelps from which it is intended fine field dogs shall be made is but a drop in the bucket toward producing a fine field worker. The raising of these whelps—the time, trouble and expense before they arrive at an age fit to decide if they have good natural field qualities—is considerable. Possibly one half of the setter's die; if so, usually we are apt to think the best if the others do not prove good. But if two out of six make really first-class dogs as we styled, as by experience, and I am saying, "Sam is a really first-class dog," and the other four are worthless. So, out of a litter of six, two really good ones are secured to put in the hands of a breaker. Up to this time, unless one has all the necessary conveniences for raising, they have undoubtedly been a nuisance; they have now gone into the hands of a reliable breaker, with the fond hope that ere long they will be returned so perfectly trained that they may be your shooting companions for years. Alas! how often are the owners disappointed. The breaker says, "Sam is a really first-class dog. Head up and tail down; quaters his ears beautifully, but does not seem to have a good nose. For what has already been taught please send \$25; and say shall I endeavor to thoroughly break him, which will cost \$100 more." You have already paid out, if time and trouble has been over \$50, and then you are told that a first-class dog is a nuisance. It has been the fate of many!

sportsmen who have tried to raise and have broken dogs to suit them. If the amount of money that has been paid out in this way were known it would astonish many sportsmen who think if they are asked \$150 for a well broken dog, that the owner desires to rob them. But for one, my dogs will be selected from seeing them at work in the field in the future; I then have had no trouble in raising, have lost none by death, and have not paid out money enough for each to buy three dogs, still having no more collies to put out over me. The reason it is so hard to find really good field dogs is that many sportsmen are not willing to pay the price it costs to produce a really well broken dog, consequently breeders will not produce them. One who has not had practical experience in breeding and training has but a little idea of how many young dogs prove almost worthless as field dogs. Neither have they an idea of the time, trouble and expense one is at to breed and break them, nor how many die under the age of one year.

Let them well consider this subject, and for the future my idea is that less dogs will be bred, sportsmen will buy of some reliable breaker who has plenty of game in the section where he resides to enable him to turn out annually three or four first-class dogs. Some breakers take twelve or more to train. I will venture the opinion that said seldom turn out a perfect dog. Six is as many as any one man should handle. Even with that number, until he has worked them two seasons, he can hardly call them perfect. SPORTSMAN.

WHAT IS A COCKER?

Toronto, Dec. 13.

I HAVE been much surprised and to a little amused in observing the gravity with which your correspondents in some instances enthusiastically draw upon their special fancies for the points of a dog, and then offer the result as a standard of the cocker; and in others, seriously suggest the formation of a cocker club to determine the standard of an animal which existed in its purity before many of themselves were born.

Why sir, I might with equal justice enter into a discussion with the object of ascertaining what constitutes a cow. The question of a cocker has long been quite as definitely settled, as I am sure it is by Mr. G. McDougall (who, I am aware, has had opportunities of knowing something of this breed) raising a doubt on the subject. He knows as well as I do that the modern cocker is purely an English cross, bred for certain purposes, by those who expended much time and money in effecting their object.

The result of their efforts, now of many years standing, is the modern cocker pure and simple, and the description of this animal, as afforded by the best English authorities in print, leaves no room for doubt as to what it ought to be. There is no need of my setting forth the points of the cocker here save the one question of weight, to which I may allude, because it does not appear to be definitely settled by the present authorities, simply, I presume, because that is as variable in proportion as the weight of a human being. However, from the comparisons made with other breeds, and the accurate description and measurements given, there can be no doubt that a fair limit of extremes is twenty to thirty pounds, and that without any depreciation in point of weight against either the larger or the smaller animal, other points being equal.

Of your correspondents, Mr. Kirk comes nearest the mark, but he also resorts to his own peculiar fancies to supply some of the points, and in each case falls into error, because he totally ignores the real existing standard, notably in his ideas as to head, color and action.

Why then should there be any doubt? England, for many reasons, has long been the nursery of the finest breeds of dogs in the world, and adopting one of these for our own use why should we depart from the standard laid down by English breeders? In saying this I do not desire to depreciate in the slightest the dogs of America, or the efforts of American breeders, who have of late been effecting such noble results. But why should we endeavor to raise doubts where no room for them exists?

Create a beautiful strain of spaniel if you like, but give it a distinctive name apart from the cocker as we now comprehend it, and then argue the points and merits if you will, and I have no doubt that the result will be in a few years the perfection of a strain superior to but distinctive from that now existing as the modern cocker.

A committee of three, so impetuously proposed by Senex and others, would, however, hardly effect that object if it happened to be composed of Messrs. McDougall, Davis and Kirk, each of whom, I think, differ materially in their ideas as to the points of the cockers now, and I should therefore await the result of their deliberations with no slight degree of interest. C. G. CARM.

JUDGES AND RULES.

Editor *Forest and Stream*:

I should like to say, through your columns, a few words. First, I cannot agree with you in the solace you offer the late disappointed competitors in the field trials held on Robin's Island. You say that "every one who entered a dog knew before the running what the judges were." This in the main was true regarding the names, residences and newspaper reputations, but the exception and point I raise and which I deem of vital importance is their questionable knowledge of the manner of shooting over dogs as practiced in their home localities, the style and training of a dog suitable to his shooting, and their bias as regards strain, style, size, color, pace, and all that go to make up the qualifications of a dog, to fit their ideal, to meet their fancies and prejudices in accordance with their judgment as their minds have been tutored and formed to recognize from boyhood up to the present. If not, and if they overlooked these vital points of the trial, they either had no sound running rules and an even mixture of judges from different localities, that the general average will be adapted to all days, covers and conditions. I should like to say to "South Side" that I do not think it wise to have a shooting as practiced in different localities. The only way to get a fair trial is to have a standard and to let that cut my eye-teeth in sporting matters over just

such strain of pointers as he speaks of, and so inflated have I been with the memory of the countless days I enjoyed myself over these priceless canine companions that I determined to ransack the county for the material to reproduce them or a like strain. After four years I have had most gratifying results, and I am confident that in the near future, if not at the present date, I shall be able to show in the field a dog, or dogs, answering his description—a strain of bold, shining liver and white pointers, with grand heads, long muzzles, hair soft as any modern breed, but coarse and hardier to the touch and this as well, capable of any amount of endurance, fatigue and privation, and able and willing to hunt anywhere and everywhere, in any climate, day in and day out, for months in succession; and their premier quality is an extra fine nose and good disposition. These last are the pinnacles on which I pin my faith.

Halbach, L. I., Dec. 31.

#### TRAINING FOX HOUND PUPPIES.

I SELECT the most promising youngsters, and when they are five or six months old tie a cord to a fox's belt, and drag it for a few hundred yards over a smooth meadow, while the morning dew is yet on the grass. I then select the slowest and steadiest hound in the pack and let him run around the course. The puppies will soon learn to follow in splendid style, and I exercise them in this way until they are eight or ten months old. Thus they become accustomed to the scent of the fox from their very infancy. I now mount my horse and drag the belt for a mile or more, increasing the distance as they grow older riding well up among them and urging them on with whip and voice. When they are about a year old I secure a living fox and release him in some smooth broad meadow, giving him only a few yards the start, so that the chase may be a short one and that they may be sure to catch him. This first taste of blood has a marvelous effect in the education of the youngster and will never be forgotten in after life. I repeat this as often as a fox can be had for the purpose giving Reynard more start as the puppies grow older in order to prolong the chase. I accustom them to the horn from an early age, and they soon learn its meaning from the steady old dog that is always with them. I never permit them to chase anything but the fox, and very soon they will not notice a hare even though she jumps up in their path. I now take them with me when I go out with the pack for a regular chase, but keep them in hand and coupled until the fox is very hardly pressed, and then cast them off so that they may be at the death, and yet not fatigued by a long run. A dog not fully matured until two years of age, and until that time should not be permitted to hunt with the pack.

Select only the fleetest and steadiest animals to breed from, and preserve only the most perfect and promising youngsters. Let the diet of the puppies after they are six months of age consist principally of meat, as its tendency is to build up muscle and bone, not fat. Give only enough of milk and vegetables to keep them in health. Never allow them at any time to lay on more than a few pounds of fat.

Give them always plenty of exercise, kind treatment and free access to pure, cold water.

Now there may be more scientific methods of training youngsters than this, but under this system Hal and I have educated packs before whom a fox can seldom live three hours above ground, and many have died in thirty minutes.

Bridgeport, W. Va.

XII YONKIS.

#### PITTSBURGH DOG SHOW.

THE following arrangements have been made with express companies for the conveying of dogs to and from the show:

To E. Garzo, President Western Penna. Poultry Society and Bench Show, Pittsburgh:

We the undersigned, agents for the several Express Companies represented by us, do agree to return all fowls and dogs (that have paid full rates to the Western Pennsylvania Poultry Society, and brought by our companies) free, to the points where originally shipped from.

D. Zimmerman, Agent B. & O. Express; C. S. Sedgwick, Agent Adams Express Co.; T. J. Hudson, Acting Supt. Union Express.

Mr. Lincoln writes us, that all the leading railroad companies have been written to, asking them to convey dogs free of charge, to and from Pittsburgh, when they are accompanied by their owners or car takers.

#### SPECIAL PRIZE LIST.

A. Parker Brothers, of 79 Chambers Street, New York, offer a double breech-loading gun, valued at \$150.00 for the best setter dog or bitch of any strain.

B. J. J. Snellenburg, of New Brighton, Pa., offer a first-class velvetten or coraury hunting snit, made to measure, valued at \$50.00, not to be competed for by the donor, for the second best setter dog or bitch of any strain.

C. For the Irish setter dog, steel engraving, framed, and Erin, value \$10.00.

D. For the best pointer dog, steel engraving, framed, of Keswick and Jessamine, value \$10.00.

E. For the best Gordon setter dog, Laffin & Rand's Powder, value \$10.00.

F. For the best English setter dog, Laffin & Rand's Powder, \$15.00.

G. The Bear Creek Refining Co., Limited, offer a barrel of water white oil, for the largest collection of non-sporting dogs, exhibited by one person.

Separate entries must be made for all specials, for which ten per cent. of the value of the prize will be charged.

CHAS. LINCOLN, Superintendent.

Address: Office, Old City Hall, Lock Box 393, Pittsburgh, Pa.

In addition to the above, donations have been received to the amount of \$412, from various newspapers, firms and individuals, the sportsman's association of Western Pennsylvania heading the list with the liberal gift of \$100.

CHIEF.—Supplementary to description of Chief from last week we have received the following additional facts regarding the sire and dam of Chief:

Berkley was trained by C. B. Whitford in the most thorough manner with a view to running him in the coming field trials. At Hampton, Iowa, he would have secured first prize had he not pointed a bit too early, which was regarded as a fault, as the trials were run on chickens. As a field dog Berkley is in every way first class, Mr. Whitford saying, "that he is one of the most killing dogs he ever shot over." In Novem-

ber, 1878, Berkley was purchased by Mr. John Fottler, Jr., the President of the Massachusetts Kennel Club, of Boston, and at a price which at that time was considered a high figure the dog remained in his kennels, and his puppies are almost invariably grand field dogs, and of fine form and color. In February, 1880, Berkley was transferred to the kennels of his present owner, Mr. A. Moore, of Philadelphia, who paid an almost incredible figure for the dog (about one thousand dollars). Duck is one of the most noted Irish bitches now living. She is very stylish in field work, and many prominent sportsmen who are good judges consider her in every way one of the finest Irish bitches in America. Duck was purchased by Mr. Fottler as a mate for Berkley, and afterward she was sold to Mr. Moore at the purchase of a dog. Berkley, Mr. Max Wenzel, the owner of Chief, showed good foresight and judgment in the choice. As soon as he learned that Duck had been purchased by Mr. Fottler and would be bred to Berkley he immediately wrote asking that his name be booked for first choice of Duck's first litter by Berkley, and stating that he had been long hoping for the opportunity, as he considered this pair the finest in the country. Afterward Mr. Wenzel paid a special visit to Boston to make his selection, which it seems was most judicious.

BEef TEA FOR DOGS.—*Cleveland, Ohio, Dec. 13.*—If puppies must be fed at times on extract of beef the enclosed receipt will prove the thing wanted. Your correspondent "Homo" is correct when he states that Liebig's extract will kill quicker than starvation. There is a meat extract made by Johnson, of Montreal, that contains all the nutritive principles of beef, but it is too expensive for dog food, and for most human invalids. I inclose a receipt that will, I think, prove satisfactory.

Mr. Wilkinson, of St. Mary's Hospital, London, advises the following improved method of preparing beef tea: The meat is cut into small pieces, the fat removed (for dogs, at option of the cook, and placed, in the evening, in an earthenware vessel, with sufficient cold water to cover the meat; in this it is allowed to remain all night. In the morning the meat is taken out, placed in other water, and boiled for several hours. The meat is then put in a preserving jar, and sealed through a mincing machine, and put into the cold liquor in which the meat was steeped the previous night, and upon this the boiling liquor from the day's beef tea is poured, and the whole well stirred, and it then forms the complete beef tea. The characteristics of good beef tea are that all the nutritive elements of the beef should be made available; and by the process carried out as above this is effectually done, the albumen, fibrine and gelatine being all retained and taken by the patient. The scraps can in many cases be used with the extract. Moreover, by this method a much smaller quantity of meat is required than under the ordinary mode, and it would consequently not become a jelly if allowed to stand; but by adding a larger quantity of beef this result could of course be obtained. (This forms with us what is called beef jelly.) It should, however, be remarked that in very hot weather the beef tea cannot be made in this manner, as it would become sour from the length of time required for its preparation. In hot weather the refrigerator can be used for the cold extract.

DR. E. STREILING.

INTELLIGENT OR REASON?—No. 2.—*Northfield, Vt., Dec. 14.*—My English setter Ned, eight months old, is, I believe, the most intelligent dog I ever owned. He seems to know just what is said to him. He has had but little training in the field, and yet the first time I took him out with a gun I bagged four partridges, all of which he worked up and pointed as staunchly as any dog. He also retrieved at command without any funny business. It was simply done perfectly. Of course he has had a pretty thorough schooling at home, but he adapts that schooling to his field work so nicely that it would please you to see him. I talk to him the same as I would to a person, and the way he sits and listens, with his large, laughing eyes fixed on mine, is very comical. He does many good and useful tricks, one of which is to get the old friend of his "sisters, his cousins and his aunts." FOREST AND STREAM, at the Dog Show, every Saturday. I believe if every man who owns a sporting dog would take the pains to educated him the race would improve so much that in ten years the result would be surprising. One day last week I was detained at my office unusually long at noon-time, and noticed Ned was getting quite anxious to go to dinner, but paid but little attention to him until he commenced pawing my leg. I turned around to speak to him and was surprised to find he had brought both my overshoes and laid them at my feet. I put them on and went home to dinner immediately. Who doubts that well bred dogs have reasoning power? I do not, and have presented Ned with a nice plated collar, which he delights in scratching, but always sits down to do so thought.

CAPTAIN WILLIAM ROBMY EXONERATED.—The Lancaster Game Association met in Alderman Spurrier's office, Tuesday evening, the attendance being reasonably large. The only item of public interest was the unanimous adoption of the following resolution:

Resolved, That after due investigation of the charges preferred against Captain William Robmy, of Quarryville, for having failed to properly preserve and protect the game upon the grounds near Quarryville, for the late meeting of the Pennsylvania Field Trial Association, we find that the said charges are unfounded; that the conduct of Wm. Robmy in the matter was entirely consistent with the character of a true sportsman.

THE FOREST AND STREAM takes pleasure in reprinting the above from the Lancaster, Pa., *New Era*.

DOG CHAINS.—*New York, Dec. 6.*—I have a grievance, and a very grievous grievance it is too. I have lost my Gordon dog because his chain broke and he trotted away and was nabbed by some appreciative thief. Can't you tell us dog lovers where we can get chains that are not as heavy as an ox chain, and will yet hold a dog? If you will try you will find that a very moderate pulp will stretch apart the links of any fair sized dog chain, even if it is nickel plated and all fair to the eye.

MANHATTAN.

The imported English dog chains are the best. They can be had of Schuyler & Duane, 169 Broadway, E. S. Harris, 177 Broadway and Hartley & Graham, 17 and 19 Maiden Lane.

LOST A POINTER PUP.—Mr. William Stone Abert, of Washington, D. C., has lost a fine pointer puppy, about ten months old. The dog was either stolen or strayed away on Decem-

ber 1, and a liberal reward has failed to bring about his return. Mr. Abert's only hope is now that some brother sportsman may see this notice and assist him to recover the youngster, which is a good one. Description: Lost from corner of L and 10th streets, northwest, a white pointer puppy, eyes light in color, ears liver, same color around left eye; right eye surrounded with white; two liver spots side of body; one larger spot on other side; tip of tail cut; hair very fine; had on a steel chain collar, with owner's name engraved thereon.

MR. R. M. LIVINGSTON'S BULL BITCH.—*Rye Beach, N. H., Dec. 17.*—Editor *Forest and Stream*: I have just received the bull bitch; she came on nicely in good condition, and up to present time is doing very well. Her pedigree is as follows: "By young Gully out of Rose. Young Gully by Champion Master Gully out of Daine. Daine by King Crib out of Berio's Wasp. Rose by White Crib out of Bounce, sister to prize White Crib by Duke out of Florence. White Crib, own brother to the Abbeys, Cluquot and Sugar. White Crib, own brother to Champion Alexander. I will be in New York with her in about a week and will bring her in to show you."

R. M. LIVINGSTON.

A CURE FOR MANOE.—*New York, Dec. 8.*—Perhaps some of your readers may like to know that sulphur of potassa will cure mange. It acted like magic on my setter when all other things—tar, etc.—had failed. Mix it with muriatic acid as per prescription in "Hallowell's Gazetteer," and hold your nose while applying it.

MASHATTAN.

The above "cure" is an old one, and not much use unless combined with sulphur ointment, or some other active agent.

—MR. W. W. TITUS, of Centerville, L. I., handler of Mr. Livingston's Baronet, at the late field trials on Robin's Island, contemplates a visit to North Carolina, about January 6th. He has already secured three dogs to handle during the three months of his sojourn, and will take three more. Parties wishing to avail themselves of this excellent opportunity to have their dogs handled in a section where game is usually plenty cannot do better than address Mr. Titus at once. Mr. T.'s card appears in another column.

IMPORTED FOX HOUNDS.—On board the steamer Greece, which arrived in this port on Sunday, was the splendid foxhound bitch Blue Bell, shipped by Dr. Gordon's Stables at London, Eng. The bitch was consigned to Mr. E. B. Goldsmith, Forwarding Agent, and re-shipped by him to her new owner, Mr. C. B. Wright, Concordia, Ky. Blue Bell is a very handsome animal and arrived in fine condition.

A FOX TERRIER FOR SALE.—Any one wishing a fine fox terrier of three years old can apply at once to TERRIER, care of this paper.

WANTED CHESAPEAKE BAY DOGS.—Breeders of Chesapeake Bay dogs will please send their addresses to the Kennel Editor of this paper.

#### KENNEL MANAGEMENT.

28 H. D., Meadville, Pa.—My pointer pup, two months old, is ruptured. Can you inform me what I can do for him? Ans. Unless you can secure the services of a skillful surgeon to perform an operation for the radical cure of hernia, which at best is a dangerous one to attempt, a band placed around the dog and a compress of cork to keep the bowels in place are the only means at your disposal.

29 W. B. L., New Orleans, La.—My pointer dog, now nineteen months old, having successfully encountered in battle with worms about eight months since, thanks to antonine, and fully developed into a most satisfactory field dog and a most valuable companion, whose loss would seriously affect me, has now succumbed to what I think is distemper. I observed about ten days since a loss of appetite and spirits. I administered a light purge which temporarily relieved him. Four days since more alarming symptoms appeared, as refusal of food, emaciation, decided cough, difficult breathing, mattery eyes, one more affected than the other, nose apparently closed, with slight discharge of mucus, extreme weakness and loss of flesh. Give day before yesterday two tablespoonful of salt. Last evening, being fully determined upon distemper, applied a seton to the back of his neck. Administered a pill, proposing to repeat. Shall give two pills daily until further developments. Please advise me in your next issue if I am correct in diagnosis, and what treatment to pursue. Ans. Probably distemper, but by the time this reaches you a tonic treatment is best. Give quinine, two to three grains, three or four times a day, and administer strong meat broths every two or three hours. Keep the dog warm and dry and allow him plenty of fresh air, particularly if his discharges are frequent.

30 J. E. M., Bridgeport, Conn.—Please advise me what to do for my Scotch terrier dog, nine months old. He coughs continually and appears to be rather short of breath. Quantities of matter comes from his nose. He acts rather dull most of the time. Ans. Probably the first stage of distemper, but when this reaches you the disease will be so far advanced as to require tonic treatment. Give two grains of quinine twice a day, and a small quantity of strong meat broth every three hours. If you had signed your full name to your communication we would have been able to reply by mail.

31 H. L. G., Brookfield, N. Y.—My fox hound, four years old, has had distemper for about six weeks; was taken with sneezing, and at times blood came from his nostrils. As he seemed better I hunted him for two days. Since then he has been much worse. Yellow matter runs from his head. He is weak and moves with difficulty; coughs as though something was in his throat. Pulse runs high; sometimes at 123, but stands at about 100. He is very thirsty and has some appetite. Water scanty and high colored; some diarrhoea. Have given him quinine and poke-root, also tincture of iron. He has had two fits. He breathes thirty-three times a minute. What shall I do for him? Ans. Give nitrate of potash, eight or ten grains, two or three times a day, and, in addition, two grains of quinine three times a day. Drop the other remedies.

32 I. S. R., Erie, Pa.—My Irish water spaniel, six months old, has changed his puppy tricks nearly two months—or, say, six weeks,

He is very healthy. Within the last four or five days long strings of slimy saliva hang from each side of his mouth. I have looked for a bone between his teeth, but find nothing wrong in his mouth. Do dogs at his age cut their back teeth after their tusks? Does it cause trouble as with children? Ans. Yes. The dog is suffering from irritation of the salivary glands, caused by teething. Give a little sulphur and castor oil once or twice a week.

33 V. H. W., New Britain, Conn.—I have a dog, half Newfoundland and St. Bernard, nearly four years old, that has been sick nearly three weeks. He began with lolling and loss of appetite, and wanted to be in some remote place. He has grown so weak in his hind parts that it is almost impossible for him to get up, and he is reduced to skin and bone. He has not eaten as much since he has been sick as he would generally eat for one meal, but will eat great quantities of snow. What shall I do for him? Ans. A dog in the condition you describe should be tied up in comfortable and secure quarters, especially if he seems nervous, in case it should turn out to be rabies, to which the few symptoms you give seem to point. Try a few (but large) doses of quinine, say five grains twice a day for a week. Will more fully.

34 C. S., Muney, Pa.—My setter dog has the distemper badly. I have tried several things, but they don't appear to help him. What shall I give him? Ans. As you fail to state the age of the dog or give necessary particulars it is impossible to prescribe. We would advise, however, to try a tonic treatment.

35 J. H. L., Camillus, N. Y.—My setter puppy, seven months old, is troubled with sore ears. I have washed them carefully with castile soap and warm water, and have applied a liniment of carbolic acid and glycerine, but he does not get better. There is no offensive smell from his ears, but on the next day after washing them his ears will be covered with dry blood. What is the correct treatment? Ans. From your description the dog is evidently suffering from canker, the membrane of the ear being so congested or inflamed as to yield some blood. Keep ears clean by syringing with tepid water. Reduce his system by cooling food, such as vegetable diet. Avoid giving meat, and administer once every other day a dose of Epsom salts—say a tablespoonful. Pour a teaspoonful of the following mixture in his ears twice a day: Lead water, one ounce; or one two drops of carbolic acid, with large half teaspoonful of glycerine added.

36 S. D. R., New York.—My setter dog (ever since he had the distemper) discharges from his eyes a transparent mucus in the morning. Can I cure them by some simple remedy, or had I better take him to a doctor. Ans. You had better show the dog to a competent surgeon. There may be necrosis which causes the running you describe. Wash the eyes with tepid water.

37 G. H. B., Watertown, N. Y.—Your dog has internal cancer of the ear. Pursue same treatment as recommended to J. H. L. in this column. Persevere and write result.

38 D. H. L., New York City.—I, my English setter bitch, with four puppies two weeks old, have the mange. 2. The puppies have little black sores all over their bodies. 3. My setter dog is in a very bad state. His hair has fallen out, and he has sores on his head and legs. He is very thin and passes water very often and very much at a time. What shall I do? Ans. 1, 2 and 3. Try Glover's mange cure, and give the setter dog nitrate of potash, eight or ten grains, twice a day for three or four days.

39 L. M. G., Attica, Ind.—My English mastiff dog, three years of age, is quite sick. Two weeks ago we noticed he would not eat. Then he got very stiff all over, but worse in his right hind leg, which he will barely touch to the ground. He has become very poor and sunken at the flanks. He walks very slowly and stops to rest every little while. This morning, for the first time, he seemed in pain, growling a little. What can be done for him? Ans. Your dog evidently has rheumatism. Give Epsom salts, a desert spoonful twice a day. Later on three grains of quinine twice a day will be of benefit to him.

40 U., Westfield, Mass.—I have been greatly interested in reading your excellent paper for the past two years that I have been a subscriber to, and articles pertaining to pointers and setters and guns and game are those in which I take the greatest interest, and which, on receipt of the paper, I always seek first, and for some time past have been hoping some of your correspondents would give me the necessary instructions to break my setter from a bad habit that seems to be growing on him; and not finding it as yet, I decided to ask you. When I take the dog into the woods after partridge, if I allow him to get, say 100 feet from me, he will start off sometimes on a sharp run and pay no attention to either call or whistle, unless he should strike a strong scent, when he will stop and go to work as carefully as any dog, but that may be a quarter of a mile from where he left me. He is as staunch as a rock, and will bring the birds in without biting them. And, aside from the habit he has of starting off as described, is as good a dog as any one could ask for. Now, will some one who has overcome this trouble tell me how to go to work to break my dog of it? Do not say shoot him if he doesn't stop, for he has two clergies in him now, and I will not do that again. I have tried scolding him and whipping him for it, but all to no purpose. Sometimes in going from my place of business to my dwelling house he will lower his head and start off into a smart trot, and neither calling nor whistling will make him return until he gets ready. He was two years old last June. Ans. As you have tried both your hand and gun in attempting to make your dog obedient and have failed, we cannot advise you better than to place him in the hands of an experienced dog trainer, who will, with the aid of a check cord, get him into shape and make him mind.

#### CURRENT DOG STORIES.

##### XXII.

A elsto picker at one of the Mill Creek coal breakers discovered a spotted setter under the pockets a few days since. Mill Creek is the leading coal centre of the Delaware and Hudson Canal Company. The dog was mischievously put into an empty gravity coal car. The car was run under the chute, and soon afterwards four tons of chestnut coal were dumped upon the dog. The car was taken away at eight o'clock. The coal from Mill Creek is shipped via the Gravity Railroad to Honesdale, and there transferred into Erie cars for shipment East. This car arrived at the foot of No. 1 plane at 7 1/2 o'clock in the evening. The workmen at the foot of the plane, hearing cries of distress which they supposed to be the moaning of a child, switched the car, determined to solve the mystery. The car was unloaded, and the dog, after a ride of

twenty miles under this pile of coal, appeared upon the scene in good condition. The owner, who lives at Mill Creek, learning of the whereabouts of his dog, sent a messenger with a check for \$50 to the lucky workmen who rescued the animal.—Exchange.

##### XXIII.

Iowa Hall can boast of a dog that out-Tanners Tanner, having lived forty-two days without food or water. On the 16th day of September the animal, owned by Mrs. Armstrong, of Burlington, disappeared from its home. They searched for it in its prolonged absence, and, after futile inquiries and search, concluded that it had come to its death from cause unknown. On the 28th of October a neighbor out hunting dogs was attracted to the edge of an old shaft by a faint jeeping at the bottom. Peering down the shaft he discovered the long-lost dog. A ladder was secured and a boy sent to the rescue of the long-lost dog, which could only shiver and laboriously move its tail for joy. The bottom of the shaft was tramped as hard and smooth as marble, and the sides as high as could possibly be covered by any animal in its frantic efforts to escape. A diet of warm water and milk was administered, and at last accounts it was recovering rapidly. Its weight before it disappeared was more than one hundred pounds, and when found it was less than twenty.—*Placer (Cal.) Argus*.

##### XIV.

In the southern part of Bolton there has lived for six or eight years past an Englishman, about sixty, by the name of Woolrich, who did not appear to be doing much for a living. He kept five dogs—some of them ugly—and few people went near the place. Last Thursday evening the fatal accident happened. One of the dogs, which had been seen for several days. Messrs. White and Summer, two resolute men, went to the house. They were greeted by the furious onset of a large coach dog, who, on their opening the door wide enough to look in, bounded forward with ominous growl and a display of teeth that meant mischief. The men shut the door and went to the window. Looking in; they saw Woolrich sitting in a chair by the stove, his head bent forward as if asleep. Unable to rouse him, and the dog continuing to exhibit the ugliest symptoms, it was resolved to kill him. Mr. White had brought his gun, but the dog kept so near his master, as if guarding him, that it was not deemed safe to fire from the window; and, raising his, the visitors hurled a stone, to start the dog forward. He dashed at them with a furious bound, when the gun was discharged, killing the faithful dog instantly. Going into the room the visitors discovered that Woolrich was dead. Probably he had been dead several days, and had been frozen to death. He was not known as a drinking man. His other dogs, starved out, had left him, but this one faithful and formidable animal had refused to desert him, and stood it out bravely by his side, in cold and hunger. The dog felt a martyr to his devotion and fidelity.—*Hartford Times*, Dec. 14.

#### KENNEL NOTES.

##### NAMES CLAIMED.

Macduff—Mr. Harry B. Livingston, of New York city, claims the name of Macduff for red Irish setter dog puppy out of Pierce's Gussie by Rory O'More, whelped July 8, 1890. The puppy is now being trained by Mr. H. B. Wyant, Peabody, N. Y.

Linda—Mr. Hugh L. Williams, of San Francisco, N. Y., claims the name of Linda for his short-haired thoroughbred St. Bernard bitch, whelped Oct. 12, 1879, out of Mr. B. Loue's Alpe, by Mr. B. Jernan's Chamunax.

Lady May—Mr. H. D. Bonner, of Nyack, N. Y., claims the name of Lady May for his dog, Belton Lichian, setter bitch with dark points by Lofly out of Maud Mill (Rob Roy-Pochontas) bred by Mr. W. A. Irvin, Kokomo, Indiana.

Rochester Ben—Mr. J. C. Bishop, of Monson, Maine, claims the name of Rochester Ben for black and tan setter bitch, whelped sixteen months old, bred by Mr. M. L. Woodin, out of Bono by Driver.

Dora Bell—Mr. J. C. Bishop, of Monson, Maine, claims the name of Dora Bell for black and tan foxhound bitch, eighteen months old, out of Fan by Chase (tatter sister to Blue Beard).

Charlie H.—Mr. Robert Walker, of Franklin, N. Y., claims the name of Charlie H. for fiver and white cocker spaniel dog puppy by Champion Charlie out of Daisy II.

Queen of Egypt—Mr. J. J. Jennelle, of Du Quoin, Ill., claims the name of Queen of Egypt for setter bitch puppy reserved for himself out of the Elcho II—Dell litter.

Barkis—Lieut. Fred W. Foster, U. S. A., Fort Laramie, W. T., claims the name of Barkis for Irish water spaniel dog puppy out of Lady by Barney.

Mickey Free—Capt. A. E. Woodson, U. S. A., Fort Laramie, W. T., claims the name of Mickey Free for Irish water spaniel dog puppy out of Lady by Barney.

Peggy—Lieut. Fred W. Foster, U. S. A., Fort Laramie, W. T., claims the name of Peggy for setter bitch puppy by Bake out of Phyllis.

Tom—Mr. John Fonda, Brooklyn, N. Y., claims the name of Tom, Jr., for his black and tan setter, whelped August, 1880, out of Geo. E. Brown's Nollie Horton (formerly Dr. Aten's) by Doan's Tom, presented him to Mr. F. L. Sheldon.

Ivanhoe—Paymaster L. G. Billings, U. S. N., Annapolis, Md., claims the name of Ivanhoe for his red Irish setter, whelped July 2, 1890, out of F. N. Hall's Rose Bradwardine by A. E. Godeffroy's Rover II.

Queen Elizabeth—Mr. F. N. Hall claims the name of Queen Elizabeth for his red Irish setter, whelped July 2, 1890, out of his Rose Bradwardine (Elcho-Bess) by A. E. Godeffroy's Rover II (Rover-Pamela).

Bessie B.—Daniel J. Duffy, of Chattanooga, Tenn., claims the name of Bessie B. for red Irish bitch, seventeen months old, by Champion red Irish setter Bob, imported by E. T. Stoddard, of Dayton, Ohio, out of Dr. Geo. Hall's Gypsy.

Pilot—Daniel J. Duffy, of Chattanooga, Tenn., claims the name of Pilot for red Irish setter dog, one and one-half years old, by imported Don (imported by Chas. Turner, Secretary of Mutual Kennel Club, St. Louis, Mo.), in December, 1879, from C. Cooper, Esq., Limerick, Ireland, out of Maud, and Maud is out of Waddell's Pilot and Gypsy.

##### SALES.

Ruby—Mr. Robert Walker, Franklin, Delaware County, N. Y., has purchased from F. F. Fletcher, Claremont, N. H., his bitch Ruby (Gambler's) Sulphur, by Mr. F. L. Sheldon.

Belle II—Mr. Robert Walker has purchased from Mr. Chas. E. Lewis, Suspension Bridge, N. Y., black and tan bitch Belle II late Pauline (Waddell's Belle-Beau).

Ruby and Rose—Mr. Robert Walker, has purchased from Mr. D. F. Blair, Frankford, Delaware County, N. Y., cockers Ruby and Rose (Flusher-Pamie II).

Joseph—Mr. F. L. Sheldon, Rahway, N. J., has purchased from Mr. Jerry Cockerell, Memphis, Tenn., setter dog pup, whelped June 27, 1890, out of Lady Clara by Joe, Jr.

Miss June—Mr. F. L. Sheldon has purchased from Mr. Jerry Cockerell setter bitch pup, whelped July 23, 1890, out of June by Gladstone.

Little Lady—Mr. Isaac Yensley, Jr., has sold to Mr. L. D. Ramsey, Buffalo, N. Y., setter bitch Little Lady (Dash II—Roxey).

Prim and Trouble—Dr. E. Day Bristol, B. I., has sold to Mr. Alex. Taylor, Jr., New York city, the brace of pointers Trim and Trouble.

Rollo-Madcap Whelps—Mr. Geo. D. Macdonnell, Lacine Kennels, has sold to Mr. F. E. Hendon, Almonte, Ont., a brace of black and white dogs, Rollo-Madcap.

Ranger-Daisy Whelps—Mr. John White, Bridgeport, Conn., has sold to Mr. J. O. Donner, four white and orange tickled Ranger-Daisy whelps. Whelped June 10, 1890.

Wildcat-Cora Whelps—Mr. Geo. D. Macdonnell, Lacine Kennels, has sold to Mr. Percy R. King, New York city, a liver colored dog (white frill), and a liver and tan dog (white frill), Wildcat-Cora.

Jackie—Mr. Geo. D. Macdonnell, Lacine Kennels, has sold to Mr. J. T. Hulse, Circleville, Ohio, a black dog with white breast and toes, Wildcat-Cora.

Bess—Granby, Ct. Dec. 18, 1890.—I have just bought from Geo. Fowall, Christiansburg, Pa., his well-known prize winning English pure beagle Bess. She arrived the 16th in fine condition, and is in whelp by Victor—will whelp the 22d. She was shown at Boston, 1878, and easily won first prize, and FOREST AND STREAM in report of show said, "That Mr. Fowall, of Christiansburg, showed his beagle Bess, which was by long odds the best dog in the lot." N. ELMORE.

##### PRESENTATION.

Elcho II—Dell Whelp—Dr. J. J. Jennelle, Du Quoin, Ill., has presented to Mr. J. W. Wilkinson, Vermont, Ill., a bitch puppy out of Dell by Elcho II.

Wildcat-Cora Whelp—Mr. Geo. D. Macdonnell, Lacine Kennels, has presented Mr. A. E. Godeffroy, Gwynard, N. Y., a chestnut and tan bitch with white frill, Wildcat-Cora.

##### WHELPS.

Rose—Dr. Wm. Jarvis' (Claremont, N. H.), Rose whelped on December 6, five dog puppies by Elcho.

Minna—Mr. Isaac Yensley, Jr., Minna has whelped five puppies by Vixen (Leicester-Stanborn's Nellie) and her mate, Bess.

Bess—Mr. N. Elmore's English beagle Bess (winner of first prize at Boston, 1878), has whelped three bitch puppies by Victor. All sold.

Nita—Paymaster L. G. Billings' black and tan Nita (Phonket-Nell), whelped December 12, three, all dogs, by Dr. Aten's Glen. One puppy has since died.

Belle—Mr. F. Campbell Moller's (New York city) black and tan setter bitch Belle (Gato's Ruby-Finn's Uuo), whelped Nov. 25, eight puppies, five dogs and three bitches by Mr. Frank Cozen's Hump.

Monta—Mr. G. W. Bassford's bitch Monta by Rory O'More, whelped December 12, seven puppies, three dogs and two bitches, sired by Iron Duke.

##### BRED.

Princess-Flash—Mr. Geo. G. Barker's (Boston, Mass.), champion pointer bitch Princess (Ranger-Fan) to Dr. A. Russell Strachan's Flash (Gypsy-Reg).

Gypsy-Sensation—Mr. Duer's (Orange, N. J.), Gypsy to Sensation. Gypsy was formerly the property of Messrs. Lincoln and Heller.

Prairie Rose-St. Elmo—Mr. F. L. Sheldon's (Rahway, N. J.), Prairie Rose to St. Elmo on December 9.

Frank—Mr. P. A. Huffman, Thorntown, Ind., has presented Col. Samuel Goodman, of Philadelphia, with his fine qual dog Frank.

#### A SAD ACCIDENT.

A LAMENTABLE accident occurred week before last in New Jersey, which resulted in the death of a valuable pointer dog. The circumstances, which were peculiarly distressing, are as follows: Mr. K., the owner of the dog, with a companion, had been shooting and killing several birds. The dog, being excited, dashed Mr. K. killed two birds with one barrel, and, after loading, the dog was sent to fetch the birds. As he approached with one of them, his master took a few steps forward, and, catching his foot in a grapevine, fell forward upon his gun. The stock was broken and the gun discharged, the entire charge passing through the dog, which was within a few feet of his master. The brave animal, without uttering a sound, continued to advance, dropped the bird at his master's feet, licked his hand, looked up with an expression of fondest affection, and fell over dead.—*Forest and Stream*, Nov. 18, 1890.

Forewell, my dog! A last farewell

I say to thee, a friend so true.

Words can never, never tell

The thoughts that in my bosom swell

Toward one I loved as you.

Forgive me, dog, my sad, sad lot!

Your eyes look love and try to say,

"Forgiven you are; I blame you not.

You did not mean this fatal shot

Should harm your friend who dies this day."

Your master knows your love so strong;

Your acts, the last so sadly tell

When, bleeding fast, you crawl along

To lick the hand that caused you wrong—

To die by friend you knew your best.

Wellsfle, N. Y., Nov. 27.

CLARENCE A. FARMER.

ONE AMONG A THOUSAND—*Buffalo, N. Y.*—Editor *Forest and Stream*: Several weeks ago a friend from the East had been on an extended shooting trip in Illinois. He took with him several fine dogs. Upon his return here he left one with me to breed to a valuable bitch I own, and which will shortly be in use. After the dog had been with me a few days I discovered he was ailing. He soon became so bad as to cause great anxiety upon my part. I had but little faith in our "vets," as I had previously had and experience with them, as also had some others whom I knew. I was at my wit's end, when finally an old horseman and a great lover of dogs happened in my office. I stated the case to him, when he recommended Dr. Robt. C. Hutchings to me. I called on the Doctor and plainly told him my lack of faith in vets for dog practice. We went up to see the dog. The Doctor gave him a thorough examination from the tip of his nose to the root of his tail, watched and studied his every movement for a long time, asked numerous questions and finally diagnosed the case as being inflammation of kidneys and bladder, extending also to penis, which proved to be correct, and a very bad case it was, too. The Doctor took him in charge, and in about four days he had the dog about cured; in fact, so much so that I shipped him to his owner (nearly five hundred miles away) the other evening. Of course you can imagine how pleased I was in being able to do so.

Should this meet the eye of any in my immediate vicinity who has a sick canine friend he may have no fears to place him in the hands of Dr. Hutchings, where he will not only receive proper treatment and care, but will at once feel that he is in the care of a true friend. Since my experience with Dr. Hutchings I have learned of several critical cases that he has been successful with. I will give you two. A gentleman here has an old pet bull terrier of large size. He is very old. This summer a fire engine ran over him and broke his foreleg. The gentleman called in an eminent physician and surgeon, who pronounced him beyond aid and recommended him destroyed. Dr. Hutchings was called, set the limb, put it in splints, and to-day the old veteran wags his hind gratitude every time he meets the doctor.

A LOVER OF THE DOG.

FOR SALE.—A grand liver colored pointer bitch, Flora, out of Lady II. by Flash; one and half year old; has had some field experience; a capital field grouse dog; is fast and retrieves properly. Flash, the sire, is a noted dog, being out of Peg by Dr. Strachan's George. Address Pointy, care of this office.

CANYAS AND CEDAR CANOES

she might carry, but most likely will not, they would be unhandy and troublesome, let alone that they would probably be in a flat-ened condition just when they were needed. The fewer impediments the better, when making a canoe trip where carries are frequent. I ordered my canoe clear on the inside from stern to stern, no seat or any provision for any. My shanty tent, with blanket and three dogs, frugal rations, pocket hatchet and two light tin cups were put up a loose, all to the left. I could make a good enough rest with the tent and blanket. A very light neck yoke is a good thing, and carries a given weight as lightly as any other mode. The guides of the North Woods always carry on the yolk, and the average of their boats is between 80 and 90 lbs. I want no tight compartments or air bags, nothing but a light, portable canoe of cedar. There are many good canoe builders in the States, but Rushton's models suit me better than any others I know of.

In making a trip through a wilderness where different river systems interlock each other, and carries are rather frequent, no man's load should be more than a third of his own weight. One-fourth is better, but that is getting it down light. Of course I speak of the solitary canoeist who goes through by the map, much knowledge as he can obtain by proper inquiry and his own judgment. A 30 lb. Rushton is large enough for a man of 170 lbs. A light weight may well take a lighter canoe.

Any man who tries the bowfacing canoe on a long trip by river, lake and carry, will be apt to go high for the paddle before he comes out. They work well on open water, but badly over the carries. And remember that any man in a strange forest is liable to get lost. Then weight counts for something. NEMUS.

#### LOG OF THE CANOE MISFIT.

Editor Forest and Stream:

Having lately received so many letters from canoeists and others seeking information with regard to my canoe voyage of last summer that I am unable to answer them individually, and being told to disappoint gentlemen who have honored me with their correspondence, I have determined, in preference, to give like "logs" kept by me during that cruise.

My object in undertaking the arduous voyage of 300 miles from New York to Lake Seneca was to prove to certain practical gentlemen that canoeing is not only a high for the body, but also a pleasant one, attended by great danger and scientific discoveries, and also that it is possible for man to paddle a canoe 300 miles and survive the excitement.

#### THE LOG.

June 14.—Having taken the precaution to have my hair parted in the middle, in order to prevent any premature capsize, I repaired with expedition to the pier at foot of Twenty-second street, where my transport lay. I opened the campaign by launching my canoe on board the steamer Drey and buying a two-dollar ticket for Albany. I carried a little top-hat offered to take me there for one dollar, but as the stipulations were that I should paddle only, I conscientiously stuck to the paddle-wheeler. 10 A. M.—Sailing by Highlands. Reminded of sonnet, "Where, oh where has my Highland padding been written, as guide book says, by Otter Greenleaf Longfellow when wandering, lost among these hills. The lassie was his guide, which accounts for his anxiety as to her whereabouts. Since 10:30 have made the wonderful run of five degrees. Shouldn't wonder if the Hudson went to North Pole after all. 5 P. M.—Reached Albany. Received with great enthusiasm by the peop—porters and hotel boys. (Price of enthusiasm, twenty-five cents apiece.) 7:30 P. M.—Been examining map. Find I have paddled one hundred miles in ten hours. Never heard of any canoeist paddling so fast before. 8 P. M.—Met some pleasant young ladies. Interested in my trip. Asked if I wasn't exhausted after paddling so far.

June 15.—10 A. M.—Veighed anchor. 11 A. M.—Saw fish. Thought it was a whale. Clapped on sail in pursuit. Crew much excited. Turned out to be a minnow. Crew discouraged and in low spirits. Gave a glass of grog to all hands. Put them in good spirits, or, rather, put good spirits in them. 1 P. M.—Examined thermometer. Eighty-nine degrees. Very hot.

June 16.—Thus far my trip has been pleasant and full of scientific discovery. I have proved beyond a doubt that Hendrick Hudson was right. The Hudson does extend to the North Pole. This day will be the first of many during which I will have to battle with the elements of the "raging sea." I hope to be able to maintain the struggle—how soon my bones shall whiten the dreary sands! 5 P. M.—Just entered the canal.

June 17.—Saw large alligator ahead, evidently on water. Fired the howitzer at him, but he didn't move. Suddenly shot through the brain. Came up to his body in about ten minutes and found it was a log. Subsequently discovered I had forgotten to put the shot in the gun.

June 18.—11 A. M.—Saw a native on the bank. Said he thought I looked sick. The swell of the river made me seasick, and his sympathy touched me. Didn't want to hurt his feelings, so paddled away as fast as possible. Stopped at the Utica Paralytic Springs. Said to kill or cure every time. Thought, by way of experiment, I'd take a dip (by proxy). Offered a man a quarter to go in. Man indignantly and demagogically. Suddenly remembered I had an engagement and dodged through an open door. Saw the man run by apparently looking for somebody. Owner of the "open door" thought I was a burglar, but upon telling him I was a canoeist he said, "Ah, I see, turning to his wife, who touched his forehead with the words, 'Perfectly harmless.' I've often wondered what he told her. The Mayor evidently appreciated my stopping at their metropolis. Paid me marked attention. Sent an officer to keep guard at my door that night. Two of them escorted me to my canoe in the morning. I must be a dangerous place for strangers since they require all that protection.

June 19.—Nothing of importance.

June 20.—10 A. M.—Got on board of canoe just in time. She started soon after I got in. A little more and I would have been left. 2:15 P. M.—Got to Syracuse in midst of militia parade. The

men in their brass coats and blue buttons had an imposing effect on the ladies. 5:30 P. M.—In spite of the rifle practice in progress I escaped from Syracuse unharmed.

June 21.—Saw several anacondas, or something, and immediately gave chase. That is, the anaconda did. I paddled vigorously for a quarter of an hour, when, becoming exhausted, I found—harrowing thought!—"the monster still pursues." Every moment may be the last. Suddenly discovered that it was only one of my cubler towing astern. However, I had the satisfaction of knowing I had gone over a great deal of ground, but discovered, too late, I had been paddling in the wrong direction!

June 22.—Being weary of paddling I chartered a "mule steamer" to carry me to my destination, and the Mifflit proudly rested upon the deck of a canal.

June 23.—Lake Seneca in sight at 8 A. M. Seeing the crowd collecting on the docks of Geneva to receive me, I quietly launched my canoe from the side of the canal boat, hidden from view to those on shore, and rounding the stern of the canalier, paddled the little Mifflit triumphantly to the wharf.

Thus ended one of the most remarkable voyages of modern times. In my little canoe, alone and unarmed, I had paddled 300 miles over some of the roughest waters in the world. I had overcome the various obstacles man and nature throw in my path—or, rather, canal—and my cruise will go into history as a crowning achievement. Will any one longer deny that the canoeist is useful as well as ornamental, or doubt that he can go 300 miles in his canoe all alone? NAVILLER.

#### Answers to Correspondents.

##### No Notice taken of Anonymous Communications.

A CONSTANT SUBSCRIBER, Philadelphia.—If you will have the goodness to repeat your question and sign your name to it you will receive an answer.

H. H., Chicago.—The manufacture of gun barrels is carried on on a very large scale at Leige, where the barrels are made for many of the English makers.

J. F., New York City.—Mr. L. F. Martin, who entered bull terriers Puss and Pegasus at New York Show in May last, can be addressed P. O. Box 2, 182, New York City.

G. B. R., Summerfield, Ill.—The Mammoth Gallery bullseye is three-quarters of an inch. 2. We know nothing of the bore, but presume it is a form of choke-bore, in which case we should presume that it has the merits of close shooting.

L. N. O., Louisville, Ky.—The famous reply made by the fishermen to Homer, when he asked them, in modern phrase, "What luck?" was this: "As many as we have caught we have left; as many as we have not caught we take with us."

M. S. B., New York City.—For Chesapeake Bay dogs address Mr. O. D. Foulks, Chesapeake City, Maryland. For Irish water spaniels address Mr. J. H. Whitman, Chicago, Ill. See notice regarding Messrs. Whitman & Olcott in another column.

MIDDLE RAIL.—Books on trapping are: "How to Hunt and Trap," by J. H. Baty, \$1.50; "Trapper's Guide," by Newhouse, \$1.50; "Complete American Trapper," by Gibson, \$1.75. We will send any one of these books postpaid on receipt of price.

DETONATION.—We have never examined any of the guns which were employed by Carl Dittmar in the alleged tests of his powder in former years; but we have been told that he had one gun built to order, weighing four hundred pounds, and especially fitted for the "Dittmar Sporting Powder."

M. V. L., Carson City, Nev.—What is the difference between the duck and drake of the cinnamon teal? Ans. The difference in plumage were noted in our issue of Dec. 9, 1890, which see. The female is much plainer in coloring, and is almost without chestnut, but has the bright blue wing marks which will serve to distinguish it from any of our ducks except the female blue wing.

J. D., New York.—I would like to ask your advice on the subject of rifles. I would like to purchase a rifle that will be effective on any game in the United States. Have thought about getting a Winchester Express, but am at a loss to know the extreme accurate range of this arm, which, to my eyes, is a very poor weapon over 150 yards. Ans. See article on "Hunting Rifles" in recent issues.

Tom, Brooklyn, N. Y.—Will you be kind enough to inform me about how much I will have to pay for a brace of Laverack or Llewellyn setter puppies, from two to four months old, as breeders who advertise puppies for sale in the columns of the FOREST AND STREAM only state prices of Irish, Gordon and native setter puppies? From \$75 to \$100 will secure you a first-class brace.

S. S., Pottstown, Pa.—You will find in the vicinity of Aiken, S. C., deer, turkeys, woodcock and quail, squirrels and foxes. Sister's Ferry, on the Savannah, is the favorite resort of the sportsmen of that section. At Aiken you may inquire for the "Old Gang," a club of sportsmen who have been organized some twenty-

eight years. They have excellent packs of hounds and some good pointers; they will receive all courtesy from them.

E. M. G., Solon, Mo.—Will you please give me directions for preserving birds with the Wickersheim fluid? Where can I get an injecting needle and what will they cost? Ans. We presume that birds can be injected in the heart the same as fishes (see our article in FOREST AND STREAM, of Nov. 4, 1890), but they will always remain flexible, and the immersion necessary may destroy the plumage. Injecting needles can be had of surgical instrument makers; they may cost half a dollar, more or less.

G. H. D., Watertown, N. Y.—Rodman's Belle, a red bitch, was whelped in 1874, and given by him to Mr. Geo. H. Wild, Red Bank, N. J. We think there were five in the litter, one of which is Darsford's Chris, a black dog, which was entered in the first Westminster Show, 1877, and also in the fourth. We have it that the pedigree of Belle is as follows: Belle by Rodman's Dash, out of Pentz's Nellie (a black and tan bitch imported by him, pedigree not known); Dash was by Paul Mead's Dash, owned by Mr. F. H. Palmer at the time of his (Dash's) death, out of Palmer's Belle, given him by Mr. Talbot of Dublin, Ireland (Belle was of the Hutchinson strain, pedigree not known). Paul Mead's Dash was by Dash, brought to the country by a British officer who was stationed in Canada, out of a bitch called Maggie, and known as the Kent bitch; but Mr. F. R. Ryer, of this city, informs us that the owner of the bitch was the late Mr. Andrew Johnson. Belle, now owned by Mr. Wild, is said to be a very good working dog. She was shot over this autumn in Maryland.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Ad.]

#### PUBLISHER'S DEPARTMENT.

HOLBAND Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

Our readers will please notice advertisement of dog lost from Roxbury, Mass.

A LITTLE Hop Bitters saves big doctor bills, long sickness, suffering and perhaps death.

## FOREST AND STREAM,

A WEEKLY JOURNAL,

## Hotels and Houses for Sportsmen.

## "THE FISHING LINE."

TAKE THE  
Grand Rapids & Indiana R.R.  
Mackinaw, Grand Rapids and Cincinnati Short Line  
FOR THE  
Trout, Grayling, and Black Bass Fisheries,  
AND THE  
FAMOUS SUMMER RESORTS AND LAKES  
OF  
NORTHERN MICHIGAN.

The waters of the  
Grand Traverse Region  
and the Michigan North Woods are unsurpassed,  
if equaled, in the abundance and great variety of  
game and fish.  
BROOK TROUT abound in the streams, and  
the famous AMERICAN GRAYLING is found  
only in these waters.  
The TROUT season begins May 1 and ends Sept. 1.  
The GRAYLING season opens June 1 and ends  
Sept. 1.

BLACK BASS, PIKE, PICKEREL and MUSC-  
LONIE, also abound in large numbers in the  
many lakes and lakes of the interior.  
The sportsman can readily send trophies of his  
skill to his friends or "club" at home, also for  
packing with care.

TAKE YOUR FAMILY WITH YOU. The scenery  
of the North Woods and Lakes is very beau-  
tiful; the air is pure, dry and bracing. The  
climate is peculiarly beneficial to those suffering  
with

Hay Fever and Asthma Affections.  
The hotel accommodations are good, far sur-  
passing the average in countries new enough to  
afford the finest of fishing.

During the season from Trip Excursion Ticks-  
ets will be sold at low rates, and attractive train  
facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Freight  
owner's risk.  
It is our aim to make sportsmen feel "at home"  
on this route. For Tourist's Guide (an attractive  
illustrated book of 80 pages), containing full in-  
formation and accurate maps of the Fishing  
Grounds and other points of interest.  
Geo. P. Fess, Agent, Grand Rapids, Mich.

## Chesapeake &amp; Ohio R.

The Route of the Sportsman and Angler to  
the Best Hunting and Fishing  
Grounds of Virginia and  
West Virginia.

Comprising those of Central and Piedmont Vir-  
ginia, Blue Ridge Mountains, Valley of Virginia,  
Alleghany Mountains, Greenbrier and New  
Rivers, and Kanawha Valley, and including in  
their varieties of game and fish, deer, bear, wild  
turkeys, wild duck, grouse, quail, snipe, wood-  
cock, mountain trout, bass, pike, pickerel, etc.  
Guns, fishing tackle, and one dog for each  
sportsman carried free.

## The Route of the Tourist,

through the most beautiful and picturesque scenery  
of the Virginia Mountains to their most fa-  
vorable wintering places and game resorts.

## The Only Route via White Sulphur Springs.

Railroad connections at Cincinnati, with the  
Great Northwest and Southwest; at Germantown  
with the North and Northeast; and at Richmond  
and Charlottesville with the South. All modern  
improvements in equipment.

## Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

## FOREST AND STREAM.

GREAT BARGAINS  
IN  
FINE GUNS

OF THE FOLLOWING CELEBRATED MAKES:

James Purdey, E. M. Reilly & Co., Westley Richards, W. &  
C. Scott & Sons, W. W. Greener, Williams & Powell,  
Nichols & Lefevre, W. R. Pope and J. D. Dougall.

## NOT "CLUB GRADES" OR "SPECIAL GRADES,"

But genuine weapons, bearing the maker's full name and address, at a reduc-  
tion of 25 per cent. below the usual cost of importation. No house  
ever before offered such a line of superb

GUNS FOR FIELD SHOOTING,  
GUNS FOR DUCK SHOOTING,  
GUNS FOR GOOSE SHOOTING,  
GUNS FOR TRAP SHOOTING,  
AT SUCH PRICES!

## LOT A.

FOUR JAMES PURDEY'S HIGHEST QUALITY.

Top lever, double bolt, bar rebounding locks, Da-  
mascus barrels, finest finish throughout.  
No. 2, 10-bore, 31 inch, 8 1/2 lbs. \$375  
No. 3, 12-bore, 30 inch, 7 lbs. 335  
No. 4, " 12 lbs. 335  
No. 5, " 6 1/2 lbs. 335

All these guns in best

ENGLISH SOLE-LEATHER CASES,  
lined with billiard cloth, with implements complete.

## LOT B.

FOUR W. &amp; C. SCOTT &amp; SON'S PREMIER QUALITY.

Top lever, double bolt, extension rib, bar re-  
bounding double notch locks, pistol grip stock,  
horn heel piece; solid gold name plate, Damascus  
barrels, choke bored; in English sole-leather  
case, lined with billiard cloth, with canvas cover  
over case.

No. 6, 12 bore, 30 inch, 9 lbs. \$190  
No. 7, " 9 1/2 lbs. 150  
No. 8, " 9 1/2 lbs. 195  
No. 9, 10 bore, " 10 1/2 lbs. 200

## LOT C.

FOUR W. &amp; C. SCOTT &amp; SON.

Quality next Premier. Made to special order by  
W. & C. Scott & Son for Jas. Butler & Co., and are  
so marked on lock plates, but have W. & C. Scott &  
Son stamped on body of action, and are equal to  
the Premier quality, except not so highly engraved.  
Top lever, double bolt, extension rib, bar rebound-  
ing double notch locks, pistol grip, horn heel piece,  
solid gold name plate, Damascus barrels in best  
English sole-leather case, with tan canvas  
cover over case.

No. 10, 12 bore, 30 inch, 8 1/2 lbs. \$150  
No. 11, " 8 1/2 lbs. 150  
No. 12, " 8 1/2 lbs. 150  
No. 13, " 9 lbs. 160

## LOT D.

SIX W. &amp; C. SCOTT &amp; SON.

Top lever, double bolt, bar rebounding locks,  
Scott's patent compensating lump, acrol fence per-  
cussion, fine laminated steel barrels, handsome  
dark stocks, with horn heel plate, handsomely en-  
graved and finished.

No. 14, 12 bore, 30 inch, 7 1/2 lbs. \$100  
No. 15, " 8 lbs. 100  
No. 16, " 8 1/2 lbs. 100  
No. 17, 10 bore, 32 inch, 9 lbs. 105  
No. 18, " 9 1/2 lbs. 105  
No. 19, " 20 inch, 9 1/2 lbs. 105

These guns in Lot D must not be confused with  
Scott's "special" and other cheap qualities, as  
they are in every way superior to the cheaper made  
guns of the present time, having compensating  
lumps and better material in every way. The  
former price was \$225.

## LOT E.

ONE W. &amp; C. SCOTT &amp; SON.

Double grip, under guard action, finest laminated  
steel barrels, highest quality throughout, pistol  
grip stock, 4 bore, 49 inch, 15 lbs. \$350  
We do not believe there is another gun equal to  
this in this country for heavy shooting. Former  
price, \$350.

## LOT F.

ONE J. D. DOUGALL, HIGHEST QUALITY.

Top lever, double bolt, bar rebounding locks,  
(Jas. Brazer's best), patent fore end, Damascus  
barrels, choked on "Dougall's Express System," 12  
bore, 31 inch, 5 1/2 lbs., chambered for 2 1/2 inch shell,  
\$390.

## LOT G.

TWO E. M. REILLY &amp; CO., LONDON.

Top lever, double bolt, bar rebounding locks,  
Scott's patent compensating lump, finest Damascus  
barrels, elegantly finished guns throughout.  
No. 20, 10 bore, 30 inch, 8 1/2 lbs. \$125  
No. 21, 10 bore, 31 inch, 8 1/2 lbs. 135  
Former price, \$400.

## LOT H.

FOUR WESTLEY RICHARDS &amp; CO.

Top lever, bar rebounding locks, extension rib  
fastening.  
No. 22, "C" quality, 12 bore, 30 inch, 8 1/2 lbs. \$125  
No. 23, "C" quality, 12 bore, 32 inch, 12 lbs. 135  
No. 24, "C" quality, 10 bore, 32 inch, 8 lbs. 135  
No. 25, "A" quality, 10 bore, 32 inch, 8 1/2 lbs. 145

## LOT I.

TWO WILLIAMS &amp; POWELL.

Top lever, extension rib, patent fore end, pistol  
grip, Damascus barrels, choke bored, finest en-  
graving, highest finish throughout.  
No. 26, 10 bore, 30 inch, 10 lbs. \$110  
No. 27, 10 bore, 32 inch, 8 1/2 lbs. 110  
Former price, \$250.

## LOT J.

TWO NICHOLS &amp; LEFEVRE.

"C" quality (\$150 list), N. & L. action, extension  
rib fastening, patent fore end, pistol grip, fine Da-  
mascus barrels, choke bored.  
No. 28, 10 bore, 30 inch, 9 1/2 lbs. \$115  
No. 29, 10 bore, 32 inch, 9 1/2 lbs. 115  
Former price, \$150.

## LOT K.

## TRADE—"BEATS THE WORLD."—MARK. Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS. The Oil of Crocote, CHARLES G. BERRY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1873, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Crocote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water St., NEW YORK.

## Philadelphia Fishing Tackle House

GUNPOWDER!  
Dupont's Rifle, Sporting and  
Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1807, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 15 caisters.

**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 15 and 35 caisters and 64 and 128 kegs.

**Dupont's Choke Bore.**—Specially adapted for "Choke Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 64 lb kegs and 15 caisters.

**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 15 caisters and 64 lb kegs.

**Dupont's Rifle Fg. "Sea Shooting."**—Fg. and FFG. The Fg. for long-range rifle shooting, the FFG. for general use, burning strong and moist. Packed in 1/2, 1 lb and 5 lb caisters, 64, 128 and 256 kegs. Fg. coarse, FFG. fine. Dupont's Sporting, Mining, Snuffing and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cylindrical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KREELAND, 70 Wall Street, N. Y.** N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

The Hazard Powder Co.,  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square caisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. caisters and 1 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. caisters and 64 and 128 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. caisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON AND MUSKET POWDER: also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

### THE FOOD OF YOUNG FISHES.

WE print this week, in the proceedings of the Central Fishcultural Society, a paper with the above heading from the pen of Prof. S. A. Forbes, of the Illinois State Laboratory of Natural History at Normal, to which we commend the attention of all thinking fishculturists. It is not enough to stock streams and lakes with fish in a promiscuous manner, trusting to their getting a living "out of the water." In the near future fish culture and science will go hand in hand, and the fishculturist who best understands his business will be he who follows up all the side branches and knows what influences are brought to bear upon success, or the reverse.

Prof. Forbes' investigations have been made in a hitherto untrodden field, and if they are not complete, or if but few individuals of a species, genus or even family have been examined, it must be remembered that he has just begun. His valuable work on the food of birds and insects has been recognized as of value, and his work is bound to be of practical benefit to agriculturalists and others, as we predict it will be to fishculturists. He is not a fishculturist, nor a farmer, but a man of science, pure and simple, who works for knowledge for knowledge's sake, and it is for practical men to apply his discoveries. He joined the fishcultural society merely to be of use to it—it is of little use to him—and we hope that his work will bring him the only reward he expects—the appreciation of those for whom he works.

The great struggle for existence, as all fishculturists know, is in the early life of the fish, and here Prof. Forbes shows that fishes whose food is widely different in adult life feed on nearly the same food in their infantile period. Who imagined that a sucker ever competed with a gar for its food? And yet it seems that the young gar feeds upon those bug or shrimp-like forms upon which the adult sucker lives. And so with other fishes of whom some have said their presence does no harm, but which, from the light shed by the paper in question, we incline to think that the good they do by serving as food when older may be more than compensated for by their presence in their younger days.

It is too soon to draw positive conclusions on this subject, which is a vast one, including the struggle for existence and the survival of the fittest, *i. e.*, the one which gets the most food, but it is a beginning, and we hope that this work will continue until we have as full and complete knowledge on the subject of fish food in the dawn of fish life as well as in the adult stage, and the intelligent fishculturist be able to know how to balance the value of fish life and to form an idea whether the food which the young suckers furnish his trout is all clear gain when bred in his ponds, or whether the minute animal life devoured by them does not deprive his troutlets of a needed article of diet worth more than the food the adult trout get.

The paper makes no claim to be more than a record of what little has been done, but contains many germs of thought for the practical man, and we would call special attention to the last three paragraphs of the paper as of especial importance.

### HARD TIMES FOR THE QUAIL.

THE heavy snow and bitter cold of the past week will make sportsmen tremble for the fate of the quail. The earth is covered with a thick mantle of snow, which effectually prevents the birds from reaching the food on the ground, and all that they now have to depend on are the few buds and berries that they can obtain from the trees and shrubs, and such seeds as are left on the tall weeds that still project above the deep snow. At such a time as this the sympathies of all are felt for the birds, and unless these sympathies take some active shape the prospects for shooting next fall are by no means encouraging. Every sportsman who is so situated as to be able to give assistance to the half-starved bevies should now do what he can to keep the birds alive through this terrible weather. It is food that they especially need, for as long as their bellies are full they can withstand the cold. We killed birds about the middle of December which were, it seemed to us, as large and as fat as any we had ever seen. They were then well prepared to endure the hardships which were in store for them. But under the stress of such snows and cold as we are now having their surplus fat must soon disappear, and unless the ground becomes bare large

numbers must perish of hunger. The man who killed a quail December 31 found it, we venture to say, a very much lighter bird than those captured two weeks earlier. No one should shoot the birds in this weather.

In an editorial in *FOREST AND STREAM*, published four years since, we advocated the feeding by sportsmen and farmers of the game birds, which, during severe seasons, have so much to contend against. Some of the remarks are so applicable to the present situation that we transcribe them almost without change:

The question now arises: Can we not alleviate their sufferings and save some of their lives? The baiting of game has long been practiced for purposes of capture, and with just as small trouble and expense the quail may be fed and saved through this severe weather. On the afternoon of the 30th ult. we flushed a bevy of twenty individuals. Having secured one bird, and finding it unfit to eat on account of its emaciated condition, we desisted from following the bevy. If these birds are saved through the winter there will be, say, eight pairs breeding next spring. Quail will, on an average, raise twenty birds in a season to the pair, there being two nests of eggs of about fifteen each. The eight pair will give in this way 160 birds, or about eight bevies in the following fall. This rate of increase is not placed at too high a figure.

Weather like this will account for the alternating scarcity and plenty of birds in different years. But it seems to us that a great many quail could be preserved through the winter if those interested would make an effort in this direction. A spot should be cleared at the border of some swamp which the quail are likely to frequent for food or shelter. On this clearing, buckwheat, corn, oats, or the screenings of wheat and rye should be scattered, together with hay and hayseed; leading from this in various directions grain should be sparsely scattered to some distance, forming paths, which the birds coming upon will follow up. During the weather that is now upon us quail are forced to travel over a great deal of ground to find a living. As soon as the baiting place is discovered they will remain near by until long after the supply of food is exhausted, and if it is occasionally replenished they will settle in the immediate locality, and probably breed near by in the spring; one would be surprised to know how little the birds can eat and yet live. We must exercise foresight and take a little trouble in this matter, and those of us who love the golden days of October, and their accompanying delights with dog and gun, should try now to help the quail survive the rigors of these latter winter months.

### THE UNITED STATES FISH COMMISSION REPORT FOR 1878.

ANOTHER large volume is added to the valuable literature of American fishes and fish culture, making the sixth of the series, in the report now before us, whose title page merely gives the lines "Inquiry into the Decrease of Food-Fishes," and "The Propagation of Food-Fishes in the Waters of the United States," as a key to its contents, which are so varied as to include, in the appendices, many subjects either under or related to these headings.

The report proper includes an account of the operations of the United States Fish Commission for the year 1878, although the work on the salmon extends to the disposition of the fish in the following spring. The work of inquiry into the decrease, and research into the character of fishes was placed in charge of Prof. G. Brown Goode, assisted by Dr. Tarleton H. Bean; the collection and investigation of marine invertebrates by Prof. A. E. Verrill, assisted by Mr. Richard Rathbun, Mr. Sanderson Smith and Mr. Warren Upham. The propagation of food-fishes was under the superintendence of the late Prof. James W. Milner, assistant commissioner, aided by Frank N. Clark and Mr. T. B. Ferguson.

The fact that the beam-trawl, which is the main reliance of the English coast fishermen, is practically unknown on our coast as a means of taking the bottom fishes, is referred to and a belief expressed that its introduction would add to our facilities for procuring food all along our sandy coast south of Cape Cod; and attention is called to the fact that in the Lofoden Islands cod are taken in gill-nets, whereby the expense of bait and the vast amount of labor expended in securing it is saved. The Commissioner recommends the establishment, either by the General Government or in connection with the States, of a thoroughly reliable and exhaustive system of recording fishery statistics for the future, to be combined annually and published by some of the public departments of the government, as it is very difficult to establish data upon facts furnished by one State, and it is only by considering the subject in its relations to the whole country

## FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 6, 1881.

\*.\* The *FOREST AND STREAM* goes to press Wednesday. Correspondents are requested to mail their communications so that they may reach us before that day.

The Annual Session for 1881 of the Michigan Sportsmen's Association will be held at Lansing, beginning Jan. 25.

IT GIVES US MUCH PLEASURE to present to our readers this week, from advance sheets, one of the chapters of a new book by Mr. T. S. Van Dyke, on sport in California. Those who are acquainted with his numerous contributions to the *FOREST AND STREAM* need no assurance that Mr. Van Dyke knows his subject thoroughly, and the chapter published by us is sufficient earnest of a most readable book. We shall notice the volume as it deserves, immediately upon its appearance.

SQUIRREL SHOOTING is not by any means the highest refinement of sport, but there is something about it that does have more of a charm than any other shooting—and that is the recollections it brings of the days when squirrel shooting, like every other sport, was the best—the days when we were boys. Something of how these memories cling in after life is shown in the pleasant letter on the subject on another page, written by a long-time correspondent, and one of the staunchest of the many thousands of friends of the *FOREST AND STREAM*.

THE GULL ISLAND CLUB.—With the exception of Capt. Johnson, who still remains at the club house, all the members of the Gull Island Club have returned from their trip to Pinicola Sound. Messrs. B. Payne, Thos. Hall and Al. Heritage came back a week ago; F. Harrison and R. Hinch followed a few days later, and the rear was brought up by N. E. Nash, F. M. Thomson, E. Wright and G. B. Eaton. The pleasure of the trip was somewhat marred by the tempestuous weather which has prevailed on the Atlantic coast for a fortnight past; but the Jersey boys report themselves well pleased with their adventures. We have a full account of the doings of the club, from the pen of "Jacobstaff," which will be published next week. Messrs. N. S. Nash, D. Tolley and Al. Heritage will probably return to the shooting grounds in the latter part of this month.

that an equitable system of legislation can be made concerning close seasons, the size of fish to be caught, the enforced use of fishways, regulations pertaining to the pollution of waters, etc.

The season of 1878 proved to be the most productive, so far, in the history of the U. S. salmon-breeding ranch on the McCloud River, California, the superintendent, Mr. Stone, estimating that 18,000,000 eggs could have been secured if they had been required, but the take was limited to the number applied for by the State Commissioners and others. The first eggs were taken August 20, and from that date until October 5, when the last car was loaded, the men were very busy, from seven to nine thousand salmon were several times taken in a single day, and two cars were loaded with eggs, one with 4,000,000 and the other with 3,250,000, while 2,500,000 were hatched and planted in the river. Mr. Stone also hatched 1,203,000 at the Clakamas station, on the river of that name, which is tributary to the Columbia, and turned them out there.

Of the station for hatching the Atlantic salmon at Bucksport, Me., in charge of Mr. Atkins, it is recorded that each fish, after being stripped, is labelled by a metallic tag with an identifying number upon it, which is recorded with the date of capture, weight before spawning, weight of eggs taken, etc. Mr. Atkins has in several instances captured these fish a second time. One instance is as follows: No. 768, stripped on Nov. 1, 1876, weighed 21 lbs. 7 oz., and yielded 5 lbs. 7 oz. of eggs; when turned back it weighed 15 lbs. The same fish was recaptured at Lincolnville, Me., June 14, 1877, weighing 26 lbs. Another fish, No. 1,010, which, on the 9th of Nov., 1876, weighed 18 lbs. 2 oz., had 4 lbs. 10 oz. of eggs, and when dismissed weighed 13½ lbs., was retaken June 13, 1877, weighing 30½ lbs., showing an increase of 12½ lbs. in two years. Very encouraging reports of increased catches of salmon in Maine rivers have been received, and large numbers have gone up the fishway at Lowell. The winninish, called also "schoddic" and "land locked salmon," has also been bred in limited quantities by Mr. Atkins at Grand Lake Stream, Me., for the General Government in connection with the States of Maine, Massachusetts, New Hampshire and Connecticut, a total number of eggs taken and distributed being 1,723,000, the parents being returned to the water uninjured.

There was also good success with whitefish (*Coregonus*) by Mr. Clark, and with shad by Messrs. Milner and Ferguson all the particulars of these, as with the salmon and other fishes, being found in special papers, by those in charge of the work, in the appendices.

Experiments at Gloucester, Mass., on the sea herring were satisfactorily conducted by Mr. Clark, also at Noman's Land by Mr. Vinal Edwards, so that it has been demonstrated that it is possible to increase this fish if thought necessary. The carp receives attention, of course, but our readers are familiar with the details of the propagation of this most valuable fish down to a later period than the report treats of.

The modes of increasing the supply of fish food are detailed; the history of fish culture, from the discoveries of Remy and Gehin in France to Garlick and Aekley in America, and the appointment of the Fish State Commissioners is glanced at, and the improved methods hinted at as subjects for future report. The appendices contain: "A List of Patents Issued in the United States, Great Britain and Canada, up to the end of 1878, Relating to Fish and the Methods, Products and Applications of the Fisheries." This includes fish hooks, fish traps, fishways, floats, harpoons and spears, nets and seines, oyster culture, pisciculture, reels, rods and sinkers, preservation of fish, paralyzing by electricity and manures, some of which are illustrated by figures. "Report on the Department of Fisheries in the World's Exposition in Philadelphia, 1876," by Joakim Andersen, translated from the Norwegian by H. Jacobson. "Report on the American Fisheries," by Frederick M. Wallem of Norway. "A Short Introduction to the Proper Care and Management of the Baltic Fishery," by H. Widegrin, of Norway. "The Salt Water Fisheries of Bohuslaen and the Scientific Investigations of the Salt Water Fisheries," by Axel Vilhelm Ljungman, of Sweden. "The Great Bohuslaen Herring Fisheries," by the same. "The Society for Promoting the Norwegian Fisheries," from the *Bergensposten*, a daily newspaper at Bergen, Norway. "Statistics of the Lofoden Fisheries for 1878," from the official report of the Superintendent. "Report on the Norwegian Deep-Sea Expedition of 1878," by Prof. G. O. Sars. "On the Scientific Investigation of the Baltic Sea and the German Ocean," by G. Karsten, translated by Dr. Oscar Loew.

Appendix E opens with a "Report on the Marine Isopoda of New England and Adjacent Waters," by Oscar Harger, which, with list of authorities quoted, covers 154 pages and is embellished with 91 figures. "Report on the Pycnogonida of New England and Adjacent Waters," by Edmund B. Wilson, 42 pages and 49 figures. Appendix E has "The Enemies of Fish," by Baron de la Valette St. George, Professor of Anatomy and Director of the Anatomical Institute at Bonn, which was read before the German Fishery Association, Berlin. "The Purification of Refuse Water," by E. Reichardt, of Jena. "Notes on the Fungus Disease Affecting Salmon," by A. B. Stirling, Assistant Conservator of the Anatomical Museum of Dublin; also "Additional Observations on the Fungus Disease Affecting Salmon and Other Fish," by the same. "Sickness of the Gold Fish in the Royal Park, Berlin," from the *Deutsche Fischerei Zeitung*,

Stettin. "The Economic Value of the Norwegian Lakes and Rivers as a Field for Fish Culture," by N. Wergeland, of Norway. "What Does a Fish Cost," by Christian Wagner.

Appendix G has "The Propagation and Distribution of Shad in 1878," by James W. Milner. "Biological Observations made during the Artificial Raising of Herrings in the Western Baltic," by Dr. H. A. Meyer. "The Propagation and Growth of the Herring and Small-Herring, with Special Regard to the Coast of Bohuslaen," by A. V. Ljungman. "The Introduction and Culture of the Carp in California," by Robert A. Poppe. "On Carp Culture, Chiefly in its Relation to Agriculture," by Eben Bandtlen, read at a meeting of the Prussian Fishery Association at Elbing. "On the Carp Ponds of Nether Lusatia," by Dr. Edm. Veenckenstede. "The Carp Fisheries in the Pletz Lakes," from a Berlin paper. "Mr. Christian Wagner's Establishment for Raising Gold Fish, at Oldenburg, Germany," from the *Fischerei Zeitung*. "A Report on the History and Present Condition of the Shore Cod Fisheries of Cape Ann, Mass., together with Notes on the Natural History and Artificial Propagation of the Species," by R. E. Earll. "Report of Operations at the United States Salmon Hatching Station on the McCloud River, California, in 1878," by Livingston Stone. "Report on an Attempt to Collect Eggs of Sebago Salmon in 1878," by Charles G. Atkins. "Report on the Collection and Distribution of Schoddic Salmon Eggs in 1878-79," by the same. "Do the Spawning Salmon Ascending the Sacramento River all die without returning to Sea?" by Horace D. Dunn, with notes by Livingston Stone. "Present Stage of the Salmon Experiment in Tasmania," by Morton Allport. "Correspondence Connected with the Transmission of Eggs of the Quinmat Salmon and Whitefish to Australia and New Zealand, 1877, 1878 and prior years." "Correspondence Connected with the Transmission of the Eggs of the Quinmat Salmon and other *Salmonidae* to European Countries in 1878 and prior years." "Summary of Reports for 1878, by State Fish Commissioners Respecting the Increase of Food-Fishes by Artificial Propagation." "Cheap Fixtures for the Hatching of Salmon," by Charles G. Atkins, illustrated with 15 cuts, and appendix II, "On the Nature of the Peculiar Reddening of Salted Codfish during the Summer Season," by W. G. Farlow, M. D.

It will be seen that a variety of subjects are treated of in the appendices, which to do justice to would require them to be printed entire, but as all who take especial interest in these matters will obtain the volume and read the portions which interest them, we forbear giving more than the titles of the papers, hoping to refer to some of them again from time to time.

WHERE WE STAND.—For reasons, which seemed to us good and sufficient, we declined to publish a communication from Mr. M. P. McKoon, of Franklin, N. Y. Having so informed that gentleman, we are now in receipt of a letter from him, which contains the following extraordinary sentences:

Now you doubtless know something of my financial circumstances, and how I became heir to my property, etc., and that I am not breeding dogs for a living by a long way. Now I have \$1,000 loose at present, and were it needed, to spend in defense of our brothers and our case in this matter, and not bother me much either; and should you not publish this letter of mine I shall of course be obliged as a duty to expose you through the other sportsman's journals; and also in pamphlet form to every known sportsman in the United States and Canada. I shall make a clean exposure of the whole thing from the time it first started. Now I certainly hope you will not oblige me to injure you in the matter, and upon your giving it a second thought I am certain you will publish them immediately and not curtail them at all.

Mr. McKoon has threatened the FOREST AND STREAM. We do not know anything about that gentleman personally, nor are we specially interested in his financial circumstances. It is, however, evident that he is somewhat irascible and disposed to jump at conclusions. Still we think that on consideration he will see that, in writing as he has, he has done a most foolish thing. Other people have once or twice tried threatening FOREST AND STREAM, and have discovered after a little while, somewhat to their surprise, that they had got hold of the wrong end of the stick. They found, when they attempted to coerce us by these means, that we did not care; that when we believed we were right we would go ahead in our course whether it pleased the parties interested or not. They found, in short, that the FOREST AND STREAM was being managed in the interests of sportsmen, man-fashion, and not merely in a politic way to try to curry favor with and cringe to everybody that chose to find fault with it. The FOREST AND STREAM is not to be dictated to. Its course is directed by an earnest desire to serve the best interests of the sportsmen of this country, and from this course it cannot be turned.

We have none but the kindest of feelings for Mr. McKoon, and we are not particularly disturbed by his threats. We would suggest, however, that it would be well for him to consider whether in attempting to dictate what shall appear in our columns he has not, in the rugged but forcible language of the Persian Sage, "bitten off more than he can chew."

The letter will not be published.

\* "Sebago salmon." "Schoddic salmon" and "Land-locked salmon" refer to one fish, also called "Winnish," or Oninimish, as some spell it. It is now called *Salmo salar* var. *Sebago* by ichthyologists.

## The Sportsman Tourist.

THE LOG OF THE FAVORITE.

STEAMER FAVORITE,  
CHATHAM STRAITS, ALASKA, AUG. 26, 1880.

IN my last, from Pyramid Harbor, I promised to send you such extracts from the Favorite's log-book, as with variations, should seem most likely to prove interesting to my FOREST AND STREAM friends.

While still in the midst of the grand scenery and novel surroundings, which have during the last ten days furnished to me more new sensations than I had thought could ever again come to me, I will start the redemption of the promise. I find myself entranced at starting, with riches and undecided whether to leave the present for a future description, and, beginning systematically with my notes avoid the risk of tautology, or to let the notes lie idle for a bit and trust to my surroundings for inspiration. For nearly a fortnight I have been cruising about in but slightly known waters, and have been enjoying the pleasures which are incidental to the exploration of hitherto almost, and in some cases quite unknown country. We have steamed for miles into great bays, where by the charts dry land appears, and have tramped the beaches of islands and bayous, where, but for the knowledge thus obtained, I should have been justified in considering that no land existed.

I have been in pleasant and friendly contact with tribes of Indians, who, but a short time since, were supposed to be unsafe to venture among, and have in studying their customs employed my time pleasantly while our hydrographer, armed with sextant and compass, has made the pleasant promise by securing for the future use of others the locations of these bays and islands, shoals, reefs and inlets.

I have gazed until fairly satiated upon magnificent scenery made up of great mountains such as Fairweather, Perouse and Crillon, all over fifteen thousand feet in height, rearing their eternally snow-crowned heads and shoulders from foot-hills which are most justly named "Alps," for as far as the eye can reach they furnish a horizon from ten to ten thousand feet above the sea; upon glaciers of the most majestic proportions and of bewildering variety of form and hue; and upon great icebergs which, becoming detached from the advanced foot of these glaciers, drop into the sea and go solemnly drifting to and fro with each change of tide, hemmed in by the precipitous shores of Cross Sound and Icy Straits, upon whose beaches in certain bays they stop at times to rest at high tide, and remain there slowly yielding to the influence of the sun's rays until, with the dense green back ground of forest, they resemble, especially by moonlight, cities of ruined marble palaces.

But for these glaciers we of the Favorite would have been unquestionably the discoverers as well as explorers and surveyors of unknown bays, but they had drawn to their vicinity that mighty Nimrod in glacier hunting, Professor John Muir, of whose previous visit to and sojourn among the ice rivers, the Indians told me.

A visit to this strange country would be worth all it would cost to those who have already exhausted the resources nearer home.

At times the sensations are decidedly exciting, for instance when from two or three directions at once great icebergs come drifting toward you, and the problem which way to steer presents itself; for of the two, in case of collision, the berg would be sure to get the best of it, and sinking as they do far below the surface, and in different depths, they are affected by eddies and currents, which present no surface indications. Then shoal water is the refuge, for the least of the dangerous bergs would ground sooner than our little steamer.

Until very lately the interior of Alaska has been a "terra incognita." Spasmodic attempts have been made by missionaries, miners and traders to effect an entry, but all have returned disgraced by failure. Along the coast are bays and harbors occupied by villages and hamlets of warlike coast tribes who have for ages claimed as their right—to be maintained, if necessary, by force of arms—the trade with the tribes (the Sticks) who inhabit the interior, and whose industry consists in the capture of the fur-bearing animals, whose pelts are by the coast Indians, purchased for oil, dried fish, and a portion of such groceries and dry goods as they may obtain, or expect to, from the white traders to whom they sell them.

These tribes, the Hoo-nahs, Takus, Sum-dums, Koot-nahs, Chilcats and Chilcoots, have stood sentry over the portals, and "thus far shalt thou come and no further" was the rule, and the coming thus far was attended by difficulties and dangers which deterred all but the most enterprising and courageous. But this state of affairs has, I trust, been permanently changed for the better—better for the whites and the Indians; the doors have been opened, and at this date miners and prospectors are distributed throughout the country searching for precious metals, which rumor has asserted were to be found there. Missionaries are working their way in, establishing schools at each outpost to which the Indian parents gladly send their children, and a small unarmed trading steamer cruises about in perfect safety and is welcomed at each village as a returned friend. To the traders, however, the welcome reaches no further than to the door.

The Indians of the coast are not deficient in shrewdness, and they fully appreciate the value of a monopoly.

I'll begin that log:

SITKA, August 14, 1880.

Reports that the Sim-Sims, who are English Indians from Port Simpson, were trespassing upon the sea-otter hunting grounds of the Hoo-nahs, who are Alaska Indians, and that a war between the two tribes was imminent; also that throughout the inland waters illegal traffic in spirits and firearms was taking place, and much smuggling going on, and that at various localities on the coast slight troubles were springing up, which vigorous steps would check, but which, if allowed to increase, would involve seriously the safety of the few whites who are strolling about Alaska, induced Major Morris and myself to pay a visit to these various places and give to the Indians a little advice and instruction, which, if heeded, would greatly decrease the dangers to the pioneers, and would also bring the Government of the Government.

The only means of transportation that we could obtain was the Favorite, which little steamer I described in my last. At 10 A. M. of the 14th, with flags and pennant proclaiming her new character, and amid the cheers of the male and handkerchief salutes of the female population, the Favorite steamed out of Sitka harbor on a mission which to every one in Sitka was of greatest importance. The weather was bright, but darkened as we passed through Olga and Nevis Straits, and

about "quitting," and was preparing to suit the action to the word, when another arrow skipped gayly from the string, and Mortality knocked at the lattice-door of his little ribs in a way that invited an immediate response.

An arrow that scattered the pine-needles among the rest of the flock caused a decided increase in their pace, and as shaft after shaft, flying wild from the archer's now trembling hand, broke over the birds or scattered the dirt around them, they lissed into a run and some flew a few yards, alighted, and then ran again.

"Now we shall have to scatter them," said Belville. "You had better keep quiet and let me do it. Hold Prince back." Belville started on a run after the birds, while Norton collapsed Prince and tried to hold him. He discoursed most touching strains "to the rocks and rills, touching the tender stops of various quills," as his master ran ahead without him. The quails quickened their pace as Belville charged on them, and stuck to their legs with provoking pertinacity for a few moments, until Belville made a "spurt" and got within ten paces of them, when suddenly the air was filled with buzzing wings and wheeling and darting streaks of blue, white and cinnamon. Quickly his gun came to his shoulder and he covered the dark green shrubbery of a *manzanita* behind which a bird had flown. The gun cracked; a shower of blue and cinnamon feathers puffed out from behind the bush; a dull sound of a falling body was heard; and Norton lay prone upon the earth!

As he picked himself up and brushed the pine-needles out of his sleeves, he announced to the universe at large his intentions of sub-letting all future contracts to hold a dog while his master goes ahead to shoot.

Prince didn't seem at all inclined to object to this arrangement, but displayed remarkable equanimity as, nearly wagging his tail off, he went in to pick up the fallen bird. He then trotted away over the ground ahead with his nose in the air and his tail vigorously whipping his sides. He had not gone a hundred yards when his pace slackened. So did his tail. The tail got slower in motion. So did the legs. The legs seemed to slacken the tail and the tail to react upon the legs, until he had settled down to a pace suitable for a fashionable mourner at a snail's funeral. Then he stopped altogether, stood for a minute with his eager eyes fixed in a stony gaze; then, turning his head, he glanced at his master. "Come on quick, now, with your guns," said Belville. "These birds do not lie long."

As Norton came up, three birds rose from the dead brush ahead of Prince, and almost at the first buzz of their wings the gun went off, and the rain of a flourishing young *sarcobata* about three feet to one side of them. One of the birds went to Belville's side and came whirling down out of a shower of feathers, while another plunged like a wet rag into a pile of rocks at the crack of the second barrel. The birds were soon picked up and the dog sent on.

He at once began to stiffen and crawl, sniffling the air and straightening out occasionally into a dead point. But no birds rose.

"Too slow for these chaps, Prince. You will have to go faster," said Belville, as he started ahead of the dog on a rapid walk. "Heie on! boy, or you'll get left!"

But Prince had not been trained upon California quails, and followed along behind as if he had a bag of shot on each foot and his tail was spliced with a poker. By running and clearing him on, Belville soon got him pretty well stirred up, and he overtook a little bunch of birds that had hidden in a fallen tree-top, where they saw him coming. Belville went to the east side of the tree and Norton and his sister to the other, while Mrs. Norton was to look for the game and flush it with an arrow when visible. Carefully she looked into the brush, but there was no sound or sign of life for two or three minutes; then Laura suddenly drew back, and with a vigorous pull at the bow-string sent an arrow half way to the feathers in the white and brown mold on a rotten stump beneath the brush.

"Oh, quails!" was heard within, and Prince, who had been standing off at some distance ran close up, turned his head to one side, crouched low, and, looking intensely anxious, settled down still as marble.

Belville kicked upon the opposite side, and out came four birds, whizzing in various directions. One came down before the combined effect of a heavy battery opened by Norton and his sister, and another's machinery was deranged by a shot from Belville.

These birds were soon picked up, and the hunters started for the rest of the covey, the trail of which the dog soon struck. But Norton and the ladies were unable to follow at the rate required to overtake them with the start they had now gained, and Belville went swiftly on alone.

**NOTE.**—The mountain quail of the Pacific slope seems to be little known to sportsmen. I have seen some very absurd statements about it by those who have attempted to describe it.

It is not "twice as large as Bob White."  
It is not "very time eating."  
It is not "extremely rare."  
It is not "extremely wild and difficult to shoot."  
It is not "found only in the roughest or most inaccessible places."  
It does not "run faster than the valley quail."

It is fully as tame as the valley quail, a far better subject for a good chapter if these things had been true. But while not adverse to good subjects, my main object is accuracy, and I describe these birds just as I have found them.

I have seen them only in their natural state, and not as they must become if much hunted. But I have not only hunted them with a shot-gun, but have time and again met them when deer-hunting, and have sat down and watched them until the last one had stolen softly away. I have seen them often so close and unobserved that a good archer could kill half a dozen with a bow, and it is no trick for a good rifleman to decapitate three or four before they leave. I do not know what they may be in the North; but in Southern California, when not hunted, they are the very embodiment of guileless simplicity.

Owing to fuller feathers this bird looks much larger than Bob White, but is only a mere trifle larger in body, at all. In flavor it is almost exactly like the valley quail, which is about equal to a tolerable game of chicken. Though by no means plenty, it is not *exceedingly* rare. It is not so common as the mountain quail, but is not so tricky for a good rifleman to decapitate three or four before they leave. I do not know what they may be in the North; but in Southern California, when not hunted, they are the very embodiment of guileless simplicity.

It is not quick so swift a flier as the valley quail, although swift enough. I have found it in good easy ground to hunt, though it generally likes rough ground. The valley quail, I have found it at altitudes as low as one thousand feet above the sea; though I believe these were the increase of escaped tame ones. Its habitat seems to be above four thousand feet.

It does not run so fast as the valley quail, though it will depend upon running much longer, and is much harder to force into flight. It is very easily domesticated and makes a charming pet, though I do not know whether it will breed in confinement.

When the brain is wearied, the nerves unstrung, the muscles weak, use Hop Bitters.

## Natural History.

### DOMESTICATING QUAIL.

INFLUENCE OF THE LAWS OF HEREDITY.

Editor Forest and Stream:

I have taken great interest in all the articles I have read in your valuable paper on the various experiments at domesticating the American quail—Bob White, as he is familiarly called from Maine to Texas. I have hoped some one would appreciate the importance of the matters and study into the principal difficulties to be overcome, and give us directions in full for bringing to a successful issue this most interesting effort to add to our list of home pets the beautiful bird so universally admired.

I have given the matter much thought, and am fully determined to make the experiment so soon as I can arrange to make a fair trial. In the meantime I hope others will make the trial, and by mutual aid it may surely become a success, and if we can obtain a "strain" of fully domesticated quail that will live with our chickens and doves we shall add a very important and valuable member to our list. And the remuneration, aside from the satisfaction, may be well worth while for I believe the demand would be unlimited for a great many years at highly profitable prices.

In many cases the effort to tame one or more specimens has been successful for one season. It has also been well established that quail may be kept under control and yet produce eggs and young, but I have found no well authenticated cases of raising any of the second generation.

Now all that I believe to be necessary is to raise and keep the birds under control for three to five generations, by which time the inherited wild instinct will be replaced by an inherited tame instinct. As bearing on this point let us note some of the facts in regard to the laws of heredity among other birds and animals.

Those who have repeatedly raised and kept a race of wild turkeys tell me that birds hatched from the eggs of wild turkeys inherit so much of the wild nature that it is almost impossible to keep them during the first generation. That it is necessary to have parents of the flock raised from tame eggs and then to watch most carefully against their getting into the forest. That if they do get into the woods and roost out one or two nights they are gone birds from that time, and refuse to come or be driven back to a tame life, and in a few days are as shy and crafty as birds born and reared in a wild state. But if kept carefully about the premises with tame fowls, they will remain partly tame. When nesting time comes the wild instinct again shows itself in the effort to wander off and secrete the nest. If this is managed properly and the eggs of this half-tamed bird are hatched by a tame turkey, the second generation are much less like wild birds, and so by the third or fourth generation they become like any tame turkey in habits and life. It is also stated that birds that are half-bred from one wild parent of the first generation show unmistakable signs of inheriting the wild instinct of their parent, and need to be very carefully watched to prevent their lapsing into the wild state.

The same experience has been met by those who have tried to domesticate the wild goose or the mallard duck from wild eggs. The first generation of these birds retain their wild nature, and in autumn show the strong migratory instinct inherited from their parents. But if kept under control and their progeny raised, by the second or third generation the nature is entirely changed, and tameness and dependence on the master, man, is at last fully established.

We see the same power of heredity among many of our animals. Notably, the characteristics of the mustang horse shows in the bucking propensity of his posterity to quite remote generations, and is even inherited by the mule which has any trace of mustang blood.

Livingstone Stone has noticed the fact that trout fry hatched from tame trout spawn are less shy than those from wild trout. So we might go on citing many cases among all kinds of animals, where the inherited traits are entirely modified by a few generations of domestic habits; and it is not at all likely that the quail will prove an exception. But all we know of his habits under tame conditions lead to the conclusion that by persevering in keeping him under our care and protection for two or three or more generations, we may fully and completely change all his wildness into the most perfect tameness and dependence on his humane protector and provider.

If not trespassing too much on time and space I would suggest a few most important features to be observed in keeping old or young in partial confinement.

They should have a mixed diet of seeds, green herbs and worms, or other kinds of animal food, and at or before the mating season should not be allowed to become too fat. They should have all the exercise possible. To this end I would arrange to partially cover and scatter their food, so they should have to scratch and hunt for it. A long movable yard could be provided, with wire-screen fencing which could be moved from place to place. Most of such details would suggest themselves to those who may be induced to try this experiment.

If any have had the trial, or think of doing so, I shall be pleased to hear from them through these columns.

St. Joe, Mich.

### HABITS OF SNAKES.

WHITEWATER, Wis., Dec. 23.

Editor Forest and Stream:

I have read with much interest the various articles in your paper about snakes eating fish, as I have myself witnessed some such incidents as have been reported to you.

About twelve years ago I was on a fishing trip at Koskoonong, an expansion of the Rock River. The lake is ten miles by four in its largest dimensions, and is known as the greatest resort for canvas-back and other ducks in the West. It also is well stocked with fish; wall-eyed pike, "pickereel" and several varieties of bass, being the most numerous. I belong to a club of fifteen, who spend the first week of June in each year, camping on the shore of this lake. We call ourselves "Fin-Hunters," and we never fail to have a longy time, sailing, fishing and fishing on the lake, and engaging in various recreations on shore. The bank on which we camp is probably twenty-five feet high, and a spring of cold, water can be made any where by digging in the gravel at its foot. When we first put up our tents we dug a spring to supply the camp with water, and another at suitable distance, much broader and quite as deep, in which to put our

live fish as we come in from trolling. This last spring soon becomes a great resort for striped and water snakes, and I have repeatedly seen both varieties in the water after dead or dying fish. As the snakes were usually small, and the fish of fair size, the former would not be able to do more than seize hold of the fish and "gape" helplessly at them.

Last June one of our number threw a small pickereel, about ten inches long, on the gravel by the boat landing. A few hours afterward a water snake was discovered trying to swallow the fish. The snake was nearly three times as long as the fish, but not as thick though. A crowd of us gathered around and watched the proceedings. The snake seemed not embarrassed, but kept diligently at its task, pushing forward and jawing the fish, and after a time it swallowed itself and the pickereel completely over. It had got the fish more than a third down, and the betters began to turn in its favor, when suddenly it stopped, rapidly disgorged the pickereel and hurried off to the water. It was the general opinion that the snake had become alarmed at the demonstration of its compeany; also that it would have succeeded in swallowing the pickereel if it had not been disturbed. The relative size of the fish and the snake does not seem to be regarded by the latter. Capt. Frank Sargent, who many years ago was proprietor of the famous "Scoutenabiquon" steamer, at Madison, told me once that he came in at Lake Koshkonong one day with a string of bass. He threw them out ahead of him on the bank. When he had landed he saw a little snake, not over a foot long, which had seized the jaw of a three-pound bass and was making most desperate efforts to drag it off. The snake worked with its (all among the small gravel) stones, and then, contorting, would pull them up toward the fish. I am inclined to think that snakes tear fish to pieces that are too large for them to swallow. I do not think that they feed on decayed fish—at least I have never seen them do so. Turples, however, are perfect scavengers, and devour anything from a live fish on a set line to one so dead and far gone as to shine in the sunlight.

**LAKEVILLE, Conn., Dec. 17.** In your issue of Dec. 9 I saw a call for information in regard to snakes swallowing their young. I gladly ran to the call and hope all others will who have any information on the subject.

When I was a boy, one day working in the hay field, I killed a striped snake of the (to me) unusual length of three and one-half feet. I killed it by thrusting a pitchfork through its head, and when held it up for the other workmen to see something seemed to me to press down toward the tail, and upon laying it down upon the ground it would seem to run back toward the head. My curiosity was excited to know what it was in the snake, so I took it up to the house, which was near by, cut the snake open and found inside of it forty-nine young snakes, about six inches long. They were all fully formed and as perfect snakes as the old one, but they were all dead, and I suppose they died from suffocation, as the supply of air had been cut off from the time I thrust the fork through their head until I opened their jaws, which was about an hour and a half. The cavity in which the young snakes lay was dry, smooth and clean, the intestines lay outside of this sac or pipe and between it and the body of the snake, I did not see the old one swallow the young ones, but found them, not in the stomach of the old one, but in a cavity evidently formed for that purpose.

But here I am again in the chain of evidence. My wife (who by the way is the "Ruth" who gave me and the rest of our club such a showing up in the Forest and Stream, some time since and had so much trouble with my first pup, was one day picking strawberries near a sandy knoll, where she discovered a striped snake with several young ones on the sand near her. When she approached them the old snake opened her mouth and the young ones immediately crawled in, one by one, and disappeared.

So, taking these two circumstances together, I came to the conclusion that striped snakes were provided with a cavity in their bodies to which the young retire for safety in times of danger.

HEMATITE.

**NASHUA, N. H., Dec. 27.**—When a boy I have often killed common striped snakes, whose bodies contained a large number of young ones from one to two inches long. I distinctly remember one occasion, when on my way to school, I killed a snake about four feet long, and very uncommonly thick, from the body of which I took forty-seven young ones. A. W.

**SHARKS SWALLOWING THEIR YOUNG.**—*Charlottesville, Va. Nov. 5.* In your issue of the 23rd ult. I noticed an article on the question of sharks swallowing their young. I think I can throw some light on this curious subject, which I give for what it is worth.

While attached to the United States school of war Vincennes, on the coast of Africa in 1858, I witnessed the capture of a shark some six or eight feet long. It was suspended from the bowsprit and ripped open by one of the crew. Twelve young sharks about two feet long followed the knife, fell into the sea and swam off with such apparent indifference as if nothing wonderful had occurred. Expressing surprise at this strange sight I was informed by an old quartermaster standing near, whose word I never had cause to question, that he had often seen young sharks swallowed by the old ones and again disgorged.

From what I saw and heard on this occasion I am satisfied that this old shark swallowed the young for protection.

JOHN THOMAS.

Medical Director, U. S. N.

**CHICKENS RETURNING TO A WILD STATE.**—*Cortland, N. Y., Dec. 27.*—In looking over a poultry journal I noticed an account of wild chickens that are hunted as wild game in Conauche County, Texas. It was stated that a few years ago large numbers of domestic chickens were deserted for some reason by their owners, when they took to the brush, and the words are now full of them. This reminds me of the somewhat novel experience—as related by himself—of a gentleman with whom I was out shooting partridges a few weeks since. Coming into a piece of woods, he made the remark that it was in this very same place that he had last shot wild chickens. It seems that a white Leghorn hen belonging to a farmer, whose henery was near by, had stolen her nest, going into the woods and hatching out a brood of chickens. The hen and chickens came to the woods a few times and were fed, but finally remained in the woods. As they matured they became wild, hiding in the brush or flying into the trees when any one approached. The farmer not owning or caring to use a gun, my friend was asked to hunt them down, which he did, shooting five of them out of the trees. They were, as he expressed it, "as wild as hawks." It may be that the common breeds of poultry would have remained

tain, "as my experience goes to show that there is no variety of food as the Leghorn.

**CANVAS BACKS IN RHODE ISLAND.**—*Boston, Dec. 24.*—As I am under the impression that a canvas-back duck is a rare bird in New England, permit me to record the killing of two of them. Myself and Mr. Ellerton Lodge of this city were shooting at Point Judith during the first cold snap of November, and one morning I floundered on four large ducks, falling within easy shot, but unluckily my trigger finger was so numb that both barrels of my gun went off before I knew it, and away went the birds. Fortunately they flew by Mr. L., who had the honor of knocking over two of them. To my surprise I found them to be genuine canvas-backs. They seemed oblivious to any danger, allowing me to get within forty yards when I drifted on them. Is this not unusual with these?

FRED K. SKINNER.

The canvas-back is not common on the New England coast, but we believe that a few are occasionally shot on the eastern shore of Connecticut.

**A THREE-LEGGED HEN.**—The following curious story comes to me from the *Relief* (N. C.) *News* of Dec. 15:

Mr. John Stone, of Franklin County, has presented Dr. Blackwell with a wonderful three-legged chicken, which is certainly a curiosity, having three distinct legs, the third leg coming out in the middle of the body between the other two. In walking the hen uses the two outer legs, drawing up the other. But when she stops she stands on the centre leg, drawing the other two up close to her body. Hundreds of people have seen her, and none have ever seen her like before.

**CHINESE BUCK'S HEAD.**—*Gravelhurst, Ont., Dec. 14.*—I noticed in one of your papers some time ago a description of a buck's head that had over fifty points on the two horns. I have lately obtained the nearest to it that I have ever heard of. It is a buck's head with a palmed horn 4 1/2 in. wide, having 25 points on the two horns. The head is no larger than a good-sized buck's head, but the deer, when alive, would weigh about 350 lbs. In appearance it is a counterpart of the cut I saw in your paper. I am satisfied that it is a different species from the common red deer, as I have a small head that I believe to belong to the same, but I am not certain. Perhaps you will know.

R. B. S.

We presume that the palmed horn is due to some injury received by the deer during the period of the antler's growth. There is no likelihood that it belongs to a new species.

**CALIFORNIA QUAIL.**—Will you or some of your correspondents who "have been there" tell us all about the California quail, both kinds—the so-called valley quail and the mountain bird? We would like to know of their habits and their qualities and value as game birds. Would they not be well worth bringing to the Eastern States to divide the burdens of "carrying off shot" with their cousin Bob White? If they are as desirable as their graceful carriage and beautiful plumage would indicate, and hardy enough to endure our winters, they should be as worthy of being introduced East as the migratory quail to be brought from his far-away home.

S. H. C.

We call our correspondents' attention to the article on the Mountain Quail, by T. S. Van Dyke, to be published by us at once.

**AN ALBINO QUAIL.**—The *Petersburg Index* gives the following account of the killing of an albino quail in Prince George County:

Some days since, while a well-known gentleman of this city was hunting with his dogs in Prince George County, about four miles from the corporate limits, a covey of partridges was flushed, one of which was killed by the gentleman alluded to. The bird was killed about dark, and upon examination it was found to be a full-fledged white partridge.

## Fish Culture.

### THE CENTRAL FISHCULTURAL SOCIETY.

#### SECOND DAY.

THE meeting was called to order by the President promptly at 9:30 A. M.

Mr. DOUTSMAN offered the following: *Resolved*, That the Executive Committee be, and they hereby are, directed to lay out a programme for the next annual meeting of this society, choosing for discussion such topics as to them seem timely and important, assigning papers on the different subjects to the members most competent to treat upon them. *Resolved* further, That such programme be decided upon at least three months before the time fixed upon for the meeting, the members to whom papers are assigned to be at once notified by the secretary of what is expected from them, and requested to forward their papers to the secretary in case they are prevented from attending in person. Carried.

The SECRETARY then, in the absence of the writer, read the following paper:

#### ON THE FOOD OF YOUNG FISHES.

BY S. A. FORRES.

I cannot learn that anything has been recorded respecting the food of young fishes in this country,\* nor have I been able to find any evidence that this subject has been systematically studied in Europe, in such part of the ichthyological literature of Europe as is accessible to me. From the translations of papers published in the appendices to the report of the United States Fish Commissioner I learn that the artificial use of Entomostraca for the food of young trout has been successfully attempted in France. I also find in the bulletin of the "Société d'Acclimatation," of Paris, a statement to the effect that, in the Russian governmental

\*Perhaps exception should be made of a note relating to the occurrence of diatoms in the stomachs of two young whitefish, published in the appendix to the report of the U. S. Fish Commissioner for 1872-3, p. 67.

establishment for the cultivation of fishes, young trout and other valuable species are fed with beetles and insect larvæ obtained from stagnant water, by means of a small muslin net. Although the use of Entomostraca is not specially mentioned in this extract, yet they must, of course, be obtained in the search for insect larvæ.

This subject should not have been long ago thoroughly investigated seems a surprising fact, when one considers the vast amount of labor which has been expended upon fishes as a class, and reflects for a moment upon the interest to science and to practical fish culture of a knowledge of the food resources of fishes and of the competitions of the various species in the search for subsistence.

Although I cannot yet treat this subject as fully as it deserves, the results of such study as I have been able to make, during the past season, of the contents of the stomachs and intestines of small specimens, seem to justify this preliminary notice.

It was early apparent, in the course of the investigation, that the food of many fishes differs according to age; and it was soon found that the life of most of our fishes divides into at least two periods, and of many into three, with respect to the kinds of food chiefly taken. Further, in the first of these periods, a remarkable similarity of food was noticed among species and families whose later food-habits are widely different.

The full-grown black bass, for example, feeds principally on fishes and craw-fishes, the sheepshead on mollusks, the gizzard shad on mud and Alge, while the catfishes are nearly omnivorous; yet these are all found to agree so closely in food when very small that one could not possibly tell from the contents of the stomachs which group he was dealing with.

It is my purpose in this paper to give what facts I have relating to the food of our fresh-water species during its first period of the fish's life, avoiding technical details, and mentioning only the general results of the investigation.

These facts were derived from the examination of one hundred and twenty-six specimens, ranging from three-eighths of an inch in length up to an inch and a half, and in a few cases to two and three inches. These specimens belong to twenty-four genera and represent eleven families. In two or three genera no specimens were obtained small enough to be regarded as belonging strictly to this first food-period, but the earliest food is nevertheless plainly inferable; and the general distribution and variety of the species studied is such that I think the main conclusions will be found to stand the test of full investigation.

#### PERCH FAMILY.

The food of a common perch, from an inch to an inch and a quarter long, consisted wholly of Entomostraca and the larvæ of Chironomus. The first of these names is applied to the minute crustaceans, which are found most abundant in lakes and other stagnant waters, but occur likewise, to some extent, in running streams. The name of water fleas is sometimes given to a large section of this group. Chironomus is a small gnât whose larvæ is familiar to all who have ever noticed the minute animals of stagnant water. It has the appearance of the naked eye of a minute red worm, which moves through the water with a violent wriggling motion.

#### BASS FAMILY.

No very small specimens of the bass proper (that is, of white bass and striped or brassy bass) were taken by us, the smallest being a brassy bass an inch and a quarter long. Half of the food of this consisted of Entomostraca, and the other half of minute gizzard shad.

#### SUN-FISH FAMILY.

A group of 43 specimens of the sun-fish family (which includes the two species of black bass) was made up as follows: Of five specimens of black bass under three-fourths of an inch long, two of rock bass of the same size, two of goggle-eye from seven-eighths of an inch to an inch in length, ten of common sun-fish from an inch to an inch and a fourth, nine of pumpkin seed from one and a half to two inches, five of crappie one inch and under, four of "fin" from three-fourths of an inch to an inch and a half, and six indeterminate specimens, probably common sun-fish, from seven sixteenths to five-eighths of an inch long. Ninety-six per cent. of the food of these forty-three specimens consisted of Entomostraca and larvæ of Chironomus—seventy of the first and twenty-six of the second. The trivial remainder, consisting of the larvæ of May-flies and other similar insects, a young amphipod, with traces of water-mites, water-bugs, and mollusks—the last taken by the "pumpkin seed," or bream.

#### SHEEPSHEAD FAMILY.

A single sheepshead (*Hoplostethus*), an inch and an eighth in length, had eaten Chironomus larvæ (seventy-five per cent.) and larvæ of May-fly.

#### PIKE FAMILY (*Esoxidae*).

I did not have the good fortune to obtain any young of the common pike, and can only report on the food of a single salmon-pickered (*Esox salmositæ*), an inch and a fourth in length. This specimen, taken at Pekin, Ill., on the 2d of June, had already begun its life labor of the elimination of remainder consisted of Chironomus composed about equally of young Amphipoda, Daphniidæ and Lymnæidæ. The presence of so large a quantity of these minute Entomostraca in the stomach of a pickered of this size is sufficient evidence that they form the principal part of its food at an earlier age.

#### HEERING FAMILY.

We come next to twelve specimens of the gizzard shad, whose minute fry swarmed in countless numbers in the waters of our larger rivers in midsummer. These were taken in June and July, from the Illinois River, from Ottawa to Peoria. The smallest of the group were twenty mm. long by two mm. wide—as slender as cyprinoids and nearly cylindrical, although the adult is a high, thin fish. I was greatly interested by the discovery that the maxillaries of these minute specimens are provided with teeth—a single row of nine or ten on the lower edge—although the mouth of the adult is entirely toothless and smooth. The internal structure also differs remarkably from that of the adult, especially in the much greater simplicity of the digestive apparatus.

In a young gizzard shad, seven-tenths of an inch long by one-tenth of an inch high, the intestine was found to pass almost directly from the anterior end of the stomach to the vent; and at this time pyloric caeca were entirely wanting. The intestine of this specimen was filled with various species of Entomostraca.

On the other hand, in a fish three and three-fourths inches long, showing the general characters of the adult, the intestine passed upward and backward from its origin, running without flexure the whole length of the body cavity (this part being covered with an immense number of pyloric caeca), then turned forward to the stomach, and made a large number of intricate turns and doublings from side to side and end to end of the abdomen, extending, in all, about eight times the length of the perivisceral cavity. This intestine was well filled with mud with only a slight sprinkling of unicellular Alge.

These twelve fishes, all under two inches, had eaten about ninety per cent. of Entomostraca, two per cent. of Chironomus larvæ, and for the remainder, Alge.

#### MINNOW FAMILY.

A single minute minnow, three-eighths of an inch long, which I could not determine specifically, had eaten Entomostraca (twenty-five per cent.) and Chironomus larvæ.

Three specimens of the common club minnow (*Semotilus corporalis*), ranging from five eighths inch to one inch, indicate somewhat doubtfully an exception to the general rule, respecting the early food of fishes. Only seven per cent. of their food was Entomostraca, and the whole remainder consisted of filamentous Alge. It should be noted, however, that twenty per cent. of the food of the smallest specimen, which was five eighths of an inch long, was Cyclops, and it may be that the club minnow lives wholly on Entomostraca at first, merely changing its habit earlier than most of its allies.

#### STUCKER FAMILY.

Thirty specimens, representing five genera of this peculiar family, were studied. A very curious feature of the food of the young is the frequent dependence of suckers of considerable size on six inches long or more upon food still more trivial than Entomostraca, viz.: upon wheel-animalcules, Protozoa, and minute one-celled plants (Alge). While only such Protozoa were found as are furnished with firm shells, yet the abundance of these in the intestines of these fishes leaves little doubt that the more perishable Protozoa must also be taken in considerable quantity. It is an interesting fact that even here the smallest specimens were found feeding on Entomostraca only, and it is therefore possible that these form the first part of the food of the family.

Ten specimens of the stone-roller, ranging from one and three-eighths to three inches, represent two dates and localities. The four smallest, none longer than an inch and three-fourths, were taken from the Lower Fox, July 9, 1879. The others were from Mackinac Creek, in Woodford County, Ill., in the latter part of August. The situations were similar, both streams being swift and rocky where these fishes were caught.

Their food was chiefly the larvæ of Chironomus (90 per cent.), the remaining ten per cent. being made up of various species of Entomostraca and Alge.

We trace in this a remarkable resemblance to the food of the darters, which frequent similar situations. Lacking the sucking mouth of Hypentelium, they do not take Protozoa or unicellular Alge, but in other particulars agree closely with this species. This curious fish is peculiar among the suckers in the unusual development of the pectoral fins—a distinguishing feature of the darters likewise—doubtless related in both cases to the constant struggle with a swift current. We may also remark the darterlike glow of color in the young of this species—a very peculiar distinction among the Catostomidae. This is one among many facts which indicate that exposure to light has great primary effect on the color of fishes—an effect often suppressed, through natural selection, by secondary influences, but manifesting itself where these are not brought into play.

This species is in marked contrast with the darters, not only in the rapidity of its growth, but in the size attained, but, in the form and size of the head, which in the darters is small and pointed, but in these fishes is unusually large, square and strong.

The principle of adaptation has here resulted in a different line of development. While the little darters have become fitted to fill and pry about beneath the stones for their food, the stone-roller has acquired the power of rolling the stones before it. As it grows larger, it resorts of course to deeper water, but always prefers the rocky reaches of the stream. The molding power of natural selection could scarcely have a better illustration than that afforded by the adaptive characters, both similar and dissimilar, of these two widely separated groups of fishes.

A single small specimen of black sucker was too large properly to come within this group, but although six inches long, most of its food was Cyclops (eighty per cent.). Other items were Entomostraca, various species of Alge and very young individuals of the river mussel.

Four club-suckers, two of which were three-fourths of an inch and two an inch and a quarter long, differed greatly in food from the foregoing. The two smaller specimens, from Peoria, near Pekin, taken June 2, 1880, had eaten only Entomostraca, with a trace of water mites. In the two larger specimens, locality and date unknown, a surprising number and variety of the minutest animal and vegetable forms were found. A small larvæ of a dragon-fly and a very young amphipod were also recognized.

A specimen three inches long, from Peoria Lake, in October, had eaten only Entomos, with a trace of Chironomus larvæ.

The specimens of red horse, varying in length from an inch to two and three-fourths, taken in July and August from the Fox and Illinois rivers and from Mackinac Creek, show no important differences of food.

In the smaller specimens taken from the Fox and Illinois, Entomostraca were relatively more important, sometimes constituting nearly the whole food; but no attempt was made to fix precise ratios.

In the four larger specimens from woodford County, shells of protozoa were estimated to form 85 per cent. of the contents of the intestine, the remainder consisting of alge, wheel animalcules, Entomostraca, water-mites and the larvæ of Chironomus and other Diptera.

The small percentage of Chironomus larvæ shows that this species has not the habit of the stone-roller.

Two specimens of the common rock sucker, six inches and six and three-fourths in length, taken from Mackinac Creek in August and June, had eaten food so similar to that of the preceding genus that detailed description is unnecessary.

Two specimens of our commonest buffalo fish, called the "red mouth" in central Illinois, seven-eighths of an inch long, had eaten most fully of unicellular plants (65 per cent.);

\*A related fact is the bleached appearance of fishes taken from the sluggish, stagnant water of mid-rivers in the Mississippi bottoms.

wheel animalcules were reckoned at 27 per cent., and the remainder of the food consisted of Entomostraca. These specimens were taken from the Illinois River in early June. Four carp suckers (*Catostomus*), seven-eighths of an inch to two inches long, taken from the Illinois and from Clear Lake in Kentucky, had fed like the preceding genus, except that the Entomostraca were in larger quantity (48 per cent.), while the rotifers were relatively few.

Reviewing the food of these thirty young suckers, we see that they differ from the other families studied in the larger food resources open to them; for, while the structure of their mouths does not prohibit their taking Entomostraca, it enables them to extract the contents of minute organisms found upon the bottom. Evidently they have no means of selecting such microscopic structures from the mud in which these most frequently rest; and considerable quantities of dirt are consequently often found in the intestines; but from the "richness" of the contents I infer that they doubtless have the power of distinguishing mud containing a large percentage of organic matter from relatively barren portions.

#### CATFISH FAMILY.

Numerous specimens of the young of this family show that, notwithstanding its many peculiarities of structure and habit, it is no exception to the general rule respecting the food of the young. The smallest of these specimens were from a little school of minute catfish taken in June from a friendly protection of an old oyster can in the Illinois River. These little creatures were colorless and seemingly almost helpless, and only three-eighths of an inch in length. They had already begun to eat, however, and their stomachs were filled with Entomostraca and Chironomus larvae. These were certainly *Amniurus*, but it was, of course, impossible to tell the species.

Other specimens of the same genus, making thirteen in all, none longer than an inch and five-eighths, were obtained from various places in the Illinois, and from mud-holes in the Mississippi bottoms, in Union County. These thirteen individuals were feeding almost wholly on Entomostraca and larvae of Chironomus, the latter composing seventy-four per cent. and the former eighteen per cent. of their food. A few young *Amphipoda* and a few unknown insects' eggs account for the remainder of the food.

Six specimens of *Naturnus* fish, varying in length from seven-eighths of an inch to an inch and a quarter, differed from the foregoing in the much larger proportion of Chironomus larvae (forty-one per cent.) and in the twenty-six per cent. of young *Allorhynchus dentata* (a very abundant small amphipod), eaten by the larger specimens. These had also taken seven per cent. larvae of May-flies. Those under an inch in length were peculiar only in the large ratio of Chironomus larvae (sixty-five per cent.), a fact probably indicating that this species seeks its food chiefly on the muddy bottoms.

No specimens of the other genera of catfishes were taken small enough to show their earliest food, but as far as can be judged from the food of four specimens of *Ictalurus*, from two and a half to three and a half inches long, the other genera will not be found to differ especially from the foregoing.

#### DOGFISH FAMILY.

A single dogfish (*Ania*), one and three-fourths inches long, taken in June, had eaten seventy per cent. of Entomostraca and two per cent. of larvae and pupae of Chironomus. A few young *Allorhynchus* and some water bugs (*Corixas*) complete the brief list.

Several specimens of *Ania* under one inch in length, whose anatomy I studied three years ago, I remember to have had their intestines packed with Entomostraca.

#### GAN FAMILY.

Here also I shall have to content myself with such hints of the food of the young as are given by two or three specimens, as the youngest are not yet common enough in our collections to supply more material for a study of their food. One of the two smallest gars examined, an inch and a fourth in length, taken in June, near Peoria, had filled itself with *Scaphiobolus mucronatus* (a minute Entomostraca) and the other had taken only a minute fish. A specimen two inches long and only an eighth of an inch in depth furnished a striking illustration of the voracity of this terror of our streams, as its stomach contained sixteen minute minnows.

The general conclusion from these observations is the supreme importance of Entomostraca and the minute aquatic larvae of a single genus of gnats as food for nearly or quite all of our fresh-water fishes—a conclusion that gives these trivial and neglected creatures, whose very existence the majority of the people are scarcely aware, a prominent place among the most valuable animals of the State, for without them all our waters would be virtually depopulated. Other facts of eminent interest thus brought to view are the magnitude and intensity of the competition for food among the young of all orders of fishes, where a stream is fully stocked, and the injurious character of such a species as the shovel-fish, which feeds on Entomostraca throughout its life. It is probable that all fishes which are not especially adapted to the food-requirements of the most valuable species are hurtful to them, because they limit the food available for the young. The sun-fishes, whose shape protects them from many enemies, and the cat-fishes, with their armor of poisoned spines, are instances in point. While their young compete with the young bass and wall-eyed pike for food, they do not furnish the latter any important food resource in later years. On the other hand, such species as the herbivorous minnows and the centrarchid suckers, which depend upon Entomostraca to a less extent when young, or take up other food at a relatively early period, are those which seem to promise best as food for the higher fishes.

It is worth while to notice that the food especially taken by young suckers is of the same kind as that upon which many Entomostraca are dependent, and that these fishes thus actually come into competition with the minute crustacea. It might seem at a glance that the suckers would have the ordinary fishes and the larvae of the food of Entomostraca not less than if they ate the Entomostraca themselves. We must remember, however, that every animal (Entomostraca included) eats during its life many times its own bulk of food, and that consequently if the young sucker can reach down a slip below the Entomostraca, and appropriate directly a part of their food-supply it will really limit their increase much less effectually than if it depended upon them strictly. The case is precisely equivalent to that of a mammalian parasite and its host. If the parasite is a herbivorous animal, it would of course compete with, and limit the strictly herbivorous animals, but would check their multiplication much less stringently than if it were purely carnivorous.

It is a curious corollary from part of the above reasoning that a prolific species having an abundant food supply, and

itself the most important food of predaceous fishes, may, by extraordinary multiplication, so diminish the food of the young of the latter as to cause, through its own abundance, a serious diminution of the numbers of the very species which prey upon it. To put the statement into more correct form, it is not certain that the excessive increase of the gizzard shad, for instance, would be a benefit to the black bass and pike-porch which feed so largely upon it. In fact, it is clear that the great overstocking of a stream with gizzard shad would, by eventually reducing the supply of Entomostraca, cause a corresponding reduction in the numbers of all the species of that stream by starvation of the young; and this deduction, applying to all in the same ratio, would take effect upon the ordinary number of the other species, but upon the extraordinary number of the gizzard shad, would reduce the other species below the usual limit, but might not even cut off the excess of the shad above that limit. Consequently, important as is the supply of food fishes for the predaceous species, it is not less important that the predaceous fishes should be supplied to eat up the food. Here, as elsewhere, only harm can come from an imperfect balance of the forces of organic nature, whether the excess be upon one side or the other.

In the efforts to increase the valuable fishes of a lake or stream, it is not sufficient that the food of these species should be increased alone, but at the same time special measures must be taken to secure a corresponding multiplication of the predaceous fishes themselves, otherwise precisely the reverse result may be produced from that intended.

As a further illustration of some of the practical bearings of these facts, it may be noted that the free access of fishes to the ponds, lakes and marshes connected with a stream is a matter of the highest importance. Running water is relatively destitute of Entomostraca, and hence fishes denied access while breeding to slow or stagnant water in which Entomostraca abound, have little chance to multiply.

Too little attention has been paid to the breeding migrations of our resident fishes. How many of our rivers are free from the obstruction of dams provided with practicable fishways? Is not the relic of the saw-mill race, in such streams as Rock and Fox rivers largely, due to the fact that a fish which enters the river from above cannot get back to the immense and swarming breeding grounds afforded by the lakes connected with its upper waters?

**ARRIVAL OF FOREIGN FISHES.**—Mr. E. G. Blackford, of the New York Fish Commission, has just received from France six roach and six golden tench brought by Mr. August Briand, a retired Captain of the French line of steamers, known as the Trans-Atlantic Steamship Co., and running between New York and Havre. The roach is held in esteem by European anglers, and American fish like larger fish. The tench, is like the former cyprinoid, but grows to a pound or more in weight. The common tench, *Tinca vulgaris*, is esteemed for the table as well as for angling, and will thrive in waters adapted to the carp. Those now at Mr. Blackford's, in Fulton Market, are a golden variety, suitable for both food and ornament. They were sent by the Aquarium at Havre, in exchange for small terrapins and catfish. On the 6th of this month, yesterday, Mr. Blackford sent a dozen of the same to France, the grand-children of German fishes brought over by Dr. Hessel a few years ago.

## Sea and River Fishing.

### FISH IN SEASON IN DECEMBER.

**FRESH WATER.**  
Pike-perch, *Esox reticulatus*.  
Pike or Pickerel, *Esox lucius*.  
Pike-perch (wall-eyed pike) *Esox americanus*, S. *gulosus*, etc.  
Yellow Perch, *Perca flavescens*.  
Striped Bass, *Morone saxatilis*.  
Salt Water.  
Sea Bass, *Centropristis striata*.  
White Bass, *Morone americana*.  
Striped Bass, *Morone saxatilis*.  
White Perch, *Morone americana*.  
Snell, *Omuraea morales*.

### FISHING IN THE GULF STREAM.

BY THE T. G. G. DEACON, (A. A. K.)

DID you ever fish in the Gulf Stream? I can guess your reply. It would be the same as that of the Captain of the trim little brig *Olivia*, bound for which I had the good fortune to sail from Bagdad, at the mouth of the Rio Grande, to New York in April, 1863. He was a Connecticut, an American citizen, like yourself, named Townley, and a good fellow withal, though a little strange at times: "Nobody but a blamed fool of a Britisher would ever think of trolling in the Gulf Stream!" Before proceeding with my story proper, however, allow me to give you a bit of my personal history, which will help to explain why I happened to be on the *Olivia* at that time.

I was born among the fishermen on the northern coast of Scotland in 1819, the month and date may be surmised from what is about to follow. Whenever I could prevail upon the berring or ling fishers to let me accompany them the trips proved unlucky and on several occasions disastrous. These superstitious people at last refused me permission to go out in their cobles (boats), notwithstanding I was always willing to take my share in the toils without reward. They had made inquiries as to the day and date of my birth, and having learned that that event had occurred on a murky Friday immediately following the 31st of March, had concluded that I was a dunsie de'il (unlucky devil) among the fishers. Loving the excitement of their rough life, and feeling more at home in a coble on the dancing waves of the wild Atlantic than in the dull and monotonous parish school, I carefully avoided every "hallow" and "very" time being brought coupled with my yearnings to become the possessor of a coble, made me ejaculate, as I approached the boatman, something equivalent to "O, boatman, spare that coble," in a rather louder tone than *alto voce*. This attracted his attention, and the upraised axe that was about to fall and shiver its timbers into atoms, was stayed and is staying yet. I

asked if the boat was for sale. He answered in the affirmative. The price, a stiff one, was named. It was high for a rotten, half-broken-up coble; but I wanted a boat, had enough saved to buy that one, and felt pretty certain that I could acquire sufficient funds to purchase a better. So I paid my money and took my choice. That was on the first day of April, 18—, but I was like the owner of the white elephant. I didn't know what to do with it. It could not be carried on one of the clumsy carts of the place, because the joltings along the strand would have shaken its internals and externals into inconveniently small pieces of punk, the supply of which article was far beyond the demand in that quarter. To transport it by water was impossible, as there was no float in it.

When it became known by my neighbor callants that the coble (fool) as they had nicknamed me, had bought a coble they found their way to its resting-place (would that I had let it rest there to this day!) after school hours. Well, I did not trouble you with the enormities they passed upon me, purchase, for all the Forest and Streams in America could not contain them. At length, as with one voice, they asked, "What d'ye intend to do with it, or with the coble?" "You'll see," I replied, "necessity's the mother of invention." Taking a few of my young friends who were esteemed nearly as daisy-like as myself into my confidence they were induced to aid me in repairing the coble upon the understanding that they were to share in the proceeds of our fishing expeditions. Fortunately, or otherwise, for us the fishermen were very honorable among themselves. They left their pitch and tar and cakelands, and all expected without the fear of any of their fellows wrongfully appropriating them. Fortunately, or otherwise, too, they were as hard drinkers as they were workers, and consequently slept soundly o' nights. A little oakum from one's bundle; a pair of tar from another's barrel; a chunk of pitch from a third; a few nails and boards found here and there, and the coble was launched about a month after it had come into my possession by the aid of and amid the cheers of my neighbors. I discussed seine, a couple of old oars, a clothes pole for a mast, and an old white counterpane for a sail, found their way on board the coble in the same 'ours, and off we went fishing! We were fortunate enough till the wintry weather set in, as we had no board to pay and would have been happy at all times if it had not been for the birchings old spectacle pedagogue used to inflict because we never had our lessons. The old goose! how could we fish and study!

In the spring we tarred and pitched the craft again, and committed ourselves to the deep. For a while I was as merry as a marriage bell. One day we got into the midst of a fine shoal of herring, and half filled the coble in a short time. We started for land with our load, singing as boys who think their fortunes made at one haul can sing, but presently a stiff breeze that we had contracted for arose. The coble moaned, and suddenly and silently the herring came, the clouds of fish returned, the sea element, and in doing so took the entire bottom of the coble with them. My companions held on to the upper part of the boat, which the villainous herring in their hurry had forgotten to carry off, while I grasped an oar and floated off to leeward. Before long I had the pleasure of seeing my friends picked up by a couple of crews who had witnessed the catastrophe. I was not far off and could see my boatmates pointing me out to their rescue. But the villainous superstitious fishers, recognizing me as the dunsie de'il, reasoned that I had been the cause of the mishap, and fearing that if they took me on board the bottom of their craft might fall out by the way left me to my fate. Several cobles passed me on their way to the harbor, and my appeals for help brought some of them quite near. But when they saw who it was that was in danger of perishing they shrugged their shoulders, shook their fists at me, and bid me go to Davy Jones' locker with the curses of the fishers of *Perch* upon me! Blinded by the waves, blinded and suffocated by the briny sea, numbed with cold, I clung to that oar with the despair that makes a drowning boy seize hold of anything that comes within his reach. Darkness was approaching, and all hope had disappeared. Oh! how I wished that I were on shore again even at the parish school on a stalwart fellow's back with the old pedagogue applying his universal remedy!

I had narrowly escaped a most unbecoming and my hold of the oar relaxing, and presently becoming unconscious, as I thought I was dead! I knew no more till I awoke to find myself being carried by four men on a board up the shore bank to the nearest tavern—the imprecations of the fishers and the fishers' wives being vociferously poured upon the heads of my deliverers as they bore me along. The usual restoratives of the fishers of those days were applied. I was rolled on my back, and the briny sea was poured down my throat. I was too weak to resist, and could not be taken to the following day. It came to my knowledge subsequently that a coble, manned by a crew of coble Samaritans that knew not Jonah, had, while making harbor, observed what they took to be the body of a dead boy and picked it up, thus earning for themselves and entailing upon their posterity the eternal curses of the fishers and their wives who knew how to curse a dunsie de'il. That event took place on the first of April 18—, being the first anniversary of the burying of the coble by me! I learned a moral from that fishing venture that I never forgot. I impressed me throughout a somewhat eventful life, and which has been profitably employed on several convenient occasions since. I hope you and readers will ponder over and profit by its lessons as it becomes you. If I hadn't stolen that oar where would I be now?

Metaphors I hear you exclaiming, "The Deacon's personal experience." Well, never mind; if it takes up the whole of your paper, I can assure you I will send you one reader at any rate. Let me tell you how to make room for it. Leave out the advertisements, drop your editorials, squelch Creedmoor and everybody else, even burking the Dittmar powder puffs, that only bursts gun barrels that are not strong enough to resist them and blow off the fingers of those who can't keep their hands out of the way. There!

In answer to your appeal, I'll be brief with the remainder of my personal history. I was born in the year of old days ago, I left Scotland for this wooden country, to the great joy of the fishers and their wives. They would have prevailed upon the captain not to permit me to board the vessel, as they felt sure it would be wrecked, if they had not been too glad to get rid of me. Incidentally I heard, a short time since, that as the vessel that bore me off never returned again, and as I have never felt love enough for any of them to write to them, I have concluded that the vessel had foundered in mid-ocean, and that the bones of Dunsie De'il and his shipmates molder "at the bottom of the sea."

The day I sailed from the Scottish shores was the first lucky first of April I had ever known.

After residing many years in Canada, expending on every annual return of my natal day something like the usual

mouth) caught at North Aurora by Wm. Messenger. Its length was 23 inches, and it weighed 7 lbs. 11 oz. The outline was drawn and the size and weight taken at the Internal Revenue office, Aurora. This is the statement recorded upon the paper upon which the outline was drawn. My only observation is that the fish must have been in excellent condition or else treated with a diet of pebbles. T. R. W.

## Game Bag and Gun.

### GAME IN SEASON IN DECEMBER.

*Moose, Alces americana.* Deer or roe deer, *Dolichonyx oryx*. Caribou, *Rangifer caribou*. Elk or wapiti, *Cervus canadensis*. Wild Turkey, *Meleagris gallopavo*. Horned or prairie chicken, *Tetrao canadensis*. Quail, *Caprimulgus virginianus*. Squirrels—red, black and gray. Indigo grouse or pheasant, *Tetrao canadensis*.

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf-scut, phalaropes, avocets etc., coming under the group *Anas*, or shore birds. Many States permit prairie fowl (grouse) shooting after Aug. 15.

### MR. SCOVEL TAKES A SHOT AT THE GRAY SQUIRREL.

CAMDEN, N. J., Dec. 25.

"SANCHO PANZA" and "BORDER RUFFIAN" have, through the brilliant and healthful pages of the FOREST AND STREAM, kindled anew in my pulses all the old love and the conciliatory ardor with which I hunted the gray squirrel along the Ohio River and the Kentucky hills, and around the hill sides and through the back woods of old Hanover twenty-five years ago.

My youthful Sydney, who never knew the wild sports of the West, may have flinched at his master's tale of a turtle dove or a chickadee in Jersey, but is profoundly unskilled in the keener pleasures of the Indiana forests, where twenty-five gray squirrels frequently rewarded the Reverend Doctor—and myself for an afternoon's sport, when we "skipped" the venerable but sweet tempered Sturges, professor of Greek, and if we were not "up" the next morning in accurate translation of how Xenophon's soldiers when they saw the ocean exclaimed:

Hailatei Hailatei!

"Do thou greet that infinite sea,"

we were smart enough to placate that most amiable and accomplished Greek scholar by sending him one of our squirrels. He was a quasi Rabelais, with all the ancient gourmet's love for the *edendi et bibendi*, but without considerable moral force, and that Professor Sturges could handle a birch rod *a priori* and otherwise, the Reverend Doctor—can tell with perfect truthfulness, if he will recall the days "when we went pyrepyring" at fifteen. But the most pleasing recollection I have of the Professor is as he smoked his pipe at the story of the "Pious Ezeas" as he cooked his fat venison by the easy spitting cedar, and drank the wine divine of those festive if ancient days. Alas! how changed. The Reverend Doctor in those days got his share of the lickings, but had the most of fun. Now he preaches and I practice. He

"Allures to brighter worlds  
And leads the way,"

while I have followed the quiddits and quilets of the law, taking an occasional sly at politics, which have been called the sum of all the sciences by Madame de Staël, while some of the "latter day sages" of politics have made it look more marvellously like the "sum of all the villainies." After listening to my friend, the worthy Doctor, for an hour, discarding the "exceeding sinfulness of sin," I could hardly believe he was the same boy whose hide (like my own) was so industriously tanned by the venerable but somewhat irascible Sturges.

"Sancho" tells with great *esprit* how he hid his hat to a bush, and, while the witty gray squirrel, tied himself to the other side of the tree and tweaked the bush with a string till the animated rodent would rush into the very jaws of his trusty Westly Richards. This is nearer than any trick I ever played on the mischievous but gany squirrel. And I dislike to tell it, but if the truth of squirrel hunting must be given I will admit in a kind of a plea of confession and avoidance, that the Reverend Doctor has of late called me into his study, and after we had an hour in reading Rev. Dr. Cox's admirable work on "Interviews, Historical, Memorable and Useful, from Diary and Memory Reproduced," or after discussing some pages of "Butler's Analogy of Revealed Religion," my friend would gently intimate that he had never dined on him till recently were it that I was always so kind as to insist on his going around on the other side of the tree to get the first shot at the squirrel. And with charming naïveté he would always say,

"My dear Brother J., was it not a little singular that when I went around to get the first shot at the squirrel he used to leant around to your side of the beech tree, and you killed two to my one?" "Such" he would remark "is the perfidy of man, that till recently I labored under the impression that you were benevolently giving me the first shot at the gray squirrel, not that I was scaring him around so you could kill him first." Now, the moral of all this is, that a better way than Sancho's idea of a bush and a string to it is to have a fellow hunter scare the squirrel over to your side of the tree.

All lovers of the woods and streams will admit that the squirrel has as much curiosity as a woman. Many of the beauties of Tennyson are fresh in my mind, because I first saw the well remembered lines in my pocket. Tennyson as I sat beneath the leafy shade of the beech woods, near old Hanover at Butler's Falls, waiting for the game to come out of his leafy retreat. Not as lucky as the "Border Ruffian," I have never had three squirrels to fall at the same time, but I have killed half a dozen squirrels in one morning from the same mulberry tree, and have in the fall of the year killed three from the same beech tree, by sitting down quietly and waiting to accurately distinguish the *locus in quo* by the peculiar and familiar "bark" of the squirrel, or catching the sound of the pibble rodents as they leaped from one tree to another. It was with a double barrel I ran my shoulder and a set of books at my side that I learned my "pleasure in the moody woods to take," and read of the days of William the Silent, how the bitter Badavaro says of the Dutchmen of that day (and jolly drinkers they were) that if one of them "woke up sober he fit sure he was sick." And among the most fresh joys, buoyant and innocent pleasures of my life I count those sweet, bright days when the May sun shone and amber light, the new leaves were in the air, and the birds and the sun shined on Shelley nor Wordsworth, ever revealed in diviner joy or more solid comfort and communion with

nature than did I, alone with my gun and my books, no companion save the frisking squirrel or the occasional wild pigeon.

Now and then a companion student would share my joys on some fortunate Saturday, and one of these old friends has just written from far off Missouri in these words:

"DEAR S.: If you were only seated at my side I would pour into your ears much of the poetry of my life since we drank in the pure air of the Hanover Hills, richer and better than the wine divine of Zantevino."

"I have tasted something of fame since last we met; known something of what the world calls love; but now, when I have seen twenty-five summers 'since we went Gypseying,' I often wish at nightfall that you were coming home to me, and if my arms are not literally stretched, every fibre of my frame, every emotion of my heart quivers with yearning to see that well remembered form and hear again that stately tread of thine. And yet how few, the nearest dearest constant, sincere, ever suspect that the calmly practical business man is other than perfectly satisfied with his daily surroundings. But ah! we must not forget that the affections only are immortal. And the heart needs daily nourishment as well as our bodies. But alas! how our days are shrouded into fragments and our nights into futilities, and there is little left to us but the fragrance of the broken vase, so sweet, it is true, if only with the perfume of a passing memory."

But I will quote no more. Ah! dear friend of my youth, I say let us hope that we may meet again and renew our youth like the eagles, and it may be in the forests and streams of far off Missouri we may revive and kindle over again the memories of our days of my old hat and fawn, and well! and I will at least every day breathe an aspiration that I may, ere the day when the grasshopper becomes a burden, be locked in thy embrace, for it is Emerson who saith that such an hour as that comes even to this world to every cynical soul. But why do I wander from the gray squirrel? And it is the fault of "Sancho" and the "Ruffian" if I have grown more didactic than the Reverend Doctor, my well beloved brother.

The young squirrel, as I remember, came in (at for the table) in early summer. And a more childish animal does not live. If you would only wait the young thing would skip through high grass within ten feet of you—falling an easy prey at every shot. Twenty-five squirrels of an afternoon was a "bag" that you could gather any good day. Hunting with a dog was my abomination; two men make a complement, and the fall is the better season of the year. As I have said, I am instead of being hesitant about it fathers had better teach their children the use of the rod and gun.

Walter Scott says he who loves field sports hates to do a mean thing.

And Gov. Hawley says you need not be "afraid to drink to the dark" with the man who insists on putting a covey of quail on the wing rather than kill them on the ground.

I would like to see of you and your little STREAM more frequently read in our school-rooms and colleges.

But, Mr. Editor, my Christmas dinner is over, though our turkey was not as wild as Maj. Merrill's, and my essay is certainly like Montaigne's in one thing, it is discursive. My household gods are basking before the wood fire in a low-down grate in the parlor. Kris Kringle has been more than kind to the boys and girls and I must romp with the children the rest of the evening; squirrel hunting makes me a boy again.

J. W. S.

### COWEEN SHOOTING.

ST. DAVIDS, December 9.

I PROMISED that I would send you some account of our shooting in this locality. Below I have endeavored (very feebly it is true) to present a description of our furred and feathered friends of the past and to-day, which may perhaps prove of some little interest to those of your readers who have visited this, "the old Niagara district," rendered somewhat famous, historically, as a frequent battle ground in the early history of Canada. Our little village is situated at a short distance from Queenston Heights, the scene of the memorable battle of that name which was fought between the Americans and British in 1812, during the "little unpleasantness" which existed at that period.

Through the village runs what, years ago, was a romantic trout stream of clear spring water, but long since converted into a mill race. At its source, about a mile above the village, are numerous little woody dells and black boggy swales, where the trout haunts of the past and here, every spring, some eight or ten couples repair to rear their broods and live in luxury and security until glorious October. Forty years ago this little stream, bordered on either side with plentiful cover, literally teemed with cock for three miles from its rise, while the (at that time) but imperfectly drained meadows below afforded grateful resting and feeding grounds for innumerable snipe in their spring and fall migrations. Amid the rocks and thickets of the past, and here, every spring, make their homes; and here in the fall a covey or two of partridge can generally be found. In this connection let me just say that here, after October, we find partridge as often in the trees as on the ground; indeed this year the tree appears to have the preference, and it need not to lessen the vexation usually attendant on such uncertain shooting as partridge in even their happiest moods, to have several "whir" out of the trees some twenty yards away, of course taking the opportunity to shoot at the rodent and render a shot impossible.

Twenty years ago the wild rabbit was a total stranger in this vicinity, while the American hare was abundant; but the latter has rapidly receded before its smaller relative, until, with one or two exceptions, it is confined to the most northern and western counties; and even there is fast diminishing in numbers. In former years this district was remarkably rich in game, as it was densely wooded and well watered; partridges were few, and save in rare instances, the old flintlock musket was about the only weapon, if we except stones, which the aboriginal had at his command. Black squirrels thronged in millions, and wild pigeons used to—but I hesitate here, for I see a wild glare light up the gentle reader's eye, anticipating the elderly story of the man who missed the flock and shot off the fifteen bushels of fies; however, as the reader never did me any harm, I will spare him.

The only spring shooting we have here at present, is frequent the Niagara River during the winter and spring in myriads; but as some of your readers have probably never heard of a coveen, I may more particularly describe it as an aquatic bird, much resembling in size and general appearance the butterfall duck, save that the drake is ornamented with two tapering tail-feathers of about a foot in length, which, when the bird is on the water, are carried at an angle of about forty-five degrees from his back, but on winging are truly straight and pointed. The color of the male is a beautiful blue, and the color of the female is a beautiful blue. Their flight is even, extremely swift, straight and duck-like, and let me hasten to add, astonishingly de-

ceptive. When wounded they dive like a flash, and swim long distances under water. Great numbers of them fly nightly over the village on their way down from the river above the Falls to Ontario Lake.

The most comfortable and favorable method of pursuing this sport is to procure a good sized, roomy fishing boat—for, unlike ordinary ducks, they do not seem to fear a boat, so long as the hunter uses ordinary caution in keeping himself out of sight—a pipe and tobacco and some decoys. Start about 4 a. m., if the weather is favorable, from Niagara to the mouth of the river, and the lower end of the lake. Resting on the lake, a short distance out, thousands of birds will be seen, and their peculiar, musical call, "Huk! Huk! Coween!" clearly tells us why they are so named. Soon a flock, the advance guard, get under way, and head up the river for their "first course," which in this case will be fish, more or less, as they have luck; and passing near the head of the lake opens. If our friend, the sportsman, is a novice it will surprise him how many fancy decoys will make without taking anything into camp. We will suppose a pair coming straight at him, low along the water. He knowingly fondles his Greener, and mindful of the hostman's caution to "put it ahead of them," lays her on, follows carefully, and pulls; after which he smilingly looks over the barrels to see if he hasn't killed both. "Two feet behind the last one," quietly remarks the punter. The smile fades away, and the bird strikes a flying bird. Alas! though he doesn't say anything, a bloodthirsty field sportsman into his eye, and he grits his teeth and makes up his mind that the next one won't have a chance to grin at him like the last couple. And now look after the flock, single pairs, over him, right, left and behind him, come thick and fast; and our bewildered sportsman, growing excited, makes the other end of the boat an uninviting spot, to say the least of it; for he keeps the boatmen busy doing the revolving gun muzzles, of which the air appears to be full, as he swings them from side to side.

He bangs away both barrels into a flock, and seeing one tumble out, thinks: "Well, there's one fellow won't fool me any more." But as the bird strikes the water the spout flies high and down he dives the instant he strikes; the ruffled surface smooths over, but no dead coveen decorates it. "Well, well, well, where the deuce did he go?" And our friend's mouth flies open so far that the punter feels a trifle nervous.

"No use looking for him; he's only wounded, and I'll come up somewhere near Toronto Bay," says that worthy; for unless killed dead—and they are about as hard to kill as a bull—it is almost useless to follow them. Perhaps, after a couple of hours, the tyro may have killed twelve or fifteen birds, and fired fifty or more shots, and missed the great majority, but none but the initiated may hope for good counts.

"The only regret one has after a good morning among the coveens is, *cut bona?* It is simply 'love's labor lost,' as the game (?) he has secured is not at all a palatable dish, for it is neither fish, flesh nor good red herring, although partaking largely of the nature of all three, being exclusively a fish feeder; and while one might keep Lent on them, yet as an *entrée* I think I should prefer even the red herring. Still, they do find their way into many a dinner, and their plumage, and transfigured into wild ducks by the field sportsman, who catch them in their gill nets, set deep in the lake for whitefish, when, as the birds are in hot pursuit of some of the smaller fishes, they run their heads into the meshes, and being unable to extricate themselves, are drowned. They are generally purchased by cunning strangers and recently imported boarding-house keepers, who think to secure wild ducks for their guests at a fair price. When, however, the aroma of the roasting fowl begins to thoroughly permeate the premises, the long suffering boarders, with one accord (*quem, enim, as it were*), move out into the woodshed, or camp in the back yard until such time as the coffee upon the hot shovel (ya old time deodorizer) has been so vigorously circulated as to purge away the "ancient and fishy smell."

A few ducks, principally blue-bills, are killed in the river between Queenston and Niagara, and numbers of ducks, and even geese, are carried over the Niagara River, and are killed in the darkness, are next day picked up crippled or killed in the eddies below.

W. W. B.

THE OLD SQUAW ON FRESH WATER—Niagara, Dec. 27.—Your issue of the 23d says, in speaking of the "old squaw," that they are seldom seen on inland waters. The old squaw, or as we call them here, *coveen*, are common on the Niagara River, and I will give you a few years ago a friend and I shot fifty-six in a day's shoot, over decoys, and on the river. We could kill from ten to twenty. We shot them from a boat in open water, with no kind of a blind—just threw out our decoys and waited for them to come within shot. They decoy best in the spring, after they have paired. We consider them the hardest duck to kill that flies. They are not only fly swiftly, but are very tenacious of life. They have regular flights in the morning up the river and about 4 p. m. they commence to fly down and stay in the open lake all night. NIAGARA.

### DUCK SHOOTING AND GAME LAWS IN CANADA.

I HAVE read with pleasure the many reports of your game law throughout your States, and they are doubtless as near perfection as one could wish. The only trouble, or I might use stronger language and say curse, is the keeping of them, and to do this every nerve must be strained and proper penalties inflicted on the law breakers.

Alas! for the true sportsman in this part of the world; he is to be pined. With game laws as prolific of penalties as a dog of fleas, yet he has no redress. I was unfortunately enough decoyed by a pair of game laws of this place, on the Grondines, about sixty miles west of this place, on the strength of an assertion made by two sportsmen (?) as they landed from the cars with two game bags full—"Any amount of duck"—and next evening saw me on my way to the fruitful shooting grounds. I landed from the cars at a station about twelve miles east of Grondines, intending to try for snipe on my way up, and as I had a good dog anticipated at least half a dozen brace. "Blessed is the man who expects nothing," I tramped my twelve miles without seeing the feather of a snipe and reached my destination pretty much "dove in the mouth." Afoot an hour before daybreak, with everything prepared for a day on the beach, and a light drizzling rain with moderate easterly wind, my spirits were a little brighter than the previous evening. I started, walked two miles for the punt and paddled as many more till I reached the duck ponds, but my decoys in order, arranged my ambush, and my wings were true, and I was standing there, and I was five paces about half a mile to the north of the ponds, and that was all the wild duck I saw that day. On my return to the house, raised a brace of snipe and brought them home with

me. That night at supper I asked the "matro de la maison" if any sportsmen had been up this way lately. He replied in the affirmative. "And did they get any game?" I asked. "No, but they brought a lot of ducks before leaving." So my two noted sportsmen had been shooting with the mighty dollar, and I did not miss telling them so.

Previous to retiring for the night I took a walk around the house, and in the direction of the beach I heard a continual knocking for which I could not account, but was soon enlightened by the landlord. "They belong to hunters around here who shoot at night." This was a curious "clock and the moon was commencing to put in an appearance.

Next morning a trio of those midnight poachers inquired if I did not want to buy some ducks to take home. They were acquainted by the landlord of my luck. The had sold a lot to two guests that had been up there a few days previous. I did not buy.

I hired a team and drove about eighteen miles to an old woodcock shooting ground and left the boy with the horses, and with a cooker, that much-talked-of dog lately, bugged six and one partridge, after tramping about four hours. I afterward learned that two of those same poachers had killed twenty-three cocks on the same grounds about a week previous.

Now as I mentioned in the foregoing part of this letter, the protection our game gets is simply ridiculous. The two would-be sportsmen who bought the duck from those poachers knew perfectly well they were killed at night and that it was in contradiction of the laws, yet they countenanced the offence. There is little or no use in lodging complaints with the authorities, as such would end where they were laid. The public market is stocked with partridges, some farmers bringing in as many as sixty brace for sale. Not one of those birds were ever touched with shot, every one of them were a rare and then taken and pricked with a sharp fork to show where they were shot.

The only one of the game laws looked after is that respecting the fish, and that is easily accounted for. Some gentlemen having an interest in a lake so worried the authorities that they at last named a fish inspector, and he does his work thoroughly, as we often notice in our papers the seizures he makes during the unlawful seasons.

On looking over some old files of our daily papers, dated May, I came across a copy of the game laws, on the one side, and among the daily items on the other, "First woodcock of the season killed by Mr. P.," and back for several years it has been a persistent course of rivalry between Mr. P. and Mr. J. who would kill the first woodcock of the season, and the law redds, woodcock, etc., etc., not to be killed before August, yet they were always killed in May.

I am afraid there is no hope for us, unless some of the true blooded sportsmen club together and worry the life out of the authorities until they do some definite good. S. F.

#### FISH AND GAME IN TENNESSEE.

THE autumn of 1880 was not so good for anglers as was the autumn of 1879. For the reason that the warm weather and drought continued so long and the rains set in so heavy and the cold weather followed so quickly. Nevertheless, we had our usual fall trips of angling, commencing about the 10th of October and continuing until frozen out. Our first trip in October was an unusually pleasant one, and although our catch was not so large as we anticipated, it was well divided among our party of six. Nor were our fish as large as usual, running all the way up from one pound to fifteen pounds.

After equipping ourselves with the best tackle, good teams, good wagons and tents and a good cook, we struck out for the Buffalo, a beautiful, clear stream in Perry County, distant seventy-five miles, over a very rough country road. We made the trip very pleasantly in one and a half day's travel, and located on the edge of the stream at noon of Thursday. The afternoon was spent in pitching our tents, resting, locating and providing for our stock. The forenoon of Wednesday was given to an angling trip, and five miles off, for minnows. Having procured a thousand fine minnows, and partaking of a good dinner prepared for the minnow catchers, we were ready to lash our reels and go at it all right. The clouds were threatening and a high wind blowing. We did not venture out far from camp that evening. The result was about fifteen black bass, two jacks and a fine blue forked tail cat. We continued fishing until the next Tuesday night, taking, all told, eighty-five fish, the largest being a king four pounds, the largest jack, eight and a half pounds, and the largest blue cat fourteen pounds—many more than our party could consume, and as many as we deemed sufficient to carry home. Much of our time was interrupted by storms and rain. We had our guns along, and from them the party feasted daily upon mallard and teal ducks and squirrels. We found the natives generous and as kind as could be, furnishing us with everything needed. A more hospitable people do not live than the people of Buffalo, nor does a finer stream for fine fish.

Another party followed us a week later, and striking the stream eighteen or twenty miles lower down, had much better luck and weather than we had, one of the party alone taking twelve black bass, all averaging over four pounds each, and one jack weighing sixteen pounds, besides many other fish. He was on a deeper part of the river, and nearer its confluence with Duck River, a famous fishing stream.

Another party went out later to Reelfoot Lake, 140 miles distant, and reached it just as the snow and ice set in. They had a rough time, but captured in one-half day's time sixty black bass, running from three to six and a quarter pounds each. They killed ten geese and a large number of ducks.

Now that angling is cut off by the rough weather, hunting is the order of the day. Quail are numerous. A few pheasants and a few wild turkeys are the game sought with the gun. Squirrels, opossums and the red and gray fox are also abundant with the gray bear, for the dogs. The summer was favorable for the quail, and large numbers are secured. I suppose now it would be an easy day's work for a good shot, with his dog, to bag fifty per day. We have a colored boy, Charley, who is an inveterate hunter, has a first-rate pointer dog and a favorite gun, improvised by himself. He takes them on the wing in true sportsman style, and his gun is an old army musket, with rifle bore, about one-half of the barrel cut off, leaving him a very short gun. He took a little walk round this evening for a couple of hours and brought me in ten fine, fat birds, a few of them the New York market. One evening last week he came in with forty quail, and it is common, every day's work to bring in two or three dozen birds. We find from one to a half-dozen coveys on every farm, and the farmers are very liberal, all allowing hunting

upon their farms without objection if the hunters will keep away from the stock yards and barns. From all I can see from the reports in your paper I am inclined to think we have as good country, and game and fish as fine and abundant as any country reported. We have good hunters, good guns and tackle as anybody, as hospitable people and as cheap living, and as good as can be found. The expenses total of our party, stove and cook, and for fourteen days, cost us, all told, \$5.15 each, and our country is as easy of access as any. We have splendid railroads leading to the hunting-grounds and the hunter can always find willing hunters to go with him, free of cost.

Franklin, Tenn., Nov.

#### REYNARD'S WILES.

"FOR ways that are dark and tricks that are vain" a red fox will compare favorably with any living creature, not excepting "Ah Sin" himself. Among the many resources at his command to outwit his natural enemy, the hound, Reynard prizes most dearly a rail fence, a road and the frozen surface of a river, and in these days of deep snows will rarely fail to avail himself of one of these means of safety. The rail raises the line of scent too high for the hound's nose, the frozen river and the well beaten road, besides the good footing they afford him, retain not a particle of the tell-tale scent so dear to the pursuer.

On two occasions E. and I, as has my keen-scented old hound Jeff, had found our fox vanish into thin air at one particular point, and though the snow lay deep on the ground, and by it we could see that the fox had come into the road, no amount of perseverance on our part revealed to us what had become of him after that. In vain we walked up and down the road in search of the tell-tale track; not a break in the even surface of the snow could be found, and we were obliged to return home and own ourselves outwitted, while Reynard, no doubt, sat watching us from some safe distance, and saying with *Puck*, "What fools these mortals be!"

But every fox, no doubt, as well as every dog, must have his day, and the mystery was solved on the next hunt. Enconced on a high piece of ground, and while the hills echoed with the mellow voice of the old dog, I saw the fox slip into the road, follow it for a hundred rods, then by one high leap land on top of a rail fence which ran at right angles with the highway, and then, gliding along the uppermost of the railings, he disappeared into the plowed ground, while I had blown bare of snow, run across the plowed field to within about ninety yards of me, when, jumping on a big rock, he curled himself up and deliberately lay down to wait the effect of his little game and enjoy the discomfiture of the hound. I dared not move, so opening my breech-loader I slipped in a long-range thread-wound cartridge, took careful aim, and sent a charge of double B shot through Reynard's handsome fur.

But foxes know more mischievous tricks than this, and dear to the heart of every old fox is a scamper down the smooth surface of a frozen river, which, besides offering an opportunity of escape, often permits him to take dereliction on his troublesome enemy the hound. For Reynard is versed in physics and knows full well the difference of weight between himself and his pursuer; instinct teaches him to a nicety the exact thickness of ice required to bear his light fur-covered body, and that on such ice his more ponderous enemy may not venture safely. On one such occasion, as I often do, so as to look down some swift stream along a frozen over and covered with light snow, and note how the trail of the flying fox gracefully curves toward every hole and invariably skirts the very edge of every piece of swift open water. Many a good hound has ended his days by venturing to follow where his tricky enemy did lead, and I imagine if foxes ever laugh, and they certainly look as though they did, Reynard must laugh as he hears the echo of his hound's den bark suddenly die away and know his game has been successful. But we did not laugh, E. and I, when all at once silence settled over the hills, but a minute before musical with the cheery notes of old Jeff's voice, for we knew the dog was on the treacherous river, and without losing a second F. hurried toward a piece of open water not far distant. On reaching it our fears were at once realized. Caught in the swift current, benumbed with the cold and exhausted by the attempts he had made to save himself, old Jeff lay with his head on the ice, his legs hanging motionless, and whining piteously. There was no time to be lost, and unable to resist the dog's mute appeal for help, F. stretched himself on the treacherous ice, seized the animal by the neck, pulled him out, and in a minute the dog was rolling joyfully at our feet. Though benumbed with cold and covered with ice he at once took up the scent with an angry bark, and two hours after we had the satisfaction of killing the fox after one of the best runs I ever saw. Old Jeff.

#### OUR DETROIT LETTER.

DETROIT, Dec. 31.

THE next meeting of the Michigan State Medal Association will be held here on Tuesday, Jan. 4, when there will be an extremely lively contest, if one may judge from the present state of feeling of the prospective contestants. The medal is now held by Edward S. Barbour, an amateur, who does comparatively little trap-shooting, but who sometimes steps to the front with an astonisher. He won the medal by killing eleven straight birds, and they were fast flyers too, wrestling the honor of its possession from that splendid shot, Ed. Gillman. This Association works under English rules, but it has a sort of managing committee who insist on handicapping many of the recognized good shots, sending them back to thirty yards to pull against their less eminent opponents at twenty-one yards. This is not a matter in which I have any personal concern, but I cannot help hearing a good deal that is said about it. The fact is, there is considerable dissatisfaction with the action of the committee in this respect, many believing it to be unnecessarily arbitrary, and a hardship for those who chance to be skillful shots. The committee is composed of John E. Long, J. V. D. Eldredge and Wm. J. Mason, all irreproachable sportsmen and gentlemen, whose motives it would be presumption to impugn; and yet they are severely criticised for their official conduct. One prominent member of the Association, who lives in the interior of the State, has practically withdrawn on account of the handicapping regulation. He asserts that inasmuch as the Association's prime object is the promotion of field shooting, there is not only nothing to be gained by such a regulation, but it is a gross injustice and a sad injustice on the part of those at whom it is directed. I only echo sentiments which I have repeatedly heard expressed,

and I give them to the readers of *FOREST AND STREAM* as a wholly disinterested spectator of the doings of the association. I do not think there is much room to doubt that the management is a little primitive in its methods and that a decided change is imminent. It may be of interest to those not acquainted with the fact to be told that the medal over which there have been so many spirited and splendid contests remains the property of the association until some member shall have won it three successive times.

This day ends the game season, and I assure you it has been a lively one in these parts. The hunters have had merry times and the dealers and commission men have had their hands full of business.

A small party of Detroiters went down to Maldstone Cross, in Canada, last Monday for a week's frolic among the game, but with the thermometer at twenty-two degrees below zero they found rather indifferent comfort. They ran upon plenty of quail, partridges and wild turkeys, but the twenty-two degrees chilled their ardor and drove them home with a bag composed of forty-three quail and fifteen partridges.

E. H. Gillman was presented yesterday by James Moore, of Toledo, with a Gordon setter puppy, now five months old, named by Grouse; I do not know the dam. Fanatics hereabout affect to see some mighty promising points in the puppy.

The Point Moullie Shooting and Fishing Club will hold its annual meeting here next week, and on the 12th of January the State Sportsmen's Association will meet at Lansing, under the nose of the Legislature, which body will be asked to make some needed amendments to the game laws of this State. I shall keep the readers of *FOREST AND STREAM* informed of everything of interest or importance in that connection.

G. P. G.

#### THE SILVER LAKE STAND.

Editor *Forest and Stream*:

In your issue of December 23 I see that a Mr. "X," has delivered an opinion on the wild geese shooting at Silver Lake, an account of which you published in the preceding number.

He is entirely welcome to his opinion. There are others whom I think might differ from him, and I should like to be allowed a chance to say a little in regard to this shooting, but not for "X," whose article is written in such a manner as to make it undesirable to state anything for his benefit.

The writer had been shooting all the early fall over dogs, and after woodcock, snipe and partridges for the benefit of health and for sport, and was very kindly invited to take up his quarters at the after mentioned stand at Silver Lake while hunting the vicinity for snipe, and the interest and pleasure he took in seeing the manner in which the live decoys were handled was very great.

To be able to turn geese from their flight far overhead, and then light them—birds headed by a shy old gander that most likely has traveled the route back and forth from the far north for years—seems to me to require great skill, and I think that no man, sportsman or not (unless we except Mr. "X.") has the present art, such a time and not enjoy the excitement. The number of birds usually shot at, as near as I can learn, varies from five to eight, and the shooting is usually flying, as well as in the water, where they are often scattered; and several of the geese killed of the number mentioned in the last article were shot down at handsome distances.

The "butchery," so called by "X," as nearly as I can see, consists in now and then getting a chance to decoy, and shoot at a bunch of geese—a small part of the thousands upon thousands which fly by, far overhead. Why, the whole number killed last year's fall and this at his stand amounted to less than seventy each season, an average of little more than one each day during the time the stand was occupied, and I believe this number may be killed in the West in three or four days, and no doubt, perhaps, by some of the readers of your paper.

I happen to know that the owners of this stand are men who go there for real enjoyment and for rest from hard work and care.

I would also say that of the many with whom I have talked in regard to the shooting in question, perfect gentlemen and good sportsmen, not one has put forth an opinion like that from "X," and I believe there were none of them who would not have enjoyed being present.

B. C. M.

I have long been a reader of your paper, and am pleased to say I like it better and better. Its typographical appearance is very much improved, and the tone of its editorial and correspondence is more in keeping with the elevation of a sound moral standard among its readers. The term "Gentlemen Sportsmen" was suggested to my mind by reading the oft-timed reply of "X" in regard to the Silver Lake performance. Why, Mr. Editor, the pot hunter, who hunts for the market as a means of support for himself and family, is a prince in comparison with some "Gentlemen Sportsmen" we read about.

Not long since your paper contained an account of a party who made a trip through Maine—among them a notable author of works on sporting—where it was stated that he bagged fourteen deer, closing up their performances Oct. 5. They had commenced the 15th of September, but they did not state how many of them were shot during that month—the close season. It seems improbable the deer should have been all killed in October. If not, were they "gentlemen sportsmen?"

Men go out upon the prairies and shoot buffaloes for their tongues, leaving the carcasses to rot, or to be devoured by wolves; others enter into a competitive arrangement to see how many ruffed grouse, ducks, squirrels, woodcock, etc., they can bag in a given time, slaughtering indiscriminately everything their eyes rest upon. Are these "gentlemen sportsmen?"

I have known members of a Game Protective Association to shoot coots by the score for the fun of the thing, and bring them home to rot, sometimes making Sunday their special day for this purpose. It could seem that the birds should have at least one day's rest in seven, even during open season. Are these "gentlemen sportsmen?"

But I will not weary you or your readers. As I before said, I am glad something is being done to elevate the moral tone of our people in regard to game. Let us all see to it that good laws are enacted and enforced, and frown upon and denounce, so far as our influence extends, the ruthless butchering of game that is not utilized for the food of man.

DECEMBER 31.

We have received the Constitution and By-laws with the Rules for Trap, Rifle and Pistol Shooting of the New York State Association.

MASSACHUSETTS—Fall River, Dec. 28.—At a shoot held by the F. R. Gun Club, Saturday, Dec. 28, the following scores were made. Card rotary trap, 18 yards:

First Match. Ten Balls.	
E. W. Buntin	10
W. J. Bralley	10
W. J. Nichols	10
J. H. Valentine	8
H. B. Brad	8
H. C. Bralley	8
T. Stanley	6
T. S. Hall	6

Second Match. Five Balls.	
E. W. Buntin	5
W. J. Bralley	5
T. S. Hall	5
H. C. Bralley	5
J. H. Valentine	5
F. Macomber	5
E. J. Farwell	5
O. Daniels	5

Third Match. Ten Balls.	
E. W. Buntin	10
H. C. Bralley	10
P. E. Borden	10
T. S. Hall	10
J. H. Valentine	10
H. B. Brad	10

Fourth Match—Team Tackle. Ten Balls.	
E. W. Buntin, Capt.	10
W. J. Bralley	10
T. S. Hall	10
P. E. Borden	10
J. H. Valentine	10
S. Allen	10
H. B. Brad	10

Fifth Match—Miss and Out.—Farwell, 5; H. C. Bralley, 7; W. J. Bralley, 6; Buntin, 5; Hall, 4; Valentine, 4; J. Borden, Jr., 2; Butler, 2.

Mr. E. W. Buntin made a score of 62 consecutive broken balls, missing his 33d ball.

Physicians of all Schools use and recommend Hop Bitters; take their advice.

## The Kennel.

Eastern Field Trials Club—Annual Meeting for election of officers January 11.

Pittsburg Dog Show—Pittsburg, Pa., January 17, 18 and 19, 1891. Entries close January 6. C. B. Elben, Secretary; Charles Lincoln, Superintendent.

### THE COCKER CLUB.

AT the solicitation of numerous correspondents, who are interested in the proposed formation of a Cocker Club, seconded by the request of Mr. Geo. D. Macdougall, who has found the necessary correspondence much more voluminous than was anticipated and a serious tax upon his time, the FOREST AND STREAM will undertake to do the necessary work preliminary to the actual formation of the committee.

The purposes for which the Cocker Club will be organized have already been set forth in these columns.

What we propose to do is this:

1. To receive the names of all persons who will express their willingness to join the Club. Having secured these,
2. To forward the list to each individual, that from it we may select ten candidates for a committee of seven, who shall then take entirely into their hands the further work of organization; the seven men receiving the highest number of votes to be declared elected.

It will be understood that we are the passive agents to facilitate the progress of the Club, and will have nothing to do with influencing its character or membership. We shall attempt simply to perform the labor so laudably undertaken at first by Mr. Macdougall, and had not that gentleman declined to act further we should not have assumed the task.

We trust that our call for the names of all sportsmen who are interested in the subject will be met by early and numerous responses.

Send us your own name and the names of those of your friends who are interested.

### MORE ABOUT THE COCKER.

AS the "Cocker-Spaniel" is justly becoming the fashionable dog, and as every one seems interested in obtaining some standard by which they may be properly judged in the future, the opinion of an unprofessional, though a lover of good dogs, may not at this time be out of place.

For several years past I have been interested in spaniels, and have given some attention to them both in the kennel and the field. As a result of this experience I am satisfied that a spaniel well adapted for work in Ohio, on turkeys, grouse, quail, woodcock, snipe and ducks as a dog of any other breed. They can be taught, according to the preference of the hunter, to point like a pointer or give tongue when they approach game, and are, withal, such busy little beings that it is a great pleasure to shoot over them.

A dog of the kind I have mentioned above I would call a cocker-spaniel, in the absence of a better name.

Cocker spaniels I would have divided into two classes.

1st. Dogs that give tongue.

2d. Dogs that point.

The weight of these dogs should be: For males in good condition, from 27 to 33 pounds; for females, from 25 to 30 pounds. The color should be liver black, lemon, or a combination of white with any of these colors. The coat should be moderately long, slightly wavy but not curly, and not too fine. What I consider a model dog, in fine flesh, measures as follows: From tip of tail to nose, 37½ inches; tail, 7½ inches; chest, 22 inches; tape tightly drawn; height, 16 inches; from the tip of one ear to tip of other over the head, not counting feather, 15 inches; distance between centre of pupils, 2½ inches; from tip of nose to beginning of forehead, 3 inches; coat, dark liver, rather coarse, but very glossy; length of hair along the back, from 1½ to 2 inches; ears, legs and tail only moderately feathered. His weight is even 80 pounds. His chest is large and hind quarters light. Such a dog has the endurance of a bound, and beauty unsurpassed by any member of the canine family.

In the parlor or the field such dogs are equally at home, and for general purposes "take the cake." Let the admirers of smaller and larger dogs hunt classes for their pets, or abandon them. My object with the modern cocker spaniel is to obtain the smallest possible dog that can and will do the best possible work in the field. I do not believe bench shows are ever called for a standard for a hunting dog, nor can limited field trials do it. A compilation of the opinions of sportsmen competent to judge will be the only means of arriving at a solution of this difficult but important subject. M. D. Circleville, O.

Now allow me to say to all that just so long as this feeling of distrust and jealousy exists you will waste both your time and patience, and eventually you will be carried out to sea by the undertow. It is all folly to think you can make a standard, and to suit the fancy of any particular strain of cockers; for who has a strain that he can claim as his own production? In fact, to make it more plain, I will ask the question openly to you all, Is there a breeder in America or elsewhere who has a breed of cockers that is easily identified among an open number of ten or more spaniels as belonging to any man's kennel, or is the acknowledged fruit of any breeder's careful study and unceasing labor? When you all think the matter over candidly, I believe you will agree with me in saying that there is not. Breed your spaniels to the high standard of perfection, which is shown in the Laverack setter, and neither yourself nor the world at large will find a standard of other guide to mark out its redeeming qualities. We need more good spaniels far more than we do a standard to judge them by. You will find by experience that a standard will not improve your dogs any. That must be done in a far different way, and I believe you will agree with me in saying it is much easier to make a list of rules to follow than it will be to follow them. At least I will venture the assertion that many of you who are so enthusiastic in hurrying up the matter of making a standard will lose all interest in the cause if you are so nobly defending now if you were to try for a couple of years at producing some particular marking in order to establish the above-named title to a strain. That is the labor and worry of a lifetime not to be gained in a day, no matter what your starting point may have been. The works of nature are fickle indeed.

There are a great many who claim to be breeders, but their experience is very limited indeed. They are breeders something like this: For example, they will purchase a half dozen or more bitches for the brood that are called good, of all weights and all colors; have also a stud dog without any knowledge of his lineage and breed him to the lot. From these unions they produce everything that looks like a dog. Would it not be better to begin with first knowing what they wanted to produce and then try to produce it and keep trying until they succeed?

Another will pick up some nondescript book on the dog, read it and have all the knowledge they require. As, for instance, one writer says the more prominent the eyes appear, especially when accompanied with tan markings, the greater the suspicion of the King Charles cross; and the greater the number of ticks over the face, legs and body the greater quantity of Norfolk blood does the animal contain. Now, when any party puts in claims of that sort I say he is not a breeder. What is a cocker to be like in his eyes? Are they small or sunken and blood-shot, like a blood-hound? And again, must he have the King Charles blood to bring out tan markings? I have never heard the claim put in against the Gordon setter. One would be fully as consistent as the other. And in regard to ticks, what is more handsome or beautiful than a well proportioned cocker, with liver head and ears and a body white ticked, with liver throughout? And this can be produced and has been, but it does not follow that they must have the broad muzzle or be mute, as in the case of the Norfolk or Clumber spaniel. That is not breeding, it is forgery. Again, I can't see the authority for placing large spaniels in the field class. Fellows say, where they belong, with very few exceptions. I think the rule laid down by J. F. K. to be a very good and reasonable one, and I can see nothing in it, intentional or otherwise, to either injure the business financially or the mind of the most fastidious. The changes I would make are in feathering. If a dog is to be used in the field it is easy to clip his feather, and you will certainly injure the value if you remove any point that adds to his beauty. And furthermore, if you tamper with the colors you are tampering with the standard. I would like very much to meet some one in an argument on some future time on a subject that seems to be harrowing up the souls of a few fanciers; that is, the origin of the King Charles spaniel.

BURN HOLLS.

After having read all the letters that have appeared in your paper relative to cocker spaniels and the proposed standard for judging them I think the letter of "Senex" in your issue of the 2d inst. has solved the problem. The majority should rule in all cases, and if the proposed committee is appointed as he suggests, the said majority should be satisfied. The proposal of "Leam" would only make matters much worse than they are at present, because the opinion prevails that the whole thing will be managed by a few interested parties in the city, and the consequence would be that if his idea were adopted, and any noted breeders and others would not only object, but would hold aloof from the proposed club. I hope, therefore, that the duty of issuing a circular in each number of your journal will not prove too onerous a duty for you, and we all will, of course, pony up to meet the expenses. My share is ready whenever it is asked for. Perhaps it would be advisable to publish a list of the best breeders with their post-office address in the FOREST AND STREAM, so that we can post ourselves as to who is the best qualified to act on this committee. Toronto, Dec. 8.

G. S.

As breeders we feel deeply interested in the controversy going on in the columns of the FOREST AND STREAM on the modern cocker. We need not give our opinion on what constitutes a cocker, as there has been enough already said on that point for the present, but would take the shortest possible cut to bring about a permanent standard for this, fast-moving dog, and to bring this about would indorse "Senex's" plan, which was to have a circular gotten up by the editor of FOREST AND STREAM, and signed by him with his paper to every breeder and every man interested in the matter in the United States, and the three men that got the most votes to be the committee of three to establish the standard. This seems to us a fair and just way to bring this matter about. Would recommend that we elect men that are not afraid, fearless, unselfish, honest men and thorough good judges of the breed in question.

Would take Stonehenge's "Dogs of the British Islands" for a guide, and improve from that as best we can. We hope and trust this good work will go on and give this most beautiful and useful of all sporting dogs an equal chance with other breeds of dogs. C. B. C.

South Acworth, N. H., Dec. 23.

I was very much pleased with the pictures of the dogs in your last issue, and have often wondered why there are not more of them. It is a good way to educate the readers up to the standard of the breeders. We cannot all reach the bench shows, and now that the little cocker is before the house for discussion, why don't the breeders of this useful dog give us the pictures of their ideal cockers, and let us pass judgment on them? We are all interested and anxious to see the different shapes advocated by the several breeders. I always suspected that the cocker spaniel was a well defined breed, and was really a miniature setter or a setter on short legs, but it would seem by the letters written upon the subject, and by the dogs I have seen in the bench shows, that almost any small spaniel would pass for a cocker. I have seen them with Blenheim heads and water spaniel coats, and all sorts of mixtures and crosses between the field, water and King Charles breeds, classed as cockers, and I begin to think that I do not know much about the breed. I always had the impression that the true field spaniel in color should be white and orange, like the clumber, and that the liver showed previous crossing with the water spaniel, and the black some distant cross with the English retriever. I should very much like it if some one who has the ability would just take hold and straighten out the business through the columns of your paper, if you can give the space.

ERIE.

I think your correspondent is going too far when he wants to turn out of the "Cocker Club" all sportsmen not breeding or owning cockers, for there are a great many sportsmen like myself, who own a few setters and pointers, that would like to join a club of this kind to become better acquainted with these little fellows. And are we all to be fired out simply because we own no cockers "and do not know one from a mongrel bull-dog?" C. E. S.

Schenectady, N. Y.

### Editor Forest and Stream:

In answer to "Cave Canem," and to defend my expressed wish to have two classes for spaniels, large and small, I have a few quotations from English fanciers, breeders and judges. In a general letter on spaniels in "Dogs of the Day," of September, 1880, "Surefoot," known to me as the greatest living breeder of spaniels, having won everything the last few years, says, after naming the several divisions of the spaniel family: ".....they are divided into two classes, large and small—the large are termed springers, the small, cockers; both sizes may be produced in one litter by the same parents." And again: "The small spaniel, or cocker, may be almost any color, black, black and white, liver and white, lemon, lemon and white, or only mottled. The head should resemble that of a small setter and have no tuft upon it; the ears should be moderately long and lie well to the cheeks. The legs should be strong, well feathered and short, the feet round, and each toe should be protected with hair, a plentiful distribution of which on and between the toes is important; the chest tolerably broad, the body long and barrel-like, the stern should come out on a line with the backbone." From "British Dogs" by Dalziel, I take the following: ".....if the present fashion is to be maintained—the prejudice in favor of black color, long backs and setter-like heads—I plead for two classes at all shows. One class for other than self-colored dogs, representing the old springer, and weighing over say twenty-five pounds, and a corresponding class for cockers weighing from eighteen pounds to twenty-five pounds. Small-sized spaniels weighing from twenty pounds or even less to twelve-four pounds, and of all colors, liver, black, white with liver or black, and in these flecked or mottled on face, legs, etc., are still pretty numerous. I think we should have classes for liver colored cockers to include the Welsh or Devon varieties, and also one for those of mixed colors, the maximum weight in each class to be twenty-four pounds." He also gives measurements of two liver and white cockers: Nell—weight, 33½; height, 9½; length, 30½. Flo—weight, 23½; height, 10½; length, 29½. Another gentleman, who has been long and judiciously the spaniel classes at different large shows writes me under a name he calls the best black cocker he ever saw—"she is not worth £—here, as the long, low black spaniel is able to win everywhere"—showing that there is no definite standard in England any more than here for cockers.

Yet "Cave Canem" says that there is a standard, and that one might as well start to argue as to what is a cow as call into question what is a cocker.

I have removed my kennel and myself to Whitestone, L. I., and in future my address will be as below, Dmo.

P. O. Box 13, Whitestone, L. I.

HORNEVILLE, N. Y., Jan. 1.

I wish to say a few words to the friends of the cocker. I have given the subject much time and have read all that has been written, and I find that no two authorities agree on what a cocker is or should be. Don't be jealous and by so doing spoil all chance of having a standard. If we do have a standard made you should be able by careful selection to breed it in three or four years, and if the standard does not happen to fit your stock it surely will do them no harm. By having a standard you will know what you want, and if you wish to exhibit with the chance of taking a prize, let men who have a horse or dog think they have the best, no matter if the horse is only fit for the crows. They think if they should let him go he could do a mile in 2:30. It is just the same with a dog. If they exhibit and get beat they rush into print, cry "Fraud!" "Poor judges," etc.

You may hear of "red noses," "bullfoundlarks," etc.; they may weigh fifty pounds and have topknots like Barney and Sinbad, but he calls them cockers and exhibits them and takes first prize over your pride and ideal cocker. Now if we have a standard the best dog according to the standard must win. Nearly all of your correspondents are of the same opinion, that we do need a standard, but at the same time seem to be afraid that it might not fit their stock. It is a pertinent question I should like to ask why is all this opposition? D. M. Longwell. It's dollars to butts, I think I can answer it myself. It's dollars to butts, simply because he has none of the bestor strain, and did not see fit to buy of those that do have them. You will observe that all that are named for a standard have the bestor strain or its variations. I think it was a kind act of "Dido" to accept the offer; very few would take the trouble without being paid for it, and certain-

MR. EARLE'S NATIVE SETTER SMUT.

ly he can do the clerical work as well as an octogenarian. His vote only counts one.

Your correspondents should remember that boys are the stuff that men are made of. Two-thirds of the dogs in the country are owned or controlled by boys. The standard will surely be a fizzle if they keep putting obstacles in the way and throw cold water on the subject. How are we to have a just, sound standard unless breeders and others interested are put in communication and a club formed. Schemers, propagandists and intriguers, etc., cannot control it. The majority rules in this country if it don't in Michigan. Stonecreek was considered a fair standard, but what one of our old and experienced breeders ever bred a dog that would scale 75 points according to it?

There is too much said about old and experienced breeders; what have they bred in all these years? certainly nothing to astonish the cocker world. In five years, with the knowledge they have gained and the experience they have had, they should be able to breed a blue dog. I for one should like to see this thing settled. I own a few dogs and should have sent some to Pittsburgh, but I dislike to be beat by a water spaniel or setter.

I think my dogs have as good pedigree as any in the country, but I do not call them perfect and want them set up as a criterion. Whatever the majority says shall be the standard will suit. Yours fraternally, J. OTIS FELLOWS.

MR. GAUSE'S KENNEL.

WILMINGTON, Del., Dec. 30.

Editor Forest and Stream:

At your request I hasten to reply to your communication asking for full particulars about my kennel. My present kennel is not very extensive, but in quality they are far ahead of anything I ever owned before. I send you photographs of some of my dogs—namely, Warwick, Ollie and Fire-Fly—that you may form some idea of the dogs. The pictures do not do them justice.

At the head of my kennel stands Warwick, whelped April, 1877. He is by Leicester out of Petrel; color, lemon and white ticked.

Among the bitches comes, in my judgment, first, Ollie, a litter sister to Champion Gladstone, and in marking almost a counterpart of him. The above brace I consider second to none for field work.

Champion Fire-Fly, red Irish setter, whelped August, 1876, by Champion Rufus out of Friend. She is a thoroughly broken field dog and a clipper, with as much style as any English dog I ever saw.

In addition to the above, I have two dog puppies, viz.: Kildare and Blaze, whelped September, 1879; by Champion Elcho out of Champion Fire-Fly. Both are rich in color as either sire or dam, are large, strong and exceedingly handsome dogs. I have reports from their breeder, Mr. E. J. Martin, that they are doing fine work. These two, with Fire-Fly, are for sale.

Please send me another picture of Dashing Monarch. He is an exceedingly fine young dog and reflects credit on Mr. Higgins for importing him and on Martin for the way he handled him. He was broken last fall, with Warwick for leader.

I. W. GAUSE.

It is with pleasure that we publish the above letter from such a dog-lover as Mr. Gause, and we congratulate him upon having in such fine training so many really splendid dogs. Of the photographs, that of Ollie is remarkably well taken, and Messrs. Schreiber & Sons, of Philadelphia, deserve credit for this "Study from Nature." The one of Fire-Fly is but passable; red dogs never appear to advantage when represented by photography. That of Warwick is not good, nor does the picture do him justice in any way. Mr. Gause has rightly placed this perfect animal at the head of the list; he is a grand dog, and, we hear, a wonderfully good one on snipe. His work in the heat with St. Elmo at the late field trials showed the perfection of training, and although it was decided that he was beaten, he did not commit a fault.

It is FRED 4TH.—There has recently been published in the columns of a contemporary a very faithful reproduction of the setter dog Fred 4th, figured by Mr. Laverack in his excellent work on the setter. The accuracy of the reproduction will be appreciated by every one who is familiar with Mr. Laverack's work. Our contemporary has, however, got the wrong name appended to the portrait, so that it purports to be the

picture of a dog now owned in this country. This is more surprising as it might have been supposed that any one familiar with the literature of the setter would at once recognize the likeness of Fred 4th, as we did when the picture was proffered to us for publication.

SMUT AND NAT.

THROUGH the kindness of the owners of this brace of merry little setters we are enabled to give to our readers in this issue two very creditable portraits of Mistress Smut and Master Nat. These dogs are typical of an old breed of native setters that has been very carefully preserved many years in Rhode Island, the "Sam Scramton" blood being predominant, and as will be seen, the subjoined pedigrees go back "pretty well for natives." To our mind the old maxim, "Handsome is that handsome does," is one that practical sportsmen should cling to most closely. Here are a brace of dogs that had to face many of the best cracks of imported blood that ever turned up in one field in this country. They were not placed, to be sure, but it is acknowledged by uninterested spectators who saw the trials that they should have been. Fortunately for them their owners were game, and before they were allowed to retire into winter quarters, the fairest kind of a challenge was offered to the owners of the dogs that had been accredited with beating them, and the challenge was not accepted.

These dogs represent the best type of our native stock, and the pedigrees here given are correct, although they belong to America, and this is more than can be said of many of those sent over with somewhat recent importations. Of course, it is well known that there are dozens of breeders in England who are honorable gentlemen, and who would think it a crime to even dream of "cooking" a pedigree; but it is not all of our countrymen who deal only at fountain head, and the go-betweens for the most part are but a sorry lot, and this unfortunately often leads to placing the blame on the wrong shoulders.

The native stock has been run down entirely too much of late, and there has not been enough backbone in our native breeders. The invasion of foreigners had a weakening effect on those that breed for profit, as it became a fashion in dog flesh, like in many things else, for certain decades to become entirely "English." Now, be it known that, to our knowledge, there have been just as good strains of pointers bred in this country fifty years ago as can be now found in England, and these American strains were kept pure for years with judicious interbreeding, and in consequence such dogs as Colonel William De Peyster and Mr. Herman Bancroft (and a dozen more, we dare say,) used to breed were healthy, plucky, most beautiful to look upon, untiring and a pleasure to shoot over.

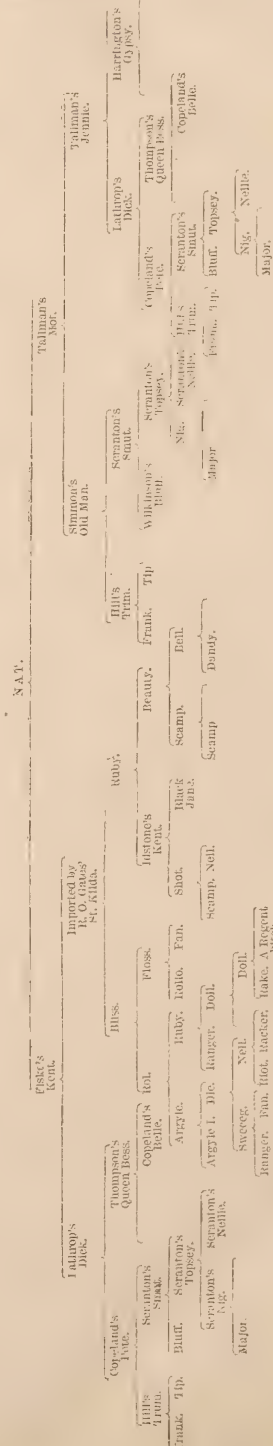

But to return to our canines. Smut is owned by Mr. Newton Earle, of Providence, R. I., and is a very pretty little setter bitch, her color being pure black. She is five years old, and has had a vast quantity of game killed over her in her time. She weighs but 37½ pounds when in condition, but the following measurements will show that she is finely proportioned:

Length of head, 9½ inches; spread of ear, 18 inches; from end of nose to end of tail, 51 inches; girth of chest, 23½ inches; length of tail, 12½ inches; from eye to end of nose, 4 inches; height of shoulder, 20½ inches.

The little bitch has been very favorably mentioned on the bench, and year before last with Grouse-dale won second in the braces at Robin's Island. She is untiring in the field, has a wonderfully keen nose, backed with a brain which tells her how to use it. Her size enables her to slip through the briars, which cannot but severely punish larger dogs; and considering that she has been made an indoor pet for the last year, her performance in such good company is highly creditable to her owner and her trainer.

Nat is the property of Mr. Horace T. Bloodgood, of Providence, R. I., to our knowledge an accomplished sportsman and excellent shot. Nat is a black and white little setter dog of 3½ years, and when in condition weighs 35 pounds. He differs but little in size from Smut, as the appended measurements will show: Height of shoulder, 19½ inches; length of head, 10 inches; spread of ears, 17½ inches; from end of nose to end of tail, 49 inches; girth of chest, 22½ inches; length of tail, 13 inches; from eye to end of nose, 4 inches. It will thus be seen that the brace is very evenly matched. Nat like Smut is an excellent field dog, is possessed of the best of noses, and for such a small animal has great speed and endurance. He is wonderfully well trained, and shows that not only his trainer but those who have subsequently handled him must be thorough sportsmen. We cannot do better than refer those interested in his performance to turn to our account of his heat with Champion Gladstone.

We append the pedigrees:

LOST.—Mr. Will H. Atlee, Fort Madison, Iowa, has lost his liver and white cocker dog pup, four months old. He has four white feet and white belly; eyes, light. Mr. Atlee purchased the puppy from Mr. McKoon last September, and as he values the dog very highly trusts that this notice may lead to his recovery.

How It Works.—*Centreport, L. I., Jan. 3.*—Editor Forest and Stream: Please withdraw my advertisement from the paper, as I have already received answers enough to fill the number of dogs I intend taking South with me. I expect to go to North Carolina on Wednesday. W. W. TITUS.

A SQUARE REPORT.—*Boston, Mass., Dec. 10.*—Editor Forest and Stream: The reason why I now subscribe to the FOREST AND STREAM is because of your report of the Eastern Field Trials. I have never had much faith in the justice of either bench shows or field trials, believing that as a general thing they have been guided and controlled by a clique as an advertisement for their own breed of dogs, and not in the interest of the public. As long as we can have upright reporting like yours let field trials continue. Though Sensation got a place, the glory is with Smut. Though Gladstone took away the prize, the honor is with Nat. RIGHT AND LEFT.

#### KENNEL MANAGEMENT.

41. C. A. S., Sloansville, N. Y.—I have a hound two years old afflicted with worms. Please send me a remedy. Ans. No one medium is a sure cure for all kinds of worms. For stomach and round worms give twenty-five grains of freshly-powdered area nut with four grains of santonine, after fasting dog for eighteen hours. Repeat dose in a week, and several hours after each dose give half ounce of olive, or castor oil. For pin worms give injections of salt water, and give internally for three days a dessert spoonful of table salt once each day.

42. A. P. S., Boston, Mass.—Your dog has rheumatism. Give as much Rochelle salts, two or three times a day, as the dog will bear without purging. Keep him out of the snow and wet, and have a warm and dry bed for him to sleep in.

43. T. G., Erie, Pa.—From your description your dog has worms. Give the following vermifuge in a little milk after twelve hours' fasting: Powdered area nut, one and a half scruple; santonine, three grains. Repeat the dose in a week. Each dose to be followed several hours later with half ounce of castor oil. Also give dessert spoonful of cod liver oil twice a day.

#### KENNEL NOTES.

\*. Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes.

THE ICE YACHTS.—The ice north of Poughkeepsie Ferry is covered with five inches of snow, interfering with sailing. South of the ferry there is a fine track with smooth surface, and it is hoped that the next frost will materially enlarge the field. A number of yachts of the I. Y. C. have been under way. Next week we will publish some further details and this season's racing fixtures.

#### NAMES CLAIMED.

Lightning.—Mr. W. W. McCain, Rush, Pa., claims the name of Lightning for his lemon and white pointer dog, whelped August 1, 1889, out of Gardner's Mats by owner's York.

Joe, Jr.—Mr. John Labatt, London, Ont., claims the name of Joe, Jr., for Irish terrier dog puppy out of Noah by Joe, purchased from Dr. J. S. Niven, London, Ont.

#### NAME CHANGED.

Gold Elsie.—Mr. Richard Dorman, Cincinnati, Ohio, claims the name of Gold Elsie for red Irish setter bitch, formerly Rylla, out of Magenta by Rory O'More.

Mr. Dew.—Mr. J. Samuel Vail, Rome, Georgia, claims the name of Mr. Dew for his setter puppy out of Daisy Dew by Lincoln.

#### WHELPS.

Zip.—Mr. C. H. Goodman's (Springfield, Mass.), pointer bitch Zip Saspehot-June, whelped Dec. 9, seven puppies by Rattler (Ranger-Bess), five dogs and two bitches, all dark liver and white. None for sale.

Grace.—Mr. N. Elmore's (Granby, Conn.), pointer bitch Grace (Sensation-Tony), whelped December 25, eight puppies, four dogs and four bitches by Gay (Snaphoot-Fanny II). Four of the puppies are liver and white, and four lemon and white—all finely marked.

#### SALES.

Don Juan.—Mr. Robert C. Cornell, of this city, has just purchased from Mr. L. H. Mayott, of Springfield, Mass., the lemon and white pointer dog Don out of Psyche II. by Sensation. Don was whelped August 7, 1878, and we hear that he is an excellent field dog.

Yule, now Gold Elsie.—Mr. Richard Dorman, Cincinnati, Ohio, has purchased from Mr. W. H. Pierce, Peekskill, N. Y., the red Irish setter bitch Rylla (Rory O'More-Magenta).

Match.—Mr. Robert C. Cornell, of this city, has purchased from Mr. John White, Bridgeport, Conn., liver and white pointer dog Match out of Grace by Sensation. Match is a well built dog, very much like his sire, and is litter brother to Gregory's Belle.

Kate.—Hon. E. H. Lathrop, of Springfield, Mass., has purchased from Dr. Corcoran the dark liver and white pointer bitch Kate (Ranger-Bess).

Tom-Nellie Horton Whelp.—Mr. G. E. Browne, of Dedham, Mass., has sold to Mr. P. Aldrich, Readville, Mass., a Gordon setter dog puppy, whelped August 11, 1880, out of Nellie Horton by Donno's Tom.

Tom-Nellie Horton Whelp.—Mr. G. E. Browne, of Dedham, Mass., has sold to Mr. H. Sawyer, Charlestown, Mass., a Gordon setter puppy, whelped August 11, 1880, out of Nellie Horton by Donno's Tom.

Belle.—Mr. N. Elmore, Granby, Conn., has purchased from Mr. J. N. Dodge his prize winning English harlequin Belle (winner of first prize at Philadelphia and Boston, 1879). She is thirteen inches high, ears spread seventeen inches and is illustrated in "Celebrated Dogs of America."

Nellie Horton-Tom.—Mr. G. E. Browne's (Dedham, Mass.), Gordon setter bitch Nellie Horton (Mum's Duke of Gordon-Tilly's Dream) to Donno's Tom (Stockton's Dash-II. Smith's Fly) on Dec. 26, 1880.

Don Juan.—Mr. R. B. Hamilton's Elleen to Mr. Robert C. Cornell's lemon and white pointer Don Juan (Sensation-Psyche II).

#### PRESENTATIONS.

Gordon Setter Whelp.—Mr. James Moore, of Toledo, Ohio, has presented to Mr. E. H. Gilman, of Detroit, Mich., a Gordon setter puppy five months old sired by Grouse.

STATEN ISLAND has a game league.

That low, nervous fever, want of sleep and weakness, calls for Hop Bitters.

## The Rifle.

THE GUN TRAVELER'S DINNER.

THE Holiday season had one affair of festivity which was certainly novel, for the like of it had never been seen before, and its occurrence betokens a very near approach of the millennium: it was the dinner of the "Gun and Revolver Travelers." In other words, a baker's dozen of the drummers who go up and down the face of the land, intent on scattering things of beauty in the shape of fine guns and those beastly little yamrutsie pistols, forgot business for a time, forgot that they were bitter rivals, forgot that there was any such purgatory on earth as "the Road," and spent a jolly evening together and parted wishing for many happy returns of the same.

The suggestion that it would be a good thing to have a social time together came as a happy thought to one of three or four of these commercial travelers as they met in a haphazard fashion at St. Louis. "We'll do it," was the response, and on the 30th ult. they did indeed carry out their plan, and at the establishment of ye host Emile Heine, 47 E. 10th st., they sat down. It was not a large assemblage, Heaven be praised, for many more of these purveyors of empty guns that go off and bring sure death would leave no fools to be counted at the next census. But there were enough of them to be responsible for the scattering of half a million pistols and revolvers over the land each year and set statisticians to wondering where all these bits of mechanism go. "After the pins," says somebody; but that is only dodging the question, and we propose the commundum now as a tough nut for the next dinner of the Associated Travelers, when the Lyon may try his teeth on it and the lice hunting peck at it.

The Travelers made a very good beginning on what may prove an endless series of annual reunions, and while showing themselves the very best of attention did not forget to invite a representative of the FOREST AND STREAM to enjoy their frugal fare and sip the nectar from the same decanter. There were fourteen of the Travelers around the board. "Eh! Gad," said the ancient of the party, "how lucky it is I am not absent, for you never could have dined with thirteen at this table." Not one of them had a brace of horse pistols thrust under the flap of his claw-hammer, and some of them might have passed for theological students. They were voluble, of course, and almost as noisy as the wares they dealt in. The shot now and then popped up and there was no end of trade jokes, while a drummer for Dittmar powder would no doubt have been welcomed as a peg on which to hang all the thrusts of the evening. No such spectre came to the board, however, and for five hours it was all fun, feed and frolic.

The list of diners included H. F. Rice and Wm. Fischer, representing Schoverling, Daly & Gales. Wm. Bunting and S. Gorton, representing T. G. Conway. J. Malby, J. Henley, J. W. Curtis and M. Herzog, representing Malby, Curtis & Co. Mr. Sylvester, representing Hartley & Graham. W. M. Calhoun, representing Herman Boker & Co. Chas. Fraser, representing John W. Hutchinson. P. Lyon, representing Mervin, Hulbert & Co. Ed. Struller, representing Struller, Law & Co. and Frank Gutterson, representing Graham & Hovey.

The menu was a novelty in its way and we reproduce it entire, leaving our readers to laugh over it with as much gusto as the gun drummers themselves when each of them saw it for the first time at table and began to run over the items. It has a strange gingle as though a cook book and a small-arm catalogue had concluded to amalgamate, and some of the offspring will be recognized as having a pun-gent flavor, and some of the party, we fear, found more truth than fiction in the names of central-ire champagne, back-action Burgundy, swell-head whiskey and solid-striker beer.

HUNTING RIFLES.

PAGOSA, Col., Dec. 12.

SOME very interesting articles have appeared in your valuable paper recently on the Hunting Rifle. I notice many very different ideas as to the best rifle, and I think the very wide discrepancy arises mainly from the writers advocating the best rifle for their hunting locality, overlooking the fact that the gun for one section may not be the one for another, where the topography of the country and the game to be killed may be entirely different from the first. The best game-killing rifle I suppose ever used was the large bore rifle, 16 to 12 shot-gun gauge, with round ball and four to five drachms of powder, used by the British sportsmen in India twenty years ago, the spherical ball producing more "shock" and killing deadlier than the same amount of lead in a conical form, and the trajectory being very flat for shooting in forests. But rifles like these are not made in the United States, and it is of American rifles for American hunting that I write.

Rides for hunting in the United States can be generally divided into three classes, according to where they are to be used:

1. A rifle for hunting in thick timber, especially in the South (though this rifle will do for all forest shooting in the United States). The range in the thick woods of the South will not generally be more than 100 yards, and rarely 150 yards. The game hunted are deer, wild turkey and black bear. The best cal., .40 or .44; I prefer the latter. From 50 to 60 grains of powder I think ample for this rifle; more powder only makes the recoil greater, and I must confess a great dislike for a kicking rifle. Again, 50 or 60 grains of powder will kill just as quick at the short ranges mentioned as 100 grains; and with a light bullet, 25 grains to 300 grains, will give a flat trajectory, which is so important in a hunting rifle, especially one of this kind, where such a small object as a turkey's head is so often the mark. I dislike greatly heavy bullets of 450 grains, with their high trajectory at short ranges, causing such frequent misses. It's not the weight of the lead that kills. What we want is high velocity. For a rifle of this kind elevating sights are hardly required, but it's not amiss to have a 200-yard leaf for occasional use. I prefer in this rifle a short barrel, about 26 inches. A short rifle can be got on game, especially running deer, much better and quicker than a long barrel, as in shooting in thick timber there are not many opportunities to get more than one shot at a time. I like the single shooter better than the repeater. It's simpler, can be loaded quick enough, and, having fewer and simpler parts than the repeater, is not so liable to be injured by the rust which so quickly attacks a gun in the South.

2. A rifle for hunting on the plains; the game antelope and buffalo. The typical game of the plains is the antelope. No animal is so wary and shy as antelope where they have been much hunted, and no animal that I have killed is generally shot at such long ranges. I have known them to be killed at 500 yards, and from my experience think fully one-half the antelope killed are shot between 200 and 300 yards. For such long-range shooting a powerful accurate rifle is needed with a flat trajectory, as distances are hard to estimate correctly on the plains—a barrel not less than 30 inch, cal. .44, 77 grains powder with long bullet, or cal. .40, 90 grains powder. Many of the plainsmen prefer the .40 cal., 90 grains powder to any other calibre.

3. A rifle for hunting in the Rocky Mountains. Here the shooting parties of something of both of the two preceding classes as far as range is concerned. You may have a shot at a black-tail deer at 100 yards away in the pine timber, or again you may have to shoot at a mountain sheep perched on some bare rock 300 yards distant. The game is the elk, black-tail deer, mountain sheep and grizzly bear. I have found that a rifle of this class should be more powerful than the first two described. A .50 cal., 70 to 90 grains powder I would prefer, though many use .44 cal. or .45. Many of these animals are tenacious of life and take much killing. In this kind of shooting, more than in timber or plain shooting, a repeater is desirable. I have often got several shots into a band of elk before they were out of range with a single shooter, and of course with a repeater could have done better. The Winchester have brought out a .50 cal., 100 grains powder, 300 grains lead, Express repeater. I have never seen the gun, but from descriptions it must be an excellent weapon for dangerous game. Personally I prefer a single shooter for general hunting purposes, but for dangerous game, or in a country where it's so cold that to load a rifle with half-frozen hands becomes a task, a repeater has advantages.

The three foregoing classes represent, I think, generally the

"On July 23, 1832, America competed in the regatta of the Royal Victoria Yacht Club at Hyde, and among the other five competitors were Arrow and Mosquito. Arrow had been lengthened, and her speed was thereby much improved; still, so far as this match was concerned, she had no advantage over Mosquito, who was a perfect paltry. The course was round the Isle of Wight, the prize the Queen's cup, and the yachts got back to Hyde at seven o'clock, nearly abreast—Arrow, 6.59.30; Mosquito, 6.59.31; and America, 7.1.20. Mosquito should have won but was disqualified for rounding the light. Arrow was a schooner, and America a cutter, and the schooner yacht for £1,000, but no match could be arranged, although Lord Londesborough with Mosquito, and Mr. Weld with Alarm (now transformed into a schooner), were anxious for a contest. However, on Oct. 12, America was matched against the Swedish schooner *Albatross*, which was a very speedy vessel, and sailed for the N. W. lightship, for the sake of the best lead in a moderate breeze the Swede ran the American 85 minutes to the leeward mark vessel. The Swede here unfortunately carried away the jaws of her main gaff on rounding, and her mainmast could not afterward be got to stand properly. The American was obliged to anchor, and eventually arrived at the goal at eight o'clock, first by twenty-six minutes; but Sverige at last lost twenty minutes or so by over-reaching.

"The America sailed no matches in 1853, and in 1854 she was hauled up in Mr. Pitcher's yard, Northleat, near Gravesend, for repairs, and the water was pumped out of her. Her keelson seemed out of the question. In the end Lord De Blaquiere sold her for a few hundreds to Mr. Pitcher, who leisurely set about rebuilding her at odd times. Her frames were taken out one by one, and replaced by frames of oak, and she was replanked with teak. The water was pumped out of her. She was a fine building, that a few years since Mr. Pitcher told us he did not think a carload of the original material was left in her. The heavy American eagle, which was on her stern, had previously been taken off at Portsmouth, and subsequently adorned the park of the English House of Commons. She was a fine specimen of the American ornament. Mr. Pitcher had some difficulty in disposing of her, but in 1880 he found a purchaser in Mr. H. Deane. This gentleman cut her mainmast 6 ft. and foremast 5 ft., partly because he was bound on a trip to the West Indies, and partly because the mastsheads were rotten. The galls were, however, removed, and the masts were topped and the rig set up. He re-named her Camilla, and on Aug. 17 entered in a match at the regatta of the Royal Western Yacht Club at Plymouth,

other competitors were Wildfire, schooner, 53 tons, Mr. Turner-Turner, and Galatea, 124 tons, Mr. Thomas Broadwood. There was a moderate breeze, and Camilla beat Wildfire twenty minutes, and Galatea thirty; thus, as she only had to allow Wildfire seven and a half minutes, she was able to beat her by twenty minutes. The West Indies as projected, and, returning in 1891, sailed a match at Queenstown, June 23, when just fresh from her long ocean voyage. She, therefore, was scarcely fit for match sailing, and it is not surprising that she only beat La Traviata (a schooner of 85 tons) by a few minutes. The result was, on July 5, she was matched against the Alarm, which Mr. Weld "Americanized" in 1852, and since then among English schooners had been invincible. Unfortunately, a day or two before the match the crew of the Camilla, who were located in the harbor, were told that she would sail the yacht himself. Accordingly, Mr. Decie had to find a scratch crew, and he got on board something of all sorts—Gosport cabin, Hyde watermen, "bounty men," who had been shipped in by H. M. S. during the war with Russia, men out of coaters, pensioners, and in fact almost any one that offered was accepted. One stalwart fellow, however, aroused Mr. Decie's suspicions, and he was asked if he really had ever been to sea. He replied, "Yes, up the Baltic in the Edinburgh." And were you an able seaman?

"Yes, nearly, sir," was the response; and how near the whole crowd was to being able seamen may be guessed from the fact that Camilla was blown by the wind, in a fine breeze, with ballast topsails and ballyhoon jib, and in trying to get the mainmast down the crew let go the tack, and the consequence being that the sail blew away, the ballast and sheaves were scattered all over the deck jammed somehow, and for eleven minutes the America was head to wind in Spithead, with her top-sail in mid-air like a balloon. In the end Alarm won by thirty-seven minutes, but no one regarded the result as satisfactory. Mr. Decie re-enters the yacht, "America," and sailed for the Southern States, where his English crew left him, as they thought he was getting into hot water between the rival governments which were then disputing for power. She was subsequently chartered by a Federal cruiser, carrying despatches for the Confederates on the river St. John, but her crew scuttled her, and themselves got away to the shore in her boats. She was lifted by the Federals, and after the conclusion of the war was used by the U. S. Navy as a training ship.

The America was subsequently chartered by the U. S. Navy in 1870, and finished fourth, both by place and time, arriving at the goal thirteen minutes ahead of Camilla. It was then decided that the America was to be matched single-handed against the Camilla, and she accompanied the yacht on their cruise from Newport, B. I., to get her crew in proper training. However, on her return passage from Newport to New York, in company with Camilla, she sailed (in broad daylight) plump into a coaster, and knocked all her head gear and figure-head scum work away. It is said to say that Mr. Decie re-enters the yacht, and the result could see, not a soul was on deck at the time—wind very light. The naval authorities after this decided that the America should do no more yachting, and in 1874 sold her to Gen. Butler. The gentlemanly and well valued vessel was, however, never heard that he is about to modernize her in some way, and we trust it will be done with discrimination.

In 1882 the late owners of the America presented the New York Yacht Club with the yacht, which had been at Coves, it seems, without any written introduction as to the object of the presentation, and so in August, 1887, the donors sent the following letter to the New York Yacht Club:

To the Secretary of the New York Yacht Club:

Sir—The undersigned members of the New York Yacht Club, and the owners of the schooner yacht America, beg leave, through you, to present to the club the cup won by the America at the regatta of the Royal Yacht Squadron at Coves, Aug. 22, 1851.

This cup was offered as a prize to be sailed for by yachts of all nations, without restriction as to the nature of the cargo, going round the Cape of Good Hope, and was won by the America, beating eight cutters and seven schooner yachts, which started in the race.

The cup is offered to the New York Yacht Club subject to the following conditions:

Any organized yacht club of any foreign country shall always be entitled, through any one or more of its members, to claim the right of sailing a match for this cup with any yacht or other vessel of not less than 30 tons more than the America, and the Custom House rate of the country to which the vessel belongs.

The parties desiring to sail for the cup may make any match with the club in the possession of the same that may be determined upon by mutual consent; but, in case of disagreement as to the match, the matter shall be referred to the arbitration of the regatta of the yacht club in possession of the cup, and subject to its rules and sailing regulations, the challenging party being bound to give six months' notice in writing, fixing the day they wish to start. It is to be understood to enhance Custom House measurement, size, and name of the vessel.

It is to be distinctly understood that the cup is to be the property of the club, and not of the members thereof, or owners of the vessel winning it in a match, and that the condition of keeping it cup to be sailed by the club, and the conditions of the cup, and the terms above laid down, shall for ever attach to it, thus making it perpetually a challenge cup for friendly competition between foreign countries.

(Signed) J. C. STEVENS, J. BECKMAN FINLEY, HAMILTON WILKES, GEORGE L. SCHUYLER, EDWIN A. STEVENS.

A copy of these conditions was sent to all yacht clubs in 1857, and published in English periodicals; but no challenge was made until 1869. The challenger was Mr. J. Ashbury, of the Camilla schooner, as representative of the Royal Thames Yacht Club. He came to sail against the America, but the members of the New York Yacht Club decided to send as many yachts as would enter against the Camilla. This was in direct opposition to the wish of Mr. Schuyler (the only surviving donor of the cup) who wrote to the commodore of the club in March, 1870:

I can state with certainty that all the signers of the letter to the New York Yacht Club presenting the cup won by the America in 1851 considered the word "match" in connection with the conditions proposed by them, as meaning that but one vessel could sail against the party challenged, and that the result of the match was to be on the lee side of a line three-quarters of a mile long, with sixteen vessels on her weather, there being only one to leeward of her. The yachts had to beat down a narrow channel from Staten Island to the Hook City Light, eleven miles distant, and Camilla had to work her way through the whole of it, and in doing this in the Narrows it was very close quarters, and some of those on board the American yachts knew so little about the "rule of the road" that the Camilla was made to give way three or four times.

On an extraordinary day, the weather being very light, in the end Camilla came in eighth, half an hour after the winner (the Magic), thirteen minutes after the America. A curious incident in connection with this match was the fact that Commodore Stebbins subsequently caused to be posted in the club house, on Staten Island, calling attention to the club sailing rules that yachts on the port tack were to give way to those on the starboard tack. In 1871 Mr. Ashbury built the Livonia, and again challenged for the cup, but the club announced their intention of sending a fleet, and could not bear of any outside course instead of the regular course. This was in spite of a second long letter Mr. Schuyler wrote, clearly defining what were the intentions of the donors of the cup. Mr. Ashbury then hit upon the idea of obtaining certificates to represent the Livonia, and sailed for the purpose, and the name of the club. He expected to sail these matches one after the other, and claim the cup if he won the match. This scheme was an impracticable one, and the New York Yacht Club would not listen to it, but, offered to sail seven matches against the Livonia, the club choose the days for the matches as they pleased, and also a yacht to meet the Livonia on the morning of each match. Mr. Ashbury accepted these conditions, but of course it was next to

impossible to win. Five races were actually sailed, and, as the Columbia won twice, and the Serpho twice against Livonia's ones, the cup was declared to be still the property of the New York Yacht Club.

In 1887 the cup was again challenged for by a Canadian owner, and the New York Yacht Club, in the person of the Commodore, almost without exception, declared that the Camilla and Livonia had been unfairly treated, and demanded that one yacht should be selected to do battle against the Countess of Dufferin, and the result, of course, was that the New York Yacht Club agreed to this, and the Madeleine was the selected vessel. Three matches were decided upon, but only two actually sailed—one over the inside course, and one outside—Madeleine won two "right away."

We must state that the New York Yacht Club, in case of the Livonia and Countess of Dufferin, waiting at the harbor, also selected, and no doubt they would do so again if they were satisfied that they had a yacht capable of making a good fight with the challenging yacht.

## THE OLD AMERICA.

Editor Forest and Stream:

I read with much pleasure your account of the "Old America," the more so as I happened to be in England at the time of the international race (1851), and of course went to Coves to see the fun. To say that the excitement run high would be begging the point. There is an episode in that race which I think has never been published. The yachts being placed for the race, and the time for starting at hand, the gun sent forth the signal. It was a moment of intense excitement, and with a beautiful sight to see the men in their smart yachting lozes manning the halyards, all so forward ready to hoist away. Hardly had the smoke cleared the muzzle of the gun than the jolly English tars had their sails out and aloft, and their boats gathered away. Not so with the America, however; there she lay, not a sail of her crew had moved at the signal. When, like a spark, the cry echoed through the crowd: "The Americans are not going! The Americans are not going! Just then what our lads were waiting for, a big puff of wind, came along, then up went that historical sail, flat as a board and taut as a drum head, and the whole vessel, being at the moment under way, to give two or three lightning bounds, and in a few seconds the race was over without peradventure.

St. Louis, Dec. 24.

## EXTRACTS FROM LOG OF GUINEVERE, R. C. Y. C.

August 8. Left Niagara at 2 p. m. for Toronto. Became three or four miles outside the mouth of the river for three hours. Picked up a fine breeze from southwest at 5 p. m., and carried everything, using the second jib as a watersail. Were near Toronto by 10 p. m., but the wind at sundown and did not reach our moorings till 10 p. m.

Aug. 16. Started for Hamilton at 3 p. m. Brisk north wind. Set out under lower sail though some other yachts had a reef down. Lost half the harbor's entrance through having to pull ashore some ladies to visit the harbor, and a short run, running twelve or fifteen miles we sent up jib-top-sail, and off Brought the gaff-top-sail. The wind lessening toward evening reached Burlington Beach before 1:30, having made the run of 33 miles in a little less than four hours. The harbor was discovered through the yacht accommodated a crew of seven, all sleeping on board at night—not bad for a seven-tonner.

September 18. Started for Port Dalhousie 3 p. m. Wind had been light, but on starting a strong breeze came, when it suddenly shifted to east, and weather became rather thick. As the wind was getting up we kept to lower canvas. The Oriole, 95 tons, and Alarm, 38 tons, passed out of the harbor ahead of us for a sail in the lake. The wind now freshened to a strong breeze, and when 2:30 p. m. was reached the wind shifted to west, and the mist taking down a reef, and soon after we made out the Oriole also reared. After making about ten miles we thought it better to reduce canvas as the lee took us out of sight, and we were again in the harbor, and the wind shifted to east, and we were, therefore, turned to and took in a reef in mainsail and shifted jibs. With the fine beam wind we veered off the miles at a good rate, and expected to make a quick run across. There was a great deal of smoke seen than there should have been, seeing that the wind had just got up, and we were in the harbor, and it is by no means that it had been blowing hard lower down the lake. At 6:30 we were well into Port Dalhousie, but soon afterward lost the wind, and took four hours to cover the last three or four miles, having finally to row the yacht into the harbor with the dingy at 11 p. m. The storm signal being up when we got in we expected to have some wind next day on our return, but had very little, and we were eight hours running back—the distance being thirty-one miles.

SEAWORTHY YACHT CLUB.—The annual meeting will be held Monday, January 10, at Delmonico's.

OCEAN CHURCH.—The thirty-five ton yawl Falcon has been heard from at Bahia, Oct. 22, having made the fastest passage from St. Vincent this season, twenty-two days. It will be remembered that she is Southampton, Eng., in August last, bound for the Pacific via Cape Horn, with a crew of Cornishmen only.

HOBBS RIVER YACHT CLUB.—The following officers have been elected for the coming year: Commodore, R. V. Freeman; Vice-Commodore, J. E. Grafney; Secretary, E. R. Wilson; Treasurer, J. Stiller; Trustees: T. Muller, T. Eude, Charles Van Ghien, James Groat, and K. K. The club is about to erect a new house at the foot of West Seventy-fourth street.

POPULAR ERRORS.—It is very generally supposed that American yachts are of very much less displacement than English boats of the same size, because the former carry as a rule less ballast, and upon this assumption much has been said in the public estimation, presenting to the uninitiated dire tales of the terrible diving to which the English craft is prone. The Columbia is, for instance, an example of a buoyant American schooner. She is 90-ft. water line, 25½ tons displacement, and in the public estimation, in light as a cork, for she carries only 35 tons of ballast. On the other hand, the English schooner Seabelle is 90-ft. water line, 19½ tons, 11½ ft. deep and has 11½ tons. Both are practically alike in size, and also in displacement, the Columbia displacing 25½ tons and Seabelle 157. Yet the latter carries 73 tons of ballast against the former's 35, showing that the American is not at all the lighter or more buoyant, but exactly the contrary, the saving in Seabelle, represented by her excess of ballast, being due to smaller spars and rigging, and construction, and less material in hull and keel of shape. The Seabelle, we may add, attains a maximum speed very nearly equal to that of the Columbia with fully 33 per cent. less sail area. It is a question whether the slight difference between the two yachts is well worth the loss of the weight of the smaller sails, safety, far superior qualities and speed in open water. The difference in ballast, 40 tons, taking the whole of it as lead, represents a difference of say, \$4,800 against the Seabelle, a sum counter-balanced, however, by the greater cost of hull and equipment of the Columbia, quality for quality.

## PUBLISHER'S DEPARTMENT.

HOLBROOK Shooting Station, Uptingrove & McLellan, Valparaiso, Ind.

THE NEWSPAPER WORLD.—We find much valuable information about newspapers in Messrs. N. W. Ayers & Son's "American Newspaper Annual," published at their office in the Times Building, Philadelphia, Pa. From the pages of this very complete volume it appears that there are in the United States and Canada some 10,674 newspapers and periodicals, of which 1,241 belong to the State of New York alone. The weeklies number 8,221, and the

dailies 973. The publishers have collected the fullest possible information respecting each publication's circulation, politics, age, rate of advertising, etc. The book contains very full lists of class papers, geographical distribution and a useful index. It is a most complete, useful and, so far as our examination shows, reliable information.

## Answers to Correspondents.

### No Notice taken of Anonymous Communications.

L. T. C.—Concerning 181b, canoes write to Mr. Rushton, Canton, N. Y.

H. O. W.—The open season expired Jan. 1. We can supply the book shortly.

MARTINEZ, Rochester, N. Y.—Address Currier & Ives, Nassau St., New York.

R. D., Cincinnati, Ohio.—We make no charge for inserting kennel notes in our paper.

R. H.—List of winning yachts appears in next number. If record of your boat is not complete correction will be made.

PRO SANO.—Old canvas of your canoe, or use water-proofing process elsewhere mentioned in these columns. You can furnish over all. Renew occasionally, rubbing down smooth first.

F. E. A., Gloucester, Mass.—Is there any book published which gives directions for taking the hides from birds and animals? If so please give me price. Ans. Maynard's Naturalist's Guide, price \$2.

H. H. B.—Nothing published concerning cutting modern yacht sails. Practice only can make perfect, so far as the art is concerned. The proper design and balance of sail is explained in many works on ship and yacht building and will be fully illustrated in coming numbers.

E. S., Waterbury, Conn.—After returning from shooting one day last week I was taking some grouse from my pocket when I felt some insect on my hand which I secured, thinking it might be the grouse fly. I inclose it for your inspection. Will you please inform me if it is? Ans. It is the grouse fly.

W. F. S.—To waterproof canoe dissolve half pound sugar of lead and half pound alum in bucket of pure water. Pour off and steep the canvas in it for several hours. Hang up to dry. Or simply oil or paint the boat, sandpapering down several coats, the first one lightly. Painting increases the weight materially.

MAYNARD.—The Nimbus was built, we believe, in 1873 by Harroshoff, of Bristol, R. I. When launched was 37 feet over all, 33 feet 4 inches water line, 11½ feet beam, 5 feet 2 inches deep and 4 feet draft, with board 8 feet. Has always been considered a fast boat and abler than most of her class on account of moderate beam, good depth and freeboard. Has won a large number of races.

A. J., Providence, R. I.—Will entail from St. John's River, Florida, live in the New England States? Will land-locked salmon introduced into Rhode Island ponds breed and propagate themselves? Ans. To both of these questions a fisherman would say that you can't tell until you try. The salmon may breed in the ponds if the water, the food and temperature suit them, otherwise they will not.

J. E., New York.—How do you put crayfish on a hook for black bass? Ans. Take off the large claws and run the hook in on the under side about the middle of the tail and out in the middle of the thorax; or reverse it, as some do. Another way is to use only the tail, if the crayfish is large and the bass are not over two pounds; in this case peel the tail and insert the hook at the base and let the point come near the end.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpentering, oil cloths, rugs, etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Ad.]

**ABOUT PARROTS.**—A notable fact in relation to the peculiar food of parrots is, that the flesh of animals, such as mutton, veal, to that of fish, fish to wild ducks, acorns to the flesh of p. k., and many other instances, is most remarkable in the case of parrots. We are assured by those who, living in South Africa, have frequently eaten of parrot, that the delicacy of the flesh varies from a luxury to positive rejection during certain seasons of the year. When the delicious guava is ripe, they are rapid and fat; the seed of the acacia imparts a slight and not disagreeable soupçon of garlic; spicy seeds give not only the flavor but an aroma of cinnamon, cloves, etc., and all berries give a peculiar quality to their flesh. They are, moreover, wine-bibbers. We had a parrot which had contracted that habit at the passenger's dinner-tables on board one of the P.-line, and Oriental steamers. He would watch the guests retire, and go round and "heel-tap" every glass as dry as any serving-man. The seed of the cotton tree is the parrot's especial weakness, and will intoxicate it in the same manner as alcohol does man. Dealers are said to give parrots a like stimulant previous to showing them to a customer, as it has the effect of making them loquacious. In opposition to a contrary notion, parrots will and have been known to breed in captivity in different parts of Europe. They lay three or four white eggs each time, and incubate several times in a year, sitting from 20 to 25 days, according to the season. The most successful results appear to have been attendant upon cases in which the birds have been provided with nesting places suitable to their habits. In one case a small barrel was procured and pierced toward a third of its height with a hole about six inches in diameter. In the bottom was placed a quantity of sawdust three inches in thickness. On this the female laid her eggs and sat until they were hatched. Recent works question the fact that parrots breed in domestication, but there exist too many trustworthy evidences to the contrary to allow the denial to obtain. Indeed, so long ago as 1833 a writer upon the subject said: "All experiments which have been tried at Caen and Paris in this interesting subject have been attended with the most favorable results."—*All the Year Round*.

**A TRUE STORY ABOUT A CROW'S ROOST.**—A gentleman who lives about six miles north of our city, in a what is probably the most stupendous thing in the way of a crow roost that has ever been seen. The roost is in the magnificent woodland of Mr. Inksheep, and our informant estimates the number of birds at 150,000,000. He says the largest oak trees have been uprooted and smaller ones crushed into kindling wood by their weight; that the noise made by them is so great that the people for three miles around have to stuff cotton into their ears, and are only enabled to communicate with each other through speaking trumpets after the crows begin to assemble. Cattle weighing 1,500 pounds have been killed by the birds and their bones picked clean, and the skeletons of hogs and sheep which weigh 150 to 200 pounds are dangling from the trees where the crows have carried them, and the whole country is strewn with bones, as in the prophet's vision of "the valley of Jehosaphat." Shooting at them is exceedingly dangerous. A gentleman in the employ of Mr. Inksheep fired two shots into one of the trees and narrowly escaped suffocation from falling birds.—*Lexington (S. C.) Press*.

## BRAIN AND NERVE FOOD. VITALIZED PHOSPHITES.

Composed of the NERVE-GIVING principles of the ox brain and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excesses or nervousness. It promotes digestion and strengthens a failing memory. It prevents debility and consumption. It strengthens the brain, gives good sleep, and recuperates after excesses. Physicians have prescribed 200,000 packages.

## Moorefield Kennel.

MR. A. H. MOORE'S ANNUAL SALE OF HIS SURPLUS STOCK OF SPORTING DOGS.

Duke of Beaufort—Black, white and tan Laverack; whelped Feb. 2, 1875, by Pride of the Border, ex-Fairy II, winner at the Westminster Kennel Club Dog Show, open class imported English setters.

Lily—Imported own sister to champion Leicester; black and white; whelped July, 1874; never been shown on the bench; a good bitch in the field, and an excellent mother. Bred by Mr. Llewellyn.

Ruth—Imported (5/8) English setter; breeder, Mr. R. P. Llewellyn; own sister to champion Leicester; lemon and white; whelped 1874, by Prince ex-Ruby; very handsome, a splendid mother, and well broken for the field; invaluable for a brood bitch.

Sepoy—Orange and white English setter; whelped March, 1879 (breeder, L. H. Smith, Ontario, Canada), by Gladstone, ex-Mersey (Leicester-Dart); very handsome; now in E. S. Wanmaker's hands finishing his education. He thinks highly of him, and says he will make a good dog for any gentleman who appreciates a handsome field dog. Can be no finer pedigree.

Benali—Lemon and white pointer bitch; whelped April, 1876 (breeder, E. Orgill, Esq., New York), by Flake, ex-Lily; own sister to champion Rose and champion Ruby; a splendid bitch in the field, very handsome, and an excellent mother; invaluable for a brood bitch.

Pearl—Imported Italian greyhound; color, dark fawn; whelped December, 1878, by Douglas, ex-Gipsy Queen; a very handsome Italian greyhound of the purest blood; bred by Mr. W. R. Bruce, Falkirk, Scotland.

Young Junbo II—King Charles spaniel, imported; breeder, Mr. Forster, London, England; color, rich black and tan; whelped May, 1879, by Champion Young Junbo, ex-Nelly.

For price, etc., address A. H. MOORE, 1,711 Spring Garden Street, Philadelphia, Pa.

## Hotels and Houses for Sportsmen.

**"THE FISHING LINE."**  
TAKE THE  
**Grand Rapids & Indiana R.R.**  
Mackinaw, Grand Rapids and Cincinnati Short Line  
AND THE  
FOR THE  
Trout, Grayling, and Black Bass Fisheries,  
FAMOUS SUMMER RESORTS AND LAKES  
OF  
**NORTHERN MICHIGAN.**

The waters of the  
Grand Traverse Region  
and the Michigan North Woods are unsurpassed,  
if equaled, in the abundance and great variety of  
fish supplies.  
BROOK TROUT abound in the streams, and  
the famous AMERICAN GRAYLING is found  
only in these waters.  
The THOUT season begins May 1 and ends Sept. 1.  
The GRAYLING season opens June 1 and ends  
Nov. 1.  
BLACK BASS, PIKE, PICKEREL and MUSCA-  
LONGUE, also abound in large numbers in the  
many lakes and lakes of this territory.  
The sportsman can readily send trophies of his  
trip to his friends or "club" at home. For  
packing fish can be had at many points.  
TAKE YOUR FAMILY WITH YOU. The scenery  
of the North Woods and Lakes is very beau-  
tiful; the air is pure, dry and bracing. The cli-  
mate is peculiarly beneficial to those suffering  
from rheumatism.

**Hay Fever and Asthma Affections.**  
The hotel accommodations are good, far sur-  
passing the average in countries now enough to  
afford the finest of food and many points.  
During the season Round Trip Excursion  
Tickets will be sold at low rates, and attractive  
travelling facilities offered to Tourists and Sportsmen.  
Dogs, Gun and Fishing Tackle Carried Free of  
charge.

It is a tourist to make sportsmen feel "at home"  
in this route. For Tourist's Guide an attractive  
illustrated book of 68 pages, containing full in-  
formation with colored maps of the Fishing  
Grounds and Lakes, Curds, address A. J. LAFAN,  
Sec. J. A. Kent, Grand Rapids, Mich.

**Chesapeake & Ohio R.**  
The Route of the Sportsman and Angler to  
the Best Hunting and Fishing  
Grounds of Virginia and  
West Virginia.

Comprising those of Central and Piedmont Vir-  
ginia Blue Ridge Mountains, Valley of Virginia,  
Allegheny Mountains, Greenbrier and New  
Rivers, and Kanawha Valley, and including in  
their varieties of game and fish, deer, bear, wild  
turkey, duck, grouse, quail, snipe, wood-  
cock, mountain trout, bass, pike, pickerel, etc.  
Guns, fishing tackle, and one dog for each  
sportsman carried free.

**The Route of the Tourist,**  
through the most beautiful and picturesque scenery  
of the Virginia Mountains, and their most fa-  
mous watering places and summer resorts.

**The Only Route via White Sul-  
phur Springs.**

Railroad connections at Cincinnati, with the  
West, Northwest and Southwest; at Gordonsville  
with the North and Northeast; at Richmond  
and Charlottesville with the South. All modern  
improvements in equipment.

**CONWAY R. HOWARD,**  
Gen. Passenger and Ticket Agent,  
Chesapeake and Ohio Railway Co.,  
May 1/81 Richmond, Va.

## Hotels and Houses for Sportsmen.

**"THE FISHING LINE."**  
TAKE THE  
**Grand Rapids & Indiana R.R.**  
Mackinaw, Grand Rapids and Cincinnati Short Line  
AND THE  
FOR THE  
Trout, Grayling, and Black Bass Fisheries,  
FAMOUS SUMMER RESORTS AND LAKES  
OF  
**NORTHERN MICHIGAN.**

The waters of the  
Grand Traverse Region  
and the Michigan North Woods are unsurpassed,  
if equaled, in the abundance and great variety of  
fish supplies.  
BROOK TROUT abound in the streams, and  
the famous AMERICAN GRAYLING is found  
only in these waters.  
The THOUT season begins May 1 and ends Sept. 1.  
The GRAYLING season opens June 1 and ends  
Nov. 1.  
BLACK BASS, PIKE, PICKEREL and MUSCA-  
LONGUE, also abound in large numbers in the  
many lakes and lakes of this territory.  
The sportsman can readily send trophies of his  
trip to his friends or "club" at home. For  
packing fish can be had at many points.  
TAKE YOUR FAMILY WITH YOU. The scenery  
of the North Woods and Lakes is very beau-  
tiful; the air is pure, dry and bracing. The cli-  
mate is peculiarly beneficial to those suffering  
from rheumatism.

**Hay Fever and Asthma Affections.**  
The hotel accommodations are good, far sur-  
passing the average in countries now enough to  
afford the finest of food and many points.  
During the season Round Trip Excursion  
Tickets will be sold at low rates, and attractive  
travelling facilities offered to Tourists and Sportsmen.  
Dogs, Gun and Fishing Tackle Carried Free of  
charge.

It is a tourist to make sportsmen feel "at home"  
in this route. For Tourist's Guide an attractive  
illustrated book of 68 pages, containing full in-  
formation with colored maps of the Fishing  
Grounds and Lakes, Curds, address A. J. LAFAN,  
Sec. J. A. Kent, Grand Rapids, Mich.

**Chesapeake & Ohio R.**  
The Route of the Sportsman and Angler to  
the Best Hunting and Fishing  
Grounds of Virginia and  
West Virginia.

Comprising those of Central and Piedmont Vir-  
ginia Blue Ridge Mountains, Valley of Virginia,  
Allegheny Mountains, Greenbrier and New  
Rivers, and Kanawha Valley, and including in  
their varieties of game and fish, deer, bear, wild  
turkey, duck, grouse, quail, snipe, wood-  
cock, mountain trout, bass, pike, pickerel, etc.  
Guns, fishing tackle, and one dog for each  
sportsman carried free.

**The Route of the Tourist,**  
through the most beautiful and picturesque scenery  
of the Virginia Mountains, and their most fa-  
mous watering places and summer resorts.

**The Only Route via White Sul-  
phur Springs.**

Railroad connections at Cincinnati, with the  
West, Northwest and Southwest; at Gordonsville  
with the North and Northeast; at Richmond  
and Charlottesville with the South. All modern  
improvements in equipment.

**CONWAY R. HOWARD,**  
Gen. Passenger and Ticket Agent,  
Chesapeake and Ohio Railway Co.,  
May 1/81 Richmond, Va.

**GUNPOWDER!**  
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!  
DUPONT'S GUNPOWDER MILLS, established in 1807, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:  
**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1b. cansisters.  
**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1b. and 5lb. cansisters and 63 and 12 1/2 lbs. kegs.  
**Dupont's Choke Bore.**—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 6, No. 7 being the coarsest. Packed in 6 1/2 lbs. kegs and 1b. cansisters.  
**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1b. cansisters and 6 1/2 lbs. kegs.  
**Dupont's Rifle Fg. "Sea Shooting."**—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFFg. for general use, burning strong and moist. Packed in 3/8, 1b. and 5lb. cansisters, 63, 12 1/2 and 250 lbs. kegs. Fg. coarse, FFFg. fine.  
**Dupont's Sporting, Mining, Snappers and Blasting Powders** of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Minnie, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.  
Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 70 Wall Street, N. Y.**  
N. B.—Use none but DUPONT'S Fg. or FFFg. for long-range rifle shooting.

**The Hazard Powder Co.,**  
MANUFACTURERS OF

**GUNPOWDER.**

**Hazard's "Electric Powder."**  
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square cansisters of one pound only.

**Hazard's "American Sporting."**  
Nos. 1 (fine) to 6 (coarse). In 1lb. cansisters and 1lb. kegs. A fine grain, quick and clean, for land prairie shooting. Well adapted to shotguns.

**Hazard's "Duck Shooting."**  
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. cansisters and 63 and 12 1/2 lbs. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loading.

**Hazard's "Kentucky Rifle."**  
FFFG FFG, and "Sea Shooting" FG in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1 1/2 lb. cansisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

**Superior Mining And Blasting Powder.**  
GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.  
The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

EVERY WAY (EXCEPT AT SHOOTER). ANY DESIRED DIRECTION. ALL IN ONE TRAP  
AND ONLY ONE SPRING USED.

Watches, Clocks, Jewelry, Rifles, Pistols, and all kinds of Sporting Goods,  
GREENER'S and BONEHILL'S GUNS A SPECIALTY.  
**WILL. H. CRUTTENDEN, Cazenovia, Madison County, N. Y.**  
**SHOOTING, BOATING AND FISHING.**  
PRICE \$1.  
FOR SALE AT THIS OFFICE.

**THE NEW AMERICAN**  
**Breech-Loading Shot Gun.**

  
SIMPLE AND DURABLE.

Rebounding Lock.  
Choke-bore Barrels.

For close, hard shooting excels all others. Extra heavy guns for ducks a specialty. Send stamp for circular. C. S. SHATTUCK, Manufacturer, Hatfield, Mass.

**Eaton's Rust Preventer.**  
FOR GUNS, CUTLERY, AND SURGICAL INSTRUMENTS. Safe to handle, WILL NOT GUM, and will keep in any climate. Sportsmen everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes, of Bay City, Mich., writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns."  
The trade supplied by sole manufacturer, GEO. B. EATON, 540 PAVANIA AVENUE, Jersey City Heights, N. J.  
Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; B. Kittredge & Co., Cincinnati, O.; E. E. Eaton, Chicago, Ill.; Brown & Hilder, St. Louis, Mo.; Thos. W. Farr, Cleveland, O.; Trimble & Kleibacker, Baltimore, Md.; Cropley & Sons, Georgetown, D. C.; Jos. C. Grubb & Co., Philadelphia.  
CANNOT BE SENT BY MAIL.

**Ammunition, Etc**

**TATHAM'S**

Selected Standard  
Number of Pellets to the oz. Printed  
on Each Bag.

**Trap Shot!**  
Soft or Chilled.

NUMBERS 7, 8, 9 AND 10.  
No. of pellets to oz.: 538 478 688 1058 Soft.  
545 485 715 1180 Chilled.

**TATHAM & BRO'S,**  
83 BEEKMAN ST., NEW YORK.

**THE HOWARD MANUFACTURING CO.,**  
MANUFACTURE AND INTRODUCE  
**PATENTED NOVELTIES**  
FOR SALE BY ALL DEALERS IN SPORTING GOODS.

  
Weigh your fish on the spot.  
**REAL**  
**Pocket Scale**  
MADE OF METAL,  
Heavily Nickel Plated.  
COMPACT, STRONG,  
DURABLE.  
Can be carried in the Vest Pocket.  
PRICE 25 CTS.  
Sample by mail on receipt of price.  
A liberal discount to the trade.  
No. 1—"Post Office," weighs to 8 ozs.  
No. 2—"Pocket," weighs to 1 lb.

## FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 13, 1881.

IT SOMETIMES occurs that a subscriber receives an imperfect or mutilated copy of the paper. By returning it to us a perfect one can be secured in its place.

EVERY READER OF THE FOREST AND STREAM can show his good will by sending us the name of a new subscriber. The paper is one which each man who reads it can with good grace recommend to his friend.

THE COMMERCIAL ADVERTISER.—We notice with pleasure the prominent position held among the evening dailies of this city by our neighbor, the *Commercial Advertiser*. That journal, having just finished a prosperous season, is now entering on the eighty-seventh year of its existence as fresh and young as ever. Its circulation, we understand, and we can quite believe it, is growing weekly, and the clean appearance of the paper and the neat press-work reflect great credit on the business management. The columns of the *Commercial* are never heavy, but always cheerful, spicy and newsy. We congratulate our contemporary and wish it well in the future.

STATEN ISLAND GAME LEAGUE.—We congratulate the sportsmen of Staten Island on the formation of a game league for the protection of the game and fish of Richmond County. Mr. Francis Endicott is the President and Mr. Robt. W. Hopkins (P. O. Box 4,377, New York city) the Secretary. The new society has already begun the real work of a game society by securing two hundred quail to supplement another hundred presented to it by one of its members. The society hopes to have a thousand birds by the middle of February to turn out in the spring.

Carp have already been put into several ponds, and it is proposed, if the fish can be secured, to stock every pond on the island. There is abundant field on Staten Island for just such a society as this new organization, and the manner of taking hold of the work gives good promise that the members will devote their time to something besides dinners and trap shoots.

## THE REFRIGERATOR AMENDMENT.

THE improved construction of refrigerators has introduced a new agent into the traffic of game and has very materially affected its destruction and consumption. Refrigerator cars convey tons of venison and other game from the localities where it is captured to the great market centres. Here huge refrigerators are prepared to receive and store it, or steamship refrigerators convey it to foreign markets. Where formerly pounds were carried it is now possible, by means of such cars, storehouses and steamships, to transport tons. In providing due protection for game it will not do to overlook these improved appliances for its marketing. The refrigerator is aggressive; it refuses to be ignored. The ice-box has just come to the front in this State; and it will be well to understand exactly what it is and what it means.

Among the proposed amendments of the New York game law are clauses legalizing at all seasons of the year the sale of venison, quail, partridge and woodcock. The only proposed limitation upon this all-the-year-round market season is that the game shall have been killed and stored in the refrigerators of the dealers within the prescribed legal season for killing the same.

Such a provision, it is claimed by those engaged in the attempt to put it through, "would revolutionize the game law." We think that it would most decidedly.

The movement is instigated and controlled solely by the game dealers of this city and of the West. The circumstance of its being fathered by a game association should not be a blind as to its true nature. The proposed amendment is wholly and only in the interests of the pockets of the men who own large game refrigerators.

This proposed amendment is of the New York law alone, but it does not alone concern the citizens of this State; if passed, its evil effects would be felt equally in Michigan, Minnesota and the other game States of the West. The movement on the part of the dealers is a national one; it is then of national interest that it be defeated.

A market all the year around means killing all the year around, in season and out of season; and that means speedy game extermination. To guard against this illegal traffic it is proposed to provide a system of market inspection, affidavits by individual dealers as to the amount stored during the open season, and a record of each sale thereafter, etc. By such machinery it is claimed that any traffic in game killed out of season can be detected and effectively punished. We most decidedly doubt that any system could be devised and put into operation which would meet the requirements of the case. The continued and defiant violation of already existing game laws by certain dealers in this city, gives little promise that they are to be relied upon for a scrupulous observance of the refrigerator-affidavit system and the apathy of public feeling on the subject, as manifested by Gov. Cornell's failure to provide New York city with a game protector, gives still less assurance of the requisite vigilance on the part of officials.

But even if this control were provided, so that the sales out of season should be confined to game killed in season, the plan would still be utterly bad, for it is a premium on the unlimited killing of game during the open season, without regard to the current market demands. In short, it means the wholesale slaughter of game, unrestrained save by the limit of the strength of the butcher and the pocket of the dealer.

This brings us to the only argument advanced in favor of the law, namely, that the quantity of game killed in the present open season is largely in excess of what can be sold in that period. This is the root of the whole matter. The dealers have set to work to remove the restraint upon their trade. Instead of conforming to the law and being satisfied to confine their purchases to such amounts as can be disposed of within the proper season, they are now trying to regulate the season to their own interests by making the time conform to their purchases. The simple fact is that if the game dealers of this city can sell only a certain amount of game in the prescribed season, they have no business to buy more than that amount. They have it entirely within their control to regulate the supply. We fail also to recognize the pertinency of the argument that a vast capital is invested in the game business, and that those interested must secure a sufficient return therefor. If the capital is greater

than can be used to advantage when the trade is restricted to conformity with the existing law, let the surplus be withdrawn and be put somewhere else.

This home consumption of game is only one part of a traffic which is assuming tremendous proportions. The export trade to Europe is constantly increasing, and domestic dealers complain that they cannot sell here the game which comes from the West—it must go to Europe. The sufficient answer to that is that we cannot afford to supply the European markets with American game. The contract is entirely too large. The supply will not long be equal to the demand. Exportation of American game should be prohibited by national enactment.

In the absence of such legislation the only remedy lies in non-export laws passed by individual States. We call the attention of Western game societies to the importance of early movement in this matter. We understand that the subject is to come before the Michigan Association at their meeting. The time has come for decided action, and we hope to see the Michigan Association press such a law.

Respecting the proposed amendment to the New York law, we submit that game laws should be framed for the due protection of game, not to time-serve the interests of the market dealers.

We invite expressions of opinion on the subject.

## NEXT FALL'S SHOOTING.

THE severe weather with which the present winter opened threatens the destruction of all our quail. From New York down through New Jersey, Pennsylvania, Delaware, Virginia and the Carolinas the same sad story comes to us that everywhere the quail are freezing and starving to death. Not quail alone suffer, but ruffed grouse as well, though these latter are better able to endure the snow and the cold than the quail. We have had snows upon snows until now the ground is covered to the depth of a foot or more. There are no bare places and literally no opportunity for the birds to feed upon the ground. In addition to this, the cold has been intense, and in many localities has for days ranged between zero and twenty degrees below. Cold is hard enough to bear when food is plenty, but the starving animal has no resources to draw on when the fatal chill makes itself felt, and soon succumbs.

Judging from our own observation, which is confirmed by the reports constantly reaching us from all quarters, the shooting next autumn will be very poor, worse probably than for a number of years. The efforts of sportsmen and farmers may do something toward keeping over a part of the birds, but even with the best-directed and most energetic efforts, there will not be enough quail saved to more than keep the stock alive.

We feel confident that the wisest step that could be taken would be to prohibit absolutely next year, and perhaps the year after, the shooting of quail and grouse. It would be some hardship, no doubt, to most of us to be obliged to refrain from the sport that we love so well, but it surely would be the wisest economy to forego this pleasure for a year or two if by that means we can render it reasonably certain that during the following years birds will be plenty. We are inclined to think that if the States of New York, Pennsylvania and New Jersey would pass such prohibitory laws, and see that they were enforced, the succeeding autumns would see such an abundance of game birds as have not been known within their boundaries for many years. It is a well-known fact that in many parts of these States ruffed grouse have been almost all killed off. It is said that in Sussex County, New Jersey, there are absolutely no grouse left; that they have been so closely followed up that one may now work most conscientiously through the best covers, where they formerly abounded, without finding a bird. Of course this has not happened all at once; for years the grouse have been annually growing fewer in numbers. Words of warning have often enough been spoken, but they have fallen on ears that refused to hear. The work of destruction has gone steadily on. Each fall the number of hunters has increased. Each year the number of birds left to propagate their kind has diminished. The grouse fly has done its part in the work of extermination. And now what was once one of the best counties for grouse in all New Jersey is, we are told, absolutely without birds.

It is an old story and a sad one. We have seen the same thing take place in so many localities that we feel that the prospect for this State is very discouraging. Prompt action is all that can save New Jersey, which, it must be said, has until recently furnished better shooting than any other place so near New York, from a terrible dearth of gallinaceous game.

We hope that the sportsmen of the Middle States will give this matter their serious consideration. Let them think the matter over carefully and weigh it well. We believe that a law prohibiting shooting for one or better two years would be followed by the best results. What do our readers think about it?

#### THE N. R. A. CRISIS.

THE Secretary's report to the life members of the National Rifle Association has its sting in the tail of it, where the retiring officer hits the keynote of the general feeling touching the old Board. It has been packed with officers of the National Guard, and yet a freak of a narrow-minded Commander-in-Chief decides practically that there shall be no more ball-practice by the National Guard. The amateur marksmen—those who shoot for the love of it, and who enjoy the keen excitement of a sharp competition, have been gradually frozen out of the Association. The Secretary himself has been about the only representative of this class, but he has had great odds to fight against, and it is but little wonder that he gives up his thankless task in despair.

Creedmoor is the house that is big enough for a day but too big for a year. It is a fine place for a prize meeting, but for the ordinary every day and weekly practice of hundreds of marksmen who would gladly patronize it, there are scores of objections to be urged against it. It might after all be a sort of god-send to the Association that the military incubus may be cast off.

The practice of the regiments should be kept up, and it is a matter for which the officers in charge will be held to an accountability by the public if they neglect it. But apart from this, and in no wise dependent upon it, is the body of shooters who shoot for the love of it. They can be self-sustaining, and the N. R. A. can better afford to dismiss from its attention everything connected with soldier work, and build up a great army of gentlemen shooters, cater to their demands, discover and meet their wishes, and keep ever in mind the "fostering of rifle practice," which is its published object in existing.

The annual meeting of the Association on Tuesday evening last, of which a very brief notice only is given in our rifle columns, was an important one, and in our next issue fuller details, with comments upon them, will be given. It was virtually a period of renaissance for the Association, and it will depend on very careful nursing for some time to come whether the infant can be brought back to life or no.

DOE MEN, BEWARE.—An individual signing himself J. C. Fowler, F. C. Fowler or F. C. Chester and dating his letters from Moodus, Conn., has by means of an advertisement in our columns made himself well known to a number of our readers. He has sold and traded an alleged setter dog called Turk, said to be by Elcho out of Nell, to a number of people, none of whom have as yet received the animal. Any information in regard to this many-named individual and his present whereabouts will be gladly received at this office. The polynomial person having stated to all his correspondents that he was about to start at once for the South, it is conjectured that he may be now in Canada. We are of course sorry for the losses sustained by the individuals who have had dealings with this person, but they could scarcely expect anything better. If they were buying a horse, a house or a yacht, would they pay for it by mail or express without seeing it or knowing with whom they were dealing? We think not. People must buy their dogs as they would buy anything else, and if, as we have more than once said before, they do not exercise ordinary business care they must expect to be victimized.

TROUT AT TEN DOLLARS PER POUND.—To bring ten dollars a pound trout should be very fine, plump and finely flavored, and yet some that recently cost Mr. Ellsworth D. Hayes that sum are not especially extolled for their table qualities. It happened in this way: Mr. Hayes loves trout and has been in the habit of fishing for them in Lake Placid, Essex County, N. Y., at all times in season and out, so dearly he loves them. Lake Placid is in the Adirondacks, in a locality which is not usually haunted by game protectors and notwithstanding that Mr. Hayes must have known of the new "protectors," as their appointment was published in the *FOREST AND STREAM*, yet such is his ardent appreciation of the delicate flavor of *Salmo fontinalis* that he thought he would risk it. Game protector John Liberty also likes trout, but only in season, and hearing that Lake Placid was placidly yielding up its trout out of season, wandered that way and found a box containing ten lake and three brook trout, and then sought the owner and invited him to an interview with his friend who was a Justice of the Peace. The Justice also loves trout, and as he was called upon to place an estimate on the worth of these, he fixed it at \$175, which Mr. Hayes added to the assets of the State of New York and departed to spend New Year's Day in the bosom of his family instead of the house kindly offered by the justice in case he declined to contribute the sum named to the State. We do not know whether Mr. Hayes

had the fish for his New Year's dinner or not, but hope that he liked the peculiar green back flavor, if he did.

WE HAD A PLEASANT CALL last week from Ned Buntline, whose sketches have so often graced the *FOREST AND STREAM*, as in years past those of Porter's *Spirit*. Our friend rightly claims to be one of the oldest of our sporting writers. In fact Ned Buntline was an expert shot, a crafty woodsman, and an enthusiastic angler so long ago, that man's memory runneth not to the contrary. Advancing years appear to have brought little diminution of the ardor with which he pursues his favorite sport, and in the mountain streams near his "Eagle's Nest" no one knows so well as he the pools where lurk the monarchs of the brook and the ripples where the leap of the trout flashes brightest.

THE BLOOMING GROVE PARK ASSOCIATION have been singularly unfortunate in the loss of their large and well appointed club-house in Pike County, Pa. The building was totally destroyed by fire Wednesday morning, January 5, the loss being between \$8,000 and \$10,000. The members of the association have shown much enterprise and pluck in their recent conduct of the affairs of the society, and will not be daunted, we presume, by this calamity.

NOT OUR AGENT.—We are informed that certain gentlemen in Buffalo, New York, have been victimized by an individual who has been collecting subscriptions to *FOREST AND STREAM*, and has failed to send the money to us.

Some of our readers appear to think that Mr. John Brewster is an agent for *FOREST AND STREAM*. We wish it distinctly understood that he has no credentials from this paper and has never sent a subscriber or a single dollar of money to this office.

IN ANOTHER COLUMN will be found a letter from Mr. P. McKoon. We may explain to our correspondent that we should not have taken the trouble of making a "public refusal" to publish his letter, had he been contented with the private one, and had he not first suggested making the matter public. That suggestion admitted no other course than the one reluctantly adopted. It gives us much pleasure to print the present letter, because we think that it is decidedly more creditable to Mr. McKoon than was the communication to which it refers.

THE PICTURE OF GLADSTONE which appeared in our issue of December 23 was produced from a pencil sketch (which, by the way, was the only one in the country) by the well known artist Mr. J. M. Tracy, of St. Louis. Gladstone had his sitting during the Vincennes trials in November, and never was he in better shape to be transferred to paper. Immediately upon Gladstone being awarded first at Robin's Island we telegraphed Mr. Tracy and secured the only correct picture of the dog ever made.

A HAPPY CONSUMPTION.—Mr. Alexander Moseley, the veteran retired editor of the *Richmond Whig*, congratulates the guild of anglers on the happy arrangement whereby the *FOREST AND STREAM* has the best fish editor in the United States, and whereby also that editor is where he can do the most good.

IT IS REPORTED that the recent storms have opened a new inlet into Shinnecock Bay. This, if true, is very good news, for although it is probably too late to save the fish it will no doubt have a beneficial effect on the spring shooting.

### The Sportsman Tourist.

#### GULL ISLAND

THE ONLY VERITABLE ACCOUNT TO BE PUBLISHED OF THE TRIALS AND TRIBULATIONS OF THE JERSEY BOYS IN SOUTHERN WATERS.

"And Jonah went with them."

THE 4 P. M. train, Pennsylvania Railroad, found the second installment of the Gull Island Club en route for their possessions. The party consisted of F. M. Thomson, of 301 Broadway; F. Harrison and R. Hinrich, of Newark; Ezra Wright, from Utica, N. Y.—all sportsmen good and true—and your correspondent, each taking with him a trunk that caused serious and emphatic language by the baggage-men, and for which large extra freight was demanded. All this ammunition it was expected would result in a car-load at least of game. We had a rapid trip to Baltimore, where we were immediately transferred to the Bay Line of steamers to Norfolk. The steamer *Carolina* is a fine, large boat, with a table that is not to be excelled in any hotel in the land. Every delicacy of the season in ample quantities and put on in good style. Capt. Whittle is a thorough sailor and a courteous gentleman. In Clerk Wardrop we found a gentleman attentive to his duties and pleasant in his attentions.

We arrived at Norfolk during the forenoon, landing on the Portsmouth side, where we were met by that prince of porters, "George" of the Purcell House, to which place we had been recommended by the party preceding us. George is a jolly and very intelligent specimen of the Southern porter, knows his business and does it well. In Mr. R. T. James, proprietor of the Purcell House, we found a gentleman that knows how to keep a hotel, good table, good accommodations and attendance. We cheerfully recommend those journeying that way to give him a call.

We expected to take the steamer *Cygnus* on Monday morning for Van Slack's Landing, there to strike the steamer *Bonito* for Roanoke Island, where we were to take a sail-boat

for our island. But here we were told that the *Bonito* had stopped running and that there would be no conveyance we could get from Van Slack's further south. It would not do to be tied up there. What should we do? Here we made the acquaintance of W. A. Graves and A. W. Chapman, two congenial fellow-sportsmen of the place, who suggested chartering a tug to take us to Roanoke Island. Mr. Graves immediately started in pursuit of a captain known to him, and the bargain was made for Monday morning. In the meantime that dismal rainy day in Norfolk that would have been so long and tedious but for the exertions of our new friends. They seemingly could not do enough for us. And we again were called upon to appreciate the large-heartedness of the Southern northers. We had a right good time, and we shall never hold in affectionate remembrance the names of W. A. Graves, A. W. Chapman, George Walker, C. Owen and others of Norfolk city.

8:30 A. M. saw us bag and baggage on the tug *Garden City*, en route for southern quarters. We steamed out by the Navy Yard and through the canal to Currituck Sound, shooting now and then a dipper duck or gull by the way. Six o'clock P. M., and the wind blowing strong and cold from the north-west, found us on the west side of Roanoke Island, instead of the east, where we ought to have been. We lay here at anchor all night, when the captain informed us that owing to adverse wind and low water it would be impossible for the tug to go further. We went ashore at a fish-house and, having had a palaver with somebody and fixed things, came back and the tug was soon alongside of the dock. Here we found a native, for a consideration, would take us in his canoe around the north point of the island to Mantico. So we embarked, and about 2 P. M. reached that interesting locality, a village of some twenty scattered houses. We proceeded to the residence of Mr. George Bliven, having a letter of recommendation to him. We found him all we had been led to believe. Mr. B. is Register of the county, and although the section is largely opposed to him politically such confidence have the citizens in his character as a man and public officer that he has been elected and re-elected for a number of terms to the responsible office.

By him and his kind wife we were well cared for. In the morning we engaged of one John Thomas Daniels a schooner to take us farther on. Here, previous to starting, friend Wright purchased and put on board eight or ten empty barrels. Would have taken more could they have been obtained. These were to hold the vast numbers of geese, brant, and ducks that we were to find on and around our island.

Well, off we got at last, and had proceeded about six miles, or nearly to Hog Island Point, they said, when it was discovered that the wind was dead ahead, water very rough, and that it would be dangerous to cross Pimlico Sound under the circumstances. So back we went to dock at 10:30 and we all went sniping, there being good ground close at hand. Got quite a number, and your correspondent got a duck, nearly over his head, in a ditch, ruining a new watch that he had purchased just before leaving home. Another night at friend Bliven's.

An hour after sunrise the next morning found us again at the schooner and off. At 1 o'clock we anchored off Chicimoco, a cluster of low houses on the banks, and ten miles from the club-house. Here Captain Daniels informed us that he must have a pilot to take us farther. Sent his man, and he negotiated. It was no water for a schooner; must change to boats of lighter draft, etc. Baggage, said Daniels, one Daly O'Neil and his canoe—another job. About this time we were getting used to such things, and we made the transfer meekly and in silence.

At 2:30 P. M. Thursday, the 9th, we arrived at the club-house.

Five days from Jersey City, lacking one hour and a half. We were welcomed in true club style by the boys there—Hal, Payne and Nash—and soon to meet in their skills, while the flag was flung to the breeze at the gable, and Al. H.—frantically swung the dish cloth from the storm window, Captain Johnson rung the bell and made the opening speech as we struck the sands: "Great head of the church! where have you been all this time?"

We found everything lovely. A substantial club house 17 by 27 feet; commodious kitchen and dining-room together and gun-room on first floor. Stairs to second story, where the fifteen cots were systematically arranged with their chest or trunk at its foot. We gazed around, and the sixty or seventy brant hanging to the beams made us glad we had come.

Hal, club life is jolly, with such caterers as Al. H.—and such fun-loving and fun-provoking companions as Tom Hall and Nash. No blue hours when they are around.

But disappointments will intrude. We soon discovered that the birds were not so numerous or gettable as we had been led to hope.

On Gull Island Shoals (our island), where but a few days before were millions of brant and geese, now but a few stragglers were to be seen.

We were told by Mr. Mann, the mail man, whose route was along the banks twice a week, that ten miles or more above, and near the inlet, the birds were rafting in large quantities. It was accounted for on this theory: Brant like a buckskin water only to feed in, and the high tide, through the inlet and the long northern winds had so raised on the bars at Gull Island and so salted the water that the fowl had left for above the inlet and fresher feeding grounds. It was the first time in forty years, the natives said, that Gull Island Shoals were so free of fowl. You see Jonah was still with us.

After staying a few few days at the club-house with but mediocre luck your correspondent, with Ned Thomson, Wright and Johnson, proceeded to Chicimoco, where the residence of Captain Benjamin Pugh, Hal, Payne and Heritage having left a few days before intending to stop a day or two at Nye's, where we learn they had a first-rate time with the canvas-backs, Harrison and Hinrich left us after a day's sniping at Chicimoco. Captain Ben Pugh is the gentleman who built our club-house for us, and has charge of our possessions in Carolina. Mr. Pugh is the most prominent citizen on the banks. Keeps the only store in the neighborhood, and has a very enviable reputation as a fearless and judicious coast-man, having saved the lives of seven persons at the imminent peril of his own. He also rendered efficient service during the last war as General Burnside's trusted guide.

Here our stay was pleasant indeed, but the confounded northwest wind kept us confined more than we wished. But with the services of Edw. B. Edwards as assistant, master of the plant, William and Daly O'Neil as boatmen and helpers, we had some good shooting. We found the bars and shoals above the inlet literally alive with brant and geese. Millions

and millions of these luscious birds were in the air scudding across from point to point or resting in long dark nests of miles in extent. All these birds, we were told, and most of them at least, really belonged on Gull Island Shoals and that they would gradually gravitate back there when the high salt tide should run out. We were told that we had been exceptionally unfortunate in our trip this year, that such a state of affairs had not been in forty years, etc., etc. Jonah!

Well, we saw the fowl and knew they are in sufficient quantities to suit the most extravagant desires, and another year we propose to go down amply equipped and make it lively among them.

Jonah stuck us up this trip, as you will perceive, all the while. Owing to high winds, rain and rough water we only had one or two really good days for shooting. But amid all these clouds there were many sunshiny hours. In the captains and crews of Life-Saving Stations 18 and 20 we found big hearts and right royal fellows. Captain Bannister Midgett and Captain John Allen Midgett are good types of the brave and successful constables of that dangerous locality. By them we were welcomed in generous style.

Did the reader ever shoot brant from a blind? Have out from fifty to one hundred decoys and, say, ten or twelve or more, if one has them, of live wild geese to do the honking? Did you ever? And as you lie snugly concealed, to see in the far distance those long living lines approaching, while your stools give out their honk of invitation, see the gradual lowering of the wings and dropping of the feet of these delicious fowl, and the incessant honking of the geese and the discordant note of the brant? When you can fairly see the white ring on the throat and just ere the great black feet touch the water you rise and pour in a broadside of No. 3, and as the vast number speed by you look over and see the white breasts of a goodly number within easy reach? Ah! that is sport, and when they come in pairs, by threes, by half-dozens, so thick and fast that your breech-loader gets too hot to hold in your ungloved hand, and you wade out in your high rubber boots and bring in all you can carry at one time of these queen of waterfowl, weighing from six to eight pounds apiece! Canvas-backs are good and their shooting affords good sport, but they are not a priming to black brant shooting on Pinaliso Sound. No, sir!

Well, all pleasures have an end; so, with our birds nicely packed in barrels, with our trunks, we started for home on Thursday the 23d, in Capt. Pugh's canoe, Daly O'Neill and Bannister Pugh as steersman and worker, N. E. Nash, E. Wright, F. M. Thomson and your humble servant—Captain Johnson only remaining until February, when another party proposes to go down. We reached Manteo toward night of the first day all right (guess Jonah had left us).

At the earnest solicitation of Mr. Lewis Mann, the mail carrier from Manteo to Kinnekeet, Mr. Nash and myself betook ourselves to his house, some two miles inland on the island. We found Mr. Mann very pleasantly situated, in Gen. Burnside's old headquarters, where he had charge of the island. Mr. Mann is one of the most intelligent and go-ahead of any of the men we met in our trip South. He knows everybody in the two counties and all know him and speak of him as the right man in the right place. The next day, Jonah still being around, it rained heavily all day and no wind, until about 3 p. m. it let up, and there being a slight wind, although in the wrong quarter, we decided to start for Powell's Point, about 30 miles, where we were told the steamer Harbinger would pass about 9 or 10 p. m. for Norfolk.

Well, we were off with all our stuff (four of us) in this open canoe, wind N. W. We wanted to go about north. We bowled along pleasantly for an hour or two, when the wind freshened up dead ahead. It was tack and tack; the sun went down; it grew colder and colder. With Croatian light over our left shoulder in the distance, we were told that when we could see a light ahead (the beacon on Powell's Point) we would be half way. Ye gods! how we watched for that light. Hour after hour passed by, higher grew the wind and colder the night air. We were chilled to the very bone; the gunwales of the boat at times running under water, the spray flying over us and freezing where it fell. Just before 9 o'clock the light appeared—only half way; we could not reach it in time for the Harbinger. Would we reach it at all alive? Put on more sail. For God's sake help us, we are freezing in that open boat far out in Currituck Sound.

It really seemed that Frank T. would die before we reached the wharf. Froze in the bottom of the boat he lay, groaning as only a hearty man in pain can groan. Poor slim, fragile Wright, wrapped in his rubber coat, but chilled through and through, suffered in silence.

Nash forgot his jollity in this hour of intensity. As for the undersigned, his lower extremities, from his hips down, were like clogs; they were past feeling. But he thought of home, of that cozy room with the fire burning bright, that tea kettle over the gas lamp and the sugar and the lemon—and it was all a dream—or that—or was this the last. Should he struggle more?

All was still save the rushing of the waters by the gunwales; we were fast losing our consciousness, when we were aroused by the thumping of the boat on the wharf—half past eleven—Powell's Point Dock, a house on stilts a quarter of a mile from land.

But the man in the house refused to be aroused. Said he wouldn't get up—boat had been gone hours and he didn't take in travelers, etc. Hereafter the matter was explained to him he aroused himself and proved indeed a good Samaritan. He had no wood, but he broke up boxes and made a fire, and we crawled on our hands and knees (not one of us could walk alone) up that pier and into that 6 by 8 room, where we shivered for two hours, while our host, Jehu Midgett, God bless his kind heart, waded ashore in his bare feet and made arrangement with Mr. Newbern, a planter on shore, for a warm breakfast for us. About 4 p. m. we got ashore and were kindly received by Mr. and Mrs. Nash, who had one of us could eat, we drank a little coffee and fell asleep in our chairs in front of the fire. At 8 o'clock Mr. Midgett had four of Mr. Newbern's boys, each with a pony and cart, before the door to take us and our luggage across country, 14 miles, to Coin Jock, on the canal where we would strike a steamer for Norfolk, some time.

And this was Christmas, 1880, and across country in a cart to the music of the darkies' guns and horns. But it was not a bad trip by any means, and we arrived at Ithal's hotel, Coin Jock, about 2 p. m. Here we found Christmas being celebrated in all its glory. Mr. Hall is a good host, keeps a first class hotel and one of the best tables we ever put our legs under. He is the proprietor of a large store. Has a good paying trade and seems to be doing well. He is a jolly good fellow, and our stay with him was made exceedingly pleasant.

We were aroused by six the next morning with the intelligence that the steamer Astoria was passing the bridge on route for Norfolk. Up we were and soon had all transferred.

Now we were all right, we were on the thoroughfare, and Jonah might be blown. We steamed away up the canal. Hurrah! we are homeward bound. But bark! that grating sound, that lurch and sudden stop. We were dead fast on a sunken log. (Jonah still with us.) An hour of backing, going ahead, poling, etc., and we were off.

We passed through the canal and into Currituck Sound. All was going on pleasantly, we thought, although the wind was very strong and dead ahead. About noon we came to anchor, the captain saying that he could make no headway against that wind. It was blowing the water out of the Sound so that it would be dangerous to proceed. (Jonah chuckling again.) So we lay at anchor all Sunday and Sunday night. Monday morning about eight, the wind having gone down, we up anchor and on our course again, and arrived at Norfolk in due time for the Baltimore boat. Captain Hudgins, of the steamer Astoria, is another type of those energetic Southern business men. Our two days and nights with him were very pleasant. He sets a good table and plenty of it, and the demands are reasonable. Well, we were at Norfolk. (Jonah.) But hold! the train was an hour and a half late; boat had to wait. Never mind. Arrived in Baltimore all right—but train behind hand again—but off at last all right. Bothered some around Germantown Junction and West Philadelphia, but off for Jersey City. Jonah dead now and gone to rest. But hold! passed Newark, crossed the meadows, drew high to Bergen cut, dead stop; delay of an hour in sight of home.

Who was the Jonah?

But all is well that ends well. Such is a plain and unvarnished account of the trials and tribulations of one party of the Gull Island Club on their first trip to their new possessions. We had some hard times, but we are not by any means discouraged. Another year and we can reach Gull Island in one day and a half from Jersey City.

The railroad from Norfolk to Elizabeth City will be completed and running by the fifteenth of this month. The steamer will be put on the route, contract with post office department made to carry the mail (and passengers) daily from Elizabeth City to Roanoke Island and farther south, thus passing by our possessions, and the best brant region on the coast if not in the United States will be within easy reach. Gull Island stock is still booming. JACOBSTAFF.

## Natural History

### OUR WATERFOWL.

*Erismatura rubida*. Ruddy Duck. Male, neck and upper parts brownish-red; under parts silky white, watered with gray; chin and sides of head white; crown and nape black. Female and young, mottled dusky, darkest on crown and back, paler on sides of head, chin and lower parts; under tail coverts always white. Plumage, silky. Length, about fifteen inches. Bill and feet dark.

Of the two species of the genus *Erismatura* found in North America, the present is the only one known to sportsmen. It is moderately abundant and generally distributed throughout the country, though we have never ourselves taken it on the Atlantic coast. Audubon speaks of its occurrence in Florida in goodly numbers, and says that he shot forty there in a morning. Dr. Coues reports it moderately abundant during the migrations throughout the Missouri River region, and states that he found it nesting near Turtle Mountains and along Milk River, a tributary of the Missouri.

The genus *Erismatura* may readily be distinguished from any of the sea ducks by the peculiar character of its tail feathers. These are from sixteen to twenty in number and are very narrow and stiff and appear disproportionately long because of the shortness of the upper tail coverts. The webs are often worn off the extremities of the tail feathers, so that the shafts project like the spines on the tail of a chimney swift. The bill is broad and much flattened and the nail overhanging. The bright plumage ascribed to the male in the description above given is very seldom seen, at least in the United States, and almost all the birds killed wear the sober livery of the female.

*Erismatura dominlex*.—St. Domingo duck. "Male, head anteriorly and chin black; hind head, neck and breast deep ferruginous; above, brownish-red, blotched with black; below, lighter ferruginous; speculum white. Female similar, but less strongly marked. Bill smaller and less expanded than in the preceding."—(Key to N. Am. Birds, p. 295.) Length, thirteen to fourteen inches.

The St. Domingo duck is a South American and West Indian species which has only been taken in the United States on two or three occasions, and is purely accidental here.

### Merganser.

The *Merganser* constitute the third sub-family of small duck-like birds inhabiting North America. They are readily distinguished from any other ducks by the bill, which is almost cylindrical instead of being flattened. Its nail is hooked and overhanging, and the lamellae are produced, in several forms, into distinctly tooth-like processes directed backward. The birds of this group feed to a very great extent on small fish, which they are readily enabled to capture and hold by means of their greatly modified bills. They are thus fishing ducks and of course, gastronomically considered, not particularly excellent. There are only about eight species, of which North America has three, only one of which, however, is peculiar to the new world. It should be said, however, that Audubon stated that he took a specimen of the European snipe (*Mergellus albellus*) on Lake Barataria, near New Orleans, and Wilson speaks of it as abundant, but the latter probably confounded some other species with the one in question, and as no second specimen has ever been taken it

is conjectured that Audubon too may have been mistaken.

*Mergus merganser*. Goosander, Merganser. Fish duck. Male with head somewhat puffy; glossy green in color; upper parts black and white, the latter crossed by a black bar; lower neck, all round, white; under parts white, tinged with salmon color, which, in the dried skin, soon fades out, leaving the under parts plain white. Length, about two feet. Bill and feet red. In this species the nostrils are near the middle of the bill, and the feathers from the forehead project further forward on the bill than do those at the side. Female has head and neck reddish-brown; upper parts ash-gray where black in male; under parts white.

The Goosander is distributed throughout the whole of North America and is extremely abundant in winter on the Atlantic coast. When the weather is so severe as to have frozen up almost all the open water, these birds congregate in considerable numbers on the open spots on our rivers, where the swift flow of the water prevents the formation of ice, and in such places they are sometimes shot in great numbers. The flesh is very fishy, however, and the birds, as a rule, are not fit for food.

*Mergus serrator*.—Sheldrake, Red-breasted Merganser. Male with a thin crest; head glossy green; upper neck white; upper parts somewhat as in *M. merganser*, but with less white; a small white patch in front of wing; forebreast reddish-brown, streaked with black; flanks waved with black; under parts white. Female colored much as in *M. merganser*. Smaller than the preceding. In the Red-breasted Merganser the nostrils are decidedly nearer the base of the bill than in the goosander and the feathers of the forehead do not reach further down the bill than those at the sides. The laminae of the bill in this species are tooth-like in shape and very sharp, but, as can be readily seen by removing the horny covering of the bill, the resemblance is merely a superficial one, and the so-called teeth are nothing more than unusually developed laminae.

The red-breasted merganser is almost everywhere a common bird. We have frequently found it breeding in the Rocky Mountains, and during the migrations it is found all over the United States. It is no better as a table bird than its larger cousin.

*Mergus cucullatus*.—Hooded Merganser, Saw-billed Diver. Male with a very conspicuous semicircular crest; that of the female much smaller. Male black, including two crescent-shaped marks in front of wing and a bar across the speculum; lower parts, centre of crest, speculum and longitudinal stripes on tertiaries white; flanks reddish-brown, waved with black. Female has head and neck brownish-gray, chin and lower parts white; upper parts and flanks darker; less white on the wing than the male. Length of male, eighteen inches; female somewhat smaller. The Hooded Merganser has the bill shorter than the head, while in the two foregoing species it is longer. The nostrils are near the base of the bill and the frontal feathers reach beyond those on the sides.

In appearance the male hooded merganser is one of the most striking of our ducks. It is rather a solitary species, and we have never found more than two or three together. More often you may start a single bird, or perhaps a pair.

The Saw-billed Diver, as it is called in Connecticut, does not seem to frequent the salt water nearly as much as do the goosander and red-breasted merganser. We have found them most frequently on little pond holes far from the shore, or on the expansions of trout brooks that pass through the swamps. We have taken this species in Western Nebraska and on Heart River, in Dakota, but have never seen it in the Rocky Mountains.

The species mentioned in the preceding articles include all the *Anatidae* known to inhabit this country. It is hoped that the descriptions may prove of practical value to gunners and may call their special attention to the different kinds of wild fowl inhabiting the sections where they shoot. Two interesting notes have already been called out by the articles, namely: the great abundance of *Harelda glacialis* on the Niagara River and the absence from the region about Winnipeg of Ross's Goose (*Anser Rossii*), which had by some writers been supposed to occur there during the migrations. We now know that it is the snow goose (*A. hyperboreus*), which is there called the "wavic."

**PARTIAL LIST OF MINNESOTA BIRDS.**—The eighth annual report of the Geological and Natural History Survey contains an interesting list of the birds of St. Louis and Lake counties, Minn. Mr. T. S. Roberts, the author of this list, is well known to our readers from his valuable contributions to the columns of *FOREST AND STREAM*, and the Geological Survey of Minnesota is to be congratulated on having secured the services of so energetic and competent an ornithologist. The region to which the observations made in the list relate consists of a strip of country along the shore of Lake Superior about one hundred and twelve miles in length. Devil's Track Lake was also visited. The country is everywhere thickly timbered, the continuity of the dense and sombre forest being broken only by occasional "burns," which admit the sunlight and afford the collector an opportunity to find some of those species which love the open country rather than the dark woods. An interesting account of the habits of the mourning warbler (*Geothlypis philadelphia*) appears in the present paper, extracted from a contribution by Mr. Roberts to the Linnaean Society of this city, read in February, 1879. There are also a number of valuable notes on other species.

Mr. Roberts' list includes 105 species, and his collections amounted to 125 specimens representing 55 species, certainly a very fair showing for the length of time, about four weeks, spent in examining the region.

**PINE GROSEBEAK IN MINNESOTA.**—Our correspondent, W. P. M., whose note under this heading appeared in our issue of December 30, writes us further in regard to the capture as follows:

I have since been informed by Mr. Benson that there were fifteen or twenty birds in the flock, and that he secured three at one shot.

**THE WAY OF WINNEPEG THE SNOW GOOSE.**—*Winnipeg, December 20.* Editor *Forest and Stream*: In the article on "Our Waterfowl," in your issue of the 25th ultimo, referring to *Anser rossii*, Ross' geese, horned variety, you state as follows: "Accounts have occasionally appeared in *FOREST AND STREAM* from some of our correspondents near Winnipeg of shooting of waders on the lakes which dot that region. It is said that these birds are quite abundant in that section during the autumn and that they afford good sport." I would say that your correspondents have misled you in this matter, the mistake arising from the fact that only the *Anser hyperboreus*, snow goose, is known here as the wader. They appear here on their way to their breeding grounds about the 15th or 20th of May in countless numbers and return South about the 1st of October. Var. *alatus*, or lesser snow goose, is also often seen here, but they are not common. I have never heard through any reliable authority that Ross' goose or horned variety has ever been seen in this province. II.

**HOW THE RUFFED GROUSE LEAVES HER NEST.**—*Lawrence, Mass., Jan. 2.* I saw in last week's issue Harry Woodland's question concerning ruffed grouse. Now, these birds have been my friends from boyhood and I have heard them a great many times, and also found their nests, and to my knowledge they always flew off. But once, I think, on coming near the nest another time, the old one ran off. One fine morning in spring I found a nest, and having some time to spare, made up my mind to watch it. The nest was at the foot of a pine, among some dead limbs, and a few yards from an old stone wall. So one day I was taking a walk through the woods I hunted up my nest, but to my surprise the old grouse did not get off at once, and when I got within a few feet of the bird got up and started away on foot from the nest, her wings trailing and acting as though hurt. As long as I was near the nest she kept within a few feet of me, but when I had followed her thirty or forty yards, she just keeping beyond my reach, the noble bird took wing and started off like a skyrocket. She wasn't lame then. I went back to the nest and found it full of yellow, downy little things, one or two of which were dead. I took one of the little ones in my hand and after looking at it to my satisfaction put it back in its nest. I then went behind the old stone wall and watched. It was not very long when I saw a grouse coming along, stopping to look at every few steps. Although this grouse walked within a few feet of me, I do not remember whether it was a cock or hen. This one passed within a foot or two of the nest and walked out of sight. I waited a little longer, and when looking in the direction the hen grouse had flown I saw her walking very slowly, stopping every little while. In this way she came within a few feet of the nest, and then she seemed to forget all caution on seeing her little ones, and rushed on the nest, where she at once settled herself, the little chicks peeping and climbing all over her, making the prettiest sight I ever saw. I went off in another direction, so as not to disturb them. Grouse are very scarce here now. I think there have been five snared to one shot in the right way. FRED. O. NEWBERT.

**AN EXPERIENCE WITH KING BIRDS.**—Like most New England youngsters, I lived on the old farm, of course. After the fashion of other embryo Daniel Websters I liked to hunt birds' nests. At the proper season I used to know the whereabouts of something like twenty-five nests. I knew the number of eggs, their color, the kind of bird that laid them, and their probable time of hatching. Growing out of a too great fondness of this business I visited these nests at every opportunity and much oftener than the parent bird would have visited or the parent was willing I should leave my work. In the orchard near our house a pair of king birds (*Tyrannus carolinensis*) used annually to build their nests in the same tree and on the same twig. In the course of a few years the birds and myself got quite a familiarity. Despite my frequent—nearly every day—visits I failed to get into their good graces, and every time I scrambled up that tree I was saluted by that plucky ferocity which this little bird knows how to exhibit. At the time of which I speak there had been two eggs in the nest. I climbed the tree quite leisurely one day and noticed that the birds were busily at work in their nest. When I arrived there, behold there were no eggs visible, but two large bunches of long hair, such as their nests are usually lined with. On examination I found the two eggs were within, done up much more nicely than I could have done it with a paper bag of the proper size. They did not touch each other, but were separated by hair and a few hairs tied around just above them. If I remember correctly, I did not take them out of the wrapper, but the next day I found them in the nest as usual. I omitted to say that in addition to being done up, they were fastened to the nest. Now, no person had the opportunity to tie them up so near the house and not make an outcry that we should have heard; moreover, no person in that vicinity, at least, could have done them up so neatly; in addition to all this, I saw the birds at work. But on the other hand I am not sure that these birds have shrewdness enough to do such a job as I did for them. Editor, or some of the knowing ones after a solution? The circumstance that I have related I am certain of. BROWN COOT.

**FIGHT WITH A SEA LEOPARD.**—I send you the enclosed cutting from a late Boston *Herald*: "NEWMARKET, N. H., Dec. 6, 1880.—Walter O. Shute and Herbert Caswell killed a sea leopard in Great Bay late Saturday afternoon, that weighed over 700 pounds. Shute first saw it on a piece of floating ice, nearly a mile distant, in the main channel. He took a small sculling boat and gave chase, emptying the contents of a double-barreled shot-gun into its body near the snout. With one blow it leaped for the boat, tearing pieces from it with its teeth, trying to overturn it. Their eyes were empty and they had no chance to retaliate. The water was

crimson with gore. Shute and his companion, with an oar and club, managed to keep it clear of the boat for about twenty minutes, when it died through loss of blood, and was towed ashore. Another was seen soon after, near by, doubtless its mate. The species is rare in these waters. "Great Bay is an enlargement of the Piscataqua River, near Portsmouth, and some twelve or fifteen miles from the ocean. The sea leopard, or, perhaps more properly, leopard seal, given by Wood as *Lepidonyx veddelii*, is said by him to have been taken only in the southern hemisphere, but to have been seen at the Orkney Isles. The Cyclopeda gives it as *Stenorhynchus leopordinus* and says it is found in the Shetland Isles. These are all the authorities I have at hand and both rather ancient, and for aught I know it may have been frequently taken along our coast of late years. Perhaps you can enlighten us on that point? F. C. BROWN.

As our correspondent remarks, the true sea leopard is not found in our waters, and from the meagre description given in the extract quoted it is difficult to determine to what species of seal the account refers. It seems probable, however, that the species referred to is either the hooded seal (*Cystophorus cristatus*) or the gray seal (*Halicestus grypus*). The former species is often found along the New England coast, the latter rarely, if ever.

**ANTIDOTE FOR SNAKE BITES.**—In looking over the "Southern Medical Record" since last writing you I came across an article by Dr. J. Hendree, of Alabama, in which he gives the best antidote for all reptile and insect poisons "known to him." The antidote I was familiar with, and it struck me it would not be amiss to give it to your readers. It is the ammoniacal preparation, "Eau de Luce," which should be carried by every camping party visiting sections of the country infested with poisonous snakes. The wound should be profusely bathed with it and a teaspoonful given in brandy or any strong spirit every ten or fifteen minutes. This makes an active and not disagreeable anti-venom. Dr. Hendree states the preparation is kept on hand in the zoological gardens of Europe, and refers to Frank Buckland's "Zoological Recreations." Some years since one of the keepers of the cobras at Regents Park, in a state of complete intoxication, entered the cage, and handling one of the serpents roughly and carelessly was bitten. His intoxication and the proper use of spirits, without an alkali, did not save him, and he died in a few hours. The "Eau de Luce" may be had at any druggist's. HOMO.

**DEATH OF THE MONTREAL CAGED WOODCOCK.**—Mr. Hall's woodcock was found dead in its cage Sunday morning, 2d inst. It appeared to be well on Saturday evening (when it was seen boring for and eating worms), except that the skin around the neck was much inflated. During its confinement the bird had become much attenuated. It lived eighteen days from the time it was picked up. H. R. Montreal, Jan. 7.

**LATE MIGRATIONS.**—*Cleveland, Jan. 1.*—The reason that snipe, woodcock and many other migratory birds, in the fall season, do not obey the supposed general law which governs bird migration is readily explained. The lack of food is the principal cause of their change of locality. As long as food abounds in their favorite haunts they are loth to leave, especially the older birds; once shot a Wilson snipe on Christmas day while quail hunting, the thermometer being about down to zero. The bird was fat and undoubtedly for many weeks had lived on the food the warm spring furnished, from which I flushed him. The first of January the year following, in the same locality, I started a woodcock, but missed the bird, as he towered up several hundred feet and then shot off like a meteor toward the south. I watched for him several days after in the same locality, but he never returned. DR. E. STERLING.

**HABITS OF SNAKES.**—I was speaking, a few days ago, to a patient of mine (a farmer) about "snakes swallowing snakes." He is a man who has had abundant opportunities to observe their habits, etc., and he says he has repeatedly seen black snakes had young, when alarmed, open their mouths and the little ones would run down their throats like a shot," as he expressed it. My father tells a curious story of what happened under his observation. One day he was driving over one of our country roads when he saw a large garter snake that had what appeared to be four feet. After watching it for some time and seeing that the feet moved, he killed the snake and cut it open, when out hopped a live toad. The snake had swallowed it, and the toad had scratched its feet through the belly of the snake. DOCK.

**A TINY BEAR.**—We have received from Mr. A. B. Dodge, of this city, a mounted specimen of *Ursus americanus* that is the smallest we have ever seen. It is a female and is about as large as a six weeks' old setter puppy. The history of the specimen is given in the following note from the donor, to whom we beg leave to return thanks for this unique curiosity. Mr. Dodge says: "I send herewith a specimen of natural history, which I trust you may be prevailed upon to accept, for the reason that it is a very small bear. She is very small and, when captured, was considerably smaller. I had her over two months before she died. She is one of a family of three—one male, two females. I, with a party, went to an island between Crystal River and Homosassa, Fla., three winters ago and killed the mother, taking away the three cubs. The two I brought home died after about a month here. This one was mounted by Wallace.

**RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.**—By purchase—Two common muskies (*Mosasa cynolomus*). Two brown cappons (*Cebus fuscus*). One white pelican (*Pelecanus trachyrhynchus*). Two American magpies (*Pipilo melanoleuca houstonia*). One green-chinned oriole (*Chrysomitris parula*). By presentation—One short-eared owl (*Bubo brevirostris*). One American crow (*Corvus americanus*). One carabid beetle (*Carabus*). One screech owl (*Scops asio*). One red-billed tree duck (*Dendrocygna autumnalis*). One razor-billed curassow (*Mitu tuberosa*). Two common rabbits (*Lepus cinereus*). One opossum (*Didelphis virginiana*). One gray parrot (*Psittacus erythacus*). One short-eared owl (*Bubo brevirostris*). One American crow (*Corvus americanus*). One carabid beetle (*Carabus*). One screech owl (*Scops asio*). One red-billed tree duck (*Dendrocygna autumnalis*). One razor-billed curassow (*Mitu tuberosa*). Two common rabbits (*Lepus cinereus*). One opossum (*Didelphis virginiana*). One gray parrot (*Psittacus erythacus*). One short-eared owl (*Bubo brevirostris*). One American crow (*Corvus americanus*). One carabid beetle (*Carabus*). One screech owl (*Scops asio*). One red-billed tree duck (*Dendrocygna autumnalis*). One razor-billed curassow (*Mitu tuberosa*). Two common rabbits (*Lepus cinereus*). One opossum (*Didelphis virginiana*). One gray parrot (*Psittacus erythacus*). One short-eared owl (*Bubo brevirostris*). One American crow (*Corvus americanus*). One carabid beetle (*Carabus*). One screech owl (*Scops asio*). One red-billed tree duck (*Dendrocygna autumnalis*). One razor-billed curassow (*Mitu tuberosa*). Two common rabbits (*Lepus cinereus*). One opossum (*Didelphis virginiana*). One gray parrot (*Psittacus erythacus*). One short-eared owl (*Bubo brevirostris*). One American crow (*Corvus americanus*). One carabid beetle (*Carabus*). One screech owl (*Scops asio*). One red-billed tree duck (*Dendrocygna autumnalis*). One razor-billed curassow (*Mitu tuberosa*). Two common rabbits (*Lepus cinereus*). One opossum (*Didelphis virginiana*). One gray parrot (*Psittacus erythacus*). One short-eared owl (*Bubo brevirostris*). One American crow (*Corvus americanus*). One carabid beetle (*Carabus*). One screech owl (*Scops asio*). One red-billed tree duck (*Dendrocygna autumnalis*). One razor-billed curassow (*Mitu tuberosa*). Two common rabbits (*Lepus cinereus*). One opossum (*Didelphis virginiana*). One gray parrot (*Psittacus erythacus*). One short-eared owl (*Bubo brevirostris*). One American crow (*Corvus americanus*). One carabid beetle (*Carabus*). One screech owl (*Scops asio*). One red-billed tree duck (*Dendrocygna autumnalis*). One razor-billed curassow (*Mitu tuberosa*). Two common rabbits (*Lepus cinereus*). One opossum (*Didelphis virginiana*). The opinion of the Attorney-General in reference to the constitutionality of the Fish Law.

AUDITOR'S OFFICE, OTTUMWA, IOWA,  
October 20, 1890.

HON. B. F. SHAW, Fish Commissioner of Iowa:

Dear Sir:—In the matter of constructing a fish ladder to the dam at this place, I wish to say to you that on the 7th day of August last past I issued a notice to the Ottumwa Water-Power Company, in accordance with the law, to construct a fish ladder to their dam and placed the same in the hands of Sam Chaney, sheriff of the county, for service. On the 9th day of the same month it was returned served. The said Water-Power Co. have employed counsel, and their attorney, Mr. Wm. McNatt, informs me verbally that they refuse to comply with the law and that the said fish law is unconstitutional. I am instructed by the President of our Board of Supervisors to ask you to procure the opinion of the Attorney-General of the State and transmit it to us in time for the November meeting of the Board, with any suggestions or instructions you may desire to give us in the premises.

Respectfully yours,

M. L. GODLEY, Auditor Wapello Co., Ia.

The above was submitted to the Attorney-General and the following is his opinion in reply thereto:

B. F. SHAW, Fish Com'r.

WASHINGTON, Iowa, Nov. 24, 1890.

HON. B. F. SHAW, Anamosa, Iowa:

Dear Sir:—In answer to your letter of the 12th inst., I will say that in my opinion Chapter 123 of acts of 17th General Assembly is not unconstitutional. A statute is never by the courts held to be in conflict with the Federal or State Constitution unless such conflict is clear and certain. One branch of the State Government, to wit, the General Assembly, has passed on its constitutionality by enacting it. The question is not a new one. While our courts have not passed on it, other courts of last resort have, and held similar statutes not liable to the objection of unconstitutionality. With these decisions you are familiar.

Yours very truly,

J. F. McJUNKIN, Atty.-Gen'l.

MR. BALLDOW: "The fishway law should be constitutional. I believe in protecting the rights of the people. The State constructs roadways, why not fishways?"

MR. SHAW: "I have here a printed protest against fishways by an Iowa miller and my own reply to it, which seems to cover the ground of the objection very thoroughly. I dislike to ask Mr. Mather to publish this in *Forest and Stream*, because he very kindly published it for me when it first appeared, and yet I would like to have it on record in our reports."

MR. MATHER: "The paper so fully states both sides of the case that it may be of interest to many, and the agreement to publish all the proceedings certainly would oblige me to print it even if it was of no interest." The protest is as follows:

OXFORD MILLS, September 20, 1890.

Editor Eureka.—You will oblige me if you will give me space in your valuable paper to express my views in relation to a law passed by the Eighteenth General Assembly of the State of Iowa.

Chapter 123, Section 3, of said law reads: "If, within sixty days after the service of a notice by the sheriff of the county, the owner, agent, or party in charge shall fail to consent to the construction of a fishway to their dam, the Commissioner, then the county Board of Supervisors shall immediately proceed to construct and attach the same; and when so constructed, the original cost and twenty per cent. thereon, as a penalty, shall be entered upon the tax book of the county, and shall be a lien on said property, to be collected in the same manner as provided by law for the collection of other taxes."

Section 4 reads: "To carry out any of the provisions of this act, the county Board of Supervisors may issue county warrants for the payment of such expenses, and when the taxes are paid, the warrants and all accrued interest thereon shall be refunded to the county, and the balance, after paying the Clerk and the State Commissioner and Board of Supervisors for their services, etc., the proceeds to be paid over to the county treasurer, and will become a part of the school fund."

To this the Fish Commissioner adds, on his own responsibility, with no more dignity than he brings to his office, in his notice to mill owners: "No temporizing, or temporary work will do, as it will be at the mill owner's expense, as the law requires him to keep it in constant repair."

Mr. Editor, I am a citizen of these United States and desirous of showing willing obedience to the laws thereof. I derived my title to my land from the United States Government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other persons. Therefore, I am entitled to the same rights as the States from imposition and unjust laws. Neither the State of Iowa nor any other State has any right to pass any law that will annoy, hamper, endanger, or depreciate the value of any man's property, without paying him in full for all damages he may sustain. If the people of the State of Iowa want to preserve the fish, what claims have they on the mill owners to compel them to be at all the expense? Does it benefit the miller more than the farmer, or any one else? Do they consider the fish as a luxury? Do they prefer cat-fish and walleyed pike to the manufacturing interests of the State? If so, why don't they pass a law that will give them the power to destroy all the mill dams in the State, and give the fish a chance? They have just as much right to pass a law of this kind, as they have to pass the other.

What benefit does the miller derive from this heavy expenditure of money? You rarely find the miller with a fish-pond in his hand. It is not a class of men who reap the benefit of the fish law. For the most part I would give considerable money if there were not a fish in our rivers. They are the cause of bringing a parcel of lazy loafers to our fishing grounds, from the country and the towns, who destroy the surrounding property, tearing down fences and desecrating the Sabbath day, to the annoyance of quiet, peaceable and law-abiding citizens. Of course there are a few exceptions to this rule. It is for a class of men and boys like this that the mill owners are required to be at from \$800 to \$500 expense in erecting a fishway to protect the fish and contribute to their pleasure; not alone this expenditure, but they are required to keep this annoyance and encumbrance in perpetual repair, no matter whether it is carried out by any flow of ice and logs that passes over the dam—which will be the case nine times out of ten—or whether it carries out the dam as well.

Heretofore the mill owners of the State of Iowa have been well protected in their rights, by the enactment of good, sound laws on water privileges; and by this reason Iowa stands second to no grain manufacturing State in our Union

—as the reports from the late Miller's Convention at Cincinnati will show. Is it possible that all the protection we have heretofore enjoyed is to be destroyed by some wild fish fanatic who cares more for a wall-eyed pike or a sun-fish than he does for all the manufacturing interests of the State? Let the millers of the State rise in their might and defend themselves against such unjust and arbitrary laws, as they have done heretofore in such cases of imposition, and they will undoubtedly come out victorious.

If this fish law is enforced, then the next law I expect to see enacted will be one requiring every farmer who owns 160 acres of land on the line of any railroad throughout the State of Iowa to build, grade and lay a track the entire length of his farm at his own expense. Not only this, but the law will require him to keep it in constant repair, at the risk of losing the rest of his farm if he does not comply with all the requirements of the law, whether from unwillingness or inability. All these benefits he is expected to donate to the travel of the general public. Why not enact and enforce a law of this kind? One can be as easily enforced as another. I can see no difference.

If the people of the State of Iowa want to stock their rivers with fish, why not levy a general State tax for the purpose of erecting these fishways and keeping them in repair, at the same time giving the mill owner a guarantee that any damage he may sustain from the erection of such fishway will be promptly paid by the State, or the county in which the mill dam is located. The State has no more claim on the mill owner in this respect than it has on the farmer, mechanic, or any other class of men. I think it is the duty of the press throughout the State to come out boldly and denounce all such unjust laws.

[Mr. Shaw's reply will appear in our next issue, and the other discussions and papers will follow as fast as we can publish them.]

## Sea and River Fishing.

### TROUT FISHING IN THE CANADIAN WILDS.

At ten o'clock on a bright moonlit Saturday night, in the end of last month, a buckboard—bearing a flat boat filled with provisions, fishing tackle and a couple of fowling pieces with their concomitants, for the use and enjoyment of the young sportsmen, who after experiencing the many advantages of the different localities in the near and distant neighborhood of the city had carefully chosen their fishing ground—left the ancient city of Quebec by the Dorchester bridge, crossing the river St. Charles, where in the past century Jacques Cartier and his hardy followers wintered, worn out by disease and harassed by the warlike redmen of the forest under their chief Stadacona, for the far off lake, Jacques Cartier, situated in the distant wilds of the Laurentian ranges, whither it needed the strong Canadian pony, whose sires had bounded over the fields of Normandy, to draw the heavy load over the almost impassable roads and steep mountain paths.

We had arranged that the post should be apportioned to the several members of the party, according to their adaptability and expeditionary talents. Alfred Dohine had to accept the outside work and Alexander Fraser and myself had to fulfill the inside work. The provisions consisted of ham, corned beef and a proportionate supply of drinkables.

We traveled under the bright moonlight through the villages of Charlesbourg, whose church spires tower so proudly from its mountain site; St. Pierre, the inmates of whose peaceful convent lay in unconscious slumber; Stoneham and Twoesburg, peopled by the hardworking farmers from Ireland, and at daylight arrived at the post as it is called. This post, a species of log hut, is situated at the extreme end of the macadamized road which is about twenty-one miles from the city, and thence commences the government road, recently constructed, to Lake St. John, and which was some time since represented as the best of highways, but which our bushmen and farmers from Lake St. John have described as almost wholly impracticable, a fact which is also proved by the many amateur fishermen who have passed over that route.

The first camp on the government road is situated at the distance of five miles, where we breakfasted and fed our horse, also providing ourselves with fodder, which could not be procured elsewhere on our journey, or at the various camps, although wood and provisions were kept on hand for the use of travelers. Mr. Lachance kept this camp, and was most obliging in his endeavors to please us. We could not but feel for his fore government. Here we found no game, but travelers passed his camp, excepting those who desired to fish in the higher waters around the Laurentides.

After resting at Lachance's post for a short time we left at about eight o'clock and in a couple of hours reached the River Cache, a beautiful stream, filled with trout, and whose banks are fringed with the fir, the spruce and the cedar tree. After mounting an extremely steep hill we, at half past eleven, arrived at the camp, a Noel, which is without a guardian and is sixteen miles from the next settlement. Near this post are two lakes, one on each side of the road, both pretty large and abounding with trout; one called *lac a Noel* and the other *lac a Regis*. At this camp we rested ourselves and our Canadian pony, who appeared to be impossible of fatigue. While in the vicinity we saw twelve men fishing, who seemed to be having good sport, as they were continually making catches of fair sized trout. Of course I was admitted that the fishing in these lakes has been carried on for a long time, and the waters are comparatively depleted. The same fact is the case with the two lakes which we reached a little further on—*Grand lac a Vepante* and *Petit lac a Vepante*. Both these lakes heretofore were famous for their trout, and unless the government interferes the water in the entire district must become entirely unproductive.

On the twenty-fifth mile we arrived at *lac Deriches*, where we remained for supper and a night's rest in the hut provided by the fore government. Here we found no game, but there was a certain supply of food, and had we had scythes we might have procured any amount of fodder for our horse, providentially otherwise provided. A stove, with any amount of firewood, was in the establishment, and we lost no time in making ourselves comfortable. One can hardly over-estimate, especially those accustomed to forest traveling and who have now and then been driven to extremities, the advantages to be found in these solitary camps, where the weary might find rest and the hungry food.

At five o'clock on Monday morning, after a good breakfast, we were ready for a start, and continued the route till about two in the afternoon we reached *lac a La Marre*, near which we reached the Montmorency River, along whose bank we drove for three miles and during this time took three camps. The upper waters of the Jacques Cartier are not so wild and furious as when most frequently seen by tourists near its mouth, at what is called Natural Steps, although even there are fierce rapids and whirling pools from which three and four pounders in the way of trout are taken by hundreds. At a place called the "Mendows," sportsmen from the city are wont to spend the holidays and never return without a satisfactory basketful. From *lac a La Marre* we entered the bush, and on our route shot nine partridges before arriving at the camp, situated on the border of *lac a Lhu*, which we passed, not without a lingering look at its beautiful waters and dark rocks, suggestive of numberless catches. At midday we reached the Jacques Bridge, our final destination being thirty-nine miles from the first post and over sixty miles from Quebec. Here we stabled our brave little horse, who had so dauntlessly carried us over the difficulties of the road, and put up our tent, as in the camp we found four horses and the impediments of an abse party. Anxiously and quickly we disposed of ourselves to hurry our movements in order to commence fishing operations; one to attend to culinary arrangements and the others to manage the fishing-tackle and launch the flat; all which was rapidly executed. After dinner we paddled up the river for about two miles, and whipped down the stream with red and brown hackle, and before arriving at camp had taken over three hundred speckled beauties of a large size, frequently capturing two at a time. In the camp we found a party of eight, who had been fishing on the lake for a couple of days and had been very successful. In fact, *ce ne saurait dire*, for this lake is at such a distance, and the approaches so difficult, that few attempt the venture; but the happy few are always richly rewarded, and the only chagrin felt by them is the impossibility of transporting to the city their complete capture.

It is almost unnecessary to state that in the depths of the wilds, "the forest primeval," separated from civilization, we did not fall of making a jolly time of it with our new-found friends, and that with the fish, so loved by the ancients, and justly whipped from the limpid waters, we did not speak of partridge, of duck and corned beef, and the whole catalogue we contrived to make the hours of night pass quickly, and that when we sought our couches of branches plucked from the sweet-smelling pine and spin, our senses soon found repose in what Shelley characterizes as "the other rosy as the morning" sleep.

On the following morning (Tuesday) we started for the rapids after breakfast, a breakfast partaken of as only woodmen can do on the wealth of the forest stream and field; of, in fact, the results of forest and stream, rod and gun up the rapids which intervene between the camp and Lake Jacques Cartier, at which water we arrived in about half an hour.

The lake is about fifteen miles in length and five in breadth, bounded on one side by high mountains, garnered by forest trees to the water's edge, and on the other side by woods, from which are wafted the delightful aroma of the cedar and pine. Near by is a sort of open ground, filled with boulders, wreathed in ferns, twining plants, and moss, fostered by the moist earth which surrounds them. In the lake are two islands, delightfully situated at a short distance from the shore, and to one of these we paddled our boat after fishing, and revelled in a real *à fresco* repast, which was in all respects truly bucolic: fresh trout from the surrounding waters, berries from the neighboring bushes and the vintage of Bacchus. In the afternoon the weather was unpropitious, and the rapidity of our skill went down the lake and descended the rapids to the camp, where we reached at about eight o'clock in the evening, where we had a right royal Robin Hood supper of fish and game.

On the following day we again mounted the rapids, and at twelve o'clock encountered a violent snow-storm, which lasted for about an hour, and therefore returned to camp, where we found that the other party had left and had been replaced by another of three gentlemen from the city.

In the distance we saw a bear satisfying himself with a leisurely meal of blueberries at some distance from the earth by a rifle. On sight of us he quietly retreated to his home in the woods. While smoking in front of our camp door an immense eagle performed several gyrations over our heads, and finally made a swoop upon the waters where were congregated large numbers of loon.

On Thursday morning we started for home, bearing with us as trophies of our booty over fifteen hundred speckled trout measuring from eight to fifteen inches in length, as also delicious memories of the sweet aroma of the woods, the tales which enhance the scenery of Lake Jacques Cartier. Quebec, September, 1890. F. B. ROBERTS.

### RANGE OF BLACK BASS.

BEDFORD, O., Jan. 1.

WILL you please allow me a little space in your paper, in reply to Dr. E. Sterling's letter in the last number of *Forest and Stream* in relation to taking black bass at the Sault de Ste. Marie? In his review of my communication of Nov. 15, I did not say, as Dr. Sterling states, that I had fished the waters of the Sault de Ste. Marie rapids and their "surroundings" for many years with Judge Potter, of Toledo, and had never caught any black bass there. But I did say we never caught any black bass at the Sault de Ste. Marie, and I repeat that we never did, nor did we ever hear of any being caught in those rapids.

In my communication I did not use the word "surroundings," but distinctly stated the Sault Ste. Marie, and referred to no other place.

One need not go twenty miles from the Sault to the Sailors' Encampment to catch black bass. This fish abounds in many of the bays and rivers of Lake Superior. They are found in the Ontonagon River, one of its branches being the outlet of Lake Agogebick, a distance of thirty miles southwest from the town of Ontonagon. That lake literally swarms with black bass. The Lake Portage mentioned by Dr. Sterling I have hauled in fish with a hand line and hook as fast as I could cast my squid by hand. T. GARLICK.

TORPEDOES AND FISH.—A Newport correspondent tells of a torpedo station at that place which fires salutes, and asks about their effect upon the fish in the harbor. He says such a salute was fired on July 21 in honor of the French frigate *Magicienne*, when each torpedo sent huge columns of water into the air several hundred feet high. There can be no doubt about its effect upon the fish being instant death to

every one for a large distance around, as fish are very susceptible to shocks, which often burst the air bladder. We know that there are many fish killed by the necessary blasting operations for the improvement of our rivers and harbors, but we do not see the necessity of torpedo salutes.

## Game Bag and Gun.

### BUFFALO HUNTING.

**B**UFFALO hunting, or rather buffalo slaughter, is the most uninteresting pastime I know of. I cannot call it a sport, as there can be no sport in any such a tame, one-sided affair, the result of which is settled nine times out of ten from the very start.

One frequently finds men, vain-glorious and conceited in their own prowess, who depict a buffalo hunt as one of the most glorious things out, besides dwelling in a sickening, grandiloquent strain upon the peril and tremendous risks they have run in killing these big-headed and bearded cows. A buffalo looks ferocious, but his appearance is so at variance and in direct opposition to his nature, that he always reminds one of the one of whom the braying of the donkey frightened away the lion.

A thousand buffalo can be stamped by a bunch of weeds drifting past them—then they will go right straight ahead, over and through anything, being far too bewildered to know or care for aught but escape—and the ground they cover, considering their weight and gait, is greatly to their credit, and shows that although deficient in pluck, hearing, eyesight and scent, they possess prodigious strength, backed by no end of wind, qualities which, if combined with courage, would make them one of the most formidable animals of this continent.

I pleaded guilty to having killed a few buffalo, never for sport but the first time, as I was so disgusted with myself that I never had the heart to do it again; and I must confess that now although I ache to kill something "big," yet I would not go out to-morrow on a buffalo hunt any more than I would go to a pigeon roost and slaughter pigeons by the sackful with a shotgun. Perhaps my early training on snipe and woodcock has rendered me unfit for this kind of murder.

There are two ways of killing buffalo; one is by stalking after once sighted, and the other is running them down on horseback. It amounts to the same thing in the end, so far as the buffalo is concerned, for these two reasons:

First—He cannot run away from a decent horse, and therefore is caught at last.

Second—He won't fight it out, can't climb a tree (Mark Twain to the contrary notwithstanding), burrow, fly away, or in any way dispose of himself. So he stands like a statue and is killed.

This is the fate that awaits him in any event; so I suppose he may as well be philosophical about it and die—not game—but sink on all fours and drop with a thud, the recollection of which may make me ashamed of ever having killed one of these harmless, good-tempered, easy-going fellows—unless indeed it be for meat—on the same principle that a farmer kills a pig, etc.

In stalking the hunter need only be careful as to the wind, as a buffalo does not trouble himself much in looking about for his enemies, so that when they appear it is too late to save himself. When once you see the game, proceed as in antelope shooting regarding your mount—only—a little more so, for remember that a buffalo will strike mortal terror to a horse's ears, so that no ordinary lariat and picket-pin will hold him should one of these sheep in wolf's clothing happen to come near him. To avoid being left on foot, then, secure your horse with a strong rope and fasten him by the halter, as should he pull frantically, as he certainly will, if fastened to the bit, it will cut up his mouth, and he will generally break away by either pulling the bit out of his mouth or smashing his head-stall. To avoid all this, use a strong halter, long, stout picket-pin, strong rope, say thirty feet long; subside the horse, when he will probably graze till you return, and in this manner occupy his time, which if he were left bridled would hang heavily on his hands, and becoming impatient would the more readily perceive any buffalo that might chance to come in sight—and then good-bye horse if not properly secured.

The stalking part requires no great amount of skill, and any man with ordinary common sense can approach, on favorable ground, to within seventy-five to one hundred yards, at which distance one shot behind the shoulder will settle the business—if not, be ready when he turns to find out "what's the row," and let him have it between the eyes; that will finish him if it strikes him fairly. Some men are so imbued with the "miraculous" that they will insist that a buffalo's head is impervious to a rifle-ball. That, of course, depends upon the rifle; all I can say is, that even with seventy grains of powder and 400 grains of lead I have always sent a buffalo to grass when hit squarely between and a little above the eyes, or just behind and a little under the ear, ranging forward. Either of these shots will penetrate the brain and cause instant death. I have seen several killed in this manner with a cal. .45 Colt's and Smith & Wesson's revolver, and also with Winchester rifles with only forty grains powder and 200 grains lead. So I must beg leave to disbelieve, *in toto*, the statements above referred to. As to the matted hair and dust which collects the forehead of an old bull, why that might to some extent stop a small bullet, but anything up to or over 270 grains lead and seventy grains powder will drop a buffalo stone dead if properly delivered, and a lighter load is not, in my opinion, worth speaking about.

In running buffalo much depends upon the horse—far more, in fact, than upon the rider—for as I have said before, however much nettle a horse may have, the sight of a buffalo is too much for him—at first, anyway. A good horse, when I have seen horses that at first went into what in men would be called convulsions, go and sniff around a dead buffalo with as much composure as they would about a hay-stack. Perhaps they felt cheap at having displayed so much cowardice and wanted to show off their newly-acquired courage.

When you see a herd get as near it as possible without being seen—this, on rolling prairie, is easy enough—keep the wind in your face, and when you have secured yourself of all the cover the land affords in the way of ravines, coolies, etc., why then make a dash at the outfit—get on the right of your victim and bang away. Don't shoot at over ten yards, and then you are pretty sure to kill at every shot. If you have your choice of rifles use a Winchester carbine—if no repeater then a Sharps—the lighter the better. Keep your

magazine always full, if possible, as it is easier to load as you go; besides, you may be dismounted at any moment, and then a few shots at your fingers' ends are handy. If you find your horse is giving out, why make one last spurt, and then your loaded tube is ready to do good execution. Don't wound a dozen, and find them all scattered over the prairie, flapping about in all directions. Kill them outright if possible, as your horse will be the better well blown after his chance and can't very well follow wounded game and then carry you to camp. So do your work in style; it is much more sportsmanlike, to say nothing of the suffering you can often so easily avoid.

If revolvers are used, change sides. The Smith & Wesson self-extractor, cal. .45, is the best, but a Colt peace-maker, same calibre, shoots more powder, and will stand more hard knocks, and is much easier managed. Beware of the Smith & Wesson Schofield model—a better contrivance to tear your thumb and break your thumb nail could not easily be conceived. This action is simply bad, but the original Smith & Wesson American or Russian models are excellent, and unsurpassed for accuracy and rapidity of fire. It is always better to have two or even three pistols, and to keep one in the belt in reserve; then if you are thrown (pardon me, I mean dismounted), or your horse falls with you, it may be convenient to have six shots left ready to check any undue familiarity an old woodcock bull might wish to bestow on you, although the poor brutes are glad enough to be let alone as a general thing.

In connection with the chase, I will give a wrinkle that I learned in South America, the land of horsemen, and although not a preventive yet it is an admirable antidote. When on the full run it is sometimes ruinous to stop; in fact, in some kinds of sport a stop would be all right. If a man drops his pistol or anything of value he is in a quandary. If he stops he loses his game; if he goes on he puts with whatever fell, and the chances are as twenty to one that he never sees it again. However good a rider you may be, you can't stop to pick up your pistol, for the simple reason that you are past it before it reaches the ground. So just fling off your hat, or drop a good big handkerchief; either of these can be seen a long way, and as your pistol is near you you can readily find it if you need it, and you're in luck. I sometimes have lost both, but that seldom occurs, unless in the evening, in which case it is better to dismount.

The buffalo's tongue is considered a tidbit, and many a poor brute has lost his life to afford some Indian or "so-called" sportsman food for one meal. It is very amusing to see a novice carve it out. He prises open the huge jaws, grabs the tongue with the left hand, pulls on it and slashes away, and is very lucky if he succeeds in getting half; so that when comparing his prize with those brought in by the "old hands" he is astonished that those so much larger—evidently he must have killed a very small buffalo.

The proper way is to turn the head sideways, insert the knife at the apex of the jaw, and from the under or outer side, cutting first through the hide, follow the jawbone with the knife, first on one side then on the other, well up to the throat. Now reach in, pull out the tongue still from under the jaw, haul away and slash it off at the roots, divest it of the hide, and then you have a morsel fit for a king.

I must say that I know of no meat that surpasses that of a buffalo calf, especially when roasted in the hide, called in Spanish "*Corneo en cuero*," literally meat in the hide. For that matter any meat tastes better cooked that way, as much of the very essence is lost in skinning.

An old bull is tough and has a twang that I can't relish, but then it beats me in all respects, and, as to my palate is away ahead of beef, mutton, possum and all such oily stuff. This is merely a matter of taste, so I can't eat oysters I suppose I am excluded from giving an opinion in the culinary art. It takes a good swift horse to overhaul a calf when left to himself. When in the herd and on the run the cows always manage to get them in the middle for protection, just behind the bulls, when the cows bring up the rear, so that calves are well protected and comparatively seldom killed. This accounts for the small number of calves killed, but not so much, as the majority killed are bulls, old fellows that have seen better days, some gray with age and stiff in every joint. When breaking a horse from fear of buffalo be careful you don't lead him up to one that is bloody, as the odor of blood alone will terrify most horses; so for the first few times lead him up gently and not too close to a dead buffalo, one that has not been operated upon. An intelligent horse soon loses his fear when he finds that he has no harm to be done, and a little experience he will dash up alongside of a poor fugitive and afford you the most numerous shots; sometimes I have seen men place their carbine muzzle within two feet of the ear; and that, by the way, is a sure shot.

The only danger that I can see is in being pitched, and none but the surest-footed horse can follow buffalo long without coming to grief. What to you appears a perfect "cool-de-sac," is a mere plaything for a buffalo. He will dash down a wash-out or gully, with banks fifty feet high and steep as a steep. Then you think you have him sure; not a bit of it; he simply charges this bank, and by his immense strength of shoulder and muscles of iron he clammers over the other side, where no horse, however active, could live it through; away he goes, fresh as a lark, while you are doing your best to get out of a tight place. When they come this dodge on me, I simply dismount before going down, and as he goes up the opposite bank I break his hind legs with a bullet, and that saves lots of trouble. If I have no rifle, then I go down as best I can and come out somewhere on the opposite side, but rarely in the buffalo's track, for although they are very appropriately termed the "surveors of the prairie and bad lands," yet it is in their quiet moments that they display their ingenuity and prairie love for fading the most level road, and not when pursued and half scared to death.

A Texas steer or a South American bull has more "sand" and is far more dangerous than a dozen buffalo, but they cannot compare with him in getting over rough ground and scaling impassable walls, possibly owing to their being too heavy set and not so powerful in the chest and legs.

TRADER.

THE CATAWISSA CLUB—*Catawissa, Penn., Jan. 3.*—The annual election of officers of Catawissa Fish and Game Protective Club, held in parlor A, Susquehanna Hotel, took place on the 31st of December. Officers: President, H. B. Aldrich; Vice-President, W. P. V. William Eyer, Treas., H. B. Aldrich, Sec'y. The society has done some good work, and we hope to continue our influence in the protection of fish and game. We shall continue the practice of glass ball shooting. Should be pleased to meet any of our neighboring clubs who wish to shoot with us.

H. B. ALDRICH, Sec'y.

### THE DEER LAW.

#### Editor Forest and Stream:

I have looked with considerable interest for the report of the last meeting of the Long Island Association's Game Committee, to see what recommendations they would make for perfecting the law relating to "protection of deer," and am very much surprised to learn, through your issue of 6th inst., that they recommend an open season of three months at a time of the year when deer can only be obtained through the agency of dogs driving them to water, and then close by saying "hounding deer to be strictly prohibited."

I am not in favor of hounding deer, and wish means could be provided for keeping dogs out of the Adirondack region. But the inhabitants of that region are mostly those who kill deer in the fall for market, and must use dogs more or less. Later, when snow comes, they kill in still-hunting, and prefer that method, owing to the skill required and consequent greater pleasure, also the better condition of the venison when obtained. Not one hunter that I have ever seen glories in driving a deer to water, then paddling up to it either to kill it with a club, or deliberately row all around it, and after getting the deer just where it is most convenient, shoot it through the head. No, they deprecate such actions. The sportsman (?) does a vast deal of it, though.

The guide is compelled to act in an entirely different capacity as guide from his natural mainly feelings. He generally has a poor man and a child, and so, to get every opportunity for earning money. Thus it is a necessity to attend spring fishing parties and fall deer driving parties. The sportsman whom he caters for in early summer must have venison, when there is very little skill required to kill deer, and I know a great many guides who will only allow the necessities to be met; but, unfortunately, there are others who stand on no ceremony, think it cunning to paddle a greenhorn up to a deer, and then, to do it as easily as possible, to meet the whims of their pair, being well aware that the members thereof know no difference between getting up to deer in May and June and the more difficult feat of supplying a camp with venison in August and September by the same method. The credit for skill as a paddler is what tickles the vanity of the average guide.

If we could have a law relating to the capture of deer that would put the sportsman and the probabilities are that the guides and hunters would be unable to pursue their vocations without stepping over the line. There is a vastness, to some, in the Adirondack region. The guides and hunters are rightly of the opinion that they should have a hearing, and laws be enacted that will greatly protect their interests. Laws enacted through the influence of people in remote regions without consulting them always will stir to rebellion the inhabitants of the Adirondacks, because it is so sure to be in some measure seemingly unjust to them.

If I am not greatly mistaken the present law in relation to hounding of deer was passed through the influence or petition of an association in close proximity to one of the best deer hunting regions of this State. What the effect has been in two years one would be astonished to learn. It has come to my knowledge that one party during the last autumn killed something like twenty deer before dogs, which means that they were unable to sink a greater portion of the venison in the lake, spoiled. I know of another party who came up from Maryland in July, eight strong, built a log-house, had several guides and dogs, all ready for "music" when August 15th arrived, and "music" they had for about a month. A man who formerly was a guide and ought to know better, keeps a hotel on an adjoining lake to the one the Maryland party were encamped on. He keeps two dogs with him, and he says that he is going to have the law enforced to drive all the deer away from this region," he said, "Well, the game is open and I intend to get my share. The law allows it, they say." There are so many like him who abuse their privileges that I should be pleased never to see another bound in the woods.

The early days of September bring many real sportsmen into the woods who kill no more than can be used, have their sport and go home. They are peaceable and disposed to be good. Even they will infringe upon the law if it is made to prevent the use of dogs entirely. So we get a great mixture—the guides, hunters, wantonly destructive sportsmen, the would-be inoffensive sportsman, and he who obeys strictly. How to meet the question has been the subject of study to a great many. As the law now stands we are subject to being overrun with sportsmen from other States and to having our deer rapidly disappear. While one set of men would certainly laws another oppose them. Should the law be passed for the protection of game and one giving some leniency to sportsmen the question would still remain, Who will see that it is properly enforced?

In my opinion the best way to have the deer law enforced is to enlist the guides and hunters in protecting the deer during the winter, spring and early summer, by granting them certain privileges that the summer and autumn visitors cannot get. The guide and hunter element could thus secure a few deer for market. I do not consider it just to prevent the midsummer tourist from killing a deer to eat, for I feel confident that the fawn will live alone after July 15 or 20, and the deer begins to be quite wary at that time, but would deprecate killing deer before that time and the use of dogs before September 1, and then only for a few days or weeks.

It is the opinion of many hunters that the deer would increase if it were possible to prevent "floating" in May and June and "crucifixion" in August. Allow an open season from July 15 to January 1 and prohibit hounding.

There is a colony of Dutch or Germans on "the west side" who are as lawless as "all possessed." During the deep snow time they have been known to kill 300 deer while the poor animals were perfectly helpless, and to "float" all during May, June and July. Who can prevent it? There are deer in plenty now, but with the use of dogs we shall soon be compelled to prohibit killing deer for certain periods. We were a law on Long Island and in Pennsylvania. We were a law of moderation and one that will not cause rebellion in the Adirondack region.

The first year the present law went into effect to hound deer the association that petitioned for it was very strenuous and watchful during the close season and succeeded in obtaining information that a certain hotel-keeper in the woods had killed deer for his table. They involved him in a lawsuit, which naturally incensed the man whose sole reason was to protect the deer. What was the result? His ideas are that the law shall not prevent his killing deer occasionally for his table and still allow the outsiders to come in at another time and kill as many deer as they please, before dogs and helplessly in the water, without a chance of escape. Naturally it is hard for such men to submit to the present arrangement. He is a determined man, an excellent still-hunter

and liked by everybody, one who appreciates a good act and quick to resent injustice.

The result of hounding on "the east side" is that deer are very scarce, and the advocates of hounding see that they have "killed the goose that laid the golden egg." As a consequence, the war upon hounds has been very disastrous, for many have been poisoned in camp. I learned of one party that lost six hounds in that way, another three and several parties with each a single hound were also visited with the same remedy. I know how the guides feel, for I have been enough interested in the subject to find out by talking with them.

The rush from "the east side" advocates of hounding to "the west side" during the past year shows that "the west side" people must do something to save the deer. "The west side" has been notoriously lawless for years and hounds have been used there for so long a time that the vocates of hounding are jumping with joy at the gates being opened for them to go through and pursue their sport on "the west side," while "the east side" is partially protected by poisoning the faithful and innocent hound, who only obeys instinct in chasing the deer. However, that is a very efficacious method of protecting the deer.

The Long Island Association cannot hope to succeed with their recommendation, and I think it would be much better to wait further to consult with other associations before calling their petition "perfect."

#### NO. 4, ADIRONDACKS.

I notice that your St. Lawrence County correspondent complains of an undue amount of deer slaughtered by the use of dogs. This is only one of a hundred instances of the kind that have taken place all over the Adirondacks since the passage of the present obnoxious law making the open season for hounding deer two and a half months. There is no doubt but that that law has been the means of the destruction of more than two thousand deer during the past two years. Deer take very readily to water late in the fall. Pot hunters have taken advantage of this fact, spreading themselves on the numerous lakes of this region and literally filling the woods with bounds. Visit any part of the Adirondacks during October and you will hear the voice of the hound heralding the swift destruction of this noble game in our great New York wilderness. As this mode of hunting requires no skill, any one with an outfit consisting of a boat and dog, an old musket or two-dollar fowling-piece, or what is considered an equally indispensable armament—a good club—can be as successful as the most expert sportsman with his modern breech-loading gun or rifle, his long experience and hard-earned skill. It is true the pot hunter does not have a guide "to hold the deer by the tail while he shoots him through the head." But then when once he has been cut off from the shore the deer is entirely in his power. He can shout at him as many times as he pleases, or beat out his brains with his club. Now, right here, will you be kind enough to tell me wherein is the difference between this mode of killing deer and crusting him, or hanging them in the deep snows of winter, or snow-shoot. In either case they are deprived of all the means with which nature has provided them to escape their enemies, and thus requires no skill on the part of the hunter.

I am of the same opinion of your correspondent. Unless the game laws regarding deer are so amended as to prohibit hounding deer, the time is short when deer will to any amount cease to exist on the Adirondacks. Or if sportsmen require a short open season, let that be at a time when deer cannot so easily driven to water, and also at a time when sportsmen are most likely to be benefited thereby.

Very few sportsmen visit the woods later than the middle of September, unless they go in for the purpose of slaughtering deer by hounding. Therefore I would suggest that if any open season for hounding deer be allowed, let that time be the first two weeks of September. This would accommodate the sportsmen, while it would prevent the great slaughter late in the fall by pot hunters and marketmen.

C. FENTON.

#### FOX-SHOOTING IN DUTCHESS COUNTY.

WE have been having gay times with Reynard this fall, and the remembrance of the last run, to say nothing of the astonishing good fortune that favored our little party induces me to send you a description of the same. I suppose, however, before telling you my story, that it would not be out of order to frankly apologize to our pink-coated brethren for the very unsportsmanlike manner in which we bagged our red game (of which they will surely accuse us). But when one has no alternative, what is one to do? Shooting fox is not the sport "par excellence" of any country, much less our own—but enough! I'm in for it, so here it goes.

Dutchess County, ten miles east of Poughkeepsie, presents an appearance not favorable to equestrians, to say the least, "off of the road," and I have yet to see the nag that will follow the bounds in that locality, much less the man, be he ever so bold or daring. The only way in which the red thieves can be brought to bag up here is by the trap and gun, and as the former method is only practiced occasionally by the farmer lads, we were forced (shall I say?) to adopt the latter.

One bright October morning, the frost bring thick and white over hill and vale, and the air keen as mid-winter, found our party of shivering, good-natured Nimrods busily stowing away the dogs and guns and getting ready for the start. The horses were dancing and impatient to be off and we were soon bowling merrily along. A drive of several miles finally brought us to our destination—a long, low, old-fashioned farm-house, half buried in the grand old trees. So with man and dog and client drove into the old barnyard, scattering the ducks and chickens in all directions, and bringing to the doors and windows the sleepy faces of the inmates, who probably thought a band of savage Sioux had arrived.

It did not take long to put the ponies under shelter and to get the breech-loaders out of their cases, and we were soon wending our way up the steep hill to the west of the house, preparatory to taking our stands on the different runways. Old "I" took the guard and general position, while I, as a better shot or more thorough woodsman (were I fired)—was confident of being able to start a fox on this same hill. When a rather stiltish walk, we were finally "told off" by the old man to our positions—one here, another there, until all were settled. Doc and myself being old hands, comparatively speaking, at the business, quietly slipped around the hill to the meadow lands below and located ourselves behind the stone wall. The dogs were running high above us, through the woods and over the huge rocks, but save the angry caw of some startled crow at his breakfast, not a sound broke the

stillness of the morning air. In a short time I saw Bugle thrust his black and tan muzzle out of the dense underbrush, and I knew that the jig was up as far as that hill was concerned. So, calling to Lester, he soon had the dogs in and we three went on to the next ridge, about half a mile distant. Here the old man left us and plunged into the swamp with the dogs, cautioning Doc, and I to get to our places. The former, not minding the cold air in the least, perched himself up on the top rail of the fence, to better view the land below him, while I chose a warm corner in the old moss-covered wall. The time hung heavily for upward of an hour, and I began to weary of the constant strain trying to hear the dogs, when the distant bay of a hound came musically to my ears, and sent the blood tingling through my veins like fire! Yes, I was not mistaken. The long-drawn howl again faintly quivered through the air, and I hastily drew out the shells to make "sure" of my charge. It was with some difficulty that I again advanced over the stone wall. I can assure you. Every moment now the notes of the pack in full cry could be heard, and I judged from the direction of the sound that they were running a hill miles to the south of us.

I was enjoying the situation exceedingly, and mentally going over the final scene if his crafty lordship would only "meander" my way, when looking up the knoll toward Doc, I beheld that worthy gesticulating wildly with his hat for me evidently to follow his example. Drawing back both hammers and glancing cautiously over the wall, I beheld his lordship trotting along, "kind of careless like," his head well up and evidently suspicious, for as I glanced along the barrels in rising to a standing position, he saw me and was off like a flash. I knocked him over at full sixty yards, and was about to make matters sure by giving him the second barrel, when Doc yelled to me to look out. I was puzzled, to say the least, as the hounds were just within hearing and I was possibly being trailing this one. Here the Doctor joined me, and we set down to discuss the matter in the open field, when like magic the music of the dogs burst full upon us. To move was impossible, and so we remained like two brown statues, our hearts in our throats, for in full view coming down the hillside a fox was running for his life and the dogs not seventy yards behind him. It was the finest chase I ever saw. On he came, no time to look ahead, and in less time than I can tell the Doctor's gun rang out his death-knell and he, the cunning scamp, was no more. Two pellets and the sun at four o'clock was grand good luck indeed, and we were highly elated. The rest of the boys hearing the guns now came running in, and we were soon talking as only fox-shooters can talk over the result. Old Lester had not as yet put in his appearance, so lighting our pipes we sat discussing the run and "lighting the battle o'er again." In a short time, however, the old man was seen striding along toward us, much to our amazement, with a fox dangling from his arm and a merry twinkle in his eye at our unfeigned astonishment. Mutual congratulations of the course followed, and we learned that during the morning the dogs started the red imp almost under his feet, and he "cut loose" with the result above stated. To say that we were not a happy lot of fellows over those three "varmints" would be unnecessary.

So ended our last hunt in Dutchess for 1880, and it is the sincere wish of your correspondent that all who contemplate a day with "Reynard and the gun" will have as good a time and be favored with as good luck.

BLUE BILL.

#### WILD FOWL IN CONFINEMENT.

I HAVE lately been inspecting the collection of wild fowl at our Philadelphia Zoological Garden, and cannot help remarking upon their excellent condition. Until this year all the geese and ducks indigenous to North America have been housed during the winter, which necessarily deprived them of the exercise which is requisite for good health. Now the society has inclosed a portion of these grounds, partly sheltered by trees, about an acre in extent, and I found the several varieties, without exception, in fine feather, and being present at feeding time noted their very healthy appetites. Barrels turned over on their sides and partially filled with straw furnished a shelter for the birds in extreme cold weather, but as all our wild fowl are of a hardy constitution and accustomed to storms and ice, I learned they seldom took advantage of the cover offered them, preferring to sleep outside.

In the collection I noticed the black and white swan, the European gray goose, the Canada goose, the brant, the canvas-back duck, the red-head, the widgeon, the black duck, the teal and summer duck. Six or seven years ago, while your correspondent was attending to some building on Long Beach, N. J., eight black ducks and a few days later one was brought to me alive. They were purchased by one of the baymen to raise, with the promise that for every one reared he should have a dollar. Supposing the whole number had died I thought nothing more about them until the following September when I was about leaving the beach where I had been spending the summer. As the boat was about leaving the dock my bayman brought to me a huge box containing the eight black ducks, now nearly three-quarters grown. Hastily directing the box to the Zoological Garden, Philadelphia, I afterward visited the society regarding them. I saw nothing more of the ducks until I one day visited the garden and found them quietly and contentedly swimming in the lake. They are now in their winter plumage and as glossy as an ibis. Two have died, owing to the hunching manner in which their wings were pinioned. The balance are as gentle as barn-yard fowl, and it is known this species is one of our wildest and shyest. The canvas-back and red-head at the Zoo, are becoming very tame, and I witnessed quite a battle between a drake widgeon and a male canvas-back duck, the widgeon driving his larger opponent from the disputed food. I would here mention that the Zoological Society of Philadelphia would be much pleased to receive from sportsmen any wing-tipped game they may come in possession of, especially the wild geese, brant or ducks, for the collection at their garden.

The intensely cold weather we have been having, accompanied by the heavy falls of snow in the past two weeks, is playing sad havoc with the game in this State and New Jersey. Ruffed grouse and quail have been driven from the woodlands, while the latter bird discovered under the snow, huddled together as they roosted, stiff and dead. In the wilder counties of Pennsylvania deer have been seen near the colder stacks in close proximity to the farm-house, being driven there to seek food. We must remember our winter has just begun and we will likely have as severe, if not more severe, weather in January and February. With this in view it is not necessary that something should be done for

the protection of our game (if there remains any) next autumn? What sportsman would not forego his quail shooting for one season and devote his attention to the ducks, snipe and woodcock which are migratory, while poor Bob White, decimated in numbers as he will most certainly be, may increase in quantity?

While I write it is again snowing, with a prospect of a fourth heavy fall. Rest assured this is certainly to be the most disastrous winter on the quail we have had for many years.

On the New Jersey coast, at Atlantic City, Tuckerton and Barnegat, all the feeding-grounds frequented by the black duck are frozen over, consequently they are pushed to points where they are easily killed in numbers, but they are poor and worthless for the table. Great quantities were shot last week, useless save for their feathers.

At Sinnepuxent the sound is frozen completely over, and what few ducks the perchers generate, with their nets, do not frighten off the shoals are obliged to go further south. We fancy these waters afford little perch-fishing, now that everything is frozen up.

We remember some years ago being at Sinnepuxent Sound goose-shooting and observed the effect the hotels and bridge had on the flight of fowl as they neared the objects mentioned. Not a goose passed within gun-shot, every bird crossing this capital shooting point much beyond range, when at one time, before the hotel was built and the bridge erected, Messrs. Tabor and Stokes, who still own the point, enjoyed a good sport whenever there was a flight of either geese or ducks. Knowing it to be a waste of time to remain where we were, we made our way to the beach side of the sound and there, hidden in boxes sunk into the sand near the water's edge, with wild geese decoys (hewers, as they are called there), managed to get several good shots and to kill a quantity of fowl. But the day for all such sport at Sinnepuxent Sound is over, the best part of the beach being taken up by a watering-place hotel and outbuildings at Ocean City. And so it is all along the New Jersey coast, from Long Branch to Atlantic City, and soon will be to the capes of Delaware. Capital grounds for bay-bird shooting in the summer and fowl and duck-shooting in the fall and winter are entirely destroyed by watering-place hotels. Hoxo.

Philadelphia.

#### A TRUE PLOVER SHOOTING STORY.

WITH A MORAL.

IT is said that "the best laid schemes o' mice and men" gang aft a-gley," and thus must all those have thought who have tried upland plover shooting.

Of all the birds on the sportsman's list, the gray or grass plover is the wildest and most not get-table. Unlike his very uncle, the goose, he will be enticed by neither stool nor call, in fact his cry is so loud and so insistent that we have only the one man who could correctly counterfeited it. This was an old bayman of Long Island, who used to say that when he first got it down fine, he used to fool himself, so much so that he would in an abstracted moment go and hide. Down in the East the good folks call this plover the Humility or Humil for short, perhaps on account of his modest and retiring nature, but the Yankees used to circumvent him occasionally by shooting out of wagons or from behind a stalking horse.

Our story takes us back to many years ago, when the pasture lands of Ocean County, N. J., were a favorite rambling place for plover. They came there in September in flocks of hundreds, filling the air with their plaintive call and straining the "long Toms" of the Jersey farmers.

It was upon a crisp, frosty morning that four of us crossed the bay from the beach to have a crack at the plover that frequented the rolling upland pastures of the mainland. The Honorable S. was of the party, a short, jolly personage, of fifty summers, well grounded in all that pertained to sport, but extremely nearsighted. The prow of our skiff had but just grated against the sand, when the Honorable S. drew from under the gunwale of the boat a huge cow's skin, surmounted with a pair of huge horns. To don this and securely fasten it by knotting a short piece of fish line around his neck, was but the work of a moment. He then looked up, and with a Satanic smile said: "Boys, I've got them very uncle, the widgeon, the teal, the hills, dotted here and there with large herds of cattle, while the wettest slabs between the knolls of the flute-like note of plover was born down upon the air. "Now, boys," said the gay deceiver, "you station yourselves behind the fences and I'll start up the birds." On went the Honorable S., bent over in imitation of a cow, his gun in hand, and his spectacles with demonaic luster gleaming on his nose. We, in silent admiration at his "happy thought," unsnatched ourselves behind the fence and peeped through the slats with anxious feelings, waiting to see whether the old would prove effective.

At last the Honorable S. spied a plover light at the base of one of the hills, and bobbing after him he went. He had lessened the distance almost half and was within a hundred yards of his victim, when from the nearest herd strode a bull. He was a grand animal, and the airy background made him look larger to us than any bovine we had ever seen before. He was not angry, but pleased, as he thought how he could use this in his introduction to his domains, and he gave his tail a snap that sounded like a pistol-shot, as much as to say, "Whoop-la! Eureka! What is this on these pastures new?" The cows of the herd raised their heads at this and took in the situation at a glance. They first looked at the counterfeiter and then at their lord and master, who was marking time to the thoughts that fled through his mind. One and all shook their heads, as if to say, "Just like him," and being of the philosophic sort, resumed the cropping of the grass.

The bull took one step forward, and, like Hamlet's ghost, sniffed the morning air. There was a devil-may-care twinkle in his eye, and an exulting chuckle in his respiration, as he sent from each nostril a cloud of smoke, as if he had pulled both triggers at once. "Yam," said the bull, and began trotting toward the unconscious S.

We yelled "Look out!" waved our hands and were frantic with dread and wild with despair. The fraudulent bovine needed us and went back, but went on toward the plover. It has been said that fifteen seconds later some one appeared, two weeks and a half; it was so with us. At the end of fifteen seconds the Honorable S. was standing on his head and the bull standing over him, looking very much surprised. S's gun went off, and the bull, still more astonished, reared up, lost his balance and fell over backward. The Honorable S. resumed his normal position and started for the fence, the bull rolled over and resumed his and followed in pursuit. He

was fierce. It was a fearful race to behold—one of life and death. The suspense was soon over, however, for the Henorable S. went for the fence the same way François Ravel used to go through the clock-head first—and safely landed on the other side after scraping, by the top rail, all the buttons off his vest. The bull slowed up and the cows on the plain seemed tickled to death, while from on high the plover, with outstretched wings, looked down and squeaked out: "Bless you, my children. Adieu!"

EPINS.

## SAVE THE BIRDS.

New York, Jan. 3.

Winter is again upon us in its fullest rigor. Snow covers the whole State to the depth of fifteen inches and the quail are gradually starving and then freezing. No game protective association, no Legislature, no prohibitory game law can help them; winter, the greatest foe, the greatest enemy of the quail, is upon them, and if help does not come to them soon a good many of them will perish.

But there is this help to come from? From our sportsmen individually, and at little expense. Every shooter, that is city sportsman, has his friends in the country, has his parties he goes out shooting with in the fall of the year. Let, then, each city sportsman write to his friends the following instructions: Take a horse and sleigh, fill up the sleigh with hay or clover cut pretty short, mix with the hay or clover a lot of buckwheat or cracked corn, and distribute the whole in patches large enough to be seen at a certain distance, so as to attract attention, along the edges of the swamp or in any field where the birds have been known to feed. Repeat this transaction every other week or after every snow storm. The expense will not be large, but thousands of quail will thereby be saved, as every shooter knows that a well fed quail can stand any amount of cold.

I have tried the experiment, and I am happy to state that it works well.

GUSTAVE WALTER.

Pittsburgh, Pa.

You ought to speak a word for the quail; you cannot be too quick about it. Only yesterday a man in my neighborhood picked up two nearly frozen, the balance of the coveys were dead. He took them home, thawed them out and they are now doing well.

This is the worst winter on them since 1855 and 1856, and unless we try to help them now we may as well quit shooting for five years to come. Why not try to get New York, Pennsylvania, New Jersey and Maryland to stop all shooting for two years. Ohio would join and it would be a blessing all round. Two years' rest for quail, grouse and woodcock would make birds plenty for twenty years to come, but if the few breeders that are now left are to be shot at from October to January of next year we may as well give up sport of this kind altogether.

J. S. B.

The Washington Reporter says: "Warren Brownlee and Wm. Mounis, formerly of this county, now of Missouri, have promised to send a thousand quails from their farm, that State to this county. The birds are very abundant there, not being hunted as they are here, because the larger game is found in plenty. The Sportsmen's Club of Washington would be pleased to receive reports from farmers and sportsmen, by postal card, whether the quail have suffered from the severe weather, in order that the loss may be made up by sending them stock birds. Parties wishing birds for presents can get them at net cost upon application to the club. Notice will be given whenever the birds from Missouri arrive."

ROCKINGHAM, N. C., Jan. 3.

The poor quail in our State are now having a hard time of it. In the northern and western portions of our State the snow I learn is, and has been for some weeks, about one foot deep. In 1876 the quail were almost exterminated here, but since then have greatly increased in numbers, and are now about as numerous as before the cold snap of that year.

T. C. L.

VERNON, N. J.

The snows have done great injury to the quail, which are the only bird left in any quantity in this section. Ruffed grouse are almost exterminated, and where several years ago hundreds could be found on our mountain for a year or two but very few could be found. Can nothing be done to save this bird?

F. C.

WILMINGTON, Del., Jan. 5.

I fear all the quail in the State are done for. We have over eighteen inches of snow all over the State, and reports are coming in that the quail are frozen and starved to death.

H. W. G.

HIGHTSTOWN, N. J., Jan. 8.

The sportsmen of New Jersey feel pretty certain that the quail have nearly all perished in the drifts or been devoured by hawks. A close season of two years is generally called for, and the Monmouth Democrat, Hightstown Gazette, Manasquan Sea Side, Lakewood Journal and other newspapers are indorsing the amendment of the game law to that end.

CENTERTOWN, L. I.

Entire beveries of quail have been found frozen in the snow, and whole beveries have also been potted by one charge of shot from the wretches who sneak up and deliver their broadsides in the snow.

W.

STANTON, Va., Jan. 8.

The snow and cold have committed fearful havoc among our birds, but didn't kill them all. The grouse is still covered five or six inches deep, but the birds can run on top of it now, and if no more comes there will be some left for "seed."

JACK.

MACON, Ga., Jan. 4.

The excessive cold weather has put a stop to our sport, this being the coldest spell since 1855; snow and ice on the ground for a week.

J. H. J.

MORGAN—Monroe, Jan. 8.—Near Saginaw two of us recently bagged in two and a half days thirty-nine ruffed grouse and forty quail and as many hares as we could carry, and in hunting a portion of those four cold days I bagged twenty ruffed grouse, twenty-eight quail and four hares, alone. These were the last four days in December, and exceedingly cold.

JOHN DAVIDSON.

## FOX HUNTING AT KITTANNING.

KITTANNING, Pa., Jan. 8.

HUNTING has peculiar charms which no one can appreciate but those who have engaged in the manly sport. The exercise which it affords is much more healthful from the fact that it is accompanied with delight and excitement. The chase has always been a source of amusement and delight to kings and nobles, and the gates of the forest in England and European nations are closed to all except that favorite few. But in America the forests are open to all of her citizens—not barred by caste or distinction—where the cares incident to an active life may be cast aside, and all may revel in the luxury of the chase, only restrained by wholesome laws for the preservation of game; the object of which indeed is to increase our pleasure.

In no locality within my knowledge is hunting extensively engaged in, and so successfully pursued as in this very county of Armstrong. Foxes and coons are the favorite game. The hunters are experienced. The hounds are blooded and well trained. The captain of the hunt was the old toon and fox hunter, "Con" Nulton, weighing over two hundred pounds, and may be seen most any day accompanied by a half dozen hounds. The captain and several others took with them five hounds: Old Jack, an imported English foxhound imported by Fox, of Foxburgh, Res-Luey, a black and tan; Nellie, black and white, from Clearfield County; Rock, a black and tan pup from a variety of Drummer, a black and tan from John King's kennels. The chase must have been quite exciting, and as the excitement of a fox hunt can be conveyed only in the phraseology of a hunter and a participant we give his own account of it.

"At 1 P. M. we started for the old furnace property, two miles northwest of this place, a tract of land containing some two thousand acres of timber, and an excellent place for fox hunting. Shortly after our arrival at the woods the pup struck the trail and gave tone. Then Old Jack and the balance followed, excepting Drummer who was held on the chain. Away they went down and across the run, the hounds giving tongue, and baying; the hunters, noisy and more excited than the hounds, shouting, 'There he goes; look, I see him.' Down the run the fox went—no time to trot, but six feet at every bound—until he came near the river, when he made a turn and recrossed the run, and ran along the side of the hill coming directly toward the hunters, not one hundred rods ahead of the hounds.

"As he came near us he struck our over the hill. 'He is making for Buttonwood Knob' shouted 'Con,' and we all struck out for the Knob. The fox made good time and gained on the dogs some three hundred yards. When we got to the Knob he made one circle around it, and was on his second round when he came within some thirty yards where we were stationed.

"Here he comes," shouted Alex. 'Look, Con, there he goes.'

"Let him go," says 'Con,' and let Drummer loose.

"Drummer struck out 'full tilt.'

"Hip, hurry," says Alex. 'Two to one he puts him to earth or kills him in ten minutes.'

"I take the bet," says the lawyer from Pittsburgh.

"Away they went through the laurel, and up the hill over Buttonwood Knob out of sight.

"If that King dog was worth a tinker's cuss he would have him; no use in depending upon anything except the pure blood," says 'Con.'

"We recrossed the ravine, and waited for half an hour, but no word of the dogs or fox.

"Con thinks they have struck out for Washington Loop. It was getting dark so we started for home, where we arrived at 6 P. M., having seen a fox chase but caught no fox. All day long we came home in the night time and the fox, we found him yesterday about five miles from here. The afternoons are too short for a fox hunt. The next time we will go out in the morning, and expect to bring in a fox. Our next venture will be after a black fox in Brant's Hollow."

"This is the account of the fox hunt. If any one of your many readers wish to have some sport in the way of fox hunting let him come to the Reynold House in Kittanning, and inquire of Sheriff Henry. He will have a warm reception. A fox can be started at any time. A HUNTER.

## THE GUN TAX ON LONG ISLAND.

I HAVE read with a great deal of pleasure Mr. Nicholas Pike's letter to the farmers of Long Island, in last week's issue of the FOREST AND STREAM, and although his letter may apply only to or in the neighborhood of the city, yet I endorse every word he writes in regard to the protection of insectivorous birds.

But in reference to his proposition that every gunner on Long Island should be taxed ten dollars for a license per annum, I would like to enter a feeble protest—not for myself, but in behalf of some very worthy sportsmen, who, not having plenty of lucre, could ill afford to pay such an amount.

It is not the man who can hardly spare a few dollars to go a short distance on Long Island who kills off the game some distance away from the city; but it is the aristocrat (described in the latest issue of sporting suits), with a magnificent gun and a brace of beautiful setters, with a supply of money unlimited, on whose hands time hangs heavily for want of occupation, who can go any distance on the Island and stay any length of time it may suit his lordship, who is the real exterminator.

The man who is tied down to business and can with great difficulty spare a day or two to enjoy some little shooting, but whose means will not enable him to go any distance or stay beyond the short time allotted him, even were he disposed to do so, is by no means the one who annihilates game.

By placing a license fee of ten dollars on every sportsman it would give the exclusive right of hunting to aristocratic members of opulent gun clubs and deprive any one else from enjoying this truly ennobling sport, genuine sportsman though he be.

On the other hand, by not having some kind of license there is danger of that part of Long Island within a radius of twenty miles from Brooklyn being run over by an army of pot-lunters and sportsmen, which is yearly being augmented.

If it be fixed at \$2 or \$3 it will prevent "fledglings" from fourteen to eighteen years of age from setting out on "scouting" expeditions from the cities of New York and Brooklyn, venturing just over the city limits of the latter named city and destroying not only insectivorous birds, but bay-yard fowls as well.

These are the ones who tend more toward destroying song

and game birds within a ten-mile radius of the city than any one else.

There is another thing I would like to ventilate through the columns of the FOREST AND STREAM, and, although I have it from a third party, I am implicitly, believe me, that it is parties shooting from a battery in East, or Moriches Bay; and while spending a few days at Moriches I was informed that the men belonging to the life-saving station in the vicinity were in the habit of "duking" for wild fowl at night. This tends more toward driving wild fowl out of the bay than a whole army of sportsmen could do.

What we want is better protection, and all the game laws of the State and all the license fees collected on Long Island will accomplish nothing if the game constables are at league with the unlawful battery shooters and shore irregular profits.

EL. PHOEBE CAZADOR.

SOMERSETT, Dec. 31.

Does Mr. Pike or any of his co-workers ever stop to consider if there are not some gentlemen sportsmen in the laboring classes, and that a ten-dollar license to them means the taking away of numerous comforts from their families? I know several laboring men in this vicinity, who honorable sportsmen as ever carried a gun or rod (although the one may be of pot-metal and the other red). They would not think of killing or catching game out of season, and their occupation and means do not allow of more than half a dozen days' hunting in the season. Will it be just to deprive them of these few days by putting on a prohibitory license? Be generous as well as just. Don't rob a sportsman, 'tho' e'er see poor 'out of a few days' enjoyment under the false plea of protecting the game, and so perhaps drive an honorable hunter on to the criminal record by selfish legislation.

I have been a regular subscriber for FOREST AND STREAM for over two years and can fully indorse the opinion that the paper is growing in excellence. I can assure you from experience that you have far more readers than subscribers. My copy is freely used in a class that can ill-afford to spare the price of any paper, and they take great interest in it and are watching the proceedings of the different clubs and associations with anxious minds. They are very expressive in their heartfelt gratitude to you for the many recipes found in correspondents' column, which have often been of great benefit to their dogs.

J. D. J.

## OUR DETROIT LETTER.

DETROIT, Jan. 8.

THE event of the week in Detroit sportsmen circles was the contest for the medal of the Michigan State Medal Association. The meeting was held on Wednesday at the grounds which have been fitted up for the use of the association within the Hunt-man Park inclosure. As I informed you in my last letter the costly bauble which is the object for which the gallant men of the profession so often and so directly struggle, was held by E. S. Barkour, of this city. He was expected to appear to defend his possession of it, but the holiday burdens had been too heavy for him, and he was downright ill. He accordingly placed the medal in the hands of a trusty friend, together with a letter explaining the cause of his absence. The day was clear and cold, but so admirable are the arrangements that very little discomfort was experienced from the depressed temperature. For instance, the "home base" is in an enclosed shed, where a large stove and plenty of fuel make it possible for the shooters to quite domesticate themselves. When one was called to the line he had merely to seize his gun, step out from his warm corner, to the scratch, wink, "pull" and blaze away. This may be regarded by some as rather an effeminate surrender to the borean blasts, but all such will have to be properly introduced to the "boy" hereabout before they can understand they are men in the broadest-shouldered sense of the term, hardy, sturdy fellows who have waded roaring torrents and chased the bounding rebock over long and tedious courses to get her. The fact that home civilization is called on to contribute to the sportsman's luxury is, I take it, better proof of his level-headedness than of his effeminacy. It will no doubt interest many hundreds of readers of FOREST AND STREAM to know that this shooting was done over traps and snares, and the still lamented Greene Smith, and that henceforth, as long as those traps shall last, the association will use no others. This in memory of one of the rarest and gentlest souls that ever grew big in mortal breast at the opportunity to do some suffering fellow creature a genuine kindness. The Detroit sportsman miss him sadly, and his name, like that of poor Tom Davey, is seldom mentioned here unless accompanied by the heartfelt aspiration: "God bless him."

Well, as I was saying, the day was brilliant, the shooters were in high feather, finger joints were in good playing order, good nature ruled the camp, birds were warm and lively, and every fellow had an air of determination as if resolved to win or die in the attempt. There was a goodly number of spectators present and a considerable sum of money changed hands on the result, chiefly by outsiders—together with such hot wine, game suppers, and 25-cent cigars. (It is astonishing how luxuriously the sportsman enjoys a good cigar after a day's shooting, apxwed with a hot game supper done up in right style.) I do not need to fill space unnecessarily with trifling details, so for the purpose of this chronicle let it suffice that Goff Stenton won the medal by killing ten out of his eleven birds.

At the annual meeting of the Michigan Sportsmen's Association, at Lansing, on the 29th instant, essays will be read on a subject of interest generally to the sporting world will be discussed as matters of subordinate concern. I say subordinate because the main point of this meeting is the proposed revolution of the game laws of Michigan. The latest organization to appoint delegates to the State Convention is the Lake St. Clair Fishing and Shooting Club. Its delegates are Hon. M. Dickinson, one of the most prominent lawyers of the West; Hon. Geo. H. S. to the Secretary to Gov. Bagley and another member of the Michigan House of Representatives; and Wm. C. Colburn, President of the club. I shall next week have for your readers an interesting history of this famous gentlemen's club, which, I think, might be accepted as a model by all the world of amateur sportsmen.

TRIGGER TRIX

NEW HAMPSHIRE—Nashua, N. H., Jan. 1.—The past season has been a dry one; but very few woodcock were shot in this vicinity, the usual feeling ground being very dry as to offer no inducement to the birds to stop. Ruffed grouse also were hard to find, and were never so scarce. Squirrel hunting is the best sport of the season. Since snow has come fox hunting has given fine sport to those who enjoy

the chase and love the music of the mellow-tongued hounds. Rabbit hunting is gaining in favor, and some fine dogs are owned here. Mr. Frank Laton has the staunchest; he took him on Christmas day to hunt rabbits in the big swamp. He started an old "long-leg" and drove him till the 25th without a tuck up, when the rabbit was shot, and made the dog a well-earned Christmas dinner.

WEBA.

## THE PROPOSED NEW JERSEY LAW.

Tom's River, N. J., Jan. 9.

## Editor Forest and Stream:

Having read in your issue of Dec. 30 a communication from J. H. B. relative to the growing scarcity of game in the State of New Jersey, and advocating a two or three years' prohibitory law on woodcock, quail, rabbits and pheasants, let me say in reply that I am a resident of New Jersey and think that I may be considered a sportsman, as I have been shooting over twenty-three years, both in the East and the Far West, and am pretty well acquainted with the nature and habits of game birds generally. All sportsmen know that it is not the gun used in open season that exterminates game, but it is during the close season, in close season, and our severe winters when the ground is covered with snow, perhaps for several weeks, and the birds are starved and frozen out. There are plenty of men who call themselves sportsmen who will sit around their comfortable fires and talk of closing a game season for two or three years who would not walk one hundred yards in a snowstorm with a little feed for the birds if by so doing they could save a whole levy. Let such as these, and all others who really desire to preserve shooting, feed the birds, now that there is a foot or two of snow all over the State, and do as I am doing—set the farmers' boys to work trapping, buy the birds from them, keep them over winter and put them out in the spring. This plan, if followed by sportsmen, will be more effective in preserving game than a ten years' close season.

Those who are acquainted with the habits of quail know that when ginned some, the beaves broken up and a number of birds killed out of each, the remaining birds will mate and breed much better for it, for the heavy is left undisturbed they will remain together. Few, if any of them, will pair off. Likely two or three hen quails will lay in the same nest, a constant warfare will be kept up, the nests destroyed, and no young birds when the season opens.

"J. H. B." also says that he finds that those who are best informed agree that the time has come when it is necessary that a close season should be established for at least two or three years. Now, sportsmen with whom I have talked relative to this matter agree with my views, and I am sure it is possible to get together enough non-sportsmen in our Legislature as would pass such a bill as "J. H. B." proposes, the result would be indiscriminate shooting at all times of year, and birds would get no protection. I am positive that sportsmen generally would neither recognize nor assist in the enforcement of such a law. The laws of this State are sufficiently stringent as they are. Our quail season opens November 1st and closes January 1st, which makes a short one; besides, there are no laws in the State which will not permit of shooting and the laws as they are cannot, or at least are not enforced. Then why talk of passing a law that would be universally disregarded? If the game laws of this State were rigidly enforced we should always have good shooting.

As regards the growing scarcity of birds, let me here remark that we have had more quail this season in this vicinity than for a number of years past, and I think such has been the case throughout the State.

I do not think it would be a bad plan to close the season December 30, for up to that time we rarely have any snow. This would prevent pot-hunters who are in the habit of tramping quail in the snow till they come up to the bevy huddled together beneath a bush, where with one shot they will kill all. With the protection of game and the privileges of sportsmen at heart, I am, etc., H. C. G.

## NEW YORK STATE ASSOCIATION.

THE Twenty-third Annual Convention of the New York State Association for the Protection of Fish and Game, and the appointment of a committee to receive donations of suitable prizes and to arrange for the publication and distribution of the advertisements and acknowledgments. The circulars and programmes will be issued between March 1 and March 15 next, and sent to every club of the association throughout this State, and to other State organizations and the press. They will also be widely distributed at the time of the convention and tournament, which will continue for at least one week, during the season at Coney Island, and systematic publication in the newspapers will be assured. All prizes must be delivered by March 1, 1881, and donors are requested to send a memorandum of the proposed gift at the earliest convenient date, as it is desirable they should before March.

All prizes will be exhibited, with the donor's name displayed thereon, for public inspection in a conspicuous place, for a reasonable time, and every practical effort made to thoroughly advertise the same.

Several valuable prizes have already been tendered and accepted.

All communications on the subject should be addressed to some one of the committee, who will cheerfully furnish the desired information. Respectfully,

Charles W. Wingert (Fountain Gun Club), 54 South Portland avenue, Brooklyn, N. Y., or care Nicol, Cowleslaw & Co., 743 Broadway, New York City.

A. Eddy (Long Island Shooting Club), 106 Sixth avenue, Brooklyn, N. Y.

F. C. Chamberlain (Nonpareil Sporting Club), 150 Sterling place, Brooklyn, N. Y., or care Lawrence, Taylor & Co.,

316 Broadway, New York City.

Chas. W. Rodman (Garden City Gun Club), 413 Eighth street, New York City.

Leslie W. Wilde (Washington Gun Club), 27 Fourth street, Brooklyn, E. D., N. Y.

We concur in the above: Abel Crook, President New York State Association; Geo. A. Chappell, President Long Island Sportsmen's Association; N. B. Cooke, Secretary New York State Association; Jno. B. Sage, Rec. Sec'y New York State Association.

## DELAWARE BAY DUCK SHOOTING.

ONE mild, sunny afternoon this fall during a duck shooting trip, I lay off in a blind overlooking a bunch of decoys. Not a ripple disturbed the ominous quiet of the broad bay, or moved the dead grass and reeds around me; an oppressive hush pervaded the desolate marshes, broken only by an occasional screech of a passing sea gull.

I was thinking of "stilly nights" and home, when I awoke to remember I had built my cosy little nest almost over the "Waterman's Grave" (from whence the point derives its name) when I was rudely called to a chilly consciousness of a piercing northwester and a white-capped sea. The day had been a storm breeder indeed, and when I arrived alongside the yacht, long after sun set, wet and half frozen, all dreamy notions of poetic inspiration and creative imagery, fell limp and frost bitten before the stern reality of the situation. Next morning I took up my field glasses; ice and snow and a leaden sky met my eye, and I dive into the cabin to muse again.

Ben Davis Point, if we except Egg Island, is the most prominent in the Delaware Bay, the adjacent shallow cove, extending down to "Tuxet" Point, furnishing a large area of feeding grounds for waterfowl; and no better spot can be found in these waters for geese, brant and ducks, as they fly to and fro across the Point. A day or two of westerly winds bring them into the cove from all parts of the bay in countless numbers, and a good paddler with a first-class shooter ahead of him can fill his boat in a few days. During heavy southeast gales the birds are driven inland by the rough water, and take shelter in the Back Creek, the Tweed and their numerous tributaries and fresh water ponds. I have killed as high as thirty-nine black ducks singly with but forty-five minutes of daylight to do it in. True, it was during a blinding snow storm, and I had the first whack at them. The latter part of February and March is the best time for geese and brant. Blue bills are so numerous then that over a hundred may be caught in an hour. I have seen short drift, often reaching from twenty up to a hundred ducks strutting in the treacherous meshes. An old fisherman tells me this with a long face. Every fall for twenty six years I have paid a visit to Ben Davis Point and the Waterman's Grave. An oil painting, done by young Peel just before he died from a sketch taken on the spot, and presented me, now hangs in my bed room, and it is truly a very lifelike picture of a very desolate spot.

R. G. W.

Form yourself into a committee of one and feed the starving birds, or pay some one of your friends in the country to do it for you.

A KANSAS INCIDENT.—Abilene, Dec. 28.—I notice quite a number of deer brought to town—seven or eight—one turned the scales at 190 lbs.—a fine buck.

Quail are very plenty here this fall and we are having fine sport with them. It is no unusual thing to find eight to ten large coveys in an afternoon hunt, and sometimes something like, as one of our boys can testify. He was out with a friend lately for a quail hunt on one of our small streams, and they had been quite successful, one hunting on one side of the stream and one on the other, only one dog, and he like a policeman, never around when wanted. C. noticed a likely looking bend in the creek, tramped down into it the long grass and bushes, when suddenly, with a snort and grunt that made him quake, he found himself attacked by a beast that savagely snapped at his legs. No trees handy, afraid to try and run for dear life, he placed out of his back. With hair standing on end, he stood his ground like some Roman gladiator, and poked and punctured at her with what? with his gun, and was about to give up in despair, when he remembered it was a gun, and pulled both triggers. The charge of No. 8, backed by a good charge of powder, did the work. Just then B., a farmer, and the dog came, and they gazed upon the monster; the silence was broken by the farmer, who remarked thusly: "Yes; she was a fine one, and pure Boker." He sold a good worth of pigs from her last year, and would not have parted with her for any money, besides the pigs will be sure to die—bit, boys, my money, give me \$16 and we'll call it square."

Dingo.

NEBRASKA NOTES.—North Platte, Neb., Dec. 21.—The boys are having lots of sport now. R. Watts came in from the Dismal. Killed twenty deer, and they were first-class. As I had a saddle myself I know. Game is very plenty this year; and it is a good thing for some of the farmers over on the Republican River who did not raise any crops this year. Any day you can see loads of game in our city going south. Mountain lions are plenty this year. A large one was killed Monday at Fort McPherson. One of my acquaintances saw four on the Medicine River and shot at them, but did not kill any. Dillon and R. Watts start to-night on a grant hunt up the North Platte, near Offallins Bluffs. There is a band of antelope there, driven down by the storm, and as they are first-class shots they will make it a successful trip. The antelope is hard game to get. I have hunted them from Old McPherson to the Big Horn Mountains, and I find that if you get them you have to shoot from 100 to 200 yards of them, and there are more killed inside of 150 than over. But a .45 cal., with 100 grains of powder, will most always do the work if any rifle will. But I think that a good repeating arm that would use 100 grains of powder would be the best, and I don't see why some gunmaker don't get one up, as it would pay. Men won't use a .56 cal. rifle out here. The bullet don't go as fast as they wish. If they would make a 12th rifle, .45 cal., 100 grains, they would have the best rifle for deer and antelope.

P. H. M.

GAME AND GUNS AT OMAHA.—Southwestern Minnesota and Northwestern Iowa is a country but sparsely inhabited as yet, and embraces without doubt the best chicken shooting to be found. Chickens are found by the thousands and the numerous lakes afford, in season, splendid duck and goose shooting. The lakes abound in multitudes of fine fish, and all in all, for sport in the fall months, this region cannot be

surpassed. There is no use in naming particular localities, as the sportsman cannot go amiss. The sportsman should be prepared to camp out, and not depend on finding much, if any, accommodation at the best places. The present cold weather has driven the deer down from more northern regions, and fine sport is now had within a few miles of Omaha. Seventeen deer shot in one week on the Minnesota bottom within six to ten miles of this place. In shot-guns every body makes ever known or heard of is represented. Almost everybody uses heavy ten-gauge guns, with pistol grips—and almost everybody overloads their guns, the rule being to put in all the powder and shot the shoulder will bear. Of dogs, we have curs of high and low degree in innumerable numbers and a fair sprinkling of really good dogs.

NAUTICA.

A HINT TO GUNMAKERS.—Fernandina, Fla., Dec. 28.—In your issue of the 9th inst. we read with much interest two articles by "Bedford" and "Dell," under the head of "Gun, Powder and Shot." They contain, without doubt, much practical information, and if every man who is an amateur sportsman had the time to thoroughly test his fowling-piece, as prescribed by these gentlemen, he very probably would be much more successful in the field. But just here is the trouble. Such experiments must not be conducted carelessly or hurriedly, but with such great precision and accurate registry of results as would consume much more time than many of us could command. Again, such trial would necessitate a convenient range for target practice, that to many would be inaccessible, except at remote distances. In view of these hindrances to the many who might otherwise make these tests for themselves, we would suggest, with due deference to the manufacturers of guns, or at all events of the better grades of guns, that they would specially test each gun for the specific purpose of furnishing with each gun directions how to load said gun so as to attain the best results, viz.: number of drachmas of powder to each number of shot; how to load on both powder and shot, what make of powder was used in the tests as to mills and number, and the range of the piece according to the loading. We are sure that there are but few purchasers who would not be willing to give an extra price for a gun accompanied with this accurate information. There is no doubt that many an excellent gun is condemned and probably many a man branded as a "muff," who might otherwise be a very fair shot, on account of the want of this accuracy of knowledge of just how to load. We do not think that our sportsmen would ever have seen never heard it advanced before, neither have we seen any directions of any kind accompany the sale of a gun, and therefore presume it is unusual, and consequently our idea is original. We write this communication to you, knowing that it is ever your pleasure to give every assistance and encouragement to the lovers of the sports of the field, and that you invite the views of all that may tend in any way to assist to give to the greatest number of sportsmen the best results and greatest success in the prosecution of their sport.

AMATEUR.

THE PROPOSED REVISION.—New York, Jan. 7.—Editor Forest and Stream: My attention has been called to the so-called measures for the protection of game as proposed by the Long Island Game Association. A number of sportsmen have called on me and asked me to use what influence I have toward expediting and preventing the passage of any such act as they contemplate bringing up at Albany. The meeting held seems to have been entirely under the control of the dealers in game and fish, and the proposed change is simply to allow them to sell game in season, thus opening a market for preachers and encouraging them to break a law. The bad features of such an act have been so thoroughly exposed that it is not necessary to discuss them now. It would prevent all further prosecutions in the large cities and destroy the usefulness of game protective societies. The only reason they offer for this change is that the present law interferes with their profits, which they could make were they allowed to pander to the appetites of the wealthy. I am sure, however, that with the growing feeling for the necessity of game protection such an outrageous law will not be passed. When will clubs and individuals stop tinkering with the game laws and learn that it is far better to see that their country friends keep their quail from starving this hard weather and enforce the present laws than to spend their time in urging the passage of new ones. People in the country get confused by the constant changes; they do not have time to get fully acquainted with the laws before they are altered. A few birds kept over and turned out in the spring and a few quarts of small grain scattered in the swamps will do more toward providing good shooting than all the game laws in existence.

W. HOLBERTON.

FLORIDA.—Madison, Dec. 30.—I came to Florida about a month ago in search of good shooting grounds. Thus far I have confined my attention to ducks and quail, which can be found in great numbers at almost any point between Live Oak and Tallahassee. I came here a stranger, but found hospitable gentlemen both ready and willing to direct me to the haunts of the duck and quail, and in many instances accompanied me into the field with their guns. From fifty to seventy quail is the ordinary bag of two sportsmen going out for one day and shooting from 9 A. M. to 4 P. M. The cover is good open brown sedge and the birds lie well to the dogs. Trust that you will direct inquiring gunners to this the finest game country I have ever seen. At Tallahassee Judge Westcott is the most enthusiastic sportsman in that section of country.

G. D. P. H.

AMONG THE INDIANS.—Lower Brule Agency, D. T., Dec. 16.—This is quite a sporting country. We have the antelope and deer quite plenty here, and also chickens, though from some reason this year we have none to speak of. The general opinion of the employees and officers at Fort Hale (which is situated about thirteen miles from here) is that the young broods were killed by a freshet of the Missouri River, just as the young broods were hatched out. As a general thing they are without number. One of our half-breeds has a fine stag hound, and every now and then he makes a capture of a wolf by running him down. I learn that the buffalo are within a hundred miles of us, and a party start out soon for a hunt. I do not expect to get much hunting till the spring, when the fowls fly here quite plenty.

LOWER BRULE.

INDIANA, Brooktown, Jefferson Co., Dec. 23.—A party of five from our town enjoyed four weeks' shooting last month along the Mississippi River, between Cairo, Ill., and New Madrid, Mo. We got eight deer, sixty-three turkeys, eighteen geese and a few ducks. As some of your correspondents seem to be interested in the weight of game birds, I

sent the record to Mr. Moore, and having made it up in a hurry I made an error in copying. Please correct in an early number. I have written Dr. Jarvis concerning this correction.

Very respectfully,  
JOHN FOTTLER, JR.,  
Pres't Mass. Kennel Club.

**BEUF-TEA FOR DOGS—Philadelphia.**—In issue of *FOREST AND STREAM* of December 29, 1880, Sterling, of Cleveland, gives an admirable receipt for making beef-tea, and agrees with your correspondent that Liebig's extract, in the feeding of puppies, will cause death sooner than starvation, and in the course of the article mentions Johnston's fluid beef as being a preparation which contains the entire nutritive constituents of the beef, but states that it is too expensive a food for dogs. My experience with the preparation he refers to (Johnston's) has been extensive, and I find it cheaper than any beef-tea prepared by the house process and likewise more economical than nutritious gruels, made by his method. In a pound of Johnston's fluid beef, costing \$16 per dozen, or \$1.83 per pound, there are sixty-four teaspoonfuls, which would make a single teaspoonful cost about two cents, and as it takes but two of these to a pint of boiling water, the pint of beef-tea would be but a little over six cents. This, compared with butcher's beef at eleven cents per pound, is certainly cheaper, as the rule (for making beef-tea, even by the process he gives) is "a pound of beef to a pint of water." I learn that Johnston first makes an extract of the soluble properties of the beef (which is more stimulating), then beef is dried and impalpably powdered and added to the extract, the combination making a food as nutritious as the solid beef itself. The powdered portion being microscopically fine, is readily assimilated by the weakest stomach and contains the fibrin as well as the albumen. I grant that any beef-tea, however made, is rather expensive food for dogs, but who would not go to the expense in the care of a valuable blood-blooded puppy, weak and run down from effects of distemper? *Homo.*

**ALEXANDRA PALACE SHOW.**—At this show (which is to open on Tuesday, Jan. 18, London, England) the following gentlemen are announced to judge, viz.: For bloodhounds, mastiffs, St. Bernards, boarhounds, Rev. W. J. Mellor; Newfoundland, Dalmatians, smooth-haired terriers, Yorkshire terriers, Italian greyhounds, toy terriers, Mr. Howard Maplecock; deerhounds, Pomeranians, pugs, sporting and non-sporting puppies, Rev. G. A. Edgson; greyhounds, English setters, Gordon setters, Irish setters, Bedlington and black and tan terriers, Mr. S. Lang; pointers, Mr. J. H. Whitehouse; retrievers, wire-haired fox-terriers, collies, bull terriers, Irish terriers, Mr. S. E. Shirley; spaniels, Major Wille t and Rev. A. H. Willett; smooth-haired fox-terriers (and puppies), Mr. F. Burbridge; dachshunds, bassets, Rev. G. F. Lovell; poodles, Capt. the Hon. F. Greville; bulldogs, Maltese, Blenheim and toy spaniels, Mr. J. W. Berrie; skye terriers, hard-haired Scotch terriers, Capt. W. Hutton; and Danes, the Debutant terriers, Rev. W. Fiddeman. The show will last four days and the schedule is, as usual, liberal.—*London Field.*

**GLADSTONE—Joe, Jr., Columbia, Tenn., December 31.**—*Editor Forest and Stream:* In your issue of the 23rd instant, giving the pedigree and performances of Mr. Bryson's dog Gladstone, you state that "in the race against Joe, Jr., at Florence, Ala., December, 1879, his speed and bottom were so apparent the judge for Joe, Jr., stated after the race that Gladstone was a third faster than Joe, Jr." Being the gentleman in question, I rise to a privilege. I made no such statement, but in conversation between Mr. Bryson and myself, on the afternoon of Tuesday (and after the race had closed by Joe, Jr., winning upon three legs), in which Mr. Bryson said that "he thought Gladstone a third faster dog of the two, and at two o'clock that afternoon he told Mr. Campbell that he had his dog Joe, Jr., beaten." I replied that during the greater part of the first day Gladstone did show more speed (without mentioning the ratio of speed of the dogs), but as the race was a privilege, I made no such statement, but in my opinion much the better dog, and at two o'clock was defeated in the race instead of the "victor," as he thought. The above is a true statement of the facts, and everything that passed between Mr. Bryson and myself or any one else relating to the race after its close.

**Query:** If the speed and bottom of the "peerless Gladstone" (as Mr. Bryson thinks him) were so apparent and so much greater than Joe, Jr., why was it that the score of the "poor" broken-down dog used up, played out? Joe, Jr., going down eleven o'clock in the morning (at about which hour he was washed one of his hind legs) until the close of the race, five o'clock in the afternoon of the second day, upon three legs only, was one point greater over the great Gladstone than that of the first day, and the score stood: Joe, Jr., first day, thirty-four points, Gladstone thirty points; Joe, Jr., second day, twenty-seven points, Gladstone twenty-two points.

Will Mr. Bryson explain? My great aversion to "newspaper notoriety" has been the cause of my long silence, I think, a notice from me of your article. My parting injunction to Mr. Bryson is, " *fiat justitia ruat cælum.*"

J. MINTICK WILLIAMS.

THE EASTERN FIELD TRIALS CLUB met at the Astor House, Tuesday afternoon and without having transacted any business adjourned to Thursday (this) evening.

#### THE MANCHESTER DOG SHOW.

(From the London Field.)

THE first exhibition of the Northern Counties' Canine Society began in the Volunteer Drill Hall, Stratford-road, Manchester, on Thursday, Dec. 16, and will end on Saturday. The hall is eminently suited for a dog show, but the arrangements were woefully deficient. They were in the open air, covered over with canvas, and the day being gloomy, the light was very bad, and the judging accordingly suffered. The judges were: For fox terriers, Mr. T. H. Scott; mastiffs, St. Bernards, Newfoundlands, bloodhounds, deerhounds, greyhounds, dachshunds, skyes, bulldogs, dandie dinnouts and sheepdogs, the Rev. G. F. Edgson; pointers, spaniels, Blenheims and toy spaniels, Mr. J. W. Berrie; wire-haired fox-terriers, Mr. J. H. Whitehouse; and black and tan terriers, smooth terriers, Yorkshire terriers, bull terriers, Irish terriers, Bedlington, pugs and toys (rough and smooth), Mr. Peter Eden.

The judging was started simultaneously in various rings, but Mr. Scott, after vainly trying to settle one of his classes of fox terriers, was so crowded in his cramped ring that he

gave it up for the time being, and sent the dogs back to their benches, deciding upon waiting until Messrs. Lort and Ed. Armstrong and the Rev. Mr. Edgson had done respectively with their classes, when he would return to his post. The attendance, at one time, was very fair on Thursday, and we sincerely trust that the public will patronize the show heartily, as it deserves every success. Messrs. Spratt had the feeding, so that was well seen to, and the dogs were comfortably benched and partitioned off, and they were attended to, in every way, in the style of our very best shows. The management itself left nothing to desire, and we must commend the secretary and his working committee on their energy and business-like arrangements. The champion Mastiffs were entered, and in the open dog class, the brindle, Vulcan II., was rightly put first by Mr. Edgson, and Scafold King took second. The highly commended Colonel II. is of a poor, indifferent color; Carlo, commended, is rather banty; and Leo, passed over, is too leggy and small-headed. In bitches, Duchess of Connaught, shown in capital form, had no difficulty in taking first over Venus, who was the substance. Mr. Jaffray's Nell looked very well, but was out-placed, and Nancy was simply a weed. The grey class was better than we expected. First went to Dourard, a very grand puppy indeed, with an excellent bone and capital bone, but just a trifle bent in the forelegs. As he is, however, only eight months old, this doubtless will improve with age, and, on the whole, we think him a most promising youngster. Countess was rightly beaten by him. The next best was undoubtedly Mr. Kenyon's Rossendale, who has a dead bone, and Mr. Jones' Tyler is a good puppy. The same gentleman's Juniper shows a lot of feather behind. Mr. Moff's Gauge is a smallish brindle, but nevertheless cheap at the catalogue price, £5.

There were three St. Bernard champions, viz., Barry, The Shah and Bayard. Bayard was looking certainly in the best form we have ever seen him; but his loins might always to place him behind either Barry or The Shah, especially when these two look well. In the open dog class Olympus, placed first, had the best bone, but is of a bad color, has a poor head, and a bad bone. The second, who is a good color, but is too long-faced. Pulgrim is a well-headed dog, with a nice coat, but a bit straight in the stifle. He, nevertheless, should have been in the prize list, as he is a good one; but he was passed over. Caesar, who took third, is a most promising dog, his only defect being that he is not square enough in the muzzle. Mr. Macdonald's Baucio deserved a card; but Thor, very highly commended, is bad in the face. Hob, who took a prize at Birmingham, was passed over altogether—a most extraordinary occurrence, especially considering that his kennel companion, Heffed, who is not nearly so good as he, was very highly commended. Haco is too long-headed; Osman I., highly commended, is not a bad dog, but has no dew claws; Meus, very highly commended, wants blaze; Don is too small; and Snowdrit was not in form. In bitches Beatrice had no difficulty in winning over Morrisbrook Norma. Altona, highly commended, is of a bad color, but has a bad head; and Arabella, placed third, is much the best.

Newfoundlands had six entries, but only one turned up, and that one was only very indifferent, so that all prizes were withheld; but in the bloodhound class Mr. Tinker's champion Dido, who was the only entry, looked in splendid form, and took the prize on her own merit. Deerhounds and greyhounds were capitally placed, Mr. Sharpe's Self Defence and his Hairspring winning in their respective classes, although the competition was rather close. Fanto was the only champion pointer dog shown. In bitches his kennel companion Pan took the prize; she looked in very excellent form. The open large dog class proved another win for Bang II., beating Karnac, who carries his years wonderfully well. The class was very good, and we think, well handled. Large bitches Mr. Lort also placed well, although Young Ruby, who took second, would not show herself at all in the ring, in spite of all George Hellewell's coaxing. Meg had a fair win. We took very much notice of the two dogs, who were in the ring, and the other one is a bit faulty. In the small dog class the awards were rightly given; but in bitches we could not at all agree with Mr. Lort's that going in favor of Miss Bryson, as she is a weedy, small bitch with a bad head, and a complete absence of bone. This award created no small sensation. The bitch was certainly shown in good style; but, in the face of her patent defects, she did not deserve even a commendation, and Locket, Bone-Belle, or Bess were a long way her superior.

The champion class for English setter dogs only had a brace in it, viz., Old Rock and Emperor Fred, and it took Edward Armstrong nearly an hour before he could decide between them. Over and over again he examined them; but still he halted at his decision. In the end, however, he gave the cup to Emperor Fred. Rock has been a great winner, as every one knows, and although he was shown in the pink of condition, he is getting stale, and doubtless this decision will be indorsed by other judges. Emperor Fred is truly a very fine setter. His head is simply beautiful, his neck is finely sprung, and his shoulders are all that one could wish for. He is, however, a trifle out at elbow, his feet might be better, and he is also rather hare-footed, but his feet are well covered with feather, and the celebrated trainer who judged on this occasion says that some of the best and fastest setters he ever knew had had this peculiar formation of foot. The change from a club-bone to a fork another brace of very excellent ones, and first went to Mr. Bowers' liver and white fluid of Honor; but here we could not indorse the decision, as Ruth looked very well indeed.

The open class for dogs brought together a mixed lot, and, barring the first, second and third, nothing very remarkable appeared in it. The winner is a very grand-bodied puppy indeed, barring his head, which wants improving. Ranger, the celebrated Field Trial dog, was passed over, although he was well shown. The open class for netchies was far superior to the dogs. Mr. Statter scoring first with one of the nicest bitches we have seen for many a day. Bessie IV. and Moll IV. should have certainly been very highly commended, but they were overlooked.

In the black-and-tan class Bate had a clear win over Ranger; his fat coat shone like satin, and he was shown in the pink of condition. Three fairly good-looking black-and-tan bitches competed, but no one can start with a word. For Marchioness the Irish setter dog class may be called a fairly good one, although we do not think it would cut a very handsome figure in Dublin. Viscount Palmerston had some trouble in getting placed over Dunkette, who showed a rare lot of quality; but Paddy, highly commended, is too thin, leggy, and poor-headed altogether. The Irish setter bitches formed a better class, and the two winners are very smart specimens.

The class for setter puppies under twelve months old was one of the finest in the show, and we are sure the four selected by Ed. Armstrong will be heard of again. First place to Dourard, a very grand puppy indeed, and we feared that Rose, Frank of the Border, or Jovial for next place, but Ruby took second. She is also very promising; and Dora, passed over, we thought deserved a notice.

The curly-coated retriever dogs were an average lot, first going to Merry, a well-known handsome liver-colored dog, and a winner at many other shows. He was followed by Nimrod, a decent-looking black specimen. The curly-coated bitch class certainly had one of the most lovely-looking bitches in it we ever saw; a more expressive face one could not wish for, but Chicory must have been overlooked, as in any way, she is better coated than Faith, who took second.

Nothing in the smooth or wavy-coated classes came up to our ideas of perfection; nevertheless, Twilight and Topsy are fair specimens, who deserved their places. Clumbers, Sussex, blacks, and any other variety were capitally placed, barring that we would have wished to see Don Pedro, late Fox, higher in the list, as he is a really good one, and should certainly have been placed over the puppy Foll, who scored second.

In water spaniels, Mickey Free received first and Larry Doolan second, but we would have reversed their positions, as in coat and type Larry Doolan is vastly superior to the winner.

Respecting fox terriers, one thing, in justice to Mr. Scott, we must mention. The judging ring was so badly kept, and so limited for such large classes, that some of his blunders may be attributed to this cause. There were only two entries in champion dogs, viz., Cob and Nimrod. Cob was placed first, but he is quite twenty pounds in weight, is entirely without terrier expression, and has loaded shoulders, his redeeming points being a fair head, great bone, good legs and feet, and proper coat. In the latter particular he beats Nimrod, who is a terrier, has a good head and ears, is of a working size, has plenty of expression, and ample bone for his class. In champion bitches the judge placed first Frisky, who is a good one, but the lady-like head, big ears and eyes, and fine fault is want of coat. Lill, the other contestant, was decidedly outclassed. The open dogs were a middling lot of forty-five. Gripper was put first, but he is only fair in coat, has a poor head and ears, is too broad in chest and large in eye for our taste, and we think V. H. C. should have been about his place. Racket came second; he is a good all-round dog, barring his coat, and he should have been first. Jovial, third, is bad in face and eyes, and also in forelegs, but is a better color; he was held too high here, however, and his place should have been occupied by Buckle—who was fourth—whose bone, substance, and grand coat and character hardly received sufficient recognition. Bagman, commended, should have been fourth; he is full of character, has a grand head, nice ears, and plenty of bone and coat, and we most decidedly prefer him to the winner. Huxter Dick was very highly commended, which was about right, as he is getting too cloggy. Robin Hood, very highly commended, is good in coat, has fair hair and face. Little Joker, also very highly commended, has a bad head and sour expression, and we thought several better in the class. Tim, very highly commended, is very pinched in the face, and has a large eye and a fine coat. Both these defects might have given his place to Lance, who was, however, in bad form, or Duster II., who has vastly improved, and is a good one all over.

Spot, highly commended, is a brute, a sour head and bad body and legs being his leading characteristics. Little Buff, commended, has a head like head, big ears and eyes, and in fact is a bad one. Cedric II. is a good sort, and we think Mr. Scott passed him over. Spot, also unnoticed, has a very good coat and head, lots of bone, and is worth prominent notice in any company. The bitch class was a good one, and Mr. Scott did not, we think, do quite right by putting Lady Grace over that grand bitch Satire, whose well-known character and coat place her far above her here successful rival. These two should have changed places. Cui, who took third, is too high in the head, and has a bad head, but good coat and terrier expression; still she was greatly overrated, as there were a dozen in the class better than she. Fourth is a nice little terrier, her faults being her large ears and fine coat. Badinage we should have placed third, as she was in good form, and looking better than we ever saw her; and Lille, unnoticed, should have been in the money, as she is good in head, coat and bone. Galatin, very highly commended, is a weak-looking fellow, but he deserves her place, and Bess, commended, is a nice one, and might have been higher, although she is a trifle light in bone. The class was a very strong one, but, for some unaccountable reason, the judge did not give any highly commended cards. Wire-haired dogs were a nice lot. Victor, who took first, is a good one, of the right coat, and a terrier; we, however, somewhat preferred Balance, very highly commended. This dog keeps on improving, and he is just about as near perfection as any wire-haired dog now before the public. Toller Broad, placed second, is a good dog, who requires a little more coat. Peter Teazle, who took third, is also a nice one, and better in fact, we think, than Toller in coat, head and bone. Peter (Burgess) has vastly improved, and some thought that he should have been in the money. Paul, highly commended, is too small and toyish. Tyke, highly commended, is a nice one, and was hardly done by; but Venture, highly commended, is far too big, and with unorthodox markings, makes a bad figure. The first prize larrikin judged, Mendicant Broad was easily first, he is a very grand one. Mr. Everett's Tick, a nice terrier, took second, and Impecuniosity Broad scored third; he is a terrier, but has not quite enough coat. The rest of the notices were rightly bestowed.

In dog puppies there was an easy win for Mr. Burgess's Bonus, a very striking puppy, good in bone, head, ears and coat. Second went to Tompan, a niceish one, but too thin in coat, and not longer enough. The third prize larrikin had good head and ears, plenty of coat, but is awful in his forelegs. Rasper, very highly commended, has a nice coat, and is of a nice size, but has slovenly ears. Working Broad Jim is a fair wire hair, a bit leggy as yet, and a trifle too big in ear. Master Joe, very highly commended, is a niceish sort, a bit on the leg at present, with fault, however, may improve in time. Bones, highly commended, is a neatly shaped little dog, but is a trifle slight in front, and lacks coat. Spy, highly commended, has plenty of bone, but is short and lacks good qualities. Harry, highly commended, is a brute, big in ears, and bad in front; but Hammer, unnoticed, should have been second—he is a very smart and showy dog, with a rare coat, lots of bone, and worth half a dozen of those noticed. Bitch puppies were not such a grand lot. First is a wretch, wide in chest, light of bone, with a weak jaw, and is, in fact, about the worst in the class. Flip, placed second, has a nice

Back ribs short, which tend to give a true Irish setter a rather "lucked up" appearance.

Fore-legs very straight and well feathered—longer than in the English setter.

Fore foot, long, and not nearly so round as in the English setter.

Hind-legs, bent at stifles, with strong locks.

Stern, set on rather low and well feathered, particularly on the middle portion of it.

Color, a deep blood-red. White is not liked in show dogs; but though undesirable, is not a proof of impure breeding. The color of the feathering is paler than that of the body.

Coat, somewhat thinner than that of the English setter, though coarser in texture.

General appearance in an Irish setter goes for a good deal. A good specimen is the beau ideal of strength and activity. He should seem a trifle leggy; no doubt his tucked-up loins increase this appearance, which his extra length of leg naturally develops; and an Irish setter should look all wire and whipcord. In fact he looks what he is, a thorough workman, and ready to gallop for ever.

The dog we have selected for illustration in our colored plate as being typical of this famous breed is Grouse II., who is the property of the Rev. R. O'Callaghan, R. N., before alluded to as one of the great breeders of his national setter. This bitch is by the old champion Palmerston out of Quail, and has been successful on the bench. In 1879, at Dublin show, she won first prize and silver medal and challenge cup. Palmerston, her sire, was by old Shot out of Cochrane's Kate; Shot by Grouse out of Bruno. Quail, the dam of Grouse, has no pedigree in the Stud Book, but she is credited with winning at Cork in the prize of red bitches. The selection of Grouse, we candidly admit, cost us much anxiety, as we were desirous to select a specimen which is regarded with favorable eyes by authorities who understand this dog, and it was upon the advice of several excellent judges that we asked permission of Mr. O'Callaghan to let his grand bitch be illustrated in this work. The study was executed by Mr. Beach under the owner's eye, and we have to thank both gentlemen for the pains they took to have the portrait of Grouse made characteristic of the breed.

Following up our rule, we append a scale of points for judging Irish setters, in which it will be seen that we attach peculiar importance to general appearance.

#### STANDARD OF POINTS FOR JUDGING IRISH SETTERS.

	Value.
Skull—formation of head and muzzle.....	5
Ears and eyes.....	5
Neck and shoulders and chest.....	5
Body, including loins.....	5
Coat and feet.....	5

#### THE SPANISH POINTER.

[From Vero Shaw's "Book of the Dog."]

BEFORE commencing any remarks on the subject of the English pointer it will be necessary to draw the attention of our readers to the dog from which our modern pointers unquestionably sprung. Such was the subject of this chapter, from the crossing of whom with the foxhound or Southern hound—opinions vary on this subject—the pointer as he now exists was originally produced.

In "Cynographia Britannica" Sydenham Edwards writes thus of the Spanish pointer in 1805:

"The Spanish pointer is a heavy, loose-made dog, about twenty-two inches high, bearing no small resemblance to the English Southern hound. Head large, indent between the eyes; lips large and pendulous; ears thin; loose and hanging down, of a moderate length; coat short and smooth; color dark-brown or liver color, liver color and white, red and white, black and white, sometimes tanned about the face and eyes, often thickly speckled with small spots on a white ground; the tail thin, smooth and wiry; frequently dewlaps upon the hind legs; the hind feet often turning a little outward."

"The Spanish pointer was introduced into this country by a Portuguese merchant at a very modern period, and was first used by an old reduced baron of the name of Bichell, who lived in Norfolk, and could shoot flying; indeed he seems to have lived by his gun, as the game he killed was sold in the London market. This valuable acquisition from the Continent was wholly unknown to our ancestors, together with the art of shooting flying, but so fond are we become of this most elegant of field sports that we now excel all others in the use of the gun and in the breeding and training of the dog."

"The Spanish pointer possesses in a high degree the sense of scenting, so that he very rarely or never goes by his game when in pursuit of it; requires very little training to make him stand, most of them standing the first time they meet with game, and it is no uncommon occurrence for puppies of three months old to stand at poultry, rabbits and even cats. But as they grow old they are apt to get idle, and even to leave the ground and trot instead of galloping, and from their loose make and slowness of foot when hunted a few seasons soon tire, have recourse to cunning, and in company let the younger and fleet dogs beat wide the fields, while they do little more than back them, or else make false points. They then become useless but for hunting singly with a sportsman who is not able or not inclined to follow the faster dogs."

There are other varieties of the pointer, as the Russian, in size and form like the Spanish, but not using the driver's dog, rough and shaggy, rough about the eyes and beard; color like the Spanish, but often grizzle and white; they differ in some being more rough than others. This is probably a cross between the Spanish pointer and the Barbet or rough water dog. He has an excellent nose, sagacious, tractable and easily made staunch; endures fatigue tolerably well; takes water readily, and is not incommoded by the most cold and wet weather.

In the illustration of pointers which accompanies these remarks of Sydenham Edwards there appears a portrait of a rough-coated dog which is supposed to represent the Russian pointer. This dog resembles in almost every point the pictures we have seen which purport to portray the Russian setter of more recent times. It is therefore, in our opinion, quite within the bounds of probability that the modern Russian setter is very closely identified with the more ancient Russian pointer. The remarks of Mr. William Lort upon the former dog, which appeared in a previous chapter, very

nearly describe the dog written of by Sydenham Edwards, and certainly the latter's theory on the derivation of the breed appear to be possessed of reason. It is, however, more with the Spanish pointer that we have to deal at present, for though practically extinct, his close connection with the modern dog entitles him to respect at our hands.

Mr. Taplin, writing of this dog in the early part of the present century, remarks that: "Every trait upon record respecting their appearance in England is that they were in very early ages introduced from Spain, and that they were natives of that country from which their name was derived. The Spanish pointer in shape, make, strength, acuteness of sight and bodily tardiness, in a perfect specimen of the most consistent uniformity; well adapted in all these qualifications to the haughty, somniferous, majestic parade and dignity of the lofty Spaniard, but very inadequate to the life, spirit, agility and impatient energy of the English sportsman. This race of dog in his natural and unimproved state is a mass of inactivity, as is evidently perceptible by his shape and make, in every point of which is displayed the very reverse of speed and action, objects so truly necessary in almost every sport of the field. The pointer of this description is short in the head, broad in the forehead, wide in the nose, expansive in the nostrils, simply solicitous in aspect, heavy in the shoulders, short in the legs, almost circular in the form of the carcass, square upon the back, strong across the loins and remarkably so in the hindquarters. Although this breed, like the English pointer (by the many collateral aids so much improved), are produced of various colors, yet the bold brown liver-and-white are the most predominant. These dogs, slow as they are, and accustomed to tire with quiet work before the intended sport of the day is half over, are yet truly applicable to the purposes of those who, advanced in years or laboring under infirmities, feel themselves unable to get across a country in the way they could in former years."

"The pointer we are now treating of, though exceedingly slow, must be generally admitted to be sure; indefatigable and minute in his researches, he is rarely seen to miss his game when game is to be found. When a covey of birds is separated by repeated shots, and are afterward found singly, the pointer under description has opportunity to display his best ability, in most industriously recovering these scattered birds, the major part of which (if accompanied by a good shot) are generally picked up to a certainty. To the recovery of winged birds the patient perseverance of this dog is peculiarly adapted; and for the sport of snipe shooting alone they are entitled to the preference of every other."

No further description is necessary of a dog which, as we have before remarked, is practically extinct, as specimens which resemble the dog referred to by Edwards and Taplin are very rarely met with. It may, however, be worth considering if a cross between a good specimen—always provided that such can be procured—with a modern pointer, might not improve the latter very considerably. Granted that the present dogs excel in strength and activity, is it still not worth experimenting with a dog concerning whose utility many former writers have spoken so very highly? His nose is certainly a great feature in a Spanish pointer, and though he is in the habit of knocking-up, we think that if a little of his blood were infused into the veins of some of our field trial pointers in the present day they would stand a better chance of holding their own in competition with the setter than they have hitherto succeeded in doing.

The illustration that is herewith given of the Spanish pointer is particularly fortunate in portraying his square short head and deep flews to considerable advantage, and his heavy bone has not been lost sight of. As in the case of the Russian setter, it is unnecessary to append a scale of points for judging a breed which is very rarely to be met with. However, it should be borne in mind that depth and squareness of head and immense bone are characteristics of the Spanish pointer which should never be lost sight of.

#### FIXTURES.

Eastern Field Trials Club—Annual Meeting for election of officers January 11.

Pittsburgh Dog Show—Pittsburgh, Pa., January 17, 18 and 19. Entries close January 6. C. B. Elben, Secretary; Charlie Lincoln, Superintendent.

St. Johns, N. B., Bench Show Jan. 9.  
Rock River Valley Poultry and Kennel Club show—Sterling, Illinois, Feb. 10, 11 and 12. B. B. Comerford, Sec.

#### KENNEL NOTES.

##### NAMES CLAIMED.

Grouse—Mr. C. T. Brownell, New Bedford, Mass., claims the name of Grouse for his black and tan Gordon setter dog puppy, whelped November 4, 1880, by owner's Dash out of his Maud.

Max Piccolomini—Mr. J. I. Montell, of Astoria, L. I., claims the name of Max Piccolomini for his black and tan setter puppy whelped July 23, 1880, out of Belle by Glen.

May—Mr. J. H. Heron Crossman, New York city, claims the name of May for white and lemon setter bitch puppy, whelped September 13, 1880, out of Daisy Dean by Lincoln.

Flash—Mr. J. H. Heron Crossman, New York city, claims the name of Flash for white and lemon setter dog puppy, whelped September 13, 1880, out of Daisy Dean by Lincoln.

Paddy—Mr. J. H. Heron Crossman, New York city, claims the name of Paddy for Irish terrier bitch puppy, bought of Dr. Niven, of London, Ont., out of Nora by Joe.

Hazel Kirke—Mr. J. H. Winslow, Baltimore, Md., claims the name of Hazel Kirke for his liver and white cocker bitch ten months old, out of imported Erin by imported Sultan.

Lucy—Mr. Charles E. Scott, of Schenectady, N. Y., claims the name of Lucy for his liver and white cocker bitch puppy out of Nellie by Rex.

Jerry—Mr. J. J. Donovan, of Boston, Mass., claims the name of Jerry for his black setter dog puppy, whelped July 8, 1880, out of Nora by Rory O'More, purchased of Mr. W. A. Pierce, Peckskill, N. Y.

Mollie—Dr. J. S. Niven, of London, Ont., claims the name of Mollie for Gordon setter bitch puppy, whelped September 19, 1880, out of Venus by Chicago, purchased from Mr. James Moore, of Toledo.

Aileen—Dr. J. S. Niven, of London, Ont., claims the name of Aileen for Irish terrier bitch puppy, whelped October 18, 1880, out of Nora by Jerry.

Daisy II.—Mr. J. Wesley Young, of Portsmouth, N. H., claims the name of Daisy II. for red Irish setter bitch puppy, whelped August 30, 1880, out of May by Elcho.

Plunkett II.—Passed ass't surgeon Arthur C. Heffenger, U. S. N., Portsmouth, N. H., claims the name of Plunkett II. for red Irish setter dog puppy, whelped August 30, 1880, out of May by Elcho.

Duncan and Dugald—Mr. Thos. Blyth, of McIntyre, Pa., claims the names of Duncan and Dugald for dark red Irish setter dog

puppies, whelped October 26, 1880, out of owner's Nellie Hattarick (Dick Hattarick-Tyke) by owner's Joel (Champion York-Diffendurfer's Bess).

##### BRED.

Beauty—Glen—Mr. E. A. Godfrey's champion Gordon setter Beauty to Dr. Allen's Glen.

Belle II—Brag—Mr. J. Otis Fellows' black cocker dog Brag to Mr. Robert Walker's black and tan bitch Belle II.

Gipsy—Joel—Mr. Thos. Blyth's Gipsy (Rodman's Dash-Fan) to owner's Joel on December 31, 1880.

##### WHELFERS.

Feather—The Riverside Cocker Spaniel Kennel Club's (Claremont, N. H.) imported Feather, whelped July 6, 1880, five liver and white puppies, three bitches and two dogs by imported Snip.

Maud—Mr. Thos. Blyth's (McIntyre, Pa.), red Irish setter bitch Maud (champion Elcho-Imported Stain), whelped December 18, 1880, eleven puppies, seven dogs and four bitches by owner's Joel.

##### SALTS.

Wildnir-Sara Bernhardi Whelp—Mr. J. Otis Fellows, Hornell Cocker Kennel, Hornellville, N. Y., has sold a liver cocker puppy, whelped October 17, 1880, out of Sara Bernhardi by Wildnir to Mr. J. Smith, New Buffalo, Pa.

Robin Adair-Fannie Whelp—Mr. J. Otis Fellows, of Hornellville, N. Y., has sold an all liver cocker bitch puppy, whelped October 27, 1880, out of Fannie by Robin Adair to Mr. W. M. Doves, New York city.

Zorrie-Belle Whelp—Mr. H. B. Harrison, of Tilsonburg, Ont., (Canada), has sold to Dr. A. B. Clayton, of Chatham, Ont., a blue Belton bitch puppy by L. H. Smith's champion Paris (Leicester-Dart) out of Belle (Pride of the Border-Kirby).

Bramble—Mr. J. P. Kirk, of Toronto, has purchased from Mr. C. Bramble the pure-bred Sussex spaniel dog Bramble, whelped February 8, 1880, imported by Mr. Bramble, and bred by him out of Ruby—third prize, Alexandra Palace, London, 1879—by Bob, bred by St. Sayers, West Tarring, Sussex. Bob by Kaiser out of Lady Ruby by Speck out of Rex (2,163). Rex by Rock (4,492) out of Sappho.

Jose—Mr. Charles H. Boddoo, of Toronto, has purchased from Mr. C. E. Lewis, of Niagara, the liver and white cocker bitch Rose by Nash's Lake out of his Buxy.

Wedgewood—Messrs. C. B. Cummings & Son, of South Aithead, N. H., have sold cocker spaniel dog Wedgewood (Snipe-Idol) to Mr. O. Whitmarsh, Nashua, N. H.

##### PRESENTATION.

Joe-Dora Whelp—Dr. G. A. Took, of Warrentown, N. C., has presented Mr. H. C. Williams, of Portsmouth, Va., with a pointer puppy out of Dora by Joe.

Nellie Whelp—Mr. Charles E. Scott, of Schenectady, N. Y., has been presented by Mr. Robert Walker, of Franklin, N. Y., with a beautifully marked liver and white cocker bitch puppy out of his Nellie by Rex.

Snipe-Ruby II. Whelp—Mr. H. B. Richmond, of Lukeville, Mass., has presented Mr. Julius E. Wilson, Manchester, N. H., with a lemon and white pointer dog puppy, whelped August 26, 1880, out of Ruby II. (Snapehot-Ruby) by Snipe (Sensation-Colburn Belle).

##### DEATHS.

Pallas—Westminster Kennel Club's imported lemon and white pointer bitch Pallas (General Prim-Powell's Queen).

A LATE NOVELTY on the stage is the introduction of live bloodhounds in the everlasting play of "Uncle Tom's Cabin." The brutes are very fierce on the show-bills, but in the theatre warranted perfectly harmless and inoffensive.

—Auburn, N. Y., boasts of many superior setter dogs, but there is not a pug within the city limits.

LIKE WINE, GROWS BETTER WITH AGE.—A correspondent writes: "FOREST AND STREAM is a most welcome weekly visitor. Like wine, grows better with age. It already wields a large influence with the best and most intelligent portion of the sporting fraternity in this country. There is need of just such a paper, and that we may abundantly succeed is my hearty and sincere wish."

DR. PURCELL'S PRAIRIE CHICKENS.—It seems that the prairie chickens that Dr. Purcell brought to and let out in Sussex County, Delaware, have raised some young, one of which, at least, was shot and brought up to this city. It being about half grown its identity was doubted, but it was afterward settled that it was a young prairie chicken. A writer in FOREST AND STREAM mentions that there were grouse some thirty years ago in the Pocono mountains, in Monroe County, Pa., also in Burlington County, N. J. This is true, as we conversed with sportsmen who had shot them in both places, and several dead on the Pocono mountains. We were told, some twenty years ago, that there were both deer and bears in the wild parts of Long Island.—German-town Telegraph.

CONNECTICUT—Granby, Jan. 1.—Foxes are very plenty here this winter and can easily find trail any good day. Rabbits are also uncommonly abundant. N. E.

Sour stomach, bad breath, indigestion and headache easily cured by Hop Bitters.

#### PUBLISHER'S DEPARTMENT.

HOLSTER Shooting Suits. Uplightgrove & McLellan, Valparaiso, Ind. Kidney and urinary trouble is universal, and the only safe and sure cure is Hop Bitters—rely on it.

OUR HOLIDAY GIFT.—Rolled Gold Solid 19 K. Rings, with initial or motto engraved, sent on receipt of 75 cents in postage stamps or currency. Read advertisement of G. Pettibone & Co. in this issue.

## The Rifle.

—ANNUAL MEETING OF THE N. R. A.

THE annual meeting of the National Rifle Association was held at the Twenty-second Regiment Armory on Tuesday evening last with a very liberal attendance of Life Members. Gen. Geo. W. Wingate occupied the chair in the absence of the President. Judge Gildersleeve made some remarks on the work of the association during the past year. The report of the Treasurer showed a balance of \$114.22. Secretary Donaldson read his report as follows:

To the National Rifle Association of America:  
Mr. President and Gentlemen—This annual Secretary's Report embraces the year 1880, an epoch in the history of the Association remarkable both for its successes and reverses. In the early spring, the President appointed the usual standing committees for the year, as follows:

Range—Gen. Geo. W. Wingate (Chairman), Col. Jos. G. Story, and Col. Geo. D. Scott.

Finance—Maj. D. B. Williamson (Chairman), Capt W. C. Casey, and Mr. James Grant.

Prize—Col. John Ward (Chairman), Maj Henry Fulton, and Col. J. H. Cowperthwait.

The resignations of Directorships of Messrs. Williamson and Casey necessitated a reorganization of two of the above Committees, which was accordingly made, in the month of March, as follows:

Finance—Mr. Jas. Grant (Chairman), Col. J. H. Cowperthwait, and Col. John Bodine.

Prize—Col. John Ward (Chairman), Mr. N. P. Stanton, and Maj. Henry Fulton.

The vacancy in the latter Committee, caused by the resignation as a Director of Major Fulton, has not been filled. There have been held, during the past year, twelve regular, seven special, and two adjourned meetings of the Board of Directors, and four meetings of the Executive Committee. This Committee has remained intact, no resignations or changes having been made. Of memberships, there is to be recorded an addition to the roll of sixteen gentlemen becoming members for life, of whom thirteen paid the usual fee, two were offered and won as prizes at the last fall meeting, and one was honorary, having been conferred by vote of the Board. Two deaths have occurred among our life members, those of Maj. Chas. A. Coffin, and Gen. Frederick Vilmar, the total number remaining upon the roll at this date being 382. The annual memberships fall below last year's figures by about thirty-five men. Eleven of this class were offered and won as prizes.

But five rifle clubs or Associations have affiliated with us in 1890, viz.: The Amateur Rifle Club of New York, the Empire Rifle Club of New York, the New York Rifle Club of New York, and the Lion Rifle Association of New York, and the Pennsylvania State Rifle Association of Pennsylvania. No military organizations (regiments or companies) joined the Association at the half rates permitted by the By-laws. Three life members' badges were sold, numbered respectively 97, 98 and 99. The Committee which had been appointed at the last annual meeting (1890) to consider the advisability of securing a Managing Director, at a competent salary, to take charge of the affairs of the Association, submitted a written report to the effect that they considered "the objects desired could best be obtained by the passage of a resolution authorizing and directing Lieut. A. H. Weston, the present Assistant Secretary and Treasurer, to represent this Board at all times and in all places, in the absence of any regular Director, with the same power and authority as a director, and that he submit at the Board meetings, from time to time, reports of matters of interest," etc. The report was finally adopted, and the salary of the Assistant Secretary and Treasurer was made the same as that of the Range Superintendent, until Dec. 1, when the salaries of both officers were reduced to \$50 that month, and thereafter at the same rate until April 1, conditional upon funds being received from any source.

On Nov. 9 the following proposed amendment to the By-laws was submitted (fully signed by ten life members, as required) to the Board of Directors, and by that body approved, and its passage duly recommended, viz.: "Amendment proposed to Article III. of the By-laws management to be paragraph 6, viz.:

"Sec. 6. Any of the permanent or honorary ex-officio Directors named in paragraphs two and three of this article may, by a writing filed with the Secretary, from time to time, designate one of their staff or other subordinate officer to represent them at any meeting of the Board of Directors, such officer to have the same powers at such meeting as his principal would have had if personally present."

The Committee appointed Sept. 2, 1879, to revise the Regulations of the Association made a final report on March 2, last, submitting a draft of the proposed new regulations. The same, being approved, was adopted, and 2,000 copies were printed and most of them distributed. No changes have been made in same up to this time.

The elected members of the Board of Directors in January, 1890, was as follows:

Terms expire 1893—Col. J. G. Story, Col. G. D. Scott, Mr. James Grant, Gen. G. W. Wingate and Col. H. A. Gildersleeve.

Terms expire 1892—Major G. S. Schermerhorn, Capt. W. C. Casey, Col. J. H. Cowperthwait, Major D. B. Williamson and Mr. F. J. Donaldson.

Terms expire 1891—Hon. D. W. Judd, Col. J. Ward, Major Henry Fulton, Col. E. H. Sanford, and Col. H. G. Litchfield.

On March 2, Major Williamson resigned, and Col. John Bodine was elected to fill the vacancy. On the same date Capt. Casey's resignation was accepted, and Gen. E. L. Molineux was elected in his stead. Business engagements, however, preventing the strict performance of his Directorial duties, Gen. Molineux resigned three months later, and was succeeded by Gen. Robert Oliphant. Major Fulton's resignation was received on Nov. 9, and followed by the election of Col. H. S. Jewell, who declined to serve, and the vacancy has not been filled.

On Jan. 13, Mr. N. P. Stanton, ex-President of the Association, was elected an Honorary Director for life, and on April 6, a like distinction was conferred upon Mr. E. A. Buck, editor of the *Spirit of the Times*. For the regular three year term, Hon. Lovi P. Morton and Gen. Anson G. McCook were elected to Honorary Directorships on April 27.

The resolution passed, early in 1879, laying aside as a sinking fund to be used upon the range for repairs, etc., all moneys received as dues from new life members, was rescinded during the past year, the receipts from this source not being large enough to make the resolution operative according to the original intentions. The offices at No. 23 Park Row were vacated on Dec. 1, for a less commodious, though almost equally serviceable room, at 37 Park Row, whereby a very considerable reduction of rental was obtained. Two thousand copies of the annual report of 1879 were printed in April, last, and most of them were distributed to riflemen and organizations throughout the States and Canada. It was hoped that the receipts from advertisements therein would cover the expenses of publication, but, though no canvasser's commission had to be paid, they fell short by over \$150. The regular monthly programmes of matches were issued in larger numbers than ever before, from April to November inclusive.

The Thanksgiving Match of Nov. 25, and the Christmas Match Dec. 18, were announced in special programmes. The Long

Island Railroad Company, claiming to have been much imposed upon by parties, other than those intended, availing themselves of the railroad tickets sold to members of the Association, for transportation to and from Queens and Creedmoor, at reduced rates, devised and put into operation a system of certificates of membership cards which, while fully protecting the railroad company, gave, I believe, general satisfaction to our members. This company, at the beginning of the season, furnished passes to many of our directors and officers, and ran trains direct to Creedmoor, at convenient hours, on Tuesdays, Wednesdays and Saturdays of each week. And the Secretary here wishes to acknowledge the uniform courtesy of Mr. Chas. M. Heald, the General Ticket Agent of the line, who, upon several occasions, has evinced his interest in the Association, by accommodating your Secretary in matters over which he has control.

The troops of the National Guard of this State have used the range almost continuously upon three days in each week, from June 1, to Nov. 1, as in former years.

It is gratifying to note the growing interest taken by the United States Army in rifle practice, and also the increasing proficiency in marksmanship, as seen in the scores of the army teams at Creedmoor during the last Fall Meeting.

The Secretary is pleased to record the names of Maj.-Gen. Winfield S. Hancock, commanding the Military Division of the Atlantic, and Col. J. C. Kellou, Assistant Adjutant-General on the staff of the Commander of the Military Division of the Pacific, both United States Army officers, to whom we are indebted for their earnest co-operation in the objects of the Association. During the past year there have been shot at Creedmoor 111 N. R. A. matches, nineteen of which were embraced in the Fall Meeting, and the remaining ninety-two being monthly and special matches. There was no Spring Meeting, it being surmised that, by its omission, the Fall Meeting would be added to in importance and greatness. That this course was wise and advantageous has not been proven, though the Secretary is of the opinion that a spring opening in April, with one or two popular matches and a large number of prizes, would be preferable and more successful than the ancient, cumbersome spring meetings. The Fall Meeting commenced on Tuesday, Sept. 14, and lasted four days, for records and statistics of which you are respectfully referred to the officer's reports and the tabulated scores in the Annual Report. During the past year the following monthly matches were concluded, the prizes being finally won according to the conditions—viz: Remington Rifle Match, thirteen competitions, six shot in 1890; Remington Shotgun Match, 12 competitions, 8 shots in 1890; Secretary's Match, 7 competitions, all shot in 1890; Champion Marksman's Badge Match, 7 competitions, all shot in 1890; Alford Match, 20 competitions, 16 shot in 1890; the Winchester Rifle, the Remington Gold, the Wo Will, and the Ballard Rifle Matches hold over for another year. At the beginning of the season, with a view to encourage long-range shooting, a series of matches were inaugurated under the auspices of the Association, known as the Weekly Long Range Subscription Matches, the first competition for which was announced for and contested on May 1. Since that time and until the month of September they were published in the regular programme, though not again shot, owing to the failure of two or more competitors to appear. The monthly and special matches of the year, with the number of entries in each and the amounts received as entrance-fees therein is shown:

Individual off-hand—Competitions, 18; entries, 635; entrance-fees, \$683. Team, off-hand—Competitions, 6; entries, 64; entrance-fees, \$256. Secretary's—Competitions, 7; entries, 397; entrance-fees, \$193.50. Winchester Rifle—Competitions, 1; entries, 25; entrance-fees, \$6.25; Remington Gold—Competitions, 3; entries, 30; entrance-fees, \$60. Wo Will—Competitions, 7; entries, 37; entrance-fees, \$18.50. Ballard Rifle—Competitions, 8; entries, 134; entrance-fees, \$67. Remington Rifle—Competitions, 6; entries, 54; entrance-fees, \$27. Alford—Competitions, 16; entries, 552; entrance-fees, \$276. Remington Shotgun—Competitions, 8; entries, 65; entrance-fees, \$110. Weekly Long Range Subscription—Competitions, 1; entries, 8; entrance-fees, \$24. Champion Marksman's Badge—Competitions, 7; entries, 1,084; entrance-fees, \$512. Any Rifle, Individual—Competitions, 1; entries, 195; entrance-fees, \$97.50. Any Rifle Team—Competitions, 1; entries, 20; entrance-fees, \$80. Thanksgiving—Competitions, 1; entries, 348; entrance-fees, \$207.50. Christmas—Competitions, 1; entries, 662; entrance-fees, \$348.50. This gives 92 competitions, with 4,602 entries (of which there were 84 teams of 4 men each), and \$3,063.75 in entrance-fees. Add to this \$140.15 net proceeds of pool target, 75 in entrance-fees, during monthly or special matches, \$19 fines and forfeits collected, and \$112.25 net balance proceeds of First-class Match, and we have the total receipts, \$3,183.15. The following will be of interest:

Matches.	No of Prizes.	Prizes.	Total Cash and Value of Prizes.
19 Fall Meetings.....	176	Cash.....\$748 00 In Value.....\$6,599 50	\$7,347 50
92 Monthly Matches, etc., 642		Cash.....2,483 33 In Value.....1,221 00	3,704 33
111 Meetings.....	818	\$3,244 88 \$3,180 50	\$1,425 43
By comparison with the matches of 1879, a large increase in 1890 will be seen, thus:			
Spring & Fall Meetings 153 prizes, including 1000.....		\$1,747 89	
62 Monthly Matches, 264 prizes, including Every-body's Match.....		1,925 44	
Spring & Fall Meetings 33 matches, amount of entrance fees.....		2,150 00	
62 Monthly Meetings, 562 entries.....		1,863 75	

This shows gains for 1890 over 1879, outside of the meetings, of 30 matches, 378 prizes, \$1,775.45 cash and value of same, 2,000 entries, and \$1,640 entrance-fees receipts. You are familiar with the facts in reference to the selection of an American rifle team to shoot a friendly match with Irishmen upon their own soil, and the unequalled victory achieved by that body at Dollymount, on June 29, is still fresh in your memories, and I need not to add what, perhaps, you already know in this connection, that our success upon that occasion was largely due to the able captainship of "Old Reliable."

After a service of seven years, our faithful Assistant Secretary, Mr. Weston, has handed in his resignation. This is a loss that all riflemen acquainted with him will deplore, more especially by those who have experienced his uniform courtesy and kindness at Creedmoor, where his pleasant voice and face always seemed to be a

welcome to the shooters. Mr. Weston, I am sure, leaves the N. R. A. with the best and heartiest wishes of all connected with it, and with a record for kindness, courtesy and thoroughness in all he undertook that we are, indeed, proud of. He goes from us, after these seven years' untiring industry in the interests of the Association, leaving behind him none but friends, and we part from him with regret, and with the hope that, in his new walk in life, he may have unbounded prosperity.

In conclusion, I beg to call the attention of the Life Members to the necessity of being represented by Directors, who will take an active, not a passive, interest in its affairs, for there is every probability that during the ensuing year the Association will have only itself to look to for the necessary expenses to keep Creedmoor open. Therefore, your new Directors should be selected with a view to obtaining those who will exert themselves to obtain prizes as well as subscriptions, if Creedmoor is not to be a thing of the past. As general dissatisfaction exists with the management, and as many of the more prominent frequenters of Creedmoor have expressed themselves to the effect that the best interests of the Association would be conserved by the election of an entirely new Board of Directors, and not wishing to be a stumbling-block in the way of such a change, I cheerfully tender my resignation as Director. Respectfully submitted,

FRANK J. DONALDSON, Secretary N. R. A.

The last paragraph raised a storm of objections, and some loud talk was indulged in, ending in the adoption of the report with the exception of that paragraph. The election of Directors resulted in the choice of J. H. Andrews, F. H. Holton, W. W. Judd, A. Alford, Geo. G. Seabury for three years each, and Col. Porter and W. H. Murphy for the one year vacancy term. On motion of Major Henry Fulton it was *Resolved*, That this Association consider it inexpedient to accept the invitation of Earl Stanhope for a match at Wimbledon in July next. This motion he said was made because the Palma was yet in American hands, and this, and this alone was the championship emblem. Col. Cowperthwait seconded the motion and it was carried.

The Board of Directors organized in the choice of E. A. Duck, as President; Geo. W. Wingate, Vice-President; D. W. Judd, Treasurer; F. J. Donaldson, Secretary, and W. H. Murphy, Geo. H. Schermerhorn, Jr., and Col. J. H. Cowperthwait on the Executive Committee.

## RANGE AND GALLERY.

BOSTON, Jan 7.—Mammoth Rifle Gallery.—The opening week in the New Year Rifle Match, at the Mammoth Gallery, has shown some very fine shooting so far early in the month, and the crack of the Maynard, Ballard, Vesson, Stevens and Remington rifles have been incessant. Mr. J. Merrill, of the Massachusetts Rifle Association, was successful in getting a clean score of eight consecutive bullseyes, and receiving \$15 for the same. He made eleven consecutive bullseyes, the same number that Mr. N. W. Arnold made in the any-rifle match in December. These two gentlemen are as yet the only ones who have made clean scores since the new targets were put in the gallery, and to Mr. Merrill and Mr. Arnold should be awarded all praise for their skill and accuracy. Mr. Merrill followed his clean score with a 39, which was a remarkable performance. The proprietor, Mr. W. W. Newton, wishes to announce that he is ready to pay \$15 to any one making a clean score of eight consecutive bullseyes. This places Mr. Merrill in the lead with five scores which will be hard to equal—two thirty-eights and two thirty-nines and a forty, making 194 out of a possible 200. Mr. A. L. Eames is second on the list with 182. Mr. Eames is a member of the Rod and Gun Club of Springfield, Mass. Mr. Geo. D. Edson is third with 179. Mr. A. C. Gould, of the Massachusetts Rifle Association, is fourth with 178, followed closely by Mr. C. R. Bartlett with 178, but outranked by Mr. Gould. Mr. J. J. Ross is sixth with 177. Mr. Newton has lately purchased a new Maynard rifle of .22 cal., and he has now a complete set of gallery rifles. Any one can find their favorite rifle there, and to all who have a Maynard stock, and not a .22 barrel, can bring the stock and fit the gallery barrel to it, and no doubt many will avail themselves of this opportunity.

The FOREST AND STREAM rifle match has not had many entries as yet, it being early in the month, and as the prize is a very handsome meerschaum pipe valued at \$50, it no doubt will prove an incentive for fine shooting before the match ends, and large scores will be in order.

The following are the leading competitors to date in the New Year rifle match (50 yards, rounds 8, possible 40, five scores to win or possible 200):

J. Merrill.....	88	88	39	39	40—194
A. L. Eames.....	86	86	37	37	182
A. C. Gould.....	85	85	36	36	179
Geo. D. Edson.....	85	85	36	36	179
C. R. Bartlett.....	85	85	36	36	178
J. J. Ross.....	85	85	36	36	177
A. C. Goodspeed.....	85	85	36	36	177
F. J. Snow.....	85	85	35	35	176
C. Warren.....	84	84	35	35	174
O. T. Hart.....	84	84	35	35	174
H. B. Duley.....	84	84	35	35	173
H. K. Knowles.....	84	84	35	35	173

Pistol Practice.—This favorite arm has also been lively during the week, and the match which began January 1 is fast becoming popular, many availing themselves to practice at this favorable range. Mr. J. Ames, of the Massachusetts Rifle Association, has shown good holding with this arm, and leads the list with 104 out of a possible 120. Mr. F. J. Rabbeli is second with 103, and Mr. J. R. Scott is third with 100. The shooting for so early in the month is good, as the following scores will show (50 feet, rounds 8, possible 40, three scores to win or possible 120):

J. Ames.....	34	34	36—104
F. J. Rabbeli.....	33	34	35—103
J. R. Scott.....	33	33	34—100
O. T. Hart.....	33	33	34—99
F. J. Snow.....	33	33	33—99
O. T. Hart.....	32	33	33—98
L. T. Folsom.....	32	32	34—96

MAGNOLIA RIFLE GALLERY.—The shooting has proved quite attractive. In the No. 1 match Mr. Farnham is at the front. In the FOREST AND STREAM match for the elegant pipe, Mr. Edwards is ahead with a good 47. Mr. Wright takes the lead in No. 2 match with 41. Mr. Gilman, with 117 for the pistol, leads all comers for the past week. The following is the result for the meetings since January 1:

Match No. 1.	Match No. 2.
W. H. Farnham.....	4 5 5 5 5 4 5 4 5 46

tends over such portions of Lake Champlain as may lie within the State of New York. There can be no doubt whatever on this point.

J. C. S., Swansea, Mass.—1. What kind of game is there in North Park, Colorado? 2. Also in North Platte River, Nebraska? 3. Which is the best place for game? 4. Is there any timber on North Platte River? Ans. 1. Antelope, elk, deer, bear, mountain sheep and a few bison. 2. On the North Platte deer, antelope and perhaps some elk. 3. North Park. 4. None of any account.

TRAPPER.—A receipt for tanning mink and muskrat skins is given as follows: First wash the hide in warm water and remove all fleshy and fatty matter. Then soak it in the following mixture: Ten gallons of cold soft water, to which is added eight quarts of

Wheat bran, one half pint of old soap and one ounce of borax. If the hides have not been salted add one pint of salt. Green hides should be soaked eight or ten hours, and dry ones till they are soft. For tan liquor, to ten gallons warm soft water add one half bushel of bran. Stir it well and let it stand in a warm room until it ferments; then add slowly two and one half pounds of sulphuric acid, stirring all the time. Let the hide remain in about four hours, then take out and work over a beam until dry.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—*Adm.*

## POUGHKEEPSIE ICE YACHT CLUB

[illegible]

The Poughkeepsie Ice Yacht Club have challenged the New  
Hamburg Ice Boat Club for the "Challenge Pennant of America."  
This prize has been offered by the N. H. I. B. C. to any organize  
ice yacht club in the world, but has not as yet been sailed for.

## W1

[illegible][illegible]

YACHTS PHOTOS.—Brentano, of Union Square, keeps a full line of all photos of American and English yachts. The American lot includes several very handsome specimens of the art, notably those representing the schooner Nellie G., the sloop Sea Bird, a fine deep view of the latter, and the sloop Rebek. We wish that some one could be found with enterprise enough to photograph New York yachts, there would be a small mint in the undertaking. As it is, we must depend upon Boston for a supply of representative illustrations.

**SANDS FITTINGS.**—Mr. A. B. Sands, of Beekman street, has a long made yacht plumbing a specialty that he may now be said to have captured the entire American market. His work is unequalled in strength and finish, and his long experience in fitting yachts of all sizes renders his methods and suggestions of great value, a fact which yacht owners recognize generally.

COMPARISON OF YACHTS.—The paper of Mr. Hyslop, in the FORCES AND STREAM of Dec. 16, on stability of different models, I regard as valuable. He could have made it of more value, however, if he had made his calculations on midship sections, instead of on the two different models. The results would be left out in comparisons between two different models. Another element, the wet surface exposed to frictional resistance, demands serious consideration. The resistance due to this source is not negligible, and is not, as is usually supposed, entirely, as that due to other sources, of which the midship section is the chief factor. The problem for yacht designers to solve is this: As water lines are supposed to be perfect, or as nearly perfect as possible, the resistance due to the wet surface of the hull, in the midship section by a line which will give the greatest possible

**ZETTLER RIFLE CLUB.**—*New York, Jan. 9.*—Monthly prize shoot at Zettler Rifle Gallery, 207 Bowery. Conditions.—22-cal. rifle, Creedmoor targets, possible 50; 10 shots off-hand; 5 cash prizes; first four best aggregate scores takes first prize; second four second prize, etc. A premium of \$10 for a full score, and \$1 for six consecutive bullseyes.

WHEELING, WEST VA.—In a recent match shoot of the Wheeling Rifle Club Richard Stewart, at 200 yards, Mass. target off-hand without sighting shots, put in the score of 11, 12, 11, 12, 11, 11, 12, 9, 12, 12=118 in a possible 120.

BROOKLYN LONG RANGE GALLERY.—During the past week P. Ronaldson, T. S. Case and M. B. Hull each accomplished a score of 50 in a possible 50 at the 200 yards (reduced) Creedmoor target. On Monday next a new match will be started, the prize being a .2 Ballard rifle, open to all comers, 10 shots, 300 yards reduced target. The matches to close each week and the highest aggregate of 3 scores to be declared the weekly winner. Two winnings before final ownership.

THE JERSEY SCHUETZEN CORPS.—*Jersey City, Jan. 6.*—At the quarterly and 192d meeting of the Jersey Schuetzen Corps, A. H. Hardekopf, Captain, a full report of the ball committee was received, which shows that the members have made great preparations for the ball, which will be held in Cooper Hall, Jersey City on the 20th of this month. New candidates were elected and seven new ones proposed, and other usual business was transacted.

THE HOBOKEN SCHUTZEN CORPS, Captain John Brehmermann will have their tenth annual ball on February 7, 1881, in Odd Fellows' Hall, Hoboken.

**No Notice taken of Anonymous Communications.**

R. G. C., Brooklyn.—1. Bogardus claims the championship. 2 Eugene has shot with the shot-gun.

F. S., Cleveland, O.—The President of the New York State Association is Mr. Abel Crook, Bennett Building, New York City.

W. H. W., N. Y.—Will you give me the name of the distributing agent for carp for the State of New York? Ans. E. G. Blackford, Fulton Market, New York City.

U. B. M., Raleigh, N. C.—We should advise you to get for general shooting a modified choke-bore gun, No. 10 or 12, the weight to depend somewhat upon your own build.

D. C., Belvidere, Ill.—1. Few such barrels made now. The English gunmakers use some of them, but you will not find many. 2. Send to Leggat, Beekman st., New York, for the book.

W. N. W., Madalin, N. Y.—The guns are equally good, except as far as the action is concerned. You may select that which suits you the best, and in other things it will be equal to the maker.

B. F., Meriden, Conn.—The law is substantially as you have it. We have failed to find any material alteration. We have published from time to time able data relative to shooting resorts in the State.

C.-W., Minnesota Junction—1. We know nothing of the firm  
2. The gunmaker's address is Philadelphia. 3. For Vennor's A  
manac write to H. G. Vennor, Montreal, Canada. The price is, w  
think, 35 cents.

J. M., Poughkeepsie.—1. So far as our dealings with the man  
he has given satisfaction. We know nothing beyond that. 2  
Sensation 2d by Sensation. We do not know the present owner. 3  
Subscription expires April 7, 1881.

2. The gun is good enough, but its action seems to find little favor among sportsmen. Aside from this the arm is excellent in every

W. B., Syracuse, N. Y.—You will find much useful discussion in our rifle columns from week to week about rifles. In selecting on

you must be guided by the kind of shooting you propose. See later issues. For guns, see our advertising columns.

L. S., Charleston, N. H.—Can you give me the address of an one who is raising minks, or keeps any live minks? Ans. Phillips Woodcock, Canaan, N. Y., used to breed minks for their fur. Whether they are still in the business or not we do not know.

T. C. C., Kingsville.—1. Is there a duty on American beef in England? 2. Did the first American rifle team commence firing at 1,000 yards? Ans. 1. No, but many oppressive laws.

W. N. T. Vermilion O.—There are many first-class breed-

loading guns made that it is simply impossible to select one of them and claim that it is the best. By dealing with any of the leading gun dealers—they are all advertised in the FOREST AND

S. H. W., N. Y.—Have the Game Protectors of the State of New York any authority on Lake Champlain? Ans. They have authority everywhere within the limits of the State, and therefore it is

**THE NASHUA CLUB.**—Mr. H. G. Bixby, who won the prize at the amateurs' match at Walnut Hill, Dec. 11, with a score of 46, is a member of the Nashua Rifle Club, and is one of the reliables.

BEACHMONT, Jan. 8.—Although to-day was cold and dreary, the enthusiastic riflemen of the East Boston Schuetzen Corps assembled at Beachmont to engage in their weekly competition. The scores are subjoined :

Massachusetts Target (Off-hand).												
J. F. R. Schaefer.....	72	11	9	11	11	72	11	10	9	10-104		
H. Max.....	11	12	10	8	10	7	10	10	11	11-104		
C. M. Gueth.....	11	9	8	9	10	8	9	9	12	9-94		

	12	5	7	8	9	9	10	9	10	11	9
	Massachusetts										Target (Rest).

WAKEFIELD, *Mass.*, Jan. 8.—The owl match sustains its interest and the popping at the white bullseyes through the darkness of the night still continues to be liberally followed. To-day, in the afternoon, we had shooting with some close leading scores, and in the evening, when wind and elevation had once been secured, it seemed no trouble at all to pour in the bullets to the bullseyes. The scores stood :

Afternoon Match—200 yds.

W. B. Daniel.....	4 5 5 4 5 6—33	T. Baxter.....	4 4 5 4 4 5—3
O. Corcoran.....	5 4 5 5 4 5—33	D. Walker.....	4 5 5 4 4 4—3

W. B. Daniel.....	5 5 4 5 5 4—33		

Boston, Mass., Jan. 8.—The final day of the several matches on the Walnut Hill range drew out a large body of shooters to-day, and the pavilion was more than comfortably full. In the early morning the sky was cloudless, the wind hard to control, unsteady, and at times approaching almost a gale. Added to this was the most provoking mirage produced by the bright sun upon the white snow. In the afternoon the weather conditions were more pleasing to the contestants, as light, fleecy clouds prevented the mirage from being so dazzling and rested the eyes of all the iris-seekers. Splendid work was now done. Captain Jackson closed high marks on the ring target (rest). Mr. D. Kirkwood took first honors on the Massachusetts target (off-hand) for a total of 106. F. J. Rabb both heads the list for 46 on the Creedmoor target. Mr. Severance made the excellent score of 116, Massachusetts target (rest); and Ames, with good holding and judgment, scored 82 on the ring target, off-hand—good work in the erratic wind of to-day. Mr. J. Cram took the lead before the amateur target for 47, outranking Mr. Gould, while Grant and Faunce both put in two 46s. The prizes in this match are gold and silver association medals. Mr. Cram will wear the gold trophy and Mr. Gould the silver one. The entries to-day were many, and as all the gentlemen are trying to improve their scores, only a few finished. The shooting was so heavy that it was impossible to arrange the prize-winners. The names will be given in next week's issue. The subjoined summary will give the results of to-day's meet :

	Massachusetts Target (Rest).										
H. Severance.....	12	22	11	19	10	12	13	12	11	13	—11
D. Kirkwood.....	11	11	11	13	10	12	13	11	11	11	—11

stability with the smallest possible surface exposed to frictional resistance, and permitting a form productive of the least wave making resistance at the same time.

NATICKS.

## RACINE CANOES.

MAKING boats by machinery has certainly been brought to a high state of perfection by the Racine Boat Company, whose headquarters and salesrooms are located in Chicago. The claims set forward in favor of the lightness and strength of boats made

RACINE SAILING CANOE.

from as few pieces as possible are rational enough, and if extended practice does not develop any serious defects in the new veneer canoes, they will acquire an enviable place in the estimate of the thousands of sportsmen and others who find some sort of boat an indispensable adjunct to a full equipment. The excellent qualities

are about one-eighth of an inch thick, will not warp, and are sufficiently elastic, with a strength far in excess of the strains a canoe or boat is likely to be put to. With fair usage these boats ought never to leak, and, when supplied with water-tight compartments at the ends, marked A in the cuts we present, they are life-boats to be relied upon in all emergencies. These compartments, we believe, are fitted to every boat turned out from the company's factory.

That the claims of strength, lightness, beauty and speed, made for boats manufactured on the plan described, are well founded can hardly be questioned. Light weight, when not obtained at a sacrifice of other needful qualities, will commend itself to all for ease of portage, of handling and housing, and also for paddling and the greater load of game or traps that can be carried. The builders of the Racine boats very naturally demand that reasonable care be taken for the preservation of their work; that, if strong and light at the same time, a certain and not very irksome amount of attention is indispensable to the retention of both beauty and condition. These boats should be housed when not in use; hauled up, sponged out and turned over in camp. When wear appears a fresh coat of varnish must be applied, and if wanted for immediate use, within an hour or so, shellac varnish instead. If you can afford a couple of days to dry, hard oil finish is the most lasting. Should a wound be made, rub the place dry and apply a coat of shellac varnish. If the wound is deep, remove loose splinters and fill the spot with paste, a small supply of which is sent with each boat, and let it harden. With these directions the life of a Racine boat extends over many years. The following models and fittings are now furnished, but should in the future some new type come into vogue, the company will no doubt keep pace with the times and supply modifications as wanted.

The illustration of a sailing and paddling canoe is a perspective of what we may call the Racine combination for general use. The hull is 13½ feet long; beam, amidships, 28 inches; depth, 10½ inches at side and 12 inches in the centre; cockpit, 5 feet by 20 inches; sheer, 7½ inches. Air chambers and compartments for provisions at each end. Back-rest, a cushion capable of being used as a life-jacket, waterproof apron, double-bladed paddle, rudder with foot gear, and also a temporary keel for deep-water sailing are furnished with the canoe. The weight is from 75 to 85 pounds, according to the rig used, and the prices vary from \$50 to \$75, according to the finish. The sharpie rig has a mainmast of 11 feet and a dandy 8 feet; or, if preferred, a lug-sail can be furnished as depicted in the illustration.

Of deck, 5 inches; cockpit, 7 by 2 feet; weight, without rig, 100 pounds. The badger is finished in five different styles, painted dry grass color, with one or two sails, varnished and brass trimmed and full finish throughout. The prices vary accordingly from \$50 to \$75.

For general pleasure purposes the Racine family boat has all the qualities desired—light pulling, stiff, handsome, buoyant and unsinkable. Length, 16 feet; beam, 38 inches; depth, 12 inches amidships and 7 inches sheer; weight complete, 120 pounds.

SAILING AND PADDLING CANOE.

Oars are 10 feet when pulling them single, and 8 feet if pulled as pairs.

The family sail boat is similar to the one just described, but has more deck at each end. The mast is 15 feet above deck, boom 8½ feet, and the sail of the leg-of-mutton style with a single row of

DOUBLE CANOE

of the Racine canoe have been attained by gradual and carefully conducted experiment, extending over two years or more, during which time the necessities and preferences of the public have also been carefully noted, so that in the models now offered the originators can fairly expect to meet existing demands with the utmost confidence. The undertaking was a bold one, for all old methods were so widely departed from that next to nothing in the way of precedent existed, and we believe it mainly due to the indefatigable exertions of Mr. Durand, the superintendent of the Racine Hardware Co., that so thorough a success has been achieved in something so original. The principal peculiarity in the "manufacture"—for the new canoes cannot be said to be built—is that they are stamped out much in the same way that tinware is, by special machinery, and special adaptation of the material used. The latter consists of thin veneers of birch with ash and cherry for the limited stiffening and framing required. The veneers are combined in several thicknesses through the intervention of waterproof fillings and varnishes. The boats are stamped out in halves and joined under the keel, where the only seam is to be found, both bow and stern being neatly sheathed with brass, after the manner of paper-racing shells, giving at once a strong binding—ends which will stand chafe and wear—and a stylish finish. The sides, when varnished, are like the finest carriage work in smoothness, and present a hard and glossy surface to the water, so that friction is reduced to the minimum attainable. The deck is without a joint, and the seam underneath is cemented and closely riveted between keel outside and keelson on the interior, rendering leakage impossible, and a very strong construction is the result. The veneer for the sides is selected, and the grain in the several thicknesses is crossed, the whole being subjected to great pressure after paying with waterproof cement between, a suitable die and mold being used to impart the shape to each half. A gunwale strip is let into a rabbet at the upper edge, cemented and riveted from the inside, all the fastening being done in such a manner that no screw or nail-head is exposed to the water. The sides

The double cruising canoe will appeal to many who prefer company and wish to have some one sail "in the same boat," and is appropriate also for family use, especially if the gentler half of the household exhibits a penchant for a husband's adventures upon the deep, or if younger blood is about to make a life-time contract of absorbing interest. Owing to possible absence of mind during a critical moment, ample beam in this canoe is intended to keep up the proper stability of affairs. The "double" is 16 feet long, 38 inches beam, 12 inches deep at side, 7 inches sheer, and weighs 120 pounds. Mainmast, 15 feet; dandy, 11 feet. Capacity, two canoeists and 500 pounds luggage besides. The air-tight compartments are indicated by the letter A. The price, brass trimmings, braided sheets and halliards, jointed double paddle, rudder and foot gear, life-jacket and mattress combined, is \$85. The qualities of a sailing and paddling canoe are always difficult to combine satisfactorily in one and the same boat, but the annexed diagrams, representing the Racine cross between the Rob Roy and Nautilus, will commend themselves as a very fair combination. The provision hatches are shown at A, A, the bulkheads of the same at D, D, and the water-tight compartments at C, C in the extreme ends. E, E shows the mast steps, F the back-rest in the cockpit, K and B general storage. The rig is that of the sharpie.

The Racine badger, an improved sort of sneak box, suitable for ducking, hunting and traveling, will carry two or three persons. Length, 16 feet; beam, 38 inches; depth at side, 8 inches; crown

roof points. She will carry five persons and float that number when filled with water. The varnished boats show the grain of the birch and are very attractive to the eye. Besides the models centralized, the Racine Boat Company build open canoes of 50 pounds weight. They make a specialty of all the fittings belonging to a full equipment, among which we may make special mention of a life preserver, 42 inches long, which serves as a cushion, a life-belt, or as mattress for the camp, weighing but little over one pound. It is sold alone for \$1.50, or with the boats as part of their outfit.

We have recently received the "lines" of a new and improved Shadow model, which the company are now prepared to put upon the market. A sample of this canoe was recently on exhibition at the American Institute Fair, and attracted much attention by her well-digested model and fine finish. Commodore C. E. Chase, of the J. C. C. O., may with justice claim some of the credit of her production, a fact to which, we believe, the Racine Boat Company will readily bear testimony. The Commodore, on an extended tour paddling and sailing the beautiful streams and lakes of Wisconsin last year in his well-known Dubble, gave the Racine builders the benefit of his experience, which was cordially accepted and worked up into one of the best models for a "paddleable sailing canoe" in existence. She looks to us like a very able, stiff boat, without the very flat floor which makes the Eastern Shadow slow and loggy under paddle. The masts are stepped 42 inches from bow and stern for a sharpie rig, which, by the way seems to be coming into very general use for canoes, and which to us seems the handiest of all. The new Shadow has an inch keel, moderate grip, and only little rake to the post, the idea being to obtain longitudinal section for windward work without centreboard or leeboard. Reports concerning the behavior and speed of this Racine Shadow are very satisfactory. Racing shells have been turned out on the same principles, but in them we presume the chief advantage is their low price, as it would seem next to impossible to save weight on the best examples of cedar or paper shells.

RACINE FAMILY BOAT.

**ELECTRICITY AND SALTED HERRINGS.**—Had any scientific enthusiast of the last generation announced his belief that the progress of electrical science would directly affect the supply of herrings to those inland Catholic countries where they are—when salted—in such demand for food on fast days, his friends would have been anxious concerning his cerebral welfare. As a matter of fact, this is now the case. The Norwegian coast is girdled by 1,200 miles of herring telegraph wire, and telegraph stations are established on the barren rocks of the Lofodden Islands, and in the hollows between the dark precipitous cliffs that form the Arctic face of Europe. Here, among the screaming seabirds, a watch is kept of the movements of herring shoals.

## TRADE—"BEATS THE WORLD."—MARK. Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely, The Oil of Creosote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 15th, 1875, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Try this and you will use no others. Sold by leading dealers.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK

### Philadelphia Fishing Tackle House

A. B. SHIPLEY & SON,

Manufacturers of Fine Fishing Tackle of Every Description,

503 COMMERCE ST., PHILA.

A specialty of the celebrated Betham Wood, for Archery Bows and Fish Rods, as tough and elastic as steel. Great Reduction in Prices for 1880. Reversed Fly Trout and Bass Flies on hand, and tied to pattern; Mist-Color Leaders, fine Trout and Bass Hooks, Lines, etc. Our BETHAMARA FLY RODS and INSIDE ENAMEL SPLIT BAMBOO RODS received the Centennial and Franklin Institute Medals. Prices as low as the lowest, and always first-class Goods.

Price-list of wood and rod mountings free. Our 65-page new Illustrated Catalogue of Fishing Tackle sent, post-paid, on receipt of ten cents in stamps.

### BIRDS' EYES.

Birds' Skins, Taxidermists' and Naturalists' Supplies.

Send for New Price List. Reduced Rates.

W. J. KNOWLTON'S Natural History Store, 168 Tremont St., Boston, Mass.

Birds and animals preserved by superior French and American workmen.

\$72 A WEEK. \$12 a day at home easily made. Costly outfit free. Add. C. S. TRUEB & CO., Augusta, Maine.

### Monadnock Trout Ponds

Will furnish Trout and Trout Spawn at low prices. For price list, address

G. A. STARKEY, TROY, N. H.

**GUNPOWDER!**  
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!  
DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean, great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 kegs.

**Dupont's Choke Bore.**—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 6, No. 7 being the coarsest. Packed in 6 1/2 kegs and 1 lb. canisters.

**Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs.

**Dupont's Rifle Fg.**—"Sea Shooting."—FFG and FFGG. The Fg. for long-range rifle shooting, the FFG and FFGG, for general use, burning strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb. canisters, 6 1/2, 12 1/2 and 25 lb. kegs. FFGG fine.

**Dupont's Sporting, Mining, Shrapnel and Blasting Powders** of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 70 Wall Street, N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

**The Hazard Powder Co.,**  
MANUFACTURERS OF  
**GUNPOWDER.**

**Hazard's "Electric Powder."**  
Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

**Hazard's "American Sporting."**  
Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

**Hazard's "Duck Shooting."**  
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

**Hazard's "Kentucky Rifle."**  
FFFG FFG and "Sea Shooting" Fg in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" Fg is the standard Rifle Powder of the country.

**Superior Mining and Blasting Powder.**  
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 20, 1881.

#### THE REFRIGERATOR AMENDMENT.

THE proposal to sell game all the year around in the New York markets has aroused the indignation and alarm of sportsmen throughout the State. We are in receipt of private letters upon the subject which show that the view of the case advanced by the **FOREST AND STREAM** last week is that view which appeals to the most experienced sportsmen of the land. We publish in another column communications from gentlemen who understand thoroughly what such a law means, and we have on hand other letters of like tenor which will be printed next week.

Of the evil effects of such a system there is but one opinion, and that a very decided one, that the effects of the open game market would be ruinous to our game. We trust that the public sentiment, which is so unmistakably in opposition to the proposed amendments, may be sufficient to deter the promoters of the bill from presenting it.

THE INTERNATIONAL MATCH.—It must be regarded only as a misfortune if the invitation of the British riflemen for a long-range match at Wimbledon during the coming summer be allowed to drop into neglect. At any rate, those sending the kindly note for a contest are entitled to something more than a lazy intimation that we find it "inconvenient" to send over a team. There is too much appearance of studied avoidance of a square issue in the use of such indefinite phrases. If we cannot afford to send over a team, then let that be said fairly and openly. If the point is made that the Palma represents the championship of the world at long-range team work and that we will stubbornly refuse to acknowledge that any other match is to be thought of so long as this remains in the way, then the issue is a plain one, and there will be no difficulty in getting an expression of opinion that the Palma has been a stumbling-block from the start and seems destined to become the greatest incubus ever laid on American rifle practice. Let the new Executive Committee of the N. R. A. take the matter in hand regarding the vote of the life members only as a suggestion and at least give a fair, open, American reason for sneaking away from the only match ever offered us by the only other National Rifle Association in the world.

THE MICHIGAN STATE SPORTSMEN'S ASSOCIATION will meet at Lansing, January 25.

#### THE HATCHERY AT NORTHVILLE, MICHIGAN.

WE recently visited the hatchery station of the U. S. Fish Commission at Northville, Mich., where the whitefish (*Coregonus*) are being so extensively hatched for distribution in the lakes and to such other parts as is deemed necessary. The Superintendent, Mr. Frank N. Clark, showed us over the establishment, and we were much pleased with it. It is situated on a slope across the road from Mr. Clark's house, and the roof of the hatchery is no higher than the road; the building is a single story frame, with side windows, and is eighty feet in length by thirty wide; in one end is the office and a workshop, while the filters and ice room are in the rear.

The question which agitated fishculturists some years ago concerning the hatching of the whitefish in spring water, thereby bringing them out earlier than in the colder waters of their native lakes, still has its partisans, and Mr. Clark has hit a medium course. By making a cooling pond and carrying the water from the spring to the further end of it in a shallow trough exposed to the air, and then further exposing it in the pond he gets the temperature down as low as is possible in the coldest weather, using ice if warmer, and so retards the hatching until toward spring. Mr. Clark has been bred a fishculturist, his father, the late Nelson W. Clark, being one of the pioneers in the business, and his success with the shad and whitefish has been uniformly good.

The hatchery is equipped with five troughs, each fifty feet long and a foot wide, divided into thirty-two compartments, seventeen inches long, filled with the "Clark hatching box." Each of these compartments contains seven trays capable of holding 10,000 eggs each. Besides this there are sixty "Chase hatching jars," six inches in diameter, sixteen and a half inches deep, with a metal top two and a half inches high, capable of holding 125,000 eggs each, making the capacity of the house 25,000,000 eggs, which can be increased, if necessary. At the time of our visit, December 17, there were only 13,000,000 eggs in the hatchery on account of the storms and bad weather which prevailed during the time when the fish were spawning, many eggs having been frozen, it having been a most disastrous season for the fish culturists generally who attempted to gather the eggs of the whitefish. Our readers are familiar with both the "Clark box" and the "Chase jar," and so we will not enter into an explanation of them. It was curious to note the different appearance of the eggs from Lake Erie from those of Lake Huron, the former appearing light colored and the latter a decided yellow; and Mr. Clark says that the fish differ, those from Lake Huron having black fins and a black back, while the Lake Erie fish have pale fins and a greenish back, and he claims that their heads are shaped differently. He keeps these eggs separate and will plant each in its own locality, for it is said that the Lake Huron fish does not sell as high in New York market as the other. The Lake Huron eggs are taken at Alpena, Thunder Bay; they are transported to the hatchery in flannel trays. In the practical working of a large hatchery the "self pickers" require assistance, as many good eggs will pass out of the gate with the bad ones, and a siphon of glass is used to remove most of the dead; but this also picks up some good ones, and so they are put into a jar by themselves for future picking when the bad ones get worse and can be more readily separated; still it is an improvement on the old-fashioned picking with nippers which is very tedious. The jars are arranged on the sides of these troughs which are placed over each other, the top one supplying the top tier of jars which empty into the second trough which supplies the lower jars, which in turn empty into the bottom trough. White fish eggs measure, according to Mr. Clark, eight to an inch, and 36,000 to a quart.

Retarding the development by ice is a favorite experiment with the superintendent, and we saw his refrigerator filled with eggs where the thermometer stood at 31 deg. Fahr., as it had done for the last twenty days, and the eggs were quite icy on the outside, often being surrounded by a film of ice, which had made on their surfaces without the egg itself being frozen, owing to the circulation of the blood developing heat enough to resist a temperature no lower than that. The eggs lay upon cotton flannel trays in a double box well packed with fine ice. His father had a box of this kind patented

and the son has improved but not patented it, he having concluded that fishcultural patents are not good. He thinks he can keep the eggs for six months and then hatch them; the only care he gives them is to see that the trays are kept damp.

The house is also used for the breeding of salmon and trout, many thousand quinnat-salmon being hatched and distributed here as well as a few of those Western brook trout (*Salmo trutta*), which have so many common names that we cannot select one, and so we are waiting for some one in authority to choose one for us, for we will not call them "California trout" for the reason that we object to the same name for the salmon; it is not its name in its own home, and there are a half dozen salmon and trout in that State. The young *trutta* in the ponds are lively and healthy, and may be kept for breeders; they were hatched on the 17th of last May, and belong to the U. S. Fish Commission, as do also a few adults. Other ponds contain yearling quinnat salmon and a few brook trout, and altogether the establishment is in good shape and excellent working condition.

#### THE SHINNECOCK BAY DEATH-TRAP.

OUR readers will remember that this beautiful bay on the south side of Long Island was closed by a storm which filled the inlet with sand about the middle of September, and that we cried aloud to have it opened, so that the millions of young fish which had been bred in its waters might go forth on their migrations and return to breed, instead of perishing in their prison and polluting its waters so that breeding fish would not enter it next season. Many other papers took up the cry, and those in authority made a stir as if they would do something, but afterward agreed among themselves that this something should be postponed until their fall plowing was completed and the fish had a chance to die. The blue-fish, weak-fish and other migratory species died, obstinately refusing to wait the leisurely motions of their jailors, and thus by their foolish prejudices against being frozen, in water which was becoming fresher than suited their palates, deprived the people of Long Island and New York not only of the amount of food which they would have grown to, but also of a crop of young fish which might have descended from them. Perhaps the Commissioners appointed to locate the inlet, after seeing the perverseness of these fish, became indignant and refused to dig. If so their dignity prevented them from plowing up the sand to let the sea-water in, and so the fishes let their sands of life run out.

It was Mr. William N. Lane who proposed to make a lane to the ocean at his own expense, if allowed, whereby the fish could travel from the Good Ground of the Island to the better ground of the Atlantic, but this offer was not accepted by the Commissioners, who may have had good grounds for declining an offer which brought them in no fees; and so things ran along until some three weeks ago old Borcas bored a hole through the beach in the western part of the bay and let in some sea-water, but too late to save the fish, which were in a bad pickle already.

Mr. Lane writes us that this inlet is in good running order, and is the best one they have had for years, being over one hundred yards wide and a good depth from bay to sea, and all that now remains to be wished is that the flow may be great enough to purify the bay before the arrival of the spawning fish now absent in warmer waters.

THE WISCONSIN STATE ASSOCIATION has undertaken a most laudable work, and none too soon, in its endeavor to check the steady diminution of the game and fish in that State. The meeting of the Society at Milwaukee, of which a report will be found elsewhere, brought together a company of earnest men whose discussions and transactions showed that they appreciated the importance of the stated objects of their organization. If the same spirit pervades the subsequent meetings of the Association Wisconsin game will be cared for.

Among the laws which the game committee of the Society proposed was one restraining the exportation of venison. This provision we hope to see presented to the Legislature and passed; for this is the only possible way of checking an export trade in game which, unless stopped in some such way, must inevitably deplete the Wisconsin forests once and forever.

## The Sportsman Tourist.

THE LOG OF THE FAVORITA—(NO. 2.)

CROSS SOUND, IOY STRAITS.

PORT FREDERICK, Aug. 18, 1880.

YESTERDAY morning, having successfully accomplished all of the results we had hoped to attain by our visit to the Kootz-noos, we left Kot-sok early, crossed Chatham Straits and at noon rounded the bold headland Point Augusta, and entered Cross Sound, through which we made our way to the westward, and at 3 p. m. made harbor in the port, which is just to the westward of Point Adolphus, on the southern shore of Cross Sound, and is known among the natives as "Kom-tok-kon."

Our partying with "Jake" and "Andrew" was a most diplomatic one; each party lauding the other with "assurances of the most profound regard," in addition which the two Thylaxes gave to us renewals of their promise that the war between themselves and the Stickies at Fort Wrangel should not be renewed, and we gave to them, instead of promises, each, one of those valuable commodities, "a paper," in which we certified to the main facts of our interview, and informed all future white men that these two chiefs had pledged themselves to friendly intercourse with whites; and to Jake, by his own request, we gave a handle to his name, based upon the most important event in his life, namely, his infelicitous journey to San Francisco some eleven years ago, upon which occasion I had had the opportunity to serve him, and as the trip was in the U. S. S. Saginaw, he received her name, and in future will be known as "Saginaw Jake."

A few navy buttons, some yellow tape as a substitute for gold lace on the trowser-legs, and "Jamestown" cap ribbon, bound them to us forever.

Cross Sound deserves a little description. This body of water separates the island of Chichagoff from the mainland to the northward, and runs nearly parallel with Peril Straits to the South, and in many respects the two straits are very similar.

A study of the chart of this region gives the impression that in some distant period the southeast coast of Alaska extended in an unbroken line, bordered by high hills and mountains, from Mt. Fairweather on the north, to Cape Fox on the southern extremity. And with this impression, a general study of a general chart will include in this unbroken line the western coast of our continent as far south as the Straits of Puca and the southern terminus of navigation in Puget Sound, from which point, in latitude 47 deg. N. to Portage Bay in the Clallam region latitude 59 deg. N., an almost continuous, deep and narrow channel, named, as we go north, Puget Sound, Hecate Strait, Clarence Strait and Chatham Straits, with intervening short sections with other local names and stretches for over a thousand miles, and through which a large steamer can navigate with safety, and during the entire trip be in smooth water and land locked, except for perhaps in the whole distance about one hundred miles when she passes the mouth of straits, which running to the eastward, admit to this great canal the tides of the Pacific, and make islands of portions of this peninsula; of these the most important are, beginning again at the southward, Juan de Fuca Strait, Queen Charlotte Sound and Dixon's Entrance. The latter divides our possessions in Alaska, from British Columbia; our southern point, Cape Fox, being in latitude 64 deg. 40 min. north.

It seems almost certain that once the islands of Baranoff, Krusoff and Chichagoff were parts of a peninsula nearly two hundred miles in extent to the south, and less than forty miles wide at its base, ending at Cape Ommanay on the south, and that through some great convulsions of nature the strong tides have forced their way through the valleys, turning them into channels, and the mountain peaks into the Alexander Archipelago.

Two of these valleys are now occupied by Cross Sound and Peril Straits, in both of which the entrance from the Pacific is to the northeast tilt about the centre, then S. E. to Chatham Straits. In both the tides meet at these centres, and produce violent rapids, whirlpools and eddies, and the power of these rushing waters is in this way sufficient to wear away any resistance less than the solid rock.

Cross Sound has been but slightly explored, and still more slightly surveyed. The northern shore is described by Prof. Davison, of the U. S. Survey, as "a region but slightly explored, but from every indication evidently the home of the glaciers."

Few peaks deeper than those of canoes have furrowed its surface, for even the hardy prospectors and adventurous Indian traders have been deterred from venturing within its limits, by the reputed danger of the glaciers, the colds and snows, eddies, whirlpools and dangerous Indians, but it has been held prominently forward by the Sitka "merchants" to prevent a probable competition in trade.

I know that these dangers have been exaggerated.

The western part of the sound is undoubtedly an uncomfortable place for navigation, for here is developed a new feature from which this portion is justly named Ice Strait; for, drifting to and fro with each change of tide, a solemn procession of icebergs gives one an idea of the element, and now and then a small and decidedly exciting sensation to the mariner, who trusting to the resources of a small steamer, ventures to intrude upon their domain.

Twenty feet above the surface, indicates that nine times as many below, the floating island is presenting to the undercurrents surfaces of resistance of probably greater area than is to us visible, and as in some cases, this upper and visible portion was judged at least a half-mile square in extent, it is easy to calculate that, even with but slight velocity, the sheer factor of momentum, viz., weight, was quite sufficient to render a colliding match between us and it, decidedly a one-sided affair; and owing to their great depth, in comparison with our own, there can be no certainty as to the direction which one of these bergs will steer; drifting quietly by, on a course which to us indicates safety, a sudden whirl announces that an undertow has been encountered, and, directly against the surface tide, the monster makes for us; and then our only resource, and our only hope of safety, a berg drawing a hundred feet cannot cause a steamer drawing but eight a great way when shoal water is in the vicinity.

In some well-sheltered bays many of these bergs and does had stranded during some unusually high tide and strong wind, and lying well back on the beach, created a most beautiful sight; the yellow sand and black, water-worn granite boulders of the beach, and the dense green of the evergreen foliage of the forest background, and the contrast of colors and the form of the ice, were beautiful; the ice, varying in solidity, had been penetrated to varying depths by the sun's rays, and

while the projecting pinnacles glowed and sparkled like burnished silver, the arches and chasms reflected all hues of the rainbow, among which ultra-marine and lapis-lazuli predominated. By moonlight the effect was superb and weird. But a little fancy was required to people these lonely bays with ice gnomes who had here built a city of crystal.

On the summit of the floating bergs many sea-fowl perched, and on terraces worn into their sides hair seals basked, and from these terraces well-worn slides showed where they had melted with their bodies' warmth, and friction while enjoying their games of coasting.

About the centre of the sound there extends from the southern shore the bold headland of Point Adolphus, and here an off-shore current proves to be a boundary line, beyond which the icebergs seldom venture, and thence to the junction of the sound with Chatham Straits the dangers from ice are eliminated. But others are substituted, among which, and the most important, is a rocky patch which, nearly a mile square and at low water, projecting from three to five feet above the surface, has failed hitherto to attract the attention of hydrographers, although from its position (nearly in the centre of the junction of the two bodies of water), it is a source of great danger to any vessel navigating these seas; for at high water there is on it a cover of eleven feet, and a stranger, in endeavoring to avoid the possible dangers near the shores by seeking a mid-channel route, would stand a good chance of discovering, by hitting it; a method of sounding, which from personal experience I can vouch, is a very unsafe one. Armed with his sextant, compass and lead-line our hydrographer, undeterred by the violent eddies and tide rips which surround it, and by the spray flying over, boldly attacked, captured and deprived it forever of its greatest power of doing mischief, viz., that of being unknown, for henceforward Hannus Reef—named for its captor—will have a recognized existence.

The run across Chatham Straits from Kootznoo would have been devoid of incident—for the day was thick and foggy and no scenery visible—but for our overtaking the canoe of our friend Hoonah Dick, in which were stowed himself and a

slave, his wife and another woman, three children and a dog. Dick gladly accepted our offer of a tow and, stopping for a few minutes, the whole party except the slave, who was left to steer the canoe, was transferred to our decks.

The two women squatted immediately in the gangway, took out calico thread and needles, and until we arrived some hours later at their village, employed themselves most industriously in manufacturing clothes for the children, who also squatted close to them and sat as still as mice throughout the day, shy at first and timid, as evinced by shrinking closer to the woman as we approached, and by rapid winking of their bright eyes, but never by a cry or scream, even when well-meaning but rather rude attempts to fondle them were made by the sailors. Our Chinese cook was to them a source of unending wonder. Dick himself soon made friends with all hands and gave to us some quite valuable information in regard to the inroad of the "Sin-sims" and upon certain illegal traffic which had been taking place. To me he also gave many items as to the hunting of sea otter and seals, and he assured me that "Kah-loo-doo-ak," the old chief of the Hoonahs, would be very pleased that we had come. In spite of all this friendship, Capt. Vanderbil, in giving the canoe a tow, incurred considerable risk, for had it met with any accident while in tow, the steamer, according to Indian law, would be held responsible.

No accident, however, occurred, that is of any magnitude, to any of them, unless a very little one, which followed my feeding to one of the babies fifteen lumps of white sugar in rapid succession can be so termed.

As we steamed along, here and there on the shore the smoke of a camp-fire indicated the temporary home of a family, and at one place on the eastern shore of Chatham Strait there was quite a village.

At 3 p. m. we entered the harbor of Kom-tok-kon, or, as by the charts, Port Frederick, and let go our anchor abreast of the principal village of the Hoonahs.

This tribe is one of the most powerful and warlike of all which inhabit the Alexander Archipelago. They are essentially coast Indians, or as termed by Professor Dall, Orrianians. Their villages are scattered among the various sheltered bays and inlets of Cross Sound, and generally in the immediate vicinity of salmon rivers and halibut banks.

In winter they all gather into the main village, Kom-tok-kon, on return from canoe trips, for trading and visiting, to Sitka and Wrangel and other places.

They have also a summer resort to the northwest of Cape Spencer, in the vicinity of the breeding ground of sea otters, off Latuya Bay.

The Hoonahs, according to various estimates, number from five to eight hundred. I am inclined to believe that the largest estimate is nearest to the truth. Dick told me, "Plenty people, more as Sitkas;" but the Indian ideas of numbers are vague.

They are bold, enterprising and intelligent, far more so than the Sitkavos of Sitka, and until very lately have been classed as "dangerous." So far as I can judge by my own intercourse with them, and the testimony of Dick Willoughby, who has lived among them, and by that of others who have come casually in contact with them, this is not a just classification, although in one respect it has proved advantageous to them, for deterred by fear, but few whites have as yet visited their country, and the demoralizing effects of whisky and debauchery, which through contact with low orders of whites have seriously lowered the morals of the Sitka Indians, have not as yet affected them. They are robust and healthy, and are the most expert canoeists and sea otter hunters of all the tribes on the southern coast.

Such contact as they have as yet had with the whites has tended to their improvement. Many of them wear our style of clothes and use the blanket only as a hunting or fishing costume, or for a cloak, and in their main village I noticed one house in which an evident attempt to improve was shown. A panel door and two windows, with glass, were substituted for the round holes which, in purely native architecture, furnish egress and ingress, and for the hole in the roof through which ventilation is secured. And in one canoe which came alongside at a very good-looking Kootchman, carrying over her head an alpaca umbrella, and in her arms a light-complexioned, blue-eyed, red-haired baby, and her costume consisted of a calico dress, shoes and stockings and a hood. Evidently the tide of civilization was advancing northwestward.

Kom-tok-kon consists of about twenty-five large houses, built of hewn logs from a foot to eighteen inches squared. The outer surfaces of these logs are hewn so smoothly with the axe that at a little distance it would be thought they were planned. In some cases planks of hemlock, three inches thick and over two feet in width, covered the logs.

At our arrival most of the houses were empty, their usual occupants being away hunting and fishing, but although quiet and deserted, the village looked neat and tidy.

The news of our arrival soon spread, and those nearest came flocking home in hopes of trading, which hopes, however, were disappointed, as no trading was permitted upon this trip. They furnish the furs of otters, fur and hair seals, and of some land animals, and the oil of whales, porpoises and walrus, with now and then a little ivory. The oil is stored in bladders, which hold from one to four gallons. The whale oil is procured from occasional whales, which by retreating tides get left embayed in shoal water and are there shot.

Kom-tok-kon is just to the westward of Point Adolphus, and the village is on both sides of the land-locked bay, which is quite large and includes within its boundaries several level places of several acres each in extent, on which are cultivated successfully potatoes, kale, turnips and cabbage. These levels are apparently the terminal moraines of ancient glaciers, and here as elsewhere seem to be composed of rich alluvial soil, needing only cultivation to make valuable.

These vegetable patches are owned in common, as at the village itself, the immediate background of high hills prevent agriculture, while they shield from winds.

Dick invited our inspection of the internal arrangements of his house, which was one of the largest. He received us most hospitably, and his wife and children were attired in garments which were clean and tidy as was the house.

On each side of the entrance there was a large lunette, carved from wood and trimmed with human hair. These faces were upside down and the hair, I learned, grew upon the heads of the warriors who, having been slain by Dick, were thus commemorated.

The principal industries of the Hoonahs are fishing and hunting the sea otter. Their employment for the year is about this:

From May in spring as the breaking up of the ice will permit, the canoes gather upon the halibut banks, off Cape Adolphus, and there at times a hundred of them are at once engaged in fishing. They do not anchor; the hook, which is a complicated structure of wood, with an iron spike (shown in cut and described in your paper of July 30, 1879), is baited with herring, and let sink to the bottom; the inner end of the line is fastened to an inflated bladder, which acts as a buoy, the fishermen stands the buoy in his hand and permits the canoe to drift. When the fish is hooked, and there is little, if any, delay between bites, it is if a small one, say of less than 70 lbs., hauled at once to the side of the canoe, stunned by heavy blows, and gaffed over the side; if a large one it is permitted to amuse itself, towing the buoy until exhausted, when it is hauled in, killed and secured.

The fish run from 30 to 300 lbs. weight, and are very delicious, more so than are those caught on our eastern banks. The opinion which I have been due to my never having eaten of the Eastern fish, as freshly caught specimens, as I have of those of the Northwest.

The supply of halibut in these waters is practically inexhaustible, and the number taken yearly is regulated by the demand alone. So at least I believe, and at the risk of being considered as competing for that big fish-hook you once offered as a prize, I'll give you one of my reasons for so believing.

We reached these banks in August, long after the fishing season had ended, but wherever we went our anchor had hardly reached bottom, at one end of our vessel, than a good sized halibut left bottom at the other end, and was soon floundering on deck, doomed only to lose his fins, of which we corned down a large quantity, for when once accustomed to them few articles of fish food exceed halibut fins in excellence. Upon one of these banks Dick Willoughby and I, each with a sailor to help gaff into the boat, our captures, fished against each other just one hour. In that period we had lying on the boat's bottom forty-seven fish, which by estimate fell very little short of a ton in weight, we weighed several, large and small, and they ran from 80 to 50 lbs. We called the average forty pounds.

At first I fished with two hooks, but soon had to give that up. The water was about eight to ten fathoms deep, and with a winter fish compared with the best, our captures weighed at each fish, certainly four-fifths of our time was occupied in hauling up the fish and rebaiting. The sinker would hardly touch the bottom when the slightest weight which proclaimed a bite was felt, which seldom failed to be a profitable one. We were using the ordinary cod fish hook, which I like better than the native hook, that is when fishing on a bank where dog fish don't abound; when they are plentiful the Indian hook, on which they cannot fasten themselves, is preferable.

When the sinker was caught these fish cut into pieces of quite two salmon, which we cut into pieces, about 2 by 4 inches. These salmon we procured right alongside the boat, by fishing with hooks attached to lines about six feet long, which were buoyed, and a line from the buoy to the boat

permitted us to haul it to us when we saw it dip, and bring up a ten or fifteen pound salmon which had swallowed the herring and the hook. These herring were caught by two small boys, who were engaged about one hundred yards from the shore. Two were about five hundred in jerking through the crowded school which their canoe was floating among, sticks armed with projecting spear nails. Nearly every jerk brought from one to a dozen herring to basket. I bought of these boys a basketful, perhaps a couple of dozen, for a cod fish hook, and when through fishing our return for that penny spent for bait, and a dollar to the Indian who showed us to the bank, was nearly a ton of fine halibut, six or seven salmon and a dozen or more herring.

The water was warm, our work soon became hard, and we were all glad when our hour was up and we could start for home. The Indians assured us that all the year the fish were equally abundant.

That evening, after a comfortable supper, as I sat smoking my pipe, I could but fall to musing and contrasting my position with that of other men, who had spent all of the same day, perhaps, in labor of the same nature as had tried me thoroughly in an hour. In the cosy and tidy cabin of the *Favorita*, and also more safely in a land locked harbor, not over a mile from the fishing banks, where I had far more sport and catch than at such a rate that were I able to withstand the physical strain of eight hours a day of just such labor, a single month would suffice for me, single handed, to give a hundred ton schooner her fare. Eight of us, working together, at the same rate and within two weeks of her leaving Portland, the schooner could have her catch in the market.

And while catching these fish I underwent no more hardship, nor as much, as a basket of trout has often cost me, and had experienced no more dangers than had I been still fishing for bass in the St. Lawrence or Ontario. And my expenses— a cent for bait, and with that bait plenty of fun thrown in (for the catching of half a dozen fine salmon is not an amusement to be despised), and my dollar to the Siwash— was but slight interest on the money I have paid to guides for far less services.

I contrasted all this with the cost to our Gloucester men, with far less results in proportion. I thought of the beggarly and stained decks, and close, greasy and foul smelling cabins, where the captain and the crew and the cooking stove and the bunks crowd each other; of the pitching and tossing to the ground swell on the banks, the drifting and dragging and fouling in icy north-easters, and of the fate of those who through gales or icebergs, or being run up by steamers, failed ever again to glide in past the "Ten Pound Island" light, and for whom wives and children wait vainly until they are sure that they have become widows and orphans.

Of the five hundred vessels which compose the fishing fleet of Gloucester, and the five thousand of their crews, every year takes from them a large percentage, and, if I remember correctly, one year thirty of the fleet and over two hundred and forty of the crew were lost. In one single gale one hundred and forty-three men perished and thirteen vessels were lost.

These five hundred vessels bring to market over three million dollars worth of fish yearly, but these fish cost heavily in life and property.

When the tide is high, if an equal number of vessels were employed, would be nearly as great, and the expense and danger less.

From 1873 to 1876 inclusive, an average of eight vessels yearly, with tonnage from forty to one hundred and forty, averaging eighty tons, have fished upon the Shumagin banks. Their catch in the seven years was over four million pounds of fish, worth in San Francisco four cents per pound or \$160,000.

The vessels belong to the Pacific Fish Co., have a station on Popoff Island and a cannery establishment opposite to Saucelle in San Francisco Bay, obtaining salt at Redwood City.

The above results are from summer fishing alone, and on this coast, thanks to the wisdom of Mr. Seward, there is no heavy bill to pay for bait and privileges.

But while the mass of our people adhere to the prevalent belief that in Alaska we have obtained a sterile, barren, worthless, ice bound land, too poor to even be entitled to a government or the protection of law, the Iñooks will remain in unexplored possessions of their banks, and draw from them their yearly title, and at home their wives and children will continue to gather undisturbed all that they wish of splendid herring, which are in myriads, and to collect the spawn on bushes planted at low tide, encrusted an inch deep after a few overflows with a most excellent food.

When the fishing season has ended, by the Indians having taken all that they wish, it is followed by the first season of sea-otter hunting.

I will not do us noble animal the injustice of more than introduction at this end of my letter.

In my next I will tell you about him, his habits and the mode of capture, as told to me by "Hoonah Dick." PISKEO.

#### THE OLD "SPIRIT" COTERIE.

IN the excellent articles of Col. Thos. Picton, Gen. Sibley ("Hal, a Dacotah"), and Isaac McLehlan, referring to the old *Spirit* of the Times, its tall editor and gifted corps of contributors, a few notable ones, still surviving, who wrote for the columns of that rare old journal, received mention. Among the most conspicuous is "Ned Buntline," the hero of three wars, and one of the popular writers of the day, who has been called the old *Spirit* in its palmist days, and later of the *FOREST AND STREAM*. As an angler, "Ned Buntline" is *au fait*, and his adventures with gun and rod in all parts of the Union would fill a large volume. His picturesque home, the "Eagle's Nest," near Stamford, N.Y., is a spot of romantic interest. The name, it is stated, is the same as that of a little hermitage wherein he once dwelt in the Adirondack wilderness, where he was one of the earliest campaigners, and whose lakes and streams, many of them, bear the names he gave.

Another notable, then known under the nom de plume of "Young America," is Col. Alban S. Payne, the identical man who "struck Billy Patterson." Col. Payne, or "Nicholas Spicer," as he is now more familiarly known, is an eminent physician, one of the professors at the Southern Medical College and a capital writer, whose contributions to various sporting journals have rendered his name famous.

Hon. R. B. Roosevelt, author of "Superior Fishing," "Gaucho" of the North, and other works of rare interest, was also one of the "free lancers" who wrote the old *Spirit* in his youth, and in later years has written voluminously for the journals devoted to sports of field and stream. Mr. Roosevelt is known as an enthusiastic sportsman, who has assisted in the organization of several societies for the protection of fish and game, as nearly all the older readers of *FOREST AND STREAM* are aware.

Francis A. Durivage ("The Old 'Un") and Geo. P. Burnham ("The Young 'Un"), joint authors of that humorous work "Stray Subjects," and both popular contributors to the old *Spirit*, are still living—the former in New York, the latter at Melrose, Mass.

Among those who have recently passed to the "shadow land," and who formerly belonged to the brotherhood alluded to, memory recalls several distinguished gentlemen, notably James Oakes ("Acorn"), the warm friend of Frank Forester, Edwin Forrest and Hawthorne; Thos. B. Thorpe, the famous author and artist; Genio C. Scott, author of "Fishing in American Waters;" E. E. Jones, one of the proprietors of the *Spirit* during the later years of its existence; and C. A. Bristed ("Carl Benson"), the classical writer.

Of the early writers, whose names are familiar as household words among the sportsmen of the land, suffice it to say that they were the peers of the leading sporting authors of England and that, as Herbert once truly stated, Nimrod, T. Ilfrey, Berlesford and other popular writers upon field sports in Britain, would lose none of their laurels to be compared to their trans-Atlantic brothers of the quill. W. W.

### Natural History

#### PROTECTION OF SONG AND INSECTIVOROUS BIRDS.

I HAVE read Mr. N. Pike's letter to farmers in *FOREST AND STREAM* of December 30 with much interest and fully agree with him that some of our smaller birds should be carefully protected and cherished; yes, I will say all birds, until they are proven conclusively by scientific research to be noxious. Birds, especially such as are singers or beautiful, even if they are strictly neutral so far as we are concerned, neither doing us harm nor good, should be protected by stringent laws and by the sense of decency and common consent of all. But birds that are proven very noxious to one or more classes of our rural people should have no protection, any more than rats or mice.

I write this to say that I find Mr. Pike advocating the same error that the great majority of people do who have not investigated the subject, to wit, that because a bird is strictly insectivorous in its food habits, therefore it is most certainly beneficial and should have protection. Now, there cannot, in my opinion, be a greater mistake than this. It is true the martins, swallows, swifts, whip-poor-wills and night-hawks feed entirely on insects, but the question very naturally occurs to the scientific man, What species of insects? For the entomologist knows full well, to a certainty, that the great enemy of noxious insects, their great destroyers, are other insects—parasitic and cannibal insects; and he also knows it to be an absolute fact that birds do not eat, and therefore destroy, the insects generally known as the most noxious. For instance, what birds are known to destroy the five, prominent potato beetles, or the chinch bug, the canker worm, the tent caterpillar, the squash bug, the cucumber beetles, the croton bug, the cotton worms, the codling moth, the plum curculio, etc., etc., to any appreciable extent? And it is also a fact that many of these above named most destructive insects have very few effective insect enemies. But there are hundreds of other equally or more destructive insects that are only kept in check by their insect enemies, and not by birds.

Now, if Mr. Pike's society will only teach the birds to destroy our insect enemies, and not our insect friends in the shape of cannibal beetles, ichneumon wasps, chalcids, and other parasitic flies, ladybugs, etc., etc., we will all go to breeding and protecting the birds. But we know that this cannot be done, therefore until it is definitely settled by scientific research into the food of insectivorous birds, and in this way decided conclusively whether a certain species of bird does or does not destroy more of our friends among the insects than it does of our enemies, we cannot safely recommend the conservation or the destruction of any of our birds. And I will here boldly say that it is my belief that the strictly insectivorous birds named above, which feed on the wing, entirely on insects, are the most noxious birds we have. Their food will be found to be made up in great part of our best friends without which we could not probably exist, to wit, gnats, flies and ichneumon, and in their love flights all the spawn air in myriads. And I am happy to state that the subject of the food of birds is being carefully and scientifically investigated by Prof. S. A. Forbes, of the Illinois State Normal University, at Normal, Ill., under the auspices of the Illinois State Horticultural Society. He is a most competent person, and has taken hold of this herculean task with all the force of his great mind. I am sure he would recommend Mr. Nicolas Pike's most commendable society to procure his reports so far as published, and read them.

D. B. WEIR.

Lacon, Ill.

A review and abstract of Prof. Forbes' important paper on "The Food of our Thrushes" will be found in *FOREST AND STREAM*, Vol. xv., p. 244.

#### IN THE PHILADELPHIA ZOO.

THE Zoological Society of our city has a very rare and extremely interesting animal in their collection, a lemur, which has been cared in the monkey house for three years. I am told that there is no other in this country. Mr. A. E. Brown, the superintendent of the garden, states that the group of lemurs is remarkable for its combination of forms, and it is very difficult to place satisfactorily as it has alliances in three directions with *Primates* (monkeys), with *Rodentia* (gnawing animals), and with *Insectivora* (moles, shrews, etc.). By most of the recent systematists they are considered as a subdivision of the highest order of mammalia as follows:

Order, *Primates*, Suborder—*Anthropoidae*, man; *Simiidae*, apes; *Leontideae*, lions.

This little animal is about the size of a large squirrel, and remains quietly sleeping most of the day, becoming very active toward evening and during the night. Much resembling the monkey in form of body there is still a marked similarity to our flying squirrel in shape of head and texture of coat. It is carnivorous and possesses canine teeth, and is very difficult to keep in confinement. Anxious to know how the animal was fed I asked Rollins, the keeper, the question, and he said that it was given a variety of food, sweet potatoes, bananas, and now and then an insect.

I noticed in the monkey house in a separate cage a beautiful specimen of the moon-eyed monkey, one of a genus of nocturnal monkeys found in the Brazilian forests. It resembles the lemurs, and is similar in habits as is usual with

night feeding animals, and both the specimens I mention have large eyes.

Philadelphians who take an interest in zoological matters are pleased with the prospect of the successful rearing of the young orang-outang at the zoo. This will be the second winter it has passed in this country, and it appears to be in the best of health, great care being taken to keep the apartment where it is confined at the proper temperature. Last summer it had at times the full range of the garden, and amazed the visitors by the rapid manner in which it made its way from limb to limb of the forest trees in the inclosure, swinging itself from branch to branch so quickly that it required some effort to keep up with it. The orang-outang is now about four years old.

The two chimpanzees purchased by the Philadelphia Zoological Society are dead, having succumbed to the change of climate they underwent in being brought to this country. They had furnished great amusement for nineteen months, which is, I believe, the longest time a chimpanzee has been kept in the United States.

During the present month the specimen of female gorilla—adult size—which was sent to Dr. Morton, of Philadelphia, in a barrel of rum from Africa will be dissected in the presence of a number of scientists. It is the invention of the missionary who shipped this specimen to Dr. Morton to forward on his arrival at his station in Africa, which is in the heart of the gorilla country, a full grown male in good condition. Decomposition having taken place before the female referred to was put in spirits, caused the falling out of almost the entire coat of hair, a small patch on the breast being all that remains.

A few days since a hawk was observed sailing in circles over the centre of our city, and finally to swoop down and dexterously pick a pigeon from a flock that were resting on a house-top. This is an illustration of what a hungry bird will do when forced by stress of weather and dearth of ordinary provender. Snow falls still continue, and last night rain, which has caused a crust to form on top of the snow, rendering it more difficult for the quail to glean a scanty livelihood.

HOMO.

#### THE MOUNTAIN QUAIL.

BETHLEHEM, Pa.

YOUR correspondent, S. H. C., of St. Joe, Mich., wants to know "all about the California quail—both kinds." To use his own expression I "have been there." They would do well "to divide the burden of 'carrying off shot' with their cousin Bob White." Both kinds afford good sport; and having been in the mountains at an elevation of about four thousand feet, I can say that I never did so much sport to discover much difference between the flavor of Bob White and the quail of California. I am aware, though, that some, whose judgment is perhaps better than my own, say that the flavor of the California bird is inferior. But if these birds could be raised here I think that most sportsmen would find great pleasure in hunting them, and would find little fault with them upon the score of flavor.

But the winter, "there's the rub." The mountain quail migrate, and probably would, survive moderate winters, his habitat being the mountains at an elevation of about four thousand feet. In such localities there is snow in California, and of course severe cold too at times. But the fact that his home is in the mountains and at such an elevation introduces I think an element of difficulty into his introduction into the Eastern States. Would he be content with the lesser altitude in which he must live if he is to be of any use to the Eastern sportsman? Might he not be disposed to leave the rolling lands of the Eastern and the prairies of the Western States and seek up his abode in the highest parts of our mountain ranges? If so he would be of use to the sportsman, and would probably be killed by the rigors of the winter. And yet spite of all these difficulties I should certainly advise that the experiment be made. It would cost but little either in money or trouble for some sportsman's association or game protective society to import and set free a number of them and observe the results. If their Western habitat is any indication as to where the experiment should be made here, there can be no doubt that it should be done in the near vicinity to mountains. By all means let the matter be tried. I should have great hope of its success.

As to the valley quail I think nothing could be done with it in any of our Northern States. Its habitat on the Pacific slope is the valleys. It is true it is sometimes found at an elevation of two thousand feet, but I think this is always in the warm weather. I am not aware that it is ever found out of the valleys when snow falls on the mountains. I am quite certain that the snow and cold of our long, hard Eastern winters would kill every valley quail brought here. I feel especially sorry for this for I am indebted to the quail for many an hour's rare sport in their native haunts, and I would find great pleasure in renewing my acquaintance with them in my native haunts. They are beautiful, bright, cunning little fellows, who by their tricks and habits would give a deal of enjoyment to sportsmen who enjoy a new experience.

Should any one attempt the introduction of the mountain quail I would advise that it would be done in the early summer. C. B.

WATER BUG.—I am sending you by this day's mail an animal I call a water beetle, for want of the true name. It was handed me by a lad of more than usual intelligence who says he saw it catch young trout two inches long, and carry them into his hole. The boy dug it out, fish and all. The boy tells me he has seen others like it, but of dull brick color. He says also that he has seen (and will bring me one) a bug much smaller, with four legs and a pair of stout arms, that catches little fish like fun. Will *FOREST AND STREAM* please tell us the name of the one forwarded? And have they any knowledge as to their habits? B.

December 23, 1890.

The bug has been received. It belongs to the genus *Belostomatidae*, and is very destructive to young fish. It is found everywhere throughout the country in more or less abundance. The specimen sent belongs to a different species from our Eastern *Belostoma grandis*. See *FOREST AND STREAM*, Vol. XII, pp. 125 and 205.

BLACK AND GRAY SQUIRRELS.—Denver, Colorado, Jan. 9.—Editor *Forest and Stream*: There are two or three questions before the *FOREST AND STREAM* debating club upon which I feel compelled to offer a few remarks.

My youthful days were spent in the Buckeye State and upon a farm. Squirrels were a great pest in the corn-planting season and plentiful at all times to afford the best field sport we had. Seemingly every hollow tree in the woods sheltered

a family of young squirrels in the proper season, and that family was popularly believed to consist of from three to five gray ones and one black one. I do not know that this was the universal rule, although so recognized, but I do know that such was a very common fact, my knowledge being gained by watching the daily gambols of families of young squirrels whose houses were in sight of my father's door. Such were frequently caught for pets, several gray and one black being taken from the same nest. Except in color they were apparently the same in size, weight and action. Adult squirrels in the woods were in the proportion of one black to four or five gray.

B.

**A PALE DOVE.**—A correspondent, I. H. J., of Macon, Ga., sends us a specimen for identification. He says: "I send you by mail the skin of a dove killed fifteen miles from this city, a *rara avis* for our section. I had made an effort to mount it, but secured it too late to preserve it. There was another bird killed near here almost entirely white, except a little portion of the wings, which were of the natural dove color. Will you please inform me as to their identity?"

The skin is that of a turtle dove (*Zenaidura macroura*). It is, however, very pale in color, being of a delicate light brown, paler toward the extremity of tail and wings—in a bleached specimen, which might be called a partial albino.

**WINTER BIRDS—Niagara, Jan. 7, 1881.**—Day before yesterday I saw the first robin of the season. The poor little fellow is very early or very late. I saw him in the churchyard among the pine trees. About a mile from here on a friend's farm there has been a meadow lark for the last two weeks. Just before Christmas a young friend told me he saw three cow birds. The coldest weather we have here was eight below zero.

—NIAGARA.

**WEIGHT OF BLACK-TAILED (MULE) DEER.**—Toward the close of a favorable season, in August to October, when deer are at their best and the fat on a buck's rump is from an inch to an inch and a half thick, it is not rare to find them weighing, gross, from 250 to 300 pounds. An occasional one may pull down a few more pounds than the highest figure named, but, I think, never more than 335. They are not so large in New Mexico as further North. (By the way, I do not like the name "mule deer.")

B.

**EARLY (?) KINGFISHER—Hornellville, N. Y., Jan. 10.**—I saw yesterday p. m., January 9, a kingfisher (*Ceryle alcyon*). This is the latest or the earliest I have observed them in this county. There is no open water on the river except where the current is very swift. I should think fishing with the temperature ten and twenty degrees below zero would be rather discouraging.

J. OTIS FELLOWS.

## Fish Culture.

### THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

**MR SHAW:** "This writer who, judging from his argument, is a mill owner, states the whole case for the opponents of fishways and gives in full what he thinks to be the grievances to which dam owners are subjected by the fishway law, and being a good argument from his point of view, it deserves a careful and a candid consideration from the public.

He says first: "I am a citizen of the United States and desirous of showing willing obedience to the laws thereof. I derived my title from the United States Government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other parties," and claims protection from any law that will hamper, endanger or depreciate the value of his property, without payment in full for all damages sustained.

To his argument I made the following reply:

"The writer overlooks the fact that he is but one of several hundred that have obtained titles exactly alike from the General Government to the banks of the Wapishinicon River, and that by making the river impassable for fish he has been depreciating the value of their property, thereby doing individually to all those parties just what he now complains the State should not do to him.

We hold these principles to be well settled by usages and decisions so many that we find it impossible in a short article to quote but a very few of them.

1. In any grant from the public to individuals, any privilege which is not expressly granted is withheld.
2. A river is a public way.
3. The right to the water and fish in a stream is a joint one to all the owners, and must be so used by each as not to unreasonably interfere with the rights of others.
4. The passage of fish in a river is a public right.
5. The Legislature has the right to make such laws as will protect the public from injury by an improper use of any of these public rights.

To partially prove the correctness of these positions we will submit a few decisions.

"Every owner of a dam holds it on condition or limitation that a sufficient and reasonable passage way shall be allowed for fish. This limitation, being for the benefit of the public, is not extinguished by any inattention or neglect in compelling the owner to comply with it." (Stoughton v. Baker, 4 Mass., 528.)

In that case there was neglect to build a fishway from 1634 to 1789; but it was held that the duty continued.

"The preservation of fisheries is for the benefit of the public. The right to have the fish pass up the river is a public right. The right to catch the fish is in the owners of the soil; but the right to have the fish there, so that they can be caught, is a public right." (Commonwealth v. Essex Co., 13 Gray, 247.)

"The grant of privileges and exemptions to a corporation is strictly construed against the corporation, and in favor of the public. Nothing passes but what is granted in clear and explicit terms." (Ohio Life Ins. Co. v. Debolt, 16 Howard, 495.)

"Ownership of the banks and bed of a stream gives to the proprietor the exclusive right of fishery opposite his land, as well as the right to use the water to create power to operate mills; but neither the one nor the other, nor both combined, confer any right to erect obstructions in a stream to prevent the free passage of fish up and down the river at their accus-

tomized seasons, as such obstructions would impair and ultimately destroy all such rights owned by other proprietors both above and below the obstruction on such stream.

"Such water-power is everywhere regarded as public right, and fisheries, even in waters not navigable, are so far public rights that the Legislature may ordain and establish regulations to prevent obstructions to the passage of fish, and to promote the usual and uninterrupted enjoyment of the right by riparian owners." (Commissioners v. Holyoke Water-Power Co., Supreme Court of United States, December Term, 1872.)

This Holyoke case is the most noted that has ever been determined in this country, and was especially favorable to the dam owners, as a moment's glance at what was claimed by the defendants will show.

It was claimed for them, as has been claimed by our correspondent, that they had a good title from the Government, and so were entitled to use the property as they saw fit.

It was claimed that they had used the water-power as they were using it, for a long period of time, and so had obtained the right to use it by statute of limitation.

It was claimed that they had expended \$20,000 in improving their power, and so it was against public policy to compel them to put in a fishway. Also, that they had paid owners of fishing or riparian rights above their dam \$20,000, for the right to fish, and that that should relieve them. But more especially it was claimed that they had a special charter permitting them to build just such a dam as they had built from the State Legislature.

We have not time or space to go over this case, but will simply say that all that was claimed for the defense was proved or admitted; that it was argued by eminent counsel, both before the Supreme Court of Massachusetts and the Supreme Court of the United States; that on August 31, 1872, the Supreme Court of Massachusetts entered a decree against the defendants, compelling them to put in a fishway; that upon appeal to the Supreme Court of the United States the decree was affirmed at the December term, 1872, and that the owners were compelled to put in a fishway.

We could cite dozens of decisions bearing upon the question and in all our reading know of no one decision that has not borne in the same direction. So we consider the question virtually settled, so far as the courts are concerned.

The Judiciary Committee of the House and Senate of the Seventeenth General Assembly of Iowa, composed of the best of legal talent, so determined and reported, after a full investigation, when this law was before them for their action.

Outside of this question of law, there is one of right or "justice." Originally all the purchasers of property along a stream pay the same price for their lands. Fish were abundant along the streams and are the property of the joint owners. One man builds a dam that effectually stops the passage of fish; but as they are plenty, no one objects. The dam brings wealth to the owner, until he boasts of its value. The dam brings barrenness of fish to the stream, until the mill-owner, scorning the little that is left, says: "I would give considerable money if there were not a fish in our river."

Now those who have suffered these losses ask those who have assumed to own all there was of value along the river, and in so doing have destroyed their neighbors' rights, to so use the privileges they are enjoying as to permit the fish to pass up the streams through the waste water that flows over their dam, in order not to entirely annihilate the fish—knowing full well that what they ask will only partially restore to them their rights, but being willing to suffer this much rather than to injure in the least the water-powers that furnish the motive power for an industry which is fully and justly appreciated.

The fair discussion of this question would occupy more space than we have at our command, but we think that what we have said covers the case fully, where the builders own the land wholly upon which their dams are built. But, it might be added, in meandered streams, like the Wapishinicon, a portion of the land upon which the dams are built—that is, the bed of the stream—has never been bought or sold and belongs as justly to the poorest person in these United States as to the parties who assume to own the dams that are upon them; and there is no question, as matter of fact, but that an action for their entire removal could be sustained.

The proper courts if sufficient cause were shown for so doing. What we have written is in the kindest of feeling toward mill-owners, but is what we believe to be the facts and the law in the case and what is being demanded by the masses of our people at the hands of owners of dams.

The Fish Commissioner claims to have made plans of fishways, as far as he was able, so that they shall not interfere with the water-powers (as they only use the waste water), and that, in his opinion, they will add strength to the dam, while they are as cheap as durability and efficiency will permit.

B. F. SHAW.

### REPORT OF THE TEXAS COMMISSION.

THE first report of the Commissioner on Fisheries for the State of Texas is before us. This State is the youngest of all in the work of fish culture, its Commissioner, Mr. J. I. Dinkins, having been appointed in September, 1879, and being without a cent of either salary or appropriation to do the work that he was called upon to undertake to accomplish, and therefore confines himself mainly to recommendations for the future. His case is the same as that of many other commissions; he has to educate the legislators up to the point of seeing that whatever brings in a ton of food to the people from sources hitherto unproductive enriches the State to that amount.

One would suppose that the successes of fish culture in other States would reach the ears of the Texas lawmakers, and that they would not require to have a Fish Commission release the alphabet of this branch of political economy any more than they would need to be told of the benefits of agriculture, railroads or telegraphs.

The Commissioner calls their attention to the fact that Texas has a large population, and it is fair to presume that they eat, and that other States have invested largely in restocking their waters, and found it profitable. He cites extracts from George M. Jerome, formerly of the Michigan Fish Commission, Mr. G. W. North, of North Carolina, from the reports of the West Virginia, Maryland, Wisconsin, Ohio, South Carolina, Massachusetts and Minnesota Fish Commissions; quotes an article on the carp from the *American Agriculturist*, and publishes his correspondence with Professor Baird, from whom he received 150 German carp, which were distributed to persons in Texas in lots of ten each, concerning the growth of these he says: "These fish have done well in our waters and grow rapidly. When they were received they were only three or four inches long, and now they are by actual measurement twenty inches

long, and it is thought that they have already spawned, as the ponds and pools where they were placed are now full of young fry, unknown before the carp were placed in them." He also mentions that "the United States Commission, through Prof. Baird, and without any expense to the State whatever, deposited in Texas streams, up to July 4, 1875, 425,000 young shad and 194,000 young California salmon." A calculation is made of the water surface of the lakes and rivers, which gives a total of 168 square miles, or 106,561 acres, which it is claimed would swell to 200,000 if the smaller ponds and lakes were added in. The list of Fish Commissioners of the different States is published and credited to FOREST AND STREAM, where the list is revised annually. After writing his report the Commissioner received 7,650 more carp from Prof. Baird through Mr. Ellis, which will be distributed, but there are no funds to accomplish more this season.

### SENDING YOUNG EGGS PERFECTLY DRY.

IT is known that fish eggs die quickly in water which is not in circulation, but that they will live several days out of it, and here is the advantage of the so-called dry impregnation. It is known that the fresh-laid eggs of many fish do not bear transportation well, especially on long journeys. It occurred to me that dry impregnated eggs which had never been in water, and in consequence had their development retarded by remaining dry, might be better adapted to long journeys than when placed in water before their voyage.

To prove this I had Messrs. Fr. Glaser & Son, of Basle, Switzerland, send me some salmon eggs and mill, tied up in the bladder of a hog, without a drop of water.

Twice this was done, and each time they were accompanied by a lot of eggs packed in the usual manner. The journey lasted three days and the temperature was high; but on both occasions the dry packed eggs came through in good condition, looking beautiful and red, while the others, packed in the usual manner, were all dead. I will experiment to find out if eggs with the embryo far advanced are also better if sent in the bladder of an animal than if packed in the usual manner.

—BERNEUCHEN, GERMANY.

THE CONICAL SYSTEM OF HATCHING.—The *Fischerei Zeitung*, of Stettin, Germany, thus notices our Fishery editor: "Mr. Fred. Mather, who has since the Berlin Exposition drawn much nearer the German pisciculturists, is again in New York. He is now in charge of the fishery department of FOREST AND STREAM, the great American journal of field sports and fish culture. We take this opportunity to mention a matter in which Mr. Mather deserves honorable mention. The conical system of hatching is of his invention, but has been called the 'Wilmot hatching' in Germany. Mr. Wilmot patented it in America, July 18, 1870, and it is No. 180,085, while from a report of Prof. Baird for the year 1876 we learn that Mr. Mather made and used the cones in experiments in 1875. It is not necessary to enter into details of this matter, but if necessary it can be done."

WHERE AND WHEN DO BLUEFISH SPAWN?—Concerning the spawning of the "bluefish," or "tailor" (*Pomatomus saltatrix*), there seems to be some confusion of facts, and in this connection we are allowed to publish the following:

UNITED STATES COMMISSION, FISH AND FISHERIES, Washington, D. C., Dec. 29.—DEAR MR. BLACKFORD: Mr. Earle, in his interviews with the fishermen along the Jersey coast, was informed that when bluefish first come in many of them are full of ripe spawn, and that this spawn constitutes an article of sale in the market. Is this in accordance with your own experience, and do your men ever remember to have found ripe ovaries when cleaning bluefish at any season of the year, especially in spring? If your recollections are not clear on this subject, will you not make a note in some of your books, or paste a memorandum in your office to look into the matter when the time comes? It will be a very interesting problem. Yours truly, SPOKESMAN, B. E. BOND, Commissioner.

To E. G. Blackford, Esq., 80 Fulton Market, New York.

Mr. Blackford informs us that the spawn is not sold in market, but that young bluefish are often found among whitebait, in May and June. We have found the young, of an inch or two inches, from May to August, and large ovaries (unripe) in July. Correspondence on this subject is in order.

A PRIZE FOR FISHCULTURISTS.—We find the following in a late number of the *Fischerei Zeitung* of Stettin, Germany, which we translate as follows: Berlin, December 5.—The committee of the German Fish Society has determined to offer a premium of 500 marks (1 M. = 23 2/3 cents) for the best work on the following subject: Of those fish eggs which are used in hatching, especially the eggs of the salmon, the fungus well known to the pisciculturists as "Byssus," or formations of mold, which partly belong to the Saprolegniaceae, partly to the Schizomyces, destroy a significant percentage. An exact botanical description of the species and kinds of these fungi, their biology and propagations, the manner of their introduction into the fish-breeding apparatus, the conditions which favor or impede their development, as also a description of how they injure the eggs, is desired. To this should be added a discussion on the question whether and by what means it might be possible to prevent their appearance among the eggs, and if once introduced into the breed, what is best to be done to prevent the further spreading of the evil. The competition for the premium is to be international; the said work to be sent sealed and provided with motto, or heading, to the Bureau of the German Fish Society, Leipzig Platz, No. 9, until October 1, 1882.

LIME FOR PONDS.—Berneuchen, Germany.—For several years I have used a large spring reservoir of about 3-16 ha (hectare) to raise a brood of trout in one summer. The pond contained many little stickle-backs, and in consequence thereof the losses on trout were very noticeable in the course of the summer, reaching as high as eighty per cent, and therefore, in the fall of the year, I had the pond drained, so much thickly slacked lime that all the stickle-backs were killed. The success was surprising. In the spring of the

present year I placed 1,500 California salmon in the pond and at the fishing in the fall I caught 1,462 lively salmon; more than twenty (I am sorry that I did not count them) had perished while fishing. The loss in the course of the summer, however, was very insignificant. In the fall, after fishing, I poured into the channels of all my ponds lime-milk (that is, lime thinned with so much water that it resembles milk) to kill stickle-backs, beetles and other unwelcome guests. The lime is of no further effect when the pond is refilled, and it can at once be occupied by fish. M. VON DEM BORNE.

**CONNECTICUT DOES NOT CONTRIBUTE.**—The Springfield (Mass.) *Republican* says: "The intelligent Fish Committee of the last Connecticut Legislature advised joining with the Commissioners of the United States, Massachusetts and Maine in stocking the rivers of the State with salmon. United States Commissioner Professor Baird, however, unwilling to see the work interrupted, has given the Connecticut Commissioners 240,000 ova of Penobscot salmon. They will be distributed from the Pequonnock hatching house. The Legislature should be blamed into continuing the work next year."

**BLACK BASS FOR ILLINOIS.**—The Fish Commissioners of Illinois have thirty thousand young black bass (sp.?) from four to eight inches in length, for free distribution within the State, now in ponds near Quincy, in charge of Commissioner S. P. Bartlett.

## Sea and River Fishing.

### THE MORTALITY OF THE GULF FISHES.

**NOTWITHSTANDING** the many notices of the wholesale deaths among the fishes of the Gulf of Mexico and the manner in which their carcasses have polluted the air, until fears have been entertained of diseases being engendered among the inhabitants near the shore, people at a distance do not seem to realize the extent of the loss to the fishermen whose occupation is gone, nor the misery which may result from the continuation of this plague.

We have received a letter from Professor Baird on this subject, in which he incloses a letter from one of his correspondents, which we publish below:

UNITED STATES COMMISSION, FISH AND FISHERIES,  
WASHINGTON, D. C., Jan. 7.

*Editor Forest and Stream:*

In the year 1878 the pages of *FOREST AND STREAM*, as also the proceedings of the National Museum, contained notices of a remarkable mortality among the fishes and marine animals of the Gulf of Mexico, the quantity of fish perishing being something truly enormous. This year the same phenomenon is repeated and the Florida papers contain many notices on the subject.

It is considered a matter of so much importance that the National Board of Health has detailed Doctor Ginter to visit the region and make a thorough investigation in regard to the cause.

Among the various communications which have reached the Smithsonian Institution I inclose one of the most detailed from an extremely intelligent observer, a resident on the west coast of Florida. At present the cause of the evil is unknown, but a careful comparison of the data, supplemented by the special investigations of the Board of Health, may enable us to solve the problem. The occasion is a very serious one to the fishermen, and indeed to the people of the Gulf coast generally, as a vast amount of animal life, cast in a putrifying condition on the shores, must be a source of injury to the public health.

It is desirable that any observations of facts connected with this phenomenon should be published.

SPENCER F. BAIRD, Commissioner.

INDIAN ROCK, Fla., Dec. 21.

Professor BAIRD:

Knowing your interest in everything connected with fish, etc., I take the liberty of giving you all the facts I have been able to collect in reference to the late mortality among the fishes in Tampa Bay and adjoining coasts. And I know from the fact I began my cruise of the extent of this mortality and splendid opportunities afforded of collecting specimens of strange and perhaps unknown species. I might have gone better prepared for collecting specimens, but I had only heard a few vague rumors, and I was little prepared for anything further than a collection of facts in regard to the matter.

On leaving Clear Water, November 20, I sailed south through Boca Ciega Bay, and encountered the first dead fish floating on the water near Bri Key, a little southeast of Pass a Pello. These were mullet, and as we progressed to the south and east I began to encounter toadfish, eels, puffers and cowfish in immense numbers, and on attempting to land on the extreme point of Pt. Pinellas for the night I was driven to my boat by the stench of thousands of rotting fish upon the beach. The next morning I went ashore and found the dead fish drifted ashore in countless numbers. The eels appeared most numerous, followed by puffers, cowfish, sailor's choice, and small fish of every shape and variety. After these followed groupers, mangrove-snappers, jewfish, garpike, spade fish, stingrays, and sharks. Other varieties unknown to me were mixed among these, together with vast numbers of cat-fish. I saw very few mullet here.

At Gadsden Point about the same varieties appeared, while at Tampa I saw but few dead fish, and they were principally gars and catfish. From Tampa I proceeded to the mouth of the Little Manatee to obtain some information from Mrs. Hoy concerning her theory accounting for the death of the fishes. I subsequently visited the towns of Manatee, Palmetto, Bradenton, and proceeded thence to Hunter's Point in Sarasota Pass, Longboat Inlet being the furthest point south visited. Returning I spent several days on Anna Maria Key, where I collected the skulls of several varieties of fish; thence, passing northward by way of Passage Key, Egmont, Mullet Key, and so on back to Clear Water. From Longboat Inlet round to Mullet Key the dead fish were principally mullet, catfish, eels and groupers. The mullet preponderating at least ten to one. Puffers, toadfish, cowfish and frog fish were still extremely plentiful, indeed I saw no diminution in their numbers, though the number of dead mullet had increased very greatly.

I saw many fish in every stage of sickness from the first attack to the end. All were affected in nearly the same manner. The fish, apparently active and healthy, would be swimming along, when suddenly it would turn on its side and shoot to the top of the water, gasping as though out of the water, apparently unable to control its motions, often lying on its side on the bottom for five or ten minutes motionless, then suddenly shooting hither and thither without aim or object, and finally ending the struggle on the surface and floating off dead. Whole schools of mullet would suddenly stand upright on their tails spouting water, and die in five minutes. Gars would run for a long time with their snouts above the water and then lie motionless, as if dead, for ten or fifteen minutes. These generally lived an hour or more after being attacked. I obtained specimens of water from various localities, which I send herewith, marked to show whence obtained.

Before giving the statement of others in regard to the matter, I will give you briefly the results of my own observation in a very brief manner:

1. The dead fish were most numerous on the outside beaches, and on the inside beaches of the outer line of keys.

2. That dead fish were least numerous about the mouths of creeks and rivers, decreasing gradually as one approached such places.

3. That the poisoned water was not diffused generally, but ran in streams of various sizes, as proven by fish dying in vast numbers instantly upon reaching such localities.

4. That the fish were killed by a specific poison, as proven by the sickness and death of birds which ate of the dead fish.

5. The fish began dying on the outside beaches first, as Mr. Strand, assistant light-keeper, at Egmont, reports, them coming up first on the 17th of October, while Mrs. Hoy observed them first on the first or second of November at Little Manatee River.

6. The examination of many dead recently dead fish revealed no signs of disease. The colors were bright, the flesh firm and the gills rosy. The stomach and intestines appeared healthy.

In my haste I have neglected to state that I saw a good many dead birds during the trip. At Tampa ducks were dying. I saw dead vultures at Anna Maria Key, and at Passage Key large flocks of cormorants were sick and dying. I also saw the carcasses of terns, gulls and frigate birds. The cormorants sat on the beach with their heads under their wings and could be approached and handled.

It might be also proper to state that on Monday morning, December 14, about one hour before day, I heard a roaring southwest Passage Key, apparently far out at sea, resembling the "blowing off" of a steam boiler. The noise continued some ten minutes and ceased. After daylight I heard a similar roaring, which lasted about five minutes. There was no steamer in sight in the direction of the sound, and I observed no swell in the sea following it. After I got under sail I heard the noise a third time. Whether this was followed by the death of fish I am unable to say, as I did not stay to see. I mention this incidentally as a corroboration of Mrs. Hoy's statement, which is hereto appended. While then, however, either of these disturbances of the water had any connection with the mortality among the fishes the theory of sub-aqueous eruptions of poisonous gases is extremely plausible and reasonable.

S. T. WALKER.

Statement of Mr. Williams, of Pt. Pinellas:

The fish began dying about the last of October here. All kinds die except red fish. Bels and sea-toads are most numerous, though all kinds die. I have seen only a few sheeps-heads. I think the cause of the trouble which I saw was caused by fresh water from the creeks, rivers and marshes. The water where the fish are dying looks black and slimy—very different from the usual color of the bay water. You see there has been an unusual amount of rain this fall, and this becoming impregnated with the poison of decaying vegetation, is poured into the bay in unusual quantities and poisons the fish. This is my opinion, and I give it for what it is worth. The oyster saloons here were obliged to close, as the oysters came near killing several people.

Statement of Mr. Spencer, of the Tampa Tribune:

I went out last Sunday (November 28) expressly to see for myself, and, if possible, to account for the dying of the fishes in Tampa Bay. I feel certain from what I saw that it is caused by fresh water from the creeks, rivers and marshes. The water where the fish are dying looks black and slimy—very different from the usual color of the bay water. You see there has been an unusual amount of rain this fall, and this becoming impregnated with the poison of decaying vegetation, is poured into the bay in unusual quantities and poisons the fish. This is my opinion, and I give it for what it is worth. The oyster saloons here were obliged to close, as the oysters came near killing several people.

Statement of Mrs. Charles Hoy, of Little Manatee:

About 8 o'clock on the morning of the 25th, or thereabout, I was sitting on my front gallery, the air being perfectly still and the bay calm, when I heard a heavy spilling of the water in the direction of Gadsden Pt. This continued for a few minutes and was immediately followed by a roaring sound, such as might be made by the wheels of a side-wheel steamer near at hand, though the noise seemed to be several miles away. This continued for about a quarter of an hour, as near as I could guess, when it suddenly ceased. Some twenty-five or thirty minutes afterwards heavy swells began to come up the river, such as come in during a heavy blow from the northwest. These continued for a long time, gradually becoming lighter until I went to bed. In three days the fish began to come up the river dead and dying. I caught several mullet that were standing upright in the water sick, and each had three black spots on the back, which gradually faded away. I opened the fish and could see nothing the matter with them. The flesh was natural and firm and the gills were normal.

In regard to oysters I have had a rather rough experience, and can with certainty say that they are poisonous. A few days after the fish began dying I had a quart of fine oysters for dinner. I had a lady visitor on that day, but she did not like oysters and ate none. My daughter and I ate heartily of them and after dinner I took my gun and went out to a pond to shoot some ducks. I took a colored woman (my cook) along, and before I had gotten half way I began to feel weak and a mist came over my eyes. I kept on, however, and when I reached it was so blind I could not see the ducks, although the water was covered with them. With the assistance of the colored woman I got home, when I found my daughter similarly affected and unable to walk. Neither Mrs. Simms, the visitor, nor my cook were affected, which makes me know it was the oysters. The sickness and loss of vision gradually left us after drinking a cup of strong coffee. I am convinced the death of the fish is caused by the discharge of poisonous gases from the bottom of the sea.

Statement of Messrs. Fogarty and Whittaker, snackmen, of Bradenton:

We own a snack and fish off the coast from Egmont south to Charlotte Harbor. Our business is about ruined by the death of the fish. They are dying off the coast as bad as inshore. Our fish die after we put them in the well, frequently in five minutes. We cannot say what causes it, as we have no means of ascertaining. The poisoned water runs in streaks, for often when three or four snacks are in company one or two will lose all their fish in a few minutes, while the others, a short distance off, lose none. In one instance, three being in company, two lost all their fish, while one lost none, the vessels being only a few hundred yards apart.

Statement of R. B. Strand, assistant-keeper of Egmont Light:

The fish first came up dead on the 17th of October, in the following order: eels, cowfish, toadfish, small fish, such as sailor's choice, minnows, etc., terrapins, ducks and other sea birds. The water has the appearance of being very slimy.

Incident related by Mr. Hendricks, postmaster at Palmetto: Mr. Dolly threw a cast-net into a school of mullet, which appeared active and healthy. Before he landed them they were all dead in his net, and looking back the whole school was floating dead on the surface.

ORVIS knows how to fashion a rod and tie a fly. He is facile and deft. The fish favor his flies and anglers praise his rods, and between the two creel is well filled.

## Game Bag and Gun.

### "THE REFRIGERATOR AMENDMENT."

WHAT IT MEANS AND HOW IT IS REGARDED.

NEW YORK, JANUARY 14.

*Editor Forest and Stream:*

THE marketmen of the city are making another attempt to emulcinate the game laws, an attempt which they have made on every possible occasion for years past. The plea for this is ingenious, and to persons, even sportsmen, who are not aware of their "tricks and their manner," is deceitful and alluring. They tell us amiably that great improvements have been brought about in refrigerators, so that they can keep birds and fish and meat an entire year without injury; and ask, with a simple and honest expression, why should they not be allowed to sell at all times what they can keep so nicely? Of course they add virtuously that they would never, no never, sell or buy, or hold or touch any game killed out of season, not they. At least some of our game dealers say this, especially those who have been sued, year after year, by the Association for the Protection of Game for selling game at prohibited times.

There are as good men in our markets as out of them, who do not commit frauds themselves and do not wish others to do so, but who must have game on their stands if their neighbors do, and these men wish their business protected on the same ground that we wish our sport protected—that both may last longer than our day and generation. It is fair to say that such men would cheerfully give their large license, but usually it is not safe to make a person judge of the law in his own case, and to trust a man to sell game during the close season, leaving it to his honor to make sure that only game killed at proper times be sold, is surely giving the largest license.

There is nothing new in this demand of the marketmen, if I may call it so, although it really comes from but a small portion. A similar provision once existed in the law, and then there were few convictions for selling game out of season. One invoice will cover any number of birds or fish or deer; there is no earmark by which one quail can be distinguished from another, nor can it be proved whether one woodcock came from Maine or Florida. The reply to all suits was that the game was purchased within the allowable period, and there was the invoice, a perennial agis, so to speak, behind which no investigation could possibly go. Now we sportsmen may be fairly able to discriminate between the heavy game of Long Island or New Jersey and their lean, hungry brethren of the great West, or to pick out a bright-colored Long Island trout from among a number brought from the wilds of Maine; but such shades of difference would not be recognized in court and could not be explained to a jury.

If game is to be sold all the year through, it may as well be killed all the year through and the game laws abolished. The pot hunters have a big enough pull on the sportsmen now in the difficulty and poverty of their condition; do not make the law wholly in their favor, do not let all the dogs loose and let all the bricks fall. If any such amendments as those proposed are passed there will be no more convictions for infractions of the laws, and we may as well go in and have a good time while it lasts.

As to the pretense that there is more game killed in the open season than can be sold, it is no more than a pretense. Of course the game killed toward the end of the open time cannot be sent to distant markets, but that result is a necessary result of any law and would equally exist under the refrigerator provisions if those provisions were to be honestly obeyed, that is if no game whatever was to be purchased after the commencement of the close time, and only that sold which was actually refrigerated before. Apart from this, there is market for all game that is legitimately killed and more than for all that should be. People forget that game cannot be cultivated like tame animals, that we cannot rear and domesticate game when once exterminated, as our Long Island and Narragansett Plover testify; that we cannot raise quail as we raise chickens, nor ruffed grouse like ducks, nor deer like sheep, but that the supply is limited by nature, and if exceeded by man's destruction will end in certain annihilation. If the marketmen's statement were true, we ought simply to reduce the time for killing, as game is disappearing rapidly enough already. The proper law would be to forbid the sale of any game after the first day of the close time. It cannot be sent to distant markets. Why should it not be so here? The only exception to this might be made in the case of venison, which only exists in our State in a few localities and could there be protected by local laws, with the consent and co-operation of the residents, and which, when it comes from the far West, the principal source of market supply, only reaches New York city in pristine condition in the latter part of December or fore part of January. I write this hastily, that I may reach you in time and under the hope that you will take prompt notice of this insidious attempt to destroy

the protective work so long carried on by our best and most self-denying sportsmen.

ROBERT B. ROOSEVELT.

NEW YORK, Jan. 12.

Originally the means of taking game permitted only a moderate amount to be captured, sufficient for the use of the captors for a few days only. Since then fixed ammunition and percussion caps and breech-loaders have been invented, increasing the capacity of destruction a hundred fold. Furthermore, the whole of the United States has become wholly or partially cultivated, and game has no longer its fastnesses. Then American ingenuity invented nets by which all the quail in a county can be trapped within a month, and all the fish in a river can be captured during a season.

The wealth of a prairie is the grouse; the value of a stream is its fish; the charm of field and water is the regular enjoyment year by year and generation by generation of the sportsman of the moorland and river. It is that which gives manhood to the growing boy and youth to old age, and makes the autumn of the year vocal with the cry of familiar birds.

To preserve this continuity of pleasure to our children we have enacted laws limiting the killing of most kinds of game to four months in the latter part of the year.

Now comes the plea of the trapper and the trader, asking that they may capture all the game they can from their fields and your streams by any known invention and sell them during all the year, wherever they find them. Putting aside all the loss of the curd that is frozen out of the fish and all the juice that is dried up in the birds, the question of right to be decided is whether men who do not own either the land or water, and who in most instances are vagrants from a distance shall be authorized to capture all this game and ship it to distant cities and there sell it all the year round for what price soever it may bring, and failing to sell it there to ship it to other States or foreign countries.

We may admit that trapper and trader would each make large gains which the law prevents, but we know that some one's fields and some one's streams are left uncultured and diminished in beauty and pecuniary value in order that the trappers and traders can make this gain. If we desire that traces of conspicuous birds and fish and deer shall remain as part of the soil, as much a part of it as the annual flowers and the music of the waters, we must see to it that their use shall be thoughtful, moderate use of the sportsman, and not the use of the trader that has annihilated the beaver and the buffalo.

CHAS. E. WHITEHEAD.

#### WISCONSIN SPORTSMEN'S ASSOCIATION.

THE second annual meeting of the Wisconsin Sportsmen's Association was held at Milwaukee, January 10. The following members were present: R. M. Boyd, W. G. Barker, C. W. Smith, A. Pugh, Geo. Rickman and A. H. Amos, Gun Club of Racine; A. K. Delaney, Mayville; Sam. Field, Ashland; T. S. Powers, Tomah; H. W. Weischer, Madison; S. J. Williams, St. Richards; Stewart Mur- ray, W. G. J. Campbell, O. W. Robertson, M. P. Carpenter, O. W. Wight, Prof. G. W. Peckham, G. Preusser, B. Liederstorf, C. Fernekes, Judge J. A. Mallory, J. M. Nell, T. S. Gray, C. Simmonds, J. G. Wells and W. E. Mann, of Milwaukee. New members elected were: F. E. Pond, of Westfield; John A. Dutcher, Louis Auer, August Luening and C. A. Hart, of Milwaukee.

President Fred. Rietbrock delivered the following address: "The Association is organized for the purpose of securing the enactment of judicious and effective laws for the protection of wild game of fur, fin and feather, and of insectivorous birds, and for the enforcement of all such laws. The organization was effected at so late a day in the session of the last Legislature that it was not deemed expedient to put forth any effort to influence the enactment of laws calculated to carry out the objects of the Association. But I think it was generally understood at our first meeting that our object was on laws should be enacted to protect the whole subject of game and fish laws, and a practicable mode of securing the enforcement thereof, and at the present session lay before you the results of their work. Two of such committees recently held a joint session, and will to-day make recommendations on various subjects which I hope will meet with your approval, and that you will take such steps as will prevail on the members of the Legislature to enact them into laws. In the southern portion of the State the quail and prairie chicken, which were once so abundant, are becoming very scarce; would it not be well to suspend the killing thereof altogether for two years, so as to allow the depleted stocks to become restocked.

"Snipe, woodcock and duck are migratory birds, but they find their natural breeding ground in our State. Should we not forego the pleasure of spring shooting altogether, so as not to kill or disturb any of those birds when they are pairing and making ready to hatch their broods. I suggest that it would be well to hold at some early day, if possible, a meeting of sportsmen from the whole Northwest, to devise a uniform system of laws for the States of Indiana, Illinois, Wisconsin, Iowa and Minnesota, in so far as least as spring shooting is concerned. In wild game or fish there is no species of property; at least not until it has been reduced to possession; but the taking, disposition and use thereof is properly within the control of the State. Should the Legislature not be prevailed upon to enact against the exportation of every species of game from this State? In the northern half of the State deer are still abundant, but are slain by the hundreds every fall for the hides and saddles alone; the export demand only making it profitable to slay them in such great numbers. Nor should the Indians, in my judgment, be exempt from the statutes enacted by white men. I am credibly informed that toward the northern border the Indians have fallen into the practice of building fences or traps, in miles in length, by which they are enabled to slay them in large numbers, and that they do this largely for their hides and furs. It seems to me that the time has come when the Indians should in this State either follow the pursuits of civilized people to secure a livelihood or be kept on their reservations. During the last few years the State has done much by way of propagating fish and bringing to our waters species not indigenous here. Our State is remarkably well watered by creeks, rivers and lakes, and most of these are abundantly stocked with native fish as gamey and delicious as any that can be planted in the water. Many of these waters have, however, been very much depleted by net-fishing and by other unsportsmanlike practices, such as disturbing the spawn, spearing during the spawning season, and the angling thereof far beyond actual capacity to use them and only for the amusement the catching thereof may have afforded. Would it not be economy if the State were to expend \$100 for the protection of our native stock of fish against such ravages

for every \$1,000 that is expended in the propagation of species not native to our own waters? Since the organization of this Association our Secretary has traveled to various parts of the State and been in correspondence with members of the Association and local clubs, and by his personal endeavors has awakened much interest in the object of our society. Indeed, from every portion of the State we have received encouragement in the good work that we have commenced. Let us then hope that the Legislature about to convene will give us an intelligent game code, one that will meet the approval of the mass of the people who interest themselves in the subject, and that the true sportsmen will so compromise their differences of opinions and wishes as to give them their united support."

The committee on game then read the following report: "How much sorer we may wish it were otherwise, Wisconsin has not been exempt from the all-pervading destruction of game. In the southern portion of our State it is gone, except, perhaps, two or three species of game birds. From this section the deer, that noble monarch of our primeval forests, has long since disappeared from the presence of his deadliest foe, civilized man. Of our game birds, the prairie chicken and quail are well-nigh extinct. The ruffed grouse, the gamiest of all game birds, once so plentiful in our groves in this part of Wisconsin, now rarely startles us with noisy wing and impetuous flight from cover and darts from view, no sower seen than lost from sight. Woodcock, if not diminishing in numbers, are barely holding their own. Snipe are unquestionably decreasing in numbers, owing chiefly to the destruction they encounter each spring during their migration northward. The prompt, decisive "quack" of the mallard and the wild, weird note of the woodchuck are sounds which less and less frequently greet the ear as the seasons come and go. Thousands of lakes, streams, marshes and bays in Southern Wisconsin, which a few years ago teemed with them, are now tenantless the lifelong year.

All these facts point to one unmistakable result. They mean extermination.

In view of these facts, the apathy, the larger want of interest in this matter which characterizes the vast majority of our people, may well be a subject of astonishment. This lack of interest on the part of our people generally has become so universally understood and recognized that every person who has given the subject the slightest consideration has reached the conclusion that the final hope for the preservation of game rests with the fraternity of sportsmen. If they do not take some action toward game protection and preservation and to arrest the march of extermination, the future will be a repetition of the past, and the golden autumn of the golden autumn of each year gladly snatch a few days from the active pursuits of life to indulge in the soul-stirring delights of field sport, will find the pursuit of their favorite recreation leading him in year by year toward the setting sun. It should be, then, not only the duty, but the pride, of every sportsman to assume the responsibility thus presented and meet the case with such remedies as its exigencies seem to require.

Two things are perpetually demanded: First, stringent laws for the protection of game; second, their relentless and stringent enforcement. Toward the accomplishment of these results sportsmen must take the initiative and persevere, and it is confidently believed that with the interest which is rapidly awakening upon this subject, Wisconsin will not be long without an efficient system of game laws which shall be rigorously enforced.

But too much in the way of good results must not be expected. Even after the realization of these two objects in this State it is a question whether many species of our game birds will not continue to diminish in numbers, even under these favorable conditions unless similar steps are taken for their protection in our neighboring States.

A large proportion of the migratory birds which are exposed for sale in the spring in the State are taken in other States and shipped here for a market. So long as the taking, killing and transporting is permitted in adjacent States, if the Legislature drives the market of this State, it will find it difficult to find a market elsewhere. The true and complete remedy lies in securing protection for and prohibition of traffic in all our birds of migratory habits in all the States traversed by them during their spring flight. By energetic and considerate action it is confidently believed this can be accomplished. Your committee would therefore recommend that the association take such action as may seem best calculated to secure the co-operation of the sportsmen and sportsmen's associations in our neighboring States, with a view to secure laws on the subject of game protection in their several States which shall be uniform, harmonious and co-operative and especially directed to the abolition of all spring shooting.

In regard to legislation in this State, your committee are of the opinion that all laws in relation to game should be codified and reduced to a form which should embrace substantially the following provisions:

#### PROPOSED LEGISLATION.

1. Shooting or taking, transporting, selling, offering for sale, having in possession, of all game animals, deer, hare, rabbits, gray, black or fox squirrels, and all game birds and wild fowl, prohibited except during a short open season, provided ten or fifteen days after close of open season allowed to dispose of game on land.
2. Prohibition of all taking by set-guns, traps, nets, snares, springs, and the use thereof for such purpose at any season of the year.
3. Exportation of all game out of the State prohibited.
4. Limitation of the number of animals or birds lawful to be taken in any one day by one person to be, deer, one; all other game twenty-five.
5. Shooting from punt or sneak boats, and the use of any battery, swivel or pivot gun, or any arm other than the common gun discharged from the shoulder prohibited.
6. No quail shooting for a term of three years.
7. Molesting or disturbing nests or eggs of all game birds and wild fowl prohibited.
8. Prohibition of shooting any bird, game or insectivorous bird from the trap.
9. Protection of minnows, rats and fur-bearing animals, same as now provided by law.
10. Protection of the robin, martin, meadow-lark, and all insect-devouring birds, their nests, birds and young.
11. Persons violating laws to be subject to prosecution in any county within or through which game is unlawfully taken or held in possession.
12. All sheriffs and deputies, constables, city and village marshals and police force required to make complaint of any violations, and District Attorneys to attend and conduct trials.
13. Appointment of game and fish wardens by the Governor are recommendations of this Association and the Wis-

consin Fish Commission, whose duty it shall be to see that laws are executed, and make complaint of violations.

14. Penalties: Twenty-five dollars per head on deer; ten dollars on all other game animals; and fine from ten dollars to fifty dollars for other violations; one-half, in all cases, to go to the informer.

15. Open season. On deer from August 25 to Dec. 15; on all grouse, ducks and snipe from August 25 to December 15; woodcocks from July 10 to December 15; on hares, rabbits and animals from September 1 to February 1.

All of which is respectfully submitted.

A. K. DELANEY,  
GUSTAVE PREUSSER,  
O. B. THOMAS,  
Committee.

By a suggestion of Judge Mallory an amendment was adopted making the infringement a misdemeanor.

An amendment was also adopted to the paragraph numbered "4," by which "deer" was stricken out altogether.

An amendment was also adopted to No. "4," classing prairie chicken with quail, so as not to be shot for three years.

Number "8" was stricken out.

An amendment to No. "11" made the penalty either fine or imprisonment.

It was also ordered to insert a clause prohibiting the catching of wild pigeons with nets.

Judge Mallory submitted the report of the committee on "Enforcement of Game, Fish and Trespass Laws" as follows:

THE WISCONSIN SPORTSMEN'S ASSOCIATION: The committee on enforcement of game, fish and trespass laws respectfully submit the following report:

In the opinion of your committee the first step to be taken for the enforcement of such laws is to appoint a committee for the purpose of raising a special fund to be used for paying expenses of prosecuting violations of such laws.

Your committee further recommend that this Association make an effort to secure the passage of a law by which the Governor shall be authorized to appoint game constables or fish wardens in such localities as may be necessary, making it the duty of such officers to be watchful and diligent in their efforts to detect and bring to punishment all persons who may be committing violations of such laws; and requiring the prosecuting attorney of the county in which any violation of such laws is committed to prosecute cases against such offenders.

It is the further opinion of your committee that effort should be made to secure the organization of local societies in every county in the State when such a society may be needed, for the purpose of assisting in the enforcement of the game and fish laws.

Your committee do not make any recommendations as to trespass laws, but suggest that subject for such consideration as the Association may think proper to give it.

All of which is respectfully submitted.

J. A. MALLORY,  
B. LINDERSTORF,  
Committee.

The election of officers resulted as follows:

President—Fred. Rietbrock, Milwaukee.  
Secretary—O. W. Robertson, Milwaukee.  
Treasurer—Stewart Murray, Milwaukee.  
Vice Presidents—Chauncey Simonds, Milwaukee; R. M. Boyd, Racine; L. A. Winchester, Whitewater; R. H. Strong, Baraboo; C. E. Norbeck, La Crosse; A. K. Delaney, Mayville; Chas. Felver, Oshkosh; Wm. Merrill, Prairie du Chien; M. T. Bally, Madison; G. W. Corning, Tomah; T. S. Powers, Tomah; J. G. Howell, Rockland; H. F. Trell, Eagle; W. B. Van Brunt, Horicon; Hon. S. Field, Ashland; J. C. Neville, Green Bay; F. A. Turner, Stoughton; L. M. Wyatt, Fond du Lac; E. W. Jones, Wausau; John Laigh, Oconto; Peter Greeley, Mukwonago; M. J. Egan, Franklin, Mil. Co.; H. A. Taylor, Hudson; Jacob Kotter, Wausau; Lou Walker, Plainfield; J. H. Boyle, Winneconne; F. W. Sackett, Berlin.

The committee on game laws was instructed to codify the same, and to prepare thereon a proper basis for presentation to the Legislature. The next meeting of the Association was appointed for the third Tuesday during the Legislative session at Madison.

#### HIGHHOLDS, SQUIRRELS AND WOODCOCK.

EAST CHESTER, New York, Jan. 10.

Editor Forest and Stream:

I have been deeply interested reading the various contributions to FOREST AND STREAM on the proposed revision of the game laws, and believe with some of the writers that enforcement of the law is more needed than revision. But that some of the sections are defective my petty offices of constable and game constable for the last couple of years have made palpably plain to me. I have succeeded, however, sufficiently well to cause the violations upon the land to be very rare where they were once frequent, and have entirely stopped the drawing of seines in Hutchinson's River, near Pelham Bridge. This I effected two years ago last June by arresting four parties whom I caught in the net. They got off lightly, but have never wet their seines in the river since. For this I received favorable mention in FOREST AND STREAM at the time and the thanks of the fishing fraternity generally. On different occasions since I have warned and driven off other parties without making an arrest; the laws in regard to salt water being somewhat vague and defective.

I would suggest that the rivers, salt water bays and estuaries emptying into Long Island Sound be distinctly stated, and if fykes are allowed the square size of the mesh to be plainly given, and that pounds be prohibited in Westchester County.

Section twelve should have the swallow mentioned as well as the martin, as some so-called sportsmen are apt to shoot swallows when assembled for glass ball and pigeon shooting. This section, as well as section thirteen, as amended in 1880, has no clause making the killing of the birds mentioned a misdemeanor. Without this the summary arrest without warrant, provided for in section thirty-five, is useless, and as that is about the only way to bring non-resident offenders to justice, the killing of the birds should certainly be made a misdemeanor.

I see that Col. Pike in his address to the Long Island farmer proposes to abolish the shooting of meadow lark, highholds and "11" snipe, robins, under the head of song birds. Of course, they are all insectivorous birds, but so are the quail and ruffed grouse, and what these are to the wing-shot, the robin and highhold are to those who have never acquired the art of stopping the swift flying game bird on the

wing. And the meadow lark, with his even steady flight, is a good bird for the beginner to practice on and fit him for the killing of nobler game. I do not write this from interested motives, for ever since the time when as a mere lad, nearly twenty-five years ago, with a terrier dog and a twenty-two single-barrel gun, I killed six woodcock one summer afternoon, I have disdained the lesser game. But I write in behalf of those who, confined in close, stifling offices in the cities, can occasionally get a day off during the open season. Notice one of these coming in from his day's sport, with what pride he displays his string of highbills and robins and if, by some lucky chance he has managed to secure two or three larks, then he is happy indeed. No big pockets for him to hide his game. Oh, no! He wants every one to see that he is a gunner and has them strung out to make as much show as possible. You ask him where he shot those highbills and he will tell you, and truthfully too, that two-thirds of them were found leading upon the dogwood, peppercorn or ivy berries and frost grapes, and one-half the other third upon the dried top of some decayed tree. I do not dispute the fact that the high-bill destroys insects, but it is no more to be compared as an insect destroyer with the small redheaded woodpecker than the imported sparrow should be compared to our native song sparrow. The robin is a great destroyer of grapes and other fruit. The meadow lark probably destroys more insects than either of the others and does little or no mischief, but he is practically well able to take care of himself, and is so shy that very few of them are killed by the tyros. Altogether I think that the loss caused by the killing of these three birds during the months of October, November and December is more than counterbalanced by the pleasure the hunting of them gives to the class of hunters above referred to, and to the small boys, who in hunting them acquire a love of field sports which is apt to last them through life, and the man who loves to shoot and fish is sure to be a bad member of society. These three gunners sometimes kill the farmer's poultry, and it is undoubtedly true, but I think they are killed fully as often by those who are professedly hunting higher game, and there are laws to punish these marauders whether of high or low degree.

I have written at some length upon this subject, believing that the protection of the game will be more generally accomplished by a liberal law than by a law by any special class.

In regard to the proposal to issue licences I do not believe that any body of men sent to Albany by the people of this State will ever seriously consider such a preposterous question. If they have the right to pass such a law for Long Island they have the right to pass it for the whole State. If they have the right to have a license fee of two dollars charged they have the right to increase it to ten, twenty or fifty dollars, or more. It smacks a little too strongly of the English laws, when a man should be transported for killing a pheasant or hare, to even give him a license in this country.

The proposed open season for squirrels is as much too late as the old one was too early; September 15 is late enough. The most of the squirrels are well grown at that time, though in isolated instances they have young very late, as on one occasion I killed a squirrel with milk in her teats in November. But most of them are bred very early in the summer, some before the snow has left the ground in the spring. Most of those who hunt them, at least in this vicinity, still hunt them in September and October. After that a dog is necessary and good squirrel dogs are very rare.

In regard to the proposed change in the open season for woodcock I should prefer to see it one month earlier than one month later. I have read most, if not all, the articles which have appeared in FOREST AND STREAM upon the subject and they have failed to convince me that woodcock are not better able to protect themselves in July than many quail are in March. When I was expected to fight a few years ago in the time of the war, I have shot woodcock in the lower part of Westchester County for twenty-five years and tried to shoot them somewhat longer and in favorable seasons. Taking into consideration the immense increase in the number of gunners and the wholesale destruction of their favorite covers and breeding places, they are as plenty as ever. My idea is that sufficient birds are raised in inaccessible regions where they are never hunted, to keep up the supply; that the place where they stop to breed is entirely dependent upon climatic changes and not upon their fondness for any special locality, as with some other birds; that the birds which, if the spring opens early, would breed in the northern part of the State, will, many of them, remain here if the season is late. I have never but once in the number of years mentioned found birds unable to fly in July, and they were probably the offspring of a bird that had her first nest destroyed, as I do not believe they habitually breed twice in the season.

In regard to the woodcock being an easy prey to the gunner during the summer I would say I have shot in company with many different men and have noticed that those who would kill three out of five birds, shooting at every one that rose in the summer were more rare than those who would kill four out of five in the fall.

One year ago last fall, from October 20 to November 23, shooting fourteen days alone, I killed ninety-three woodcock, and shooting in company with another party four days during the period we killed twenty-four. These birds were all killed within eight miles of the northern boundary of New York city, many of them within three miles and that after the ground had been repeatedly shot over during the summer, ten being the most killed in any one day. Last fall with very little summer shooting not more than one-half that number fell to my gun, nine, however, being killed on one occasion. The birds were quite plenty fifteen miles above here, Nelson Ferris and a friend, named Horton, were expected to kill two or three grouse in one day near Portchester. The weather changed so suddenly very cold, freezing the ground, and most of the birds passed over here without stopping. In concluding I will only say that however much my views may differ from those of others I shall do all in my power to protect the game and uphold whatever laws may be passed. J. H. D.

#### A DAY'S DEER HUNTING IN CANADA.

"IT'S no use, sir," said McKinlay; "the deer will bear you a mile off this morning. And we might just as well be in the shanty as wandering about through these cursed briars and woods."

This remark was made to me by a backwoodsman whom I had hired to accompany me for a couple of days' still hunting.

The day was clear and pleasantly cold, without a breath of air stirring, so that every little noise re-echoed itself through the woods, making a man's progress even in moccasins far too noisy to enable him to follow a deer with any chance of getting a shot.

At least so thought McKinlay, but as my time was limited, I determined to go in spite of the unfavorable calmness of the weather. So telling McKinlay to strike off in an easterly direction, I entered the woods, and after going north for a short distance I turned my steps to the east, so as to travel parallel with my compass at a distance from him of about half a mile. In less than twenty minutes I came suddenly on three fresh tracks, evidently those of roe-stated deer, which had been feeding leisurely on a hill side, and to judge from the tracks the animals could not have gone far, and were most probably at that moment within hearing distance of me. For nearly an hour I followed the tracks, proceeding with great caution and peeping into every valley with the hope of seeing my three friends, as I now felt that they must be but a short distance ahead of me.

I saw the tracks running up a hill on the other side of which lay a ravine, and further on a second hill of greater size than the first appeared, and I said softly to myself they must either be in the ravine or on the hillside beyond.

Creeping stealthily up through underbrush and fallen trees I reached the top of the nearest hill, and here paused for a quiet survey of the country beyond. Not a living creature was to be seen in the rocky gully beneath me, but standing immediately in front of me, at a distance of perhaps ninety yards, was a fair-sized buck. Further to the right I could see the head and neck of a doe, but the third deer was not to be seen, although I knew the missing animal must be somewhere close at hand.

Both deer appeared to be looking straight at me, and I immediately fired at the buck. After the crack of my rifle I saw his legs waving a farewell to those he left behind him, and the next instant the doe was stooping over him, thus exposing nearly her whole side. Again my Spencer cracked, and I heard the dull "thud" of the bullet as it crashed into the side of the faithful animal. Never moving, she stood over her fallen lord, while on the ground she calmly took my fire, and then, with three balls through her body, she knelt and lay down and died almost touching the dead buck.

Re-loading my rifle, I made two or three steps forward, when the third deer started from a small thicket close to the carcasses of the deer I had killed. Getting glimpses every now and then of the nimble-footed beast, I tried hard to obtain a sufficient view to enable me to shoot, and at last, as the deer bounded swiftly over a beaver meadow to my left, I fired almost a snap shot at a distance of upward of a hundred and fifty yards.

Simultaneously with the clear, pleasant ring of my rifle I saw that the ball had taken effect. A moment more showed me the deer disappear in some cedars, but going at a slackened pace and on three legs, a pretty sure evidence that my ball had done mischief. I hastily cut the throats of the two deer and whistled for McKinlay, who was not long in joining me. Leaving him to clean the deer, I took the track of the wounded animal and ran until I saw blood almost warm, where the poor brute had stood under the shelter of a tree-top. The tracks now showed me that the pace was no longer a run, and clots of blood marked every step.

The woods became more open and I hurried on until I reached a marsh, through which the track ran. This swamp was several hundred yards in length and as smooth as a table, being firmly frozen by continued severe frost. When half way across I found the track turn suddenly to the right, and as my eyes glanced in the new direction I saw the deer (a fine, fat doe) get up out of the crisp rushes and make a dash straight away from me, on the level surface of the frozen marsh. She ran slowly and apparently with great effort, but was very nearly two hundred yards off before I fired, of course hurriedly, and missed.

Click! click! went the guard, and another cartridge slipped into the breech. Spang! spang! my good rifle once more, and to my joy I saw the doe pitch on her head and lie still.

On examining her I found that my first shot had shattered her left hind leg, and in bad efforts to get away I fancy the other hind leg must have been sprained, as she hardly ran a mile after the first ball struck her. My last bullet (it was rather a lucky shot) had caught her squarely in the centre of the neck, and I don't know any spot more fatal than the neck bone. I have shot plenty of deer in the water and have often remarked that if you place your ball properly in the deer's neck, just below the head, the animal dies almost without a shudder.

I was now quite satisfied with my morning's work, and after cleaning the doe I buried her under the snow, first fastening her fore legs to her nose by means of a piece of hard wood, a simple process which enables you to drag a deer through the woods with very little trouble.

Rejoining McKinlay, we managed, after three hours work, to get two of the deer out of the woods before dark. Bright and early the following morning we brought the other deer, now frozen stiff, to the Frontenac Road, and an hour afterwards I was en route to my home in the city of Kingston, a distance of forty miles from the scene of my still hunt.

Kingston, Dec. 14.

RIDEAU.

#### GAME IN NOVA SCOTIA.

NEW GLASGOW, N. S., December, 1880.

PERHAPS one of the readers of FOREST AND STREAM might like to know how their brothers of the rod and gun fare for sport in this land of the Mayflower.

First and foremost we have the king of the bog and barren, the lovely moose. Next to him the caribou, the black bear, and of late an occasional wolf. Of game birds we have the goose and brant and an army of ducks, from the beautiful woodcock to the smallest teal, ruffed grouse, woodcock, snipe and plover.

Of late sportsmen and the public generally have been paying more attention to the game law, and although it is not yet all that a sportsman could desire, still a man has not now to travel the woods and barrens for a week before striking a fresh moose track.

In 1873 a law was passed prohibiting the killing of moose for three years, and since that time they have been on the increase. Previous to that year of extermination was carried on against them, and some idea can be formed of the number killed from the fact that a single firm in Pictou shipped in one season over seven hundred moose hides, the deer mostly killed in the counties of Pictou and Guysboro.

The writer knows an Indian who in one year killed one hundred moose, and a few while hunting in the Liscomb region a couple of miles from the carcasses of two moose, killed alone for their skins, and the flesh left for the bears or for any one who cared to take the trouble to carry it out of the woods. Happily this state of things no longer exists. This is partly owing to increased vigilance on the part of the

game wardens, who are stimulated by receiving half the fine in case a conviction for a violation of the game law, and partly that the skins have fallen so low in market value that it hardly pays to hunt for them. No single hunter or party of hunters are allowed to kill more than three moose and five caribou in one season.

The practice of hunting with dogs is, I am glad to say, almost done away with, and the greatest evil which now remains is the abnormal practice of "snaring," which is practiced by many of the settlers in the outlying districts, the *modus operandi* of which I may give at some future time. We are in hopes that in a little time we will be able to crush out this evil, but I must admit it is a tedious operation. A man who hunts with dogs or hunts out of season generally leaves some trace, but one who sneaks out generally after night, sets his snares and quietly returns, and does not visit them again or go near the woods for some days, and then not until darkness covers his evil deeds, is a more difficult subject to deal with, and it is not until some hunter or lumberman comes by accident upon the "spring pole," and sees the work the poor brute has made while tangled, that it is known that a moose has fallen in the toils of some vile snarer. And this is generally all the evidence that is forthcoming, and I have no hesitation in saying that more moose fall in this way than to the rifle of the hunters either by "calling" or "still hunting."

The best district for hunting in this part of the province is the Liscomb Lake region, which extends from Sheet Harbor to the West River of Pictou, a distance of over seventy miles, nearly all woods and barrens. I have no doubt that some of the readers of this will remember with pleasure days enjoyably spent hunting or fishing in this locality. In this region is the Big Barren, which extends nearly from Liscomb Harbor to Big Liscomb Lake, a distance of seventeen miles, and an average width of three miles. Unfortunately, indeed, is the hunter who, in crossing this caribou as he comes upon fresh "sign" of moose or caribou, if he does not see the animals themselves. This barren is covered in many places with blueberry bushes, and here when the berries are ripe bruin is also to be found. Of late caribou are becoming very numerous in this district; the writer saw a herd of over one hundred this fall. They appear to have been driven in from New Brunswick, and it is only within the last few years that this deer has appeared in any great numbers. The wolves also have followed the caribou as late as season they were more plentiful than ever known before.

The Liscomb region is well watered by lakes the principal of which are Big and Little Liscomb, Rocky, Prince Arthur and Sileam, to say nothing of Hentis, Porcupine and Chesholm, all of which abound with salmon-trout. If I were to tell of some of the hauls I have made on these lakes it would gladden the hearts of some of the disciples of old Izak even to hear about them. If Mr. H. of Boston, should read these lines it will carry him back to the days of "saw lang syne," some of which were spent upon these very lakes.

However, as the sailors say, I am spinning too long a yarn. It was my intention to have given a few sketches and incidents which have happened during some of the many moose hunts he has engaged in; the best weapons; the different modes of hunting and "calling," etc., which perhaps might interest some of the readers of FOREST AND STREAM who may not have had an opportunity to engage in one.

GLOBE SIGHT.

#### FLORIDA QUAIL SHOOTING.

FERNANDINA, Fla., Jan. 7.

THE cold wave struck us with unusual severity. The mercury went down to 18 degs., and for a week it did not rise above 40 degs. Of course the cold weather brought down quantities of ducks and snipe, and everybody or nobody (pot hunters) that could muster a gun of any description went out. A good deal more game was frightened than hurt, though some of our sportsmen were successful. I went out a short while before the cold snap with my friend S. I did not know where they are common at this time. Fernandina is on an island eighteen miles long, somewhat triangular in shape, the ocean on one side and the Amelia and Nassau rivers on the other two. On the ocean we boast of the finest drives in the world, and do not say it in egotism, but simply state a truth. For fifteen miles on the beach at low tide we have a drive as firm as any pavement and in width sufficient to accommodate as many as twenty to thirty vehicles abreast. Fernandina is situated on Amelia River. The principal street—Center—runs from the town to the ocean, a distance of two miles. The road is shelled to the beach. About a quarter of a mile from the beach an arm of the sea makes inlets to the island and gives us a beautiful marsh for snipe shooting, about the only good sport that we have on the island. On the mainland, however, about five miles from Fernandina, we have fine quail shooting, and it is there that my fun is generally had.

We left Fernandina on Tuesday morning about daylight with Dandy, my Gordon setter. We traveled about five miles, where we stopped. It was hard work to keep Dandy from bounding away, as he evidently winded birds, but he was too well-bred to go until he had license. We finally were ready, and in about ten minutes my beauty was as "stiff as a poker" in a bunch of weeds, unfortunately very near thick cover. We got in proper distance and I told S. to be on the *qui vive*, as I would go in and flush. They got up in nice style, Dandy dropping to command. I got my bird, but S. scored a zero. We reloaded and Dandy retrieved the bird. As the cover was so thick, I would not go in after them, so we took another direction, and my dog bounded away like a shot, his head up and altogether, to a sportsman, presenting a most beautiful sight. When about a hundred yards away he quartered a little to the right, and although at full speed he dropped in an instant, turned his head to the right and I could see he had a bevy just under his nose. What a beautiful stand! We both exclaimed, and what a "levy of a plow" to get them up. I flushed and in a short while four cartridges were discharged. Four birds fell, and such a covey as it was! There must have been at least thirty birds in it. Dandy retrieved nicely and we went for the scattered birds. Fifteen fell under the aim of my breech-loaders, and I scored a straight ten out of ten shots S. making some poor shots and scoring only five to his credit. We went about half a mile further and Dan commenced growing very cautious. We looked ahead of us and there before our eyes we saw the quarry running in almost every direction. Dan was in the midst of them and rather flustered, as he could see them and did not know exactly how to get them. He finally pinned them so closely that they squatted and he was true to his stand. We got three out of this bevy and followed them up, bagging five more before they reached cover. In a small

## THE ENGLISH POINTER.

(Reprinted from advance sheets of Yero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through Cassell, Pectet, Galpin & Co., publishers, No. 596 Broadway, New York.)

There are very few varieties of dog which owe more to the institution of dog shows than the modern pointer does. Up to the commencement of canine exhibitions the majority of the admirers of this breed appear to have devoted the greater portion of their attention to breeding for sporting purposes, and to a certain extent seem to have ignored appearance. Now things are so far changed, by a wider knowledge of the pointer having been extended to the public, that most breeders seem to regard good looks more favorably than formerly. It must not, however, be thought that all those who bred pointers were unimpressed with the desirability of producing a handsome dog, or that they were by any means indifferent to the symmetry of their strain, for many gentlemen have used great exertions to improve their dogs by every means in their power. The inauguration of dog shows, nevertheless, has done a great deal in the way of obtaining uniformity of appearance in the pointer, though it must freely be confessed that more than one type is supported, and we may add that it is always likely to be by the various judges.

With reference to the appearance of this breed, it may, we think, be fairly taken for granted that it is the offspring of the old Spanish pointer referred to in the preceding chapter, and the lighter variety of foxhound, to which allusion has already been made in former pages. The introduction of the latter blood was unquestionably the result of a desire on the part of the pointer's early breeders to increase the pace and stamina of the Spanish pointer, for, as before observed, his *forte* was nose, not pace. The hounds selected for the purpose of crossing with this dog were, we consider most probable, chosen as light-formed as possible, and probably some attention was paid to their color as breeders, no doubt, preferred to get their puppies well marked with white, as such are more easily seen at work than liver or dark colored dogs. The precise period at which the pointer was introduced into this country is, of course, unascertainable, as he is, as he at present exists, a manufactured breed, and consequently made his appearance gradually. That the introduction has been, comparatively speaking, of recent date, is, however, an almost palpable fact, as no mention is made of the pointer in the earlier works on canine subjects. Dr. John Caius, for instance, though fully recognizing the spaniel and the setter, makes no allusion to the pointer, and this he most certainly would have done if the breed were in existence here in his time. He particularly alludes to the Spanish origin of the spaniel; and, as the earlier pointers were unquestionably imported from that country, he would have remarked upon that fact at the same time beyond a doubt.

Gervase Markham, too, gives prominence to the setting dog, but ignores the pointer, and in fact it is only in the writings published toward the commencement of the present century that we find allusion to the latter. This is no doubt due to the fact that shooting was only becoming a popular recreation about this period, and this is clearly proved in the preceding chapter. Up to this time the setter was the sportsman's dog, as his peculiar mode of working was found to be of more service when birds had to be driven into nets that were spread out for their reception. The general introduction, therefore, of firearms into field sports may, we think, be correctly taken as the final cause of the pointer, and, no doubt, on his first appearance the setter fell into temporary disuse, as it probably never struck our fathers for some considerable period that the setter's abilities could be so easily moulded to suit the novel innovations introduced by the use of firearms as future events have testified.

However, about the period referred to ample mention is made of the improved pointer; and Sydenham Edwards, writing in 1830, speaks of him in the following words:—

"The sportsman has improved the breed by selecting the lightest and gayest individuals, and by judicious crosses with the foxhound, to procure courage and fleetness. From the great attention thus paid has resulted the present elegant dog, of valuable and extensive properties, differing much from the original parent, but with some diminution of his instinctive powers. He may thus be described—light, strong, well formed, and very active; about twenty-two inches high; head, snail and straight; lips and ears, small, short and thin; coat, short and smooth, commonly spotted or flecked upon a white ground, sometimes wholly white; tail, thin and wiry, except when crossed with the setter or foxhound, then a little bushed.

"This dog possesses gaiety and courage, travels in a grand manner, quarters his ground with great rapidity, and scents with acuteness, gallops with his haunches rather under him, his head and tail up; of strength to endure any fatigue, and an invincible spirit. But with these qualifications he has concomitant disadvantages; high spirit and eagerness for the sport render him intractable and extremely difficult of education; his impatience in company subjects him to a desire to be foremost in the points, and not give time for the sportsman to

come up; to run in upon the game, particularly down wind. But if these faults can be overcome in training, if he can be made staunch in standing, drawing and hacking, and to stop at the voice or token of the hand, he is highly esteemed; and those who arrive at such perfection in this country bring amazing prices.

"There is a circumstance worthy of notice in pointers, that some of them have a deep fissure in the centre of the nose, which completely divides the nostrils. Such are termed *double-nosed*, and supposed to possess the power of scenting better than others.

"The most judicious crosses appear to have been with the foxhound, and by this has been acquired speed and courage, power and perseverance, and its disadvantage, difficulty of training them to be staunch. I believe the celebrated Colonel Thornton first made this cross, and, from his producing excellent dogs, has been very generally followed."

There frequently occur now in modern litters of pointers, puppies malformed by a "double nose," as described by Sydenham Edwards. We use the expression malformed advisedly, as, in our opinion, such a development is not only unsightly, but positively injurious to the animal's power of scent. In certain quarters we are aware of the existence of a lingering superstition to the effect, that a "double-nosed" pointer has superior scenting powers, but for our own part we cannot agree with the theory, and have never seen it proved in practice.

would seem that the large proportion of hound blood which then existed in the pointer caused him to be very headstrong in the field, and completely changed the character of the old Spanish pointer, whose extreme steadiness was one cause of his being so popular with sportsmen. According to the "Sportsman's Cabinet," it will be seen in the quotation given below, that the pointer was supposed to have been imported from Spain about the year 1600, but, at the same time, it will be observed that no idea is given as regards the possible period when the foxhound cross was first instituted. It is, however, we should imagine, most probable that this was not resorted to until the use of firearms in the field became a custom, as when nets only were employed in the pursuit of winged game it is probable that a slow hunting, keen-scented dog was more valuable to the sportsman than a fast and high-couraged one, who would naturally be more liable to flush the birds.

The ideas on the elementary education of the Pointer which were held by sportsmen in the early years of this century are thus expressed in the "Sportsman's Cabinet":—

"The pointer, notwithstanding the beautiful uniformity of his frame, the docility of his disposition, and his almost unlimited utility, has been less noticed by naturalists than any other individuals of the species; hence it may be fairly inferred this particular breed was formerly unknown in Britain, and that the stock was originally of foreign extraction. A

combination of circumstances tends to justify the predominant opinion that they were first introduced into this country from Spain (very little more than two centuries since), and that the heavy, awkward, slow and somniferous appearance of the Spanish Pointer is nearly lost in what may be candidly considered the judicious crosses and improved breed of our own.

"It is no more than thirty or forty years since the breed of pointers was nearly white, or most variegated with liver-colored spots; except the celebrated stock of the then celebrated Duke of Kingston, whose breed of blacks were considered superior to all in the kingdom, and sold for immense sums after his death. But so great has been the constantly increasing attachment to the sports of the field, particularly of the gun, that they have been since bred of every description, from a pure white and flecked blue or gray, to a complete liver color or perfect black. After every experiment that can have been possibly made by the best judges and most energetic amateurs in respect to size, it seems at length a decided opinion with the majority that when bred for every species of game and every diversity of country, both extremes are better avoided, and the line of mediocrity more advantageously adhered to; overgrown, fat and heavy dogs very soon get weary in the hot and early part of the season; the smaller sort are likewise attended with inconvenience in hunting high turnips, heath, ling and broom fields."

"The art of breaking Pointers was also considered a most difficult and mysterious concern, many of those denominated dog-breakers having nearly derived their sole subsistence from such employment; that charm, however, has been long since broken, and the simplicity of the process is now so generally known among the practitioners that a tolerably well-bred Pointer puppy may have the groundwork of all his future perfections theoretically implanted in the parlor or kitchen of the dwelling-house before he once makes his appearance in the field. The instinctive impulse of this breed is frequently seen to

display itself in subjects no more than three or four months old; where, in still and uninterrupted situations, puppies may be observed most earnestly standing at chickens, pigeons, and even sparrows upon the ground, by sight, before the olfactory powers can be supposed to have attained maturity to prompt a point by scent."

"When a whelp of this description has reached his sixth or seventh month, the process may be proceeded upon in the following way; and either a single dog, a brace or more, may be managed with equal ease in any convenient spot, room or yard, at the same time, with no other assistance whatever than the alternate expression of 'To ho!' 'Have a care!' and 'Take heed!' (having the small field whip in hand to impress attention and enforce obedience) although the most attractive meat is tossed before them in every direction. The commencement of the ceremony consists in throwing a piece of bread at some small distance before the dog, who, upon making his effort to obtain it, must be instantly checked by a quick exclamation of 'Have a care!' and the assistant terms alternately repeated, to keep him in a patient point of perseverance, till, having given ample proof of his obedience to the injunction, and stood time sufficient to demonstrate his comprehension of the restraint he must occasionally encounter, a vibrative, low-toned whistle, accompanied with a mild ejaculatory 'Hee! oh!' will prove the signal for proceeding, which the whole will quickly learn to obey; and it will be found by practice that once the may, at the very moment of seizing either the bread or the meat, be as instantly stopped and made to renew their point by a repetition of either of the verbal cautions previously observed. Some there are who consider it a qualification in a Pointer to bring the game to foot when killed, and those

DOGS AND GAME, BY DESPORTES (ABOUT 1700), SHOWING THE EARLY FOXHOUND AND POINTER CROSS IN FRANCE.

Appropos of the "amazing prices" which Sydenham Edwards dilates upon, reference may be made to the preceding chapter on setters, from which it will be seen that at the sale of Daniel Lambert's dogs the pointers fetched lower prices than the setters. On the other hand, in 1848, thirteen pointers were sold by auction, and though only two of them had been shot over, the large total of 256 guineas was secured. The following is the catalogue:—

- |  |             |
|--|-------------|
| 1. Nelson, by Bounce out of Bloss.....                   | 15 guineas. |
| 2. Nell, by Bounce out of Bloss.....                     | 10 "        |
| 3. Drab, by Bounce out of Dido.....                      | 13 "        |
| 4. Buzz, by Bounce out of Mab.....                       | 5 "         |
| 5. Rake, by Rake out of Die.....                         | 16 "        |
| 6. Ben, by Don out of bitch by Rake.....                 | 21 "        |
| 7. Belle, by Don out of bitch by Rake.....               | 16 "        |
| 8. Otter, by Don out of Sir R. Wilmoit's bitch.....      | 17 "        |
| 9. Crack, by Don out of Sir R. Wilmoit's bitch.....      | 17 "        |
| 10. Swap, by Duke out of Bloom.....                      | 25 "        |
| 11. Snake, by Duke out of Bloom.....                     | 24 "        |
| 12. Rock, by Rap out of bitch by Lord Mexton's Rump..... | 46 "        |
| 13. Bang, by Bounce out of Bess.....                     | 46 "        |

256 guineas.

Lots 12 and 13 were shot over in England and Scotland; the others were well broke.

It may be remarked that Bloom, the dam of Swap and Snake, had previously been sold for 80 guineas.

Subsequently to the appearance of Sydenham Edwards' work, all the writers on canine subjects make special reference to the pointer, and nearly all of them give special directions for his training. From the remarks which appear, it

who wish it, will find it easy of attainment, by teaching them to fetch and carry before they are at all accustomed to the field; it is a mode of being employed they are much delighted with, and never forget, but is attended by the chance of one inconvenience annexed to the experiment; if they become hard-mouthed, and take to breaking both flesh and fowl, it is a fault, a crime, which generally becomes incorrigible, and is hardly ever obliterated without incessant trouble and much distressing severity. This circumstance, so naturally likely to occur, it is more necessary to bring to memory, because punishment is at all times unpleasant to the humane and liberal-minded sportsman, who will coincide with the writer in opinion, that prudent prevention is preferable to the uncertainty of cure; and that a slight and salutary correction to-day, may sometimes render unnecessary the doubt and irrevocably enhanced misery of to-morrow.

The above remarks are essentially practical, and show that considerable attention had been paid to the habits and breaking of the pointer. Of a very different nature is the anecdote told of the worthy priest, in the following extract from the "Sportsman's Repository"—"In fact, the story bears with it the impression that it was merely a playful invention of the author of the work, to excite the feelings of those responsible for the story, the staunchness of Juno and Dash, when Mr. Gilpin was executing their likeness; we therefore give the extract for what it is worth, merely observing that the story told of the price given for the pointer Dash, and the conditions under which he was disposed of, are, we believe, perfectly correctly referred to, as they are accepted as facts by other writers of that period, who themselves express no doubt of their veracity. The staunchness of Pluto and Juno is, of course, possible, but the venture to suggest that the balance of probabilities is in favor of it being slightly exaggerated. However, it is valuable as showing that, in the first place, breeders began to recognize the fact that too much foxhound was undesirable in their pointers, as it rendered them headstrong; and, in the second place, that the dogs had become more staunch, or any foundation for the story could not have existed.

For something very extraordinary in the sporting way we must refer to the practices of Colonel Thornton, whose high and laudable ambition it has ever been, both to deviate from the common road and to excel; and he has undoubtedly so far succeeded as to raise a name which will go down with *clat* to sporting posterity. We suppose that the Colonel himself meditated and carried into effect the crosses necessary to produce his famous pointer, Dash, which is, as we have before observed, in all probability three-parts foxhound. Dash was sold by the Colonel to the best of pointers, a character sanctioned by his high ranking owner, the moors, the vast expedition with which he cleared his ground, and the intuitive, heaven-born method, said to be almost incredible, in which he hunted inclosures for birds, which was by at once scenting and advancing upon them, without the previous labor imposed upon other pointers, of quartering his ground; add to this, he was a most staunch and steady backer or secondor of other dogs. Dash was sold by Colonel Thornton to the gentleman to whom Sir Richard Symonds, one hundred and sixty pounds' worth of champagne and burgundy, bought at the French ambassador's sale, a hoghead of claret, an elegant gun, and a pointer; with the annexed stipulation that, if any accident should befall the dog, which might render him unfit for hunting, he was to be returned to the Colonel at the price of fifty guineas. This latter agreement actually took place: Dash had the misfortune to break his leg, and was returned to Colonel Thornton, who considered him in that state a great acquisition as a stallion.

Exalted as was the reputation of Dash, it seems nearly impossible that he could have exceeded in point of steadiness the merit of a brace of other pointers, the property also of Col. Nel Thornton, Pluto and Juno. Pluto has also been already cited as a famous deer hunter. It is recorded that this dog and bitch, being taken at a point, kept their point upward of one hour, and the result was that the late celebrated Mr. Gilpin could take the sketch from which they were painted for their proprietor, an elegant engraving of which we find in Mr. Daniel's "Rural Sports."

"Many merry jokes have been passed in our hearing, by sportsmen, on the above account, with the view of promoting the cause of ridicule, comparing it with another still more marvellous and well known, given on the authority of a grave and most respectable member of the priesthood. For our parts we really believe both the possibility and probability of the staunchness of Pluto and Juno as here quoted; and although Gilpin cannot be referred to as having quoted—we hope for a better—this painting and plastering world, there are yet survivors to whose authority an appeal may be made. It remains to back the above story with the well-known one (but the repetition on this occasion will be pardoned) of the Rev. Theophilus Verity. On a certain Christmas Day this gentleman was riding his nag round his parish church, which was a considerable distance from his dwelling-house, and his way lay over the most private spot of a secluded and neglected heath. In the deepest recess of this wild he espied a pointer by himself, standing at a covey of birds. He looked, admired, pondered on the wonderful and inscrutable instinct of the brute creation, blessed himself and passed on. The cares and studies necessarily attendant upon his calling, however, soon expelled every vestige of this occurrence from his mind, until he was awakened to fresh admiration and benediction by a renewed and stupendous view of the same objects. Exactly on the above day twelve months, passing the same way, his second astonishment was far greater than the first; for he saw, upon the self-same spot, the dog pointing at the birds in precisely the same attitude he had left both parties twelve months before; with this difference, however, that they were then living and breathing, one partly treacherously circumventing, the other innocently standing where they were in a state of skeleton, fit for a lecture in anatomy, and doubtless, as the reverend gentleman supposes, the partridges were held to their destiny by the well-proved and well-known power of fascination emitted from the eyes of the dog. Now, we particularly request that no light-minded person will attempt to make a joke of this, well convinced, as every rational man ought to be, that there are wonders of which, never having had the experience, he cannot have any adequate conception.

This extract is valuable as corroborative testimony that the introduction of the foxhound cross was first due to the enterprise and judgment of Colonel Thornton; as lovers of the modern pointer will no doubt be glad to know to whom they are indebted for the improvement in their favorite breed, their later exertions having unquestionably been rendered more easy by the good he originally wrought upon his mind. But, before the year 1810, the year in which the eleven years after the publication of the account of the pointer by Sydney Edwards in "Cynographia Britannica," we find the following description of the pointer given in the "Shoot-

er's Guide," by B. Thomas, or, rather, to give the author's correct name, by Thomas B. Johnson.

"The pointer generally to be recommended is of the middle size, well made, active, light and strong. It will easily be proved that a dog of this description will bear a vast deal of hunting; whereas a small one, however good he may be, is by no means calculated for a piece of strong timber for potatoes, strong and stiff stubbles, or mountains where the heath is strong and long. On the contrary, it is generally supposed that a large dog is much sooner tired by his own weight than one of the middle size, consequently the latter are in general to be preferred, and indeed I would by all means recommend them. But, at the same time, I would not refuse a large dog for no other reason than his size, as, however large a dog may be, it often happens that he has strength according to his bulk."

With respect to color, which may perhaps depend upon fancy—and no doubt, there are very good dogs of all colors. However, those I would recommend are the liver or brown-and-white. A white dog is to be preferred on account of his good temper, and being naturally less subject to disease than others, which arises from the predominance of phlegm in his constitution. He has an excellent nose, is a curious hunter, is full of stratagems and cunning, and may be seen at a great distance. Pointers of a brown or liver color are generally good ones, but they are certainly difficult to be seen at a great distance, particularly on a mountain, which gives the sportsman sometimes a vast deal of trouble. At the same time, a brown dog will bring you nearer the game, and is particularly useful when it will not lie well. Birds will suffer a brown dog to approach them much nearer than a white one, which arises solely from his color approximating more nearly that of stubbles, etc. Among which he hunts, and consequently renders him less distinguished by color.

"A dog of the lemon or red color is generally of a giddy and impatient nature, as cholera is found to be the most predominant humor in him. In fact, in general, white and brown, or these colors mixed, are to be preferred. If a dog has much white upon him it is an indication of good temper."

The opinions of this writer certainly seem to be largely unimpaired, for, as far as our experience goes, we have no reason to agree with him that white, or nearly white dogs, are by any means better in constitution or temper than pointers of any other shade. There is much, however, to be said with reference to Thomas' theory, and in defence of any ideas he has formed, that it must be borne in mind that there is every reason to believe that foxhound blood was very largely contained in the veins of pointers about that period, and consequently the lemon or red colored dogs, to which he alludes, may possibly have been once nearly allied to the hound, therefore more headstrong than the liver, which he took more of the nature of the steady-going Spaniard. His ideas on the subject of color are certainly sound, as far as they refer to the working of dogs in the field, for it is palpable that a white dog can be seen farther off than a liver-colored one; and also that the latter is less likely to disturb birds than a light-colored one. His reasonings upon the ancient of pointers which he has put forward, given as they are, are merely conjectures on his part, and given as they are, unsupported by any practical reasons for the assertion, may safely be set aside when the question of colors is to be discussed. No reference to such advantages possessed by one color over another is made in "Kunopodia," an excellent work on breaking the pointer and the spaniel, which was written by William Dobson, Esq., of Eden Hall, Cumberland, in 1814, and thus, we are of opinion, would surely have been done by any writer who was generally conversant with that period that a white dog was constitutionally superior to a dark-colored one.

The foxhound cross has been resorted to by Irish sportsmen of the day for the purpose of increasing stamina and giving a wet-resisting coat suitable to the moist climate of Ireland, and these results were well exemplified in specimens we saw exhibited at a Dublin show, bred and shown by a thorough sportsman, who appreciated of every branch, but whose specialties are hunting and shooting.

[TO BE CONTINUED.]

## THE PITTSBURG BENCH SHOW.

FROM OUR OWN REPRESENTATIVE.

THE officers of the society are to be complimented for the commendable spirit they have shown in undertaking to give a really first-class exhibition, and they are to be congratulated that the show is in every way a success. It is, by far, as regards the quality of the entries, the best that has been ever given in this city, and it compares in this respect with the best shows in the country.

At first it was estimated that the entries would not exceed one hundred and fifty in number, but the official catalogue informs us, that, thanks to Mr. Lincoln, two hundred and eighty two were booked.

The city was alive at an early hour this morning with the barking of dogs, the crowing of cocks, the quacking of ducks, the cooing of pigeons and the gabbling of geese. At eight precisely the doors of the old City Hall were swung open to the public, and the usefully racket overhead announced that the show was being held on the second floor of the building.

In a large well ventilated hall, fairly adapted for the purpose, the dogs are booked in three long double rows of pens, extending the whole length of the room, and in these the sporting and larger non-sporting dogs are stalled, while the small non-sporting dogs are boxed in front of a stage that stretches across the north end of the hall. On each side of the dogs the poultry exhibits are caged, but although both sides of the hall have a number of large windows, the light early in the afternoon was insufficient whereby to see the animals, and the gas had to be lighted. The hanging of all respects is similar to that adopted at the New York show, and many of the pens are tastefully decorated, prominently those of the "Laverack Kennel" of Messrs. Snellenburg and McConnell, of New Brighton, Pa., and "Superior Kennel," of Messrs. Henricks and Stayton, of Allegheny City, Pa. These have large compartments, so that several dogs can be taken in at the same glance. The sanitary arrangements were well cared for and there was an absence of all doggy smell.

The non-sporting dogs were in admirable condition, and as the judge was instructed in the bench-show rules and regulations to make allowance for dogs that had been worked this season, a proportionate number of Field Trial dogs put in an appearance.

Turning to the catalogue we find that the classification is

somewhat faulty, the red Irish and red and white setters are pooled under the head of "Irish Setters;" this should not be, there should be two distinct classes. In Class 51 three field spaniels got mixed up with the Irish water spaniel and were ruled out. Class 49 turned out to have no legitimate entries, as its three entries belonged to the rough-coated collie class, no smooth coated dogs being present, the entries were therefore judged with class 48, rough-coated collies. Classes 35, 36 and 37, beagles, contained both the bench or bow-legged and the straight legged dogs, and there was a large number of the former type of dogs present, which rendered a large class of the old stock of Maryland dogs, which had been kept pure with great care for many years; and as the two types are so different and wide apart Dr. T. Waddell, backed by Dr. Maddux, of Baltimore, and Genl. Bond, of Maryland, petitioned the executive committee to allow two typical classes to be established—name: y one headed under the name Maryland, the bench-legged beagle, and one for the straight-legged beagle. The committee's consent was at once obtained, and the Pittsburgh show of 1881 will have the honor of assisting in instituting a precedent that we trust to be observed at all future shows. This, if done, will hereafter bring a large number of entries in both classes. It is full time that harriers should not be classed with beagles, as they were at last year's New York show, and now that our game birds are rapidly disappearing in the East, there will be no objection to their being set apart for their amusement. One of the most popular of these will be hare hunting, and with well-bred beagles this sport can be enjoyed to the utmost. To obtain well-bred dogs, distinct classes for them must be opened at our shows, and it is the suggestion of Dr. T. Waddell that it might be also well to open classes for dogs under and over twelve inches height of shoulder. Of this, however, more in the future; we shall at once publish pictures of dogs of each type, and as this distinction had to be made sooner or later, we consider that there is no better time than now for the discussion of the important subject.

We have already stated that the premium list was a good one, but we must not forget to mention that the donations from outside contributors were liberal. To dispose of two of these prizes two special prize lists were opened that certainly would lead to better results. We refer to the "Special A," for the best setter dog or bitch of any strain," and B, "for second best dog or bitch of any strain." The special A, as it will be seen in the subjoined entry list, closed with five entries, namely, with three English setters and two red Irish. To ask any judge to select the best, where the standards of the two types are so entirely different, is really asking too much of any man. Special prize list B would include none but straight-legged dogs, and as the latter are the lucky one therefore would go before the world as the winner of a second class. This, however, is not the case, as all the entries are of first-class dogs.

The judging began at 2 p. m., both sporting and non-sporting dogs being judged simultaneously. The former were taken to a large room on the third floor at the south end of the building and the latter were reviewed on the stage. The attention was very large and much interest was taken up to the end of the judging, at 6 o'clock. The show remained open until 11 p. m.

JANUARY 18.

The judging was continued at half-past nine this morning and at the close of the day had been completed. The judging was done by Mr. A. H. Moore, of Philadelphia, Lexington, Ky., the judge of sporting classes, and Dr. L. Henry Twaddell, of Philadelphia, deserve great credit for their care and excellent decisions. Major Taylor gave every dog recognition, and there was not one dog brought before him that was not handled by him and carefully looked over. Among the exhibitors Mr. A. H. Moore, of Philadelphia, carried off the greatest number of prizes. He had twenty-five entries, of which twenty were sporting and ten non-sporting dogs. This sportsman won every special prize but one—six in all. His exhibit was one of the finest ever seen in this country, and his kennelman, Benjamin Lewis, who used to be in Llewellyn's kennels in England, certainly deserves credit for the excellent bench show condition he had prepared the dogs. The Baltimore Kennel also sent eight dogs, under charge of their efficient kennelman, A. J. Kelly. There stock was in fine order.

As the following list will show, there were very few absences: The following dogs were not present: Nos. 3, 16, 26, 41A, 50, 68, 94, 117, 131, 134, 180, 175, 178, 187, 204, 218, 219, 254A.

We publish below a full list of the awards, reserving any detailed comments on the show until our issue of next week.

[Special to FOREST AND STREAM.]

PITTSBURGH, Jan. 19.

A committee meeting of the society will be held this evening at 8 o'clock for the purpose of deciding upon a name for the two new classes of beagles. It is quite probable that the name Maryland will be changed to America, but as yet this matter is undecided.

## AWARDS.

- Class IV—Imported English setter bitches. 1st, Minerva.
- VIII—Champion Irish setter dogs. 1st, Berkeley.
- X—Champion Irish setter bitches. 1st, Loo II.
- XI—Irish setter dogs. 1st, Biz; red, Raleigh; v h c, Flint; h c, Conn; c, Bob II.
- XII—Irish setter bitches. 1st, Gusie; 2d, Norn; v h c, Abbey W.; Kathleen; h c, Anabel Lee; c, Juno.
- XIII—Irish setter dog puppies. 1st, Flash; v h c, Ned; h c, Red Ranger.
- XIV—Irish setter bitch puppies. 1st, Red Lion.
- XV—Champion Gordon setter dogs. 1st, Bob White.
- XVI—Champion Gordon setter bitches. 1st, Stella.
- XVII—Gordon setter dogs. 1st, Goldsmith Kennel Club; 2d, Stella; v h c, Cheek; h c, Grouse II.
- XVIII—Gordon setter bitches. 1st, Jessie; 2d, Nell; v h c, Grand Duchess.
- XIX—Gordon setter dog puppies. 1st, Grouse II.
- XX—Gordon setter bitch puppies. 1st, Typsy II.
- XXIII—Champion pointer dogs, under 55 lbs. 1st, Rush.
- XXIV—Champion pointer bitches, under 50 lbs. 1st, Lady Romp.
- XXV—Pointer dogs over 55 lbs. 1st, Banjo; 2d, Tom; h c, Twig.
- XXVI—Pointer bitches over 50 lbs. 1st, Nellie R.
- XXVII—Pointer dogs, under 55 lbs. 1st, Duke; 2d, Dick; h c, Rover.
- XXVIII—Pointer bitches, under 50 lbs. 1st, Rue; 2d, Cleo; v h c, Glymont; h c, Queen.
- XXIX—Pointer dog puppies, 1st, Garfield; v h c, Fawcett's Duke; h c, Lewis Duke.

Class 37.—(For the best beagle puppy under 12 months, dog or bitch, \$10)—188 John Bittner and Bro., Allegheny City, Beulah, black, white and tan, 11 months; Gallup a Sport-Martinett's Fan, 189<sup>o</sup> Dr. T. Clay Maddux and Gen Frank A. Bond, Smart II., black, white and tan, 7 months; Dyke-Dorsey's Vesper, 190<sup>o</sup> Dr. T. Clay Maddux and Gen. Frank A. Bond.

Dell, black, white and tan, 4 months; Dyke-Imp. Katie. 191 Dr. J. Clay Madison and Gen. Frank A. Bond, Dale, black, white and tan, 4 months; Dymale Imp. Katie. 192 Chas. Ellis, Bole, black, white and tan, 7 months. 193 Chas. Ellis, Nance, black, white and tan, 6 months. 194 J. A. Scovell, Nance, black, white and tan, 7 months; Custer-Imp. Charming. 195 Robert M. Bland, New Market, Md., Lacy II, black, white and tan, 1 year. 196 Pottinger Dorsey, New Market, Md., Lacy II, black, white and tan, 8 months; Major-Lucy. 197 Pottinger Dorsey, Cleopatra, black, white and tan, 9 months; Bradbury's Major-Diana. 198 J. N. Dodge, Hoxly, black, white and tan, 11 months; Dora's Ring-necked Dog's Spider.

Class 33.—Dachshunds (best dog or bitch, \$10; second best, \$5).—199 Jacob Weiskacher, McKeesport, Pa., Max, black and tan, 2 years; imported. 200 Jacob Weiskacher, Fan, black and tan, 2 years; imported. 201 J. A. Scovell, Grochen, fallow red, 15 months; imported. 202 Jacob Weiskacher, Fan, black and tan, 2 years; imported. 203 John Fawcett, Jim, black and tan, 2½ years; imported.

Class 34.—Fox Terrier Dogs (best, \$10; second best, \$5).—204 James Mortimer, New York, Vandal, white and tan, 3 years; Torment-Venus. 205 Paul Pedigree, 206 W. Rutherford, New York, Bowstring, white, black and tan, 4 years; champion Turk-Vixen. 206 L. and W. Rutherford, Nailer, white, black and tan, 2 years; champion Buff-Activity. 207 James Mortimer, Shol, white, black and tan, 18 months; Tartar-Nell, winner of 1st New York.

Class 40.—Fox Terrier Bitches (best, \$10; second, \$5).—208 James Hennessey, Vixen, black, white and tan, 1½ years; imported. 209 Fred W. Fleck, New York City, Gipp, white, tan and spotted. 20 months; Finchy-Kate, full extended pedigree. 210 L. and W. Rutherford, Nailer, black and tan, 3 years; damster-Gypsy. 211 L. and W. Rutherford, Tussle, white, black and tan, 2 years; Joe-Venus. 212 L. and W. Rutherford, Chance, white, black and tan, 3½ years.

Class 41.—Fox Terrier Puppies Under 12 Months (best dog or bitch, \$10).—213 Fred W. Fleck, Prince, white and tan, 8 months; Vandal-Sue; full extended pedigree. 214 L. and W. Rutherford, Sally, white, black and tan, 8 months; Flash-Tussle. 215 L. and W. Rutherford, Joker, white and black, 6 months; Nailer-Active. 216 L. and W. Rutherford, Allamuchy Nell, white, black and tan, 1 month; Nailer-Active. 217 Dan Gardner, Pittsburgh, Sue G, white, black and tan, 4 months; Imp. Buff-Imp. Vie (Vie winner of 4 prizes).

Class 42.—Greyhounds (best dog or bitch, \$10).—218 L. C. F. Lotz, Chicago, Spring, light brown, 8 years; Flash-Nell, full pedigree; winner of Centennial Medal and 2d at New York. 219 L. C. F. Lotz, March, 3 years; Prince-Mand.

Class 43.—Scottish Deerhounds—No entries.

#### NON-SPORTING DOGS.

Class 44.—Mastiffs—No entries.

Class 45.—St. Bernards (best dog or bitch, \$10; second, \$5).—220 William L. Jones, Pittsburgh, Snowball, tawney and white, 3 years; imported. 221 Fred, George, Allegheny City, Tiger, light brown, 3 years. 222 John T. Hutton, Pearson, liver, 3 years; bred from imported stock.

Class 46.—Newfoundlands (best dog or bitch, \$10; second, \$5).—223 W. C. Meyer, Chesapeake, Pa., Pluto, black, 4 years. 224 Alfred Joseph, Pittsburgh, Leon, black, 4½ years. 225 W. Rutherford, Kate, 225 J. D. Williams, Cambridge, Beaver Co., Pa., Lion, black, with white points.

Class 47.—Siberian or Cln Dogs—No entries.

Class 48.—Shepherd Dogs or Collies (best rough-coated dog or bitch, \$10; second, \$5).—226 Jacob Drake, Mansfield Valley, Pa., Lucy, champion. 227 W. H. C. Bristol, 228 David Foster, Mansfield Valley, Pa., Ring, white and tan, 2 years; from imported stock. 229 Dr. J. W. Downey, York, Pa., White, white, black and white, 3 years; imported. 230 Dr. J. W. Downey, Lassie, sable and white, whelped 1879; Mr. Mills' Toss-Mr. J. Swift's Lassie; winner of 1st St. Louis, 1880.

Class 49.—Shepherd Dogs or Collies (best smooth-coated dog or bitch, \$10; second, \$5).—231 G. S. Houghton, Pittsburgh, Stella, fawn and white, 2 years; imported. 232 Geo. S. Houghton, Bruce, black, white and tan, 4 months; Scott-Zaldee; full pedigree. 233 Geo. S. Houghton, Nell, black and white, mixed, 5 months.

Class 50.—Bull Dogs (best dog or bitch, \$10; second, collar, value \$5).—234 George W. Moore, 235 Geo. W. Moore, 236 Geo. W. Moore, 237 Geo. W. Moore, 238 Geo. W. Moore, 239 Geo. W. Moore, 240 Geo. W. Moore, 241 Geo. W. Moore, 242 Geo. W. Moore, 243 Geo. W. Moore, 244 Geo. W. Moore, 245 Geo. W. Moore, 246 Geo. W. Moore, 247 Geo. W. Moore, 248 Geo. W. Moore, 249 Geo. W. Moore, 250 Geo. W. Moore, 251 Geo. W. Moore, 252 Geo. W. Moore, 253 Geo. W. Moore, 254 Geo. W. Moore, 255 Geo. W. Moore, 256 Geo. W. Moore, 257 Geo. W. Moore, 258 Geo. W. Moore, 259 Geo. W. Moore, 260 Geo. W. Moore, 261 Geo. W. Moore, 262 Geo. W. Moore, 263 Geo. W. Moore, 264 Geo. W. Moore, 265 Geo. W. Moore, 266 Geo. W. Moore, 267 Geo. W. Moore, 268 Geo. W. Moore, 269 Geo. W. Moore, 270 Geo. W. Moore, 271 Geo. W. Moore, 272 Geo. W. Moore, 273 Geo. W. Moore, 274 Geo. W. Moore, 275 Geo. W. Moore, 276 Geo. W. Moore, 277 Geo. W. Moore, 278 Geo. W. Moore, 279 Geo. W. Moore, 280 Geo. W. Moore, 281 Geo. W. Moore, 282 Geo. W. Moore, 283 Geo. W. Moore, 284 Geo. W. Moore, 285 Geo. W. Moore, 286 Geo. W. Moore, 287 Geo. W. Moore, 288 Geo. W. Moore, 289 Geo. W. Moore, 290 Geo. W. Moore, 291 Geo. W. Moore, 292 Geo. W. Moore, 293 Geo. W. Moore, 294 Geo. W. Moore, 295 Geo. W. Moore, 296 Geo. W. Moore, 297 Geo. W. Moore, 298 Geo. W. Moore, 299 Geo. W. Moore, 300 Geo. W. Moore, 301 Geo. W. Moore, 302 Geo. W. Moore, 303 Geo. W. Moore, 304 Geo. W. Moore, 305 Geo. W. Moore, 306 Geo. W. Moore, 307 Geo. W. Moore, 308 Geo. W. Moore, 309 Geo. W. Moore, 310 Geo. W. Moore, 311 Geo. W. Moore, 312 Geo. W. Moore, 313 Geo. W. Moore, 314 Geo. W. Moore, 315 Geo. W. Moore, 316 Geo. W. Moore, 317 Geo. W. Moore, 318 Geo. W. Moore, 319 Geo. W. Moore, 320 Geo. W. Moore, 321 Geo. W. Moore, 322 Geo. W. Moore, 323 Geo. W. Moore, 324 Geo. W. Moore, 325 Geo. W. Moore, 326 Geo. W. Moore, 327 Geo. W. Moore, 328 Geo. W. Moore, 329 Geo. W. Moore, 330 Geo. W. Moore, 331 Geo. W. Moore, 332 Geo. W. Moore, 333 Geo. W. Moore, 334 Geo. W. Moore, 335 Geo. W. Moore, 336 Geo. W. Moore, 337 Geo. W. Moore, 338 Geo. W. Moore, 339 Geo. W. Moore, 340 Geo. W. Moore, 341 Geo. W. Moore, 342 Geo. W. Moore, 343 Geo. W. Moore, 344 Geo. W. Moore, 345 Geo. W. Moore, 346 Geo. W. Moore, 347 Geo. W. Moore, 348 Geo. W. Moore, 349 Geo. W. Moore, 350 Geo. W. Moore, 351 Geo. W. Moore, 352 Geo. W. Moore, 353 Geo. W. Moore, 354 Geo. W. Moore, 355 Geo. W. Moore, 356 Geo. W. Moore, 357 Geo. W. Moore, 358 Geo. W. Moore, 359 Geo. W. Moore, 360 Geo. W. Moore, 361 Geo. W. Moore, 362 Geo. W. Moore, 363 Geo. W. Moore, 364 Geo. W. Moore, 365 Geo. W. Moore, 366 Geo. W. Moore, 367 Geo. W. Moore, 368 Geo. W. Moore, 369 Geo. W. Moore, 370 Geo. W. Moore, 371 Geo. W. Moore, 372 Geo. W. Moore, 373 Geo. W. Moore, 374 Geo. W. Moore, 375 Geo. W. Moore, 376 Geo. W. Moore, 377 Geo. W. Moore, 378 Geo. W. Moore, 379 Geo. W. Moore, 380 Geo. W. Moore, 381 Geo. W. Moore, 382 Geo. W. Moore, 383 Geo. W. Moore, 384 Geo. W. Moore, 385 Geo. W. Moore, 386 Geo. W. Moore, 387 Geo. W. Moore, 388 Geo. W. Moore, 389 Geo. W. Moore, 390 Geo. W. Moore, 391 Geo. W. Moore, 392 Geo. W. Moore, 393 Geo. W. Moore, 394 Geo. W. Moore, 395 Geo. W. Moore, 396 Geo. W. Moore, 397 Geo. W. Moore, 398 Geo. W. Moore, 399 Geo. W. Moore, 400 Geo. W. Moore, 401 Geo. W. Moore, 402 Geo. W. Moore, 403 Geo. W. Moore, 404 Geo. W. Moore, 405 Geo. W. Moore, 406 Geo. W. Moore, 407 Geo. W. Moore, 408 Geo. W. Moore, 409 Geo. W. Moore, 410 Geo. W. Moore, 411 Geo. W. Moore, 412 Geo. W. Moore, 413 Geo. W. Moore, 414 Geo. W. Moore, 415 Geo. W. Moore, 416 Geo. W. Moore, 417 Geo. W. Moore, 418 Geo. W. Moore, 419 Geo. W. Moore, 420 Geo. W. Moore, 421 Geo. W. Moore, 422 Geo. W. Moore, 423 Geo. W. Moore, 424 Geo. W. Moore, 425 Geo. W. Moore, 426 Geo. W. Moore, 427 Geo. W. Moore, 428 Geo. W. Moore, 429 Geo. W. Moore, 430 Geo. W. Moore, 431 Geo. W. Moore, 432 Geo. W. Moore, 433 Geo. W. Moore, 434 Geo. W. Moore, 435 Geo. W. Moore, 436 Geo. W. Moore, 437 Geo. W. Moore, 438 Geo. W. Moore, 439 Geo. W. Moore, 440 Geo. W. Moore, 441 Geo. W. Moore, 442 Geo. W. Moore, 443 Geo. W. Moore, 444 Geo. W. Moore, 445 Geo. W. Moore, 446 Geo. W. Moore, 447 Geo. W. Moore, 448 Geo. W. Moore, 449 Geo. W. Moore, 450 Geo. W. Moore, 451 Geo. W. Moore, 452 Geo. W. Moore, 453 Geo. W. Moore, 454 Geo. W. Moore, 455 Geo. W. Moore, 456 Geo. W. Moore, 457 Geo. W. Moore, 458 Geo. W. Moore, 459 Geo. W. Moore, 460 Geo. W. Moore, 461 Geo. W. Moore, 462 Geo. W. Moore, 463 Geo. W. Moore, 464 Geo. W. Moore, 465 Geo. W. Moore, 466 Geo. W. Moore, 467 Geo. W. Moore, 468 Geo. W. Moore, 469 Geo. W. Moore, 470 Geo. W. Moore, 471 Geo. W. Moore, 472 Geo. W. Moore, 473 Geo. W. Moore, 474 Geo. W. Moore, 475 Geo. W. Moore, 476 Geo. W. Moore, 477 Geo. W. Moore, 478 Geo. W. Moore, 479 Geo. W. Moore, 480 Geo. W. Moore, 481 Geo. W. Moore, 482 Geo. W. Moore, 483 Geo. W. Moore, 484 Geo. W. Moore, 485 Geo. W. Moore, 486 Geo. W. Moore, 487 Geo. W. Moore, 488 Geo. W. Moore, 489 Geo. W. Moore, 490 Geo. W. Moore, 491 Geo. W. Moore, 492 Geo. W. Moore, 493 Geo. W. Moore, 494 Geo. W. Moore, 495 Geo. W. Moore, 496 Geo. W. Moore, 497 Geo. W. Moore, 498 Geo. W. Moore, 499 Geo. W. Moore, 500 Geo. W. Moore, 501 Geo. W. Moore, 502 Geo. W. Moore, 503 Geo. W. Moore, 504 Geo. W. Moore, 505 Geo. W. Moore, 506 Geo. W. Moore, 507 Geo. W. Moore, 508 Geo. W. Moore, 509 Geo. W. Moore, 510 Geo. W. Moore, 511 Geo. W. Moore, 512 Geo. W. Moore, 513 Geo. W. Moore, 514 Geo. W. Moore, 515 Geo. W. Moore, 516 Geo. W. Moore, 517 Geo. W. Moore, 518 Geo. W. Moore, 519 Geo. W. Moore, 520 Geo. W. Moore, 521 Geo. W. Moore, 522 Geo. W. Moore, 523 Geo. W. Moore, 524 Geo. W. Moore, 525 Geo. W. Moore, 526 Geo. W. Moore, 527 Geo. W. Moore, 528 Geo. W. Moore, 529 Geo. W. Moore, 530 Geo. W. Moore, 531 Geo. W. Moore, 532 Geo. W. Moore, 533 Geo. W. Moore, 534 Geo. W. Moore, 535 Geo. W. Moore, 536 Geo. W. Moore, 537 Geo. W. Moore, 538 Geo. W. Moore, 539 Geo. W. Moore, 540 Geo. W. Moore, 541 Geo. W. Moore, 542 Geo. W. Moore, 543 Geo. W. Moore, 544 Geo. W. Moore, 545 Geo. W. Moore, 546 Geo. W. Moore, 547 Geo. W. Moore, 548 Geo. W. Moore, 549 Geo. W. Moore, 550 Geo. W. Moore, 551 Geo. W. Moore, 552 Geo. W. Moore, 553 Geo. W. Moore, 554 Geo. W. Moore, 555 Geo. W. Moore, 556 Geo. W. Moore, 557 Geo. W. Moore, 558 Geo. W. Moore, 559 Geo. W. Moore, 560 Geo. W. Moore, 561 Geo. W. Moore, 562 Geo. W. Moore, 563 Geo. W. Moore, 564 Geo. W. Moore, 565 Geo. W. Moore, 566 Geo. W. Moore, 567 Geo. W. Moore, 568 Geo. W. Moore, 569 Geo. W. Moore, 570 Geo. W. Moore, 571 Geo. W. Moore, 572 Geo. W. Moore, 573 Geo. W. Moore, 574 Geo. W. Moore, 575 Geo. W. Moore, 576 Geo. W. Moore, 577 Geo. W. Moore, 578 Geo. W. Moore, 579 Geo. W. Moore, 580 Geo. W. and tan, whelped 1879; Charley-Gyp. 264 James Hennessey, Sport, blue and tan, 2 years; imported. 265 Robert H. Baker, Detroit, Mich., Vie, formerly Dandy, blue and tan, 3 years; imported.

Class 57.—King Charles, or Blenheim Spaniels—No entries.

Class 58.—Italian Greyhounds (best dog or bitch, \$10; second, \$5).—266 A. H. Moore, Cream, fawn, whelped 1878; Tidy-Firt. 267 A. H. Moore, Pearl, fawn, whelped 1878; Douglas-Gypsy. 268 Wm. Montgomery, Pittsburgh, Crissie, fawn, 3 years. 269 James Hennessey, Derby, white and fawn, 3 years.

Class 59.—Miscellaneous and Foreign Cans for all dogs that have not been assigned a separate Class (best dog or bitch, \$10; second best, \$5).—270 John Bittner and Bro., Allegheny City, Tip, white, 7 years; Cuban Poodle, bred from imported stock. 271 Daniel Bittner, Allegheny City, Nell, white and black, spotted, 16 months; French poodle. Imported. 272 Daniel Bittner, Daisy, white, 3 years; Cuban poodle, bred from imported stock. 273 Daniel Bittner, Sarah Bernhardt, white, 4 months; Cuban Poodle, bred from imported stock. 274 Dan Gardner, French Poodle, bred from imported stock. 275 Dan Gardner, French Poodle, bred from imported stock. 276 Geo. W. Moore, Flash II, lanky, 2½ years; Bellington Terrier. 277 J. D. Walms, North, black and deer, 7 years; Backhound. 278 James Hennessey, Pete, blue tan, 3½ years; Terrier. Bourne-Nettle.

#### SPECIAL PRIZE ENTRY LIST.

A. Parker Brothers, of 79 Chambers street, New York, offer a double breech-loading gun, valued at \$150, for the best Setter Dog or Bitch of any strain.—Entries: 279 Snellenburg & McCoulin, Thunders. 280 A. H. Moore, Berkeley. 281 Dr. S. Fleet-Spirit, St. Elmo. 282 P. H. Bryson, Peep o' Day. 283 John S. McIntosh, Bix.

B. J. J. Snellenburg, of New Brighton, Pa., offers a first-class vulcan or collar hanging suit, made to measure, valued at \$50, not to be competed for by the donor, for the best Setter Dog or Bitch of any strain.—Entries: 284 R. T. Vandover, Rock. 285 A. H. Moore, Leicester. 286 A. H. Moore, Rocky Mountain. 287 Dr. S. Fleet-Spirit, Wanda. 288 P. H. Bryson, Peep o' Day.

C. For the best Irish Setter Dog, Steel Engraving of Biddy and Erin; value \$10.—Entries: 289 John S. McIntosh, Bix. 290 W. A. Strother, Flint. 291 Geo. W. Moore, Red Grouse. 292 Dr. J. H. Moore, Bix.

D. For the best Pointer Dog, Steel Engraving, framed, of Keswick and Jessamine, value \$10.—Entries: 293 A. H. Moore, Donald. 294 Edmund Ogilby, Rush.

E. For the best Gordon Setter Dog, Lad and Rand's Powder, value \$10.—Entries: 295 R. W. Ardary & Bro., Stubble. 296 A. H. Moore, Bob.

F. For the best English Setter Dog, Lad and Rand's Powder, value \$15.—Entries: 297 Snellenburg & McCoulin, Thunders. 298 A. H. Moore, Leicester. 299 Dr. S. Fleet-Spirit, Wanda. 300 The Bear Creek Reining Co., Limited, offer a Barrel of Water White Oil, for the largest collection of Non-Sporting Dogs, exhibited by one person.—Entry: 301 A. H. Moore, 1,711 Garden street, Philadelphia, Pa.

#### DOGS THAT TREED GROUSE.

##### POINTERS VS. SETTERS.

STAGTON, Va., Jan. 7.

#### Editor Forest and Stream:

I have seen several communications in late issues of your valuable paper touching subjects which I think I am able to throw some light on, and others about which I would like to have "my say." Of the first class of subjects is the pheasant dog—the dog that will tree grouse (ruffed grouse). These dogs are like poets, born and not made. In an active experience as a sportsman of twenty-five years, I have never seen more than two really good pheasant dogs of this kind. One was a half terrier, the other half pointer. The latter was every variety of no account dog in the world; and the other was a fine-bred hound bitch, the best deer dog I ever saw besides. So that you may infer that there is nothing in the breed. Nobody could tell how either of them ever arrived at the perfection for which they were noted—as no attempt at training was made on either—they just "took to it."

I have seen several communications in late issues of your valuable paper touching subjects which I think I am able to throw some light on, and others about which I would like to have "my say." I have seen several communications in late issues of your valuable paper touching subjects which I think I am able to throw some light on, and others about which I would like to have "my say." Of the first class of subjects is the pheasant dog—the dog that will tree grouse (ruffed grouse). These dogs are like poets, born and not made. In an active experience as a sportsman of twenty-five years, I have never seen more than two really good pheasant dogs of this kind. One was a half terrier, the other half pointer. The latter was every variety of no account dog in the world; and the other was a fine-bred hound bitch, the best deer dog I ever saw besides. So that you may infer that there is nothing in the breed. Nobody could tell how either of them ever arrived at the perfection for which they were noted—as no attempt at training was made on either—they just "took to it."

I am glad to see from the results of the late trials on Robin's Island that the pointer is beginning once more to get his due. I welcome an intelligent and vigorous champion of this noble lot of all dogs—as "Black Ned" and South Side. I have sat in mute astonishment for the several years I have been reading your paper at the craze that seems to me to have taken possession of our Northern (and to some extent our Southern) sportsmen about the setter. Now don't be alarmed! I don't intend to go all over the threadbare discussion of the whole merits and demerits of the two breeds, but I wish to give my experience of the two for what it is worth. I started bird hunting more than twenty-five years ago. My first love was a setter. I have broken and hunted four others up to this time, and have owned and broken three pointers in the same time. They were all of good native stock, but as pure as the best "imported." My setters passed with sportsmen for first rate dogs, but I honestly confess that not one single one of them ever "filed my eye"—they never came up to my ideal of a good bird dog—while of the three pointers each one was at least a wish him to be.

It is said that they haven't got the speed or the style of the setter. I can tell "Black Ned" for his comfort that we have here a strain of bold, "slashing liver and white pointers," that have for eight or ten years past shown the way to all the setters that have been brought against them, and can do it yet. They are as fast, have more nose, as much bottom, are as staunch and back prettier from the very start than any setters that ever were seen here.

The following are the tickets that were balloted for:

For President—J. Otto Donner. For Vice-Presidents—C. DuBois Wagstaff, G. E. Raymond, J. G. Heckscher, S. Fleet Spier, Justus Von Lengerke, W. A. Coster. For Treasurer—H. H. Munn. For Secretary—Jacob Pentz. For Executive Committee—H. E. Aiken, W. H. Thompson, R. E. Roosevelt, A. E. Godfrey, Chas. Heath, H. W. Livingston, R. C. Cornell, L. H. Billings, J. E. I. Grainger, A. Belmont, Jr., I. O. Munroe, E. A. Spooner, G. De E. Grant, J. W. Greene, Geo. T. Leech, Geo. W. Bassford, J. Van Buren, T. Van Buren, E. A. Herzberg. For President—J. Otto Donner. For Vice-Presidents—I. C. Munroe, J. G. Heckscher, W. A. Coster, Chas. H. Raymond, Jas. Benkard, N. H. Holmes. For Treasurer—Geo. T. Leech. For Secretary—Fred. N. Hall. For Executive Committee—H. E. Aiken, W. H. Thompson, R. E. Roosevelt, A. E. Godfrey, Chas. Heath, H. W. Livingston, R. C. Cornell, J. E. I. Grainger, A. Belmont, Jr., R. E. Ryer, Max Weuzel, S. Fleet Spier, R. C. Cornell, J. Von Lengerke, H. E. Hamilton, Chas. Heath, Aug. Belmont, Jr., Martin Van Buren, Travis Van Buren.

The whole number of votes cast was seventy-eight, of which received forty-one votes, while the last ticket received thirty-seven.

It was resolved that the finance committee should be requested to devise a system to govern the Secretary and Treasurer in regard to the financial business of the club. The meeting then adjourned.

FIELD TRIALS CRITICISM.

Pittsburgh, Pa., Jan. 7.

*Editor Forest and Stream:*  
For my article concerning on the National Association Field Trial Rules I promised in my next to speak my mind of the bad taste of an interested field-trial reporter in trying to run Count Noble to the front and some irregularities at the trials at Vincennes. I now address myself to that duty. I may be wrong in saying that this newspaper man tried to run Count Noble to the front, but as a close observer I simply say what my impressions are from what I have seen and heard. I have often heard it intimated—and I venture to assert from many sources—that I have heard the same—that the National Association Field Trials were run in the interest of certain men and strains of dogs in which they were interested, and that this newspaper man was active in running these to the front. I confess my observations for two years trials have led me to believe that the charge is not without some foundation. At Vincennes the changes were rung on Count Noble and Gladstone, Gladstone and Count Noble, and you could hardly hear anything but "Gladstone" and "Count Noble" talk loud and continued in their favor; and to add to this (as I am informed), this man at the conclusion of the heat between Count and May publicly on the field announces an offer of \$1,000 for Count Noble. I say it was in very bad taste for him to have done so. It is said he was authorized to do so by a Mr. McDonald. But suppose he was, does this fact make it appear any better? Very few thought the offer a *bona fide* one, and I was told a significant wink went the rounds at the time among those present.

By the way, was it not the same McDonald who once offered \$1,500 for Gladstone? Pity he cannot make an offer where his money would change hands.

I say it was not the fair and square thing to do under the circumstances, and in this I believe all disinterested sportsmen will agree.

Now, let me ask, what was the object of this \$1,000 offer and all this persistent talk and brag? Was it not a part of a concerted plan to influence the judges and carry these dogs to the front in the "Dorothy" and "Free for All"? If I did believe it was intended to create a popular sympathy and influence and remind the judges if their awards were adverse of the "viols of wrath" to be poured upon them, then I would not be writing these lines. But were the judges influenced? Is the question which naturally arises. I must say I believe the judges meant to do the square thing, may have gone home thinking they had, but so subtle was this influence the sequel seems to indicate they were not proof against it.

In my previous article I claimed that Count Noble was beaten by two entries. I referred to May and Daisy Laverack. The heat between May and Count was only continued about fifteen minutes and the award made on the first fault of May; Count Noble, as far as I could learn, made several flushes, secured but one positive point, and was credited for several doubtful points. May fairly outquartered Count Noble, and her bursts of speed were immense, so much so that this reporter, in his account, was forced to say "she showed Count Noble her heels." She flushed and pointed, as Count Noble did, but refused to back, which, it was reported the judges said, if she had done the heat would have been hers. Now, I wish here to call attention to a little fact that was not noted in this account of the trials, namely, Count Noble's huddling.

After pointing he deliberately left his point to go round his birds, mean while May came down on them in the position he left and pointed staunchly before "Count Noble" pointed again. So apparent was this that I am informed that Whitford insulted Sanborn who overheard him saying to Short, the handler of May, at the supper table, referring to the opportunity: "There was where you made a mistake Short, you should have walked right in and flushed your bird before Count Noble secured his point again." But Short did not do this, and after a while Count Noble got his point and the judges allowed both a point. Now, I claim, considering that that Count Nobles should have been out for staunchness if allowed to point, and this, considered in connection with May's superior speed and quartering in a heat but fifteen minutes long, proved her the superior.

But the work of Daisy. Well may your kennel editor express regret that Daisy did not have an opportunity to meet Count Noble. Her work was perfect and as brilliant as a meteor and without a mistake; continued for nearly two hours under most adverse circumstances (sore feet), and yet when it was left to the judges to make the awards, it proving impracticable to finish the trials, they give Count Noble first, Daisy second, and threw May back with three others for third, throwing Abbe W. out, a smart little Irish bitch, who had done very clever work and won her heat, and brought in for a division of third a dog that had lost a heat.

Now why the judges concluded the heat between May Laverack and Count Noble in thirty minutes under the circumstances, and yet compelled Daisy Laverack to run nearly two hours with some feet against continued blundering nearly the first on the part of Peepo Day I fail to see, unless it shows that Count Noble would have been licked in a two-hour heat, and Peepo Day have a chance to open the sours on Daisy's feet and win. One thing, the dog to win against these had a long heat before him, and would be compelled to whip

them twice over before the judges would concede it. So much for the subtle influence.

Mr. Aldrich in one of your issues says "Whitford is a trickster, and Gladstone a trick dog." There is a great deal of truth in this, but this reporter calls Whitford's tricks with his dogs "nice generalship." I say, out on such judgment that will allow such tricks. If time would permit I would show how Davidson was imposed upon here. Your Eastern trials were not free from the like, and did not reflect as much credit on the judges.

I say, let the best dog win regardless of man or blood. Grand style may be well enough with other qualities, but give me the dog that will find and point his birds staunchly in preference to all the style imaginable in a flusher. So says Fritz.

LEONBERG DOGS.

THE account of the Leonberg dogs in your issue of Dec. 30 induces me to send you a description of several of the same breed now in my possession, to which reference was made in your valuable journal of May 9, also July 31, 1879.

In February of that year I received by steamer Nederland, direct from the kennel of Count Essig, two magnificent specimens of his celebrated breed of dogs, Sultan and Para, then pups of three months old. Despite the utmost care, the voyage and change of climate proved almost fatal to the young animals. Para, considered the most promising of the two, finally succumbed and died the following May, not, however, without both he and Sultan began to show signs of that remarkable size and beauty for which the race is noted. Dog fanciers from far and near were loud in their praise and frequently visited the growing animals. Efforts were made to have them exhibited in the Philadelphia Bench Show of that year, but it was not deemed advisable to subject them to the excitement, etc., of a public exhibition.

I informed Baron Essig of Para's death, when, in the kindest manner possible, he sent me a half-brother of Sultan, Cesar, sired by Marco, one of the most celebrated Leonberg dogs of Europe. Cesar was eight months old when he arrived by steamer Zealand, in July, 1879, and although not so large as Sultan, is perhaps one of the finest specimens of the canine race in America. In color and appearance he resembles a young lion, as full of courage as he is of gentleness and as affectionate as a child. Sultan is much larger, standing thirty-five inches high, his head reaching nearly four feet; he is seven feet in length from tip to tip; in color he is light fawn and is emphatically the pet of the ladies. The origin of this breed of dogs, alike remarkable for beauty, size and docility, is somewhat remarkable. In 1846 Count Essig, of Wurtemberg, Germany, conceived the idea of producing a race of dogs that should combine the valuable features of the Newfoundland and St. Bernard, and at the same time excel either in size and beauty. By crossing the breed of the above types and mating the produce with the large Pyrene wolf dog (the original St. Bernard dog) the Count succeeded beyond his expectations, and now that over thirty years have gone by, the breed of Leonberg dogs is acknowledged by connoisseurs in affairs canine to be the largest and handsomest class of dogs in existence.

They are particularly remarkable for their extreme docility, though at the same time at night they are excellent guardians of the house. As evidence of their sagacity, it may be mentioned that the present race of so-called St. Bernard dogs in use at the Alpine Hospices are in reality a cross between that breed and Count Essig's celebrated dogs. Three years since, when, through accident and an epidemic attack on the dogs of the Hospice, the staff of life-saving brutes were reduced to a single animal, Count Essig presented the Rev. Prior Father Delouise with two dogs from his then already celebrated kennel. From these three, two Leonberg and a Mount St. Bernard, are descended the present dogs, of whose gallant services to benighted travelers amid the snow-bound fastnesses of the treacherous Alps the public are frequently made aware through the columns of the newspapers. One of these dogs was presented to the Prince of Wales when he visited the Hospice, and this dog has taken numerous prizes at the bench shows of Great Britain.

The breed varies in color, but the most valuable may be considered to be the rich brown-colored ones, shaded more darkly over the head and neck. Differing from other breeds of dogs, these animals take a much longer time to fully develop, and furthermore, require indulgent treatment in their youth, rarely attaining their full growth until they are three years of age. I am now about to import four more Leonbergs, with the idea of maintaining a complete kennel of this rare breed. My experience in the matter, however, teaches me the folly of sending for pups, as they will seldom survive the hardship of the trip, and a grown dog is not desirable to import. I therefore intend to visit Germany and accompany the dogs myself.

I might add that Sultan and Cesar were especially invited to visit General and Mrs. Grant at their rooms at the Continental Hotel, Philadelphia, December 23, 1879. The General was especially delighted, presenting each with a gold medal and pronouncing them the largest and most magnificent dogs he had ever seen. W. E. STERLING.

New York, Jan., 1881.

BELTON.—An erroneous impression seems to prevail in regard to the origin of the term Belton, as applied to setters. Beltons are so called from Belton, a place in Northumberland, and hence the word should be written with the initial letter capitalized.

WHAT IS A COCKER.—*Cortland, N. Y., Jan. 11*—I have been very much interested in the articles which have appeared in your paper on the cocker spaniel, and the proposition for the formation of a club and sat satisfactory standard receives my hearty endorsement. The standard, however, ought not to be in the interest of any particular strain of this breed, but breeders all over the country should present points on their dogs for the guidance of any committee appointed, that thereby a more general standard could be established. I have been a lover of the cocker for many years and have bred them very carefully. I have now in my possession six very fine specimens. Their color is seal brown and white, and lemon and white. The father of my dogs was imported from England and from one of the best kennels. The bitch was bred in Philadelphia. I submit the points on one of my dogs as representing my strain: Tip of tail to nose, 39 in.; tail, 9½ in.; chest, 33½ in.; height, 10½ in. From tip of one ear to the other, not counting feather, 16 in. Dis-

tance between centre of pupils, 3 in. From tip of nose to beginning of forehead, 8½ inches. Shape of head, roundish; coat very lustrous seal-brown and white. Color does not fade by constant exposure to sun and water. Hair along the back is about two inches long and decidedly wavy; legs and toes well feathered and tail full. For hunting qualities in thick cover I prefer the cocker to any dog I have ever used. And as for the most part it is that kind of hunting in this State, it is a wonder to me that they have not come into more general use. As retrievers I find the cocker as intelligent and sure-scented as any and more persistent than most of dogs.

Let it be understood that while I am in favor of a standard for the cocker, yet, if, as one of your correspondents says, a standard already exists, I should be in favor of proving, first, that such standard fails to meet the requirements. The force of that will appear to those who have used great care in trying to retain the points in breeding of those dogs which they have procured from a standard kennel in England and elsewhere. F. R. T.

South Acworth, N. H., Jan. 13.—We wish to become members of the Cocker Club and would recommend every breeder and owner of a cocker spaniel in the United States and Canada to join the club. It will be the salvation of the cocker if rightly managed. We hope all breeders will take hold and join at once and get the wheels to rolling as soon as possible. C. B. CUMMINGS AND SON.

NOT SO VERY LARGE.—I see by a late number that you call General Hancock's dog (125 pounds) "undoubtedly the largest specimen of the canine race in the United States." Isaac Benson, of this place, has a dog two years old ("General") who weighs 130 pounds, and now growing fast as ever. His mother was a St. Bernard and his father a New Foundland. He is a tall, "rangy" fellow, and bids fair to go to 150 pounds by the time he is four years old; is very good-natured, intelligent, friendly and a good faithful watch dog. Have you any larger "two-year-olds?" A.

Condersport, Pa., Jan. 10.

The article you refer to was a reprint. Many dogs go over 120 pounds in weight. We have seen within a week a Leonberg dog, eighteen months old, said to weigh 160 pounds.

OFF FOR THE SOUTH.—Mr. W. Titus sailed January 15 for Savannah. He will locate for the winter at some point in Georgia near the Florida line.

ADDED HONORS FOR ELONO.—I see by your extract from London *Field*, that there is "one more" added to the list of honors won by the get of Elcho, in the winning of first by his daughter, Ailsen at Manchester, England Dog Show. You will remember she is the bitch that after taking first at Cork, Ireland, 1876, was brought over to this country by her owner (who came to shoot in the Irish Rifle Team) and carried off from all aspirants the valuable silver tea set given by your paper as champion prize at the Centennial. She has since her return to Ireland been winner both there and in England. Yours, OWNER OF ELONO.

Jan. 15.

CURE FOR MANGE.—*Editor Forest and Stream:* Incorporate equal parts of pine tar and lard or grease with gentle heat, when nearly cool thicken to consistency of paste with flour sulphur. With carbolic or laundry soap give the animal a thorough lathering; when dry, apply the ointment with hand, vigorously rubbing against the hair. Don't forget the tail, and if a housekeeper, don't you forget to chain that dog out of the house if the madame's hair is inclined to the pink tint. An old fox-hunter many years ago gave me the above specific and but once have I found the second application necessary to a cure. KENTUCKIAN.

Mill Springs, Ky.

WESTERN PENNSYLVANIA DOG AND POULTRY SOCIETY.—The annual meeting of this organization was held at the City Hall, in Pittsburgh, Pa., on the evening of January 10, 1881, when the old board of officers was re-elected for the ensuing year. President, J. M. Egg; Vice-President, Mr. J. Palmer O'Neil; Treasurer, Mr. A. Stevens; Secretary, Mr. C. B. Elben. Board of Directors—Messrs. Thos. Booth, Isaac R. Statton, W. C. Myer, J. J. Snellenburg and Henry H. Phillips.

LOST.—November 17, 1880, a Gordon setter dog; black, with tan spot over each eye; tan on jaws, legs and under tail; white on chest and neck foot. Reward will be paid for return to W. Chisholm, Prospect avenue, near Westchester road, Morrisania, N. Y. Had on when lost a black leather strap collar, with buckle and ring.

KENNEL MANAGEMENT.

44 F. L. H.—My black cocker spaniel, eight years old, has what appears to me to be an attack of rheumatism, or paralysis in his loins, affecting his hind quarters. He is very tender to the touch and cries out when patted or pressed with the hand; has lost all his liveliness and seems to have considerable difficulty in raising himself after lying down. He is in good condition, rather too much so. I am feeding sparingly on milk and porridge, and giving an occasional dose of castor oil. What do you think is the matter? How shall I treat him? Ans. Doubtless rheumatism. Pursue same treatment, that is, low diet, exercise and occasional doses of oil, or, what is better, Epsom salts in the morning. Keep your dog where it is dry and moderately warm, and avoid exposing him in damp and wet weather.

45 G., Mass.—1. What would be the proper weight for a "heavy weight" pointer dog? 2. How high should said dog stand at the shoulders? 3. What would be the correct length of head and ears? 4. My dog's feet are cut, resulting from hunting him on crusted snow after keeping him on the chain for about a month. What shall I do for them? Ans. 1, 2 and 3. We answer your questions regarding the measurements of a large-size pointer by giving those of Mr. Price's celebrated Vagg: from these you can draw your own conclusions: Wagg when full grown weighed 70 lbs.; his height at shoulder was 24 ins.; length from nose to set-on of tail, 44 ins.; length of tail, 13 ins.; girth of chest, 30 ins.; girth of loin, 23 ins.; girth of head, 17½ ins.; girth of forearm, 8 ins.; length of head from occiput to tip of nose, 10 ins.; girth of muzzle midway between eyes and tip of nose 10 ins.; length of ears 8½ ins. 4. Keep your dog's feet clean by washing with castile soap and warm water, and grease them with mutton tallow. Should the thick cuticle covering

the sole or pad have become worn down apply warm foundations and poultices of bran and bread scalded together. Aperient medicine is advisable with rest. A wire muzzle maybe worn to prevent the dog from tearing off the poultice.

**A CASE OF DIPHTHERIA.**—Early in December last a large liver setter was brought to this office for examination. The animal appeared to have some paralysis of the lower jaw and looked very badly. Some of the symptoms seemed to point to rabies, and as the case was an obscure one we recommended the owner to take the animal to Dr. H. J. Dancer, which was done. Some time later we received from the owner the following letter:

PATERSON, N. Y., December 16.  
I brought home my retriever from Dancer, last night, almost entirely well. He was a very sick doggie and I think his cure very creditable to Dancer, as the case seems to have been something quite out of the usual line. Dancer was modest enough to confess he was pretty well puzzled at first—which I liked—but he brought close observation of the patient and intelligent treatment in accordance with the symptoms to bear, with very gratifying results. I am much obliged to you for sending me to him—no less than for your courtesy when I saw you. J. M. HORTON.

At our request Dr. Dancer has prepared the following report of the case. It is very clear and deserves the careful consideration of all dog lovers and especially of medicine men. The report is as follows:

On Wednesday, December 8, a dog was brought to my office presenting the following symptoms: Great general anæmia; face pinched; expression anxious; tongue covered with a thick yellowish white scum, extending into pharynx; throat very tender to touch; occasional tremors; a rosy saliva exuded from mouth, which was open four inches by actual measurement; the teeth of lower jaw were exposed to the view, and were completely gone. The three latter symptoms were due to paralysis of the muscles of mastication and deglutition, as well as the buccinator. I offered the animal some water. He plunged his head into it greedily, making attempt after attempt to drink, but failed to swallow a drop. I elevated his head and poured some down his throat. It started a fit of coughing. I mixed up a pill consisting of a nerveine and stimulant. It passed down readily, the weight of the material forcing the gullet down, a circumstance which may be proved by any one understanding the anatomy and physiology of the part.

I had him removed to comfortable quarters, where for the following few days I gave him food in a semi-solid condition, and fluids through a tube which I passed into the esophagus; administering medicine to him in the pill form and sometimes through the tube with food.

The history of the case is as follows: He had been taken sick four days before, showing the same symptoms, only in a milder form. They kept getting worse until he nearly disappeared, and was so emaciated that he had to be taken to several veterinary surgeons of repute, but all had failed to either alleviate the animal or see what was the matter with him.

The following day his condition was unchanged, except that the skin flowing from mouth was of a more copy consistency. I now diagnosed diphtheria. Up to this time I was unwilling to say positively what was the matter with the dog, although my suspicions were aroused almost from the first. I did not feel justified in coming to this conclusion, as I had not seen a settled case. The disease is one of the rarest which attacks the canine race, if not the rarest. I had never seen a case. There is no record of it having attacked an animal in this country; no native author gives a description of it; and but few foreign ones mention it, even among those who do not set a high value on it. It is almost invariably fatal, and I felt but little hope of saving the animal, so that I was agreeably surprised to find some improvement in his condition the following day.

The secretions from his mouth were of a scum on tongue somewhat diminished; tremors had left; face less pinched; expression more natural; paralysis improving, though he could not swallow as yet; fever abating. Next day but one there was still greater improvement; the secretions from mouth disappeared, and with diminished power he swallowed a few drops of water. Forty-eight hours later the only symptoms remaining were a furrowed tongue and slight tenderness of throat; he was still very weak. His convalescence was short. I returned him to his owner the following Wednesday cured. He was in my possession but seven days.

A few remarks on diphtheria in the dog may not be out of place, they will at least show what a rare disease it is, and how fatal.

It has been mistaken for dumb rabies; some of the symptoms resemble those of that affection. Mr. Robertson, of England, mentions an outbreak of this variety and forty cases, with only three or four recoveries. Prof. Williams, in his immense practice, with only four cases, and in no one a settled case. It is almost invariably fatal, and I felt but little hope of saving the animal, so that I was agreeably surprised to find some improvement in his condition the following day.

In Aug., 1875, cases similar to the above cropped out in England which were taken at first for dumb rabies, and many animals were killed before the true nature of the disease was discovered.

J. H. DANCER, V. S.

We may repeat here what we have previously said, that the Columbia Veterinary College, No. 217 East 34th st., this city, has kindly offered to make *post mortem* examinations of any specimens sent them, and to report on the same through our columns. The animal must be boxed and sent to the college by express, charges prepaid. This arrangement will admit of our treating diseases of an epidemic character in the most direct way, which may lead to the saving of many valuable animals of the same kennel.

#### KENNEL NOTES.

\*.\* Breeders and owners of sporting dogs are invited to send memoranda of names crimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes.

#### NAMES CLAIMED.

**Bronzo**—Mr. P. W. Aldrich, of Readville, Mass., claims the name of Bronze for Gordon setter dog puppy, whelped August 11, 1880, out of Nellie Horton by Doane's Tom.

**Gowan**—Mr. James Lindsay, of Jersey City, claims the name of Gowan for his black and white Scotch collie dog puppy, whelped October 1, 1880, out of Downey's Lassie (Husma-Trip) by Rex (Carlyle-Elcho). First New York, 1880.

**Joe**—Mr. H. G. Williams, of Portsmouth, Va., claims the name of Joe for his pointer dog puppy, whelped by Joe and Doggy.

**Duke III**—Mr. Fred. Kellerman, of Litchfield, Conn., claims the name of Duke III. for his red Irish setter dog, whelped June, 1879, out of Duke by Duke, Jr.

**Febo**—Mr. Henry H. Sawyer, of Charleston, Mass., claims the name of Febo for Gordon setter dog puppy, whelped August 11, 1880, out of Nellie Horton by Doane's Tom.

**Dan and Elko**—Mr. Austin Mann, of Brownville, Tenn., claims the names of Dan and Elko for setter puppies out of Nellie by Flash purchased from the Kennel Club.

**Wallace**—Mr. W. W. Case, of Taylorsville, Ill., claims the name

of Wallace for dog puppy out of Nell by Prince purchased from Mr. O. F. Cromwell.

**Jim**—Mr. W. H. Linn, of Decatur, Ill., claims the name of Jim, for dog puppy out of Nell by Prince purchased from Mr. O. F. Cromwell, Taylorsville, Ill.

**Gypsy**—Mr. W. H. Linn, of New York city, claims the name of Gypsy for all liver cocker spaniel puppy, whelped October 27, 1880, out of Fellow's Fannie by Robin Adair.

**Red Duke**—Mr. E. E. Phelps, Kansas City, Mo., claims the name of Red Duke for his dog puppy whelped by Ranger out of Irish-Cocker, bred by the Emporia Kennel Club.

**Correction**—*Flora Bell*—Mr. H. B. Stall, of Corning, N. Y., writes to correct an error in regard to his setter bitch puppy Flora Bell. She was whelped January 20, and was presented to Mr. Ed. Soverston, of Oswego, N. Y.

**Maz**—Mr. C. B. Robinson, of Louisville, Kentucky, claims Maz for his pointer puppy by Beaufort out of Nymph, whelped September 10, 1880. He is a handsome, fine looking puppy, and with good handling should do well.

**Pride of Oxford**—Mr. H. B. Harrison, Tilsbury, Oxford County, Ont., claims the name of Pride of Oxford for liver and white setter puppy by Paris out of Belle. This puppy is marked like his grand sire Prince, the Border.

**Jack Kirke**—Mr. J. H. Winslow, Baltimore, Md., claims the name Jack Kirke for his imported liver and white cocker spaniel dog, two years old by Jack out of Fannie.

**Luke Schoolcraft**—Mr. J. H. Winslow, of Baltimore, Md., claims the name Luke Schoolcraft for his imported bull terrier dog, two and a half years old; color, white with brindle marks on ear, body and tail by Bull Sykes out of Gripper.

**Cap**—Mr. A. M. Agelasto, claims the name Cap for his setter dog puppy by Prince out of Juno, purchased of Mr. Jerry Cockrell, of Memphis, Tenn.

**Juno**—Mr. A. M. Agelasto claims the name Juno for his setter bitch puppy by Gladstone out of Juno, purchased from Mr. Jerry Cockrell, of Memphis, Tenn.

**Lydia Langsdorf**—Mr. J. W. Vorner, of Sarnia, Ont., claims the name Lydia Langsdorf for his Irish water spaniel bitch puppy out of Mr. Felton's bitch (Bob-Norah) by Snider, presented by Mr. J. H. Whitman, of Chicago, Ill.

**Deity III and Zoulet II**—The owner of Elcho writes us as follows: "notice among your 'Kennel Notes' of this week's issue that names are claimed for two puppies said to be by Elcho out of May, and born August 30, 1880. I presume the gentleman who claimed the names intended to have mentioned Elcho III. as I am sure (or certainly Elcho is not), but forgot to add the III. It is well perhaps to be exact so as to avoid all future misunderstanding, and so I take the liberty of writing as above.

**Daisy II and Phunket II** were by Elcho, not Elcho, out of May. Daisy II was a bitch puppy by Elcho out of Rover out of Ruby, as shown by Flash out of Daisy. This is a typographical error of importance which we are glad to be able to correct.

**Joker, Jr.**—Mr. John M. Forbes, of Virginia, claims the name Joker, Jr., for his imported pointer puppy by Beaufort out of Nymph, whelped September 10, 1880, purchased of Mr. G. H. Nixon, Leesburg, Va. The puppy is strong, large, sagacious and in all respects promising.

**Prince**—Mr. Frank D. Freeman, of Central Falls, R. I., claims the name Prince for his Irish water spaniel white English setter puppy, whelped November 1, 1880, by Frank II, out of St. Cecilia.

**Dan**—Mr. Geo. H. Pinkham, of Central Falls, R. I., claims the name Dan for his red Irish setter puppy, whelped September, 1880, by Gladstone out of Juno.

**Div**—Mr. R. Landry claims the name Diva for his red Irish setter bitch, whelped December 11, 1879, by champion Berkley out of J. A. Rockwood's Mag, she by Elcho out of Mr. John Fottler's Ellen. Diva was purchased of Mr. J. A. Rockwood, March 22, 1880.

#### PURCHASES.

**DRAFT FROM MR. LINCOLN'S KENNEL**—Mr. C. Fred. Crawford, of Pawtucket, R. I., has purchased from Mr. Charles S. Lincoln, of Warren, Mass., champion red Irish setter Arlington; English cocker spaniel Elcho; dog and bitch by Rover out of Ruby; St. Cecilia and pup by Lincoln, and Hellyar's imported Frank II. Irish water spaniel St. Regis out of Lady by imported champion Barney. Red Irish setter pup out of Lincoln and Hellyar's Flora by Arlington.

#### PRESENTATIONS.

Mr. W. W. Swayne has presented me with three liver and white bitch pups out of his Fanny (Sensation-Juno) by my champion Rusch. They are marked very evenly and are very handsome.

EDWARD ORRILL.

**Jim**—Mr. W. H. Linn, Decatur, Ill., has presented Mr. W. A. Ruger with his dog puppy Jim out of Nell by Prince.

#### WHELPS.

**Judy**—At the Beacon Kennels, Boston, Mass., Mr. J. P. Barnard's lull bitch Judy, whelped ten puppies, eight dogs and two bitches, all alive but one bitch.

**Wyand**—Mr. W. H. Shuster's (Philadelphia) setter bitch Wyand, whelped December 7, 1880, seven puppies, two dogs and five bitches, by Mr. Harry Champion's Gildersleeve setter Don. One dog puppy has since died.

**Nora**—Mr. A. A. Sampson's (Troy, New York) red Irish setter bitch Nora, whelped December 6, 1880, nine puppies, five dogs and four bitches, three dogs and six bitches, by champion Berkley.

**Mima**—Mr. Isaac Yearseley, Jr.'s, (Cotestville, Pa.) bench shot bitch Mima (Rock-Kirby), 446 N. A. S. B., whelped, November 23, 1880, five puppies, three dogs and two bitches, by Nixon, he out of Barbara's imported Nellie by Leicester.

#### BRED.

**Mr. H. W. Livingston's** (New York) Rose to champion Rusch. **Maida-Rusch**—C. T. Pierce's (Brooklyn, N. Y.) Maida to Mr. Edmund Orgill's champion Rusch on January 10, 1881. Maida's sire was Rake II, while her dam was Miranda III, imported; both owned by Mr. J. W. Coffin, of Providence, R. I. Miranda III was selected in England by Rev. J. C. Macdonald and thought by him to be as near perfect as could be found in that country for breeding purposes. She was imported by the late Mr. Wm. M. Tluston in 1877, and has had a very fine litter in this country; she is now in whelp for the second time.

**Gussie-Chief**—Mr. W. H. Pierce's red Irish setter bitch Gussie (Pratt's Dan-Hobart's Ruby) to Mr. Max Wenzel's Chief, winner of first prize puppy sales, Robin's Island, 1880, on January 10, 1881.

**Red Sue-Chief**—Mr. W. H. Pierce's red Irish setter bitch to Mr. Max Wenzel's Chief on January 11, 1881.

**Border Lily-Glen**—Mr. J. E. Fisher's Gordon setter bitch Border Lily was bred to Dr. Allen's champion Gordon dog Glen, January 10, 1881.

**Mattie May-Snapshot**, Jr.—Dr. A. M. Collum's (N. Y. C.) white pointer bitch Mattie May (Gypsy-Don) to Mr. Edmund Orgill's (Brooklyn) Snapshot, Jr., (Ruby-Sue) on January 10, 1881.

**Wendie-St. Elmo**—Dr. F. Fleet-Spier's imported English setter bitch Wendie (Paris-Pearl) to champion St. Elmo.

**Fan-St. Elmo**—Dr. S. Fleet-Spier's setter bitch Fan to champion St. Elmo.

**South Bant-Bonnie Boy**—Mr. P. Barnard, Jr.'s (Boston, Mass.) imported bull bitch South Bant (Sir Anthony-Rogers's Nellie) to owner's imported Bonnie Boy (Blenderman-Sal O'Shoreditch) on the 13th inst.

#### SALES.

**Shep**—Mr. W. H. Watts, of Philadelphia, has purchased from the Hon. J. Fitz Malloy, of Jersey City, the black, tan and white Scotch collie dog Shep.

**Rake-Rose Whelp**—Mr. Gardner G. Hammond, of New London, Conn., has sold to Mr. C. E. Jordan, of Portland, Maine, two Chesapeake Bay puppies, dog and bitch, whelped June 4, 1880, out of Mr. Hammond's Rose by his Rake. Rose took first prize at New York and Boston, 1878.

**Rake-Rose Whelp**—Mr. M. U. Borland, of New London, Conn., has purchased from Mr. C. E. Jordan, of Portland, Maine, two Chesapeake Bay puppies, dog and bitch, whelped June 4, 1880, out of Mr. Hammond's Rose by his Rake. Rose took first prize at New York and Boston, 1878.

**Dash III-Minnie Whelp**—Mr. Walter H. Beate, of this city,

has sold to Mr. F. N. Hall, a liver and white bitch puppy, whelped August 29, 1880, out of Minnie by Dash III.

**Ayton, St. Cecilia, St. Regis, etc.**—Mr. Charles S. Lincoln, of Warren, Mass., has sold to Mr. C. Fred. Crawford, of Pawtucket, R. I., his orange Belton setter dog Ayton, black Belton setter bitch St. Cecilia, Irish water spaniel dog St. Regis and liver and white setter whelp by Frank II, out of St. Cecilia.

**Rocket**—Mr. Geo. E. Poyner, Dayton, Iowa, has purchased of Mr. James Shotwell, Owasco, Mich., his black and white ticked English setter bitch, half Rob Roy, quarter Blackie, quarter Mel, born Iowa, Geo. E. Poyner, of Dayton, Iowa, has purchased of Mr. S. W. Ward, St. Louis, Mo., his liver and white ticked pointer dog Boom (champion Seafood-Damn).

**Paris-Belle Whelp**—Mr. H. B. Harrison, Tilsbury, Ont., has sold the following water spaniel dog, Leicester-Dart out of his field trial setter bitch Belle (Pride of the Border-Kirby) to Mr. T. Davey, London, Ont., a white and black ticked dog. To Mr. Clayton, Chatham, Ont., a white and blue ticked dog. To Mr. T. Davey, London, Ont., a white and liver ticked dog.

**Duroc**—Mr. Isaac Yearseley, Jr., of Cotestville, Pa., has just sold his Duroc (Rob Roy-Pocolantos) to Mr. T. B. Chaney, Houston, Texas.

**Mignon-Wildair Whelp**—Mr. Eugene Powers, of Cortlandt, N. Y., has sold to Mr. Burr Holts, Hornellville, N. Y., a black and white cocker bitch puppy out of Mignon by Wildair.

**St. Regis**—Mr. C. Fred. Crawford, Pawtucket, R. I., has sold to Mr. John Ramabottom, of Central Falls, R. I., his Irish water spaniel bitch, out of Lady by imported champion Barney, whelped Oct. 1, 1880.

**St. Cecilia and Whelp**—Mr. C. Fred. Crawford, of Pawtucket, R. I., has sold to Mr. Frank D. Freeman, of Central Falls, R. I., the English black Belton bitch St. Cecilia and one of her whelps, born November 1, 1880, by Frank II.

**Arlington-Flora Whelp**—Mr. C. Fred. Crawford, of Pawtucket, R. I., has sold a red Irish setter pup, whelped September, 1880, by Arlington out of Flora to Geo. H. Pinkham, of Central Falls, R. I.

Bolls, Pimples, Freckles, Rough Skin, eruptions, impure blood, Hop Bitters cure.

## The Rifle.

### RANGE AND GALLERY.

CONLIN'S GALLERY, 1,222 Broadway, N. Y.—The first week's competition, ending 15th inst., of the pistol shooting tournament for the championship of New York for year 1881 was in every way a success. After a very close contest, in which the foremost shots of the city participated, Mr. Wm. M. Chase won the championship of string measurement shooting by the following extraordinary score, ten shots at each distance:

10 yards.....	Total measurement, 52-8 inches
15 ".....	" " " 6-3 " "
20 ".....	" " " 9-3 " "
Total.....	
20-78 " "	

The Conlin's ready measurement paper target was used, by which each shot can be measured from centre of bullseye to center of shots to within the sixteenth part of an inch.

Judging by the interest taken in the first competition and the large number of expert pistol shots competing for the honors, this tournament promised to be the most successful and popular indoor match ever inaugurated. Col. H. A. Litchfield, Col. J. Dunn, H. W. Wickham, Hon. Sherman Smith, P. Lorillard, Jr., H. J. Brown, D. A. Davis, T. Fitz, J. B. Miller, Capt. L. C. Bruce, W. C. Southwick, J. Medhurst, R. B. Gifford, G. Work and many more gentlemen whose names are equally familiar to the shooting public are taking an active interest. The winner of the title of champion will win only by superior skill and nerve, and it is very probable that his victory will be earned by a very hard and close struggle. The plan of the tournament is a new one and is acknowledged to be a perfect method for determining who can justly claim the honors of being the champion pistol shot of the metropolis.

The tournament is held for ten weeks, and the championship for each style of pistol shooting, such as string measurement, word shooting, bullet shooting, fancy shots, etc., etc., is shot for during a specified week of the tournament; the winner of the most championships to be declared the champion. A competitor winning a championship of any of the styles of shooting to be presented with a gold badge. In case he wins an additional championship he will be presented with a gold bar, suitably inscribed, which can be appended to his badge; and the competitor winning second place to be presented with a gold expert pistol shot badge. During the second of the tournament, January 17 to January 22, inclusive of both dates, the championship of bullet shooting will be contested. The competitions are open to all comers.

JAMES S. CONLIN.

Boston, Mass., Jan. 15.—A new temporary subscription handicap match was opened at Walnut Hill to-day, and it will be run until the new programme of matches has been perfected. A perfect winter day prevailed, clear, quite cold, with a cloudless sky and strong north wind from 11 to 12 o'clock, hard to control and vacillating. Large scores were not in order, although good results were obtained off-hand at 200 yards on the ring target. The spectators were numerous, but the attendance of riflemen was smaller than usual, most of those present being the new Board of Directors elected at the last annual meeting. The conditions for the new match on the Massachusetts target call for ten rounds, three scores to win. The summary gives only the best scores made:

	Handicap Match.

The list of prize winners of the Novelly and Creedmore matches, closing January 22, have been completed by the Secretary as follows:

Creedmore Match.  
E. T. Dodge, 147; H. Mass 140; J. B. Polk, 138; H. G. Hixby, 134; E. T. Richardson, 132; J. S. Bennett, 131; R. D. Archer, 131; C. R. Gifford, 129; J. Nichols, 125; A. M. Archer, 125; G. W. Bullard, 125; S. Fogg, 123.

The Yosemite, though not by any means completely allied to the latter, is nevertheless a vessel of this class, and is to be judged in the interests of engineering science that Roach & Son, her builders, will have exhaustive trials made with Yosemite's machinery, and give the public the full data, as we are very much in want of reliable statistics concerning the performances of steam yachts in an unusual trial. The Yosemite is a vessel of the ordinary compound engine and high pressure tubular boiler no such imposition as the Anthracite could have been palmed off upon the lawless, for a glance at the tables would have exhibited the hollowess of the claims set forth by an unscrupulous and unscrupulous agent. The Yosemite is a vessel of the ordinary compound engine and high pressure tubular boiler no such imposition as the Anthracite could have been palmed off upon the lawless, for a glance at the tables would have exhibited the hollowess of the claims set forth by an unscrupulous and unscrupulous agent. The Yosemite is a vessel of the ordinary compound engine and high pressure tubular boiler no such imposition as the Anthracite could have been palmed off upon the lawless, for a glance at the tables would have exhibited the hollowess of the claims set forth by an unscrupulous and unscrupulous agent.

is in a single forging. Keel plate, 5; garboards, 9-16th; side plating, 1 and 7-16th, the plates diminishing slightly at the vessel's ends. Middle line keelson 10x1 stiffened with angle irons 3x3x3/4. Deck beams of bulb iron 6x5, with angle irons 2 1/2x2 1/2x15-16th. Stringer plates are worked over the beam ends and scored home to the outside plating, being secured to the latter by short lengths of angle iron and having a continuous angle iron, faced against the reverse frames on the inside. The plates are 20x3. The deck is covered with light iron. Diameter of rudder head 4in. The rudder being a forged frame with plating each side. The hull is further stiffened by diagonal bracing from floors to wales. All butt straps double riveted. As may be expected, the accommodations below are both richly and elegantly furnished, besides being well arranged, a matter of no great difficulty in so large a vessel. The companion leads down from the smoking room or chart house just forward of the mainmast, and land on a sort of out-cumbers to the main saloon, the landing, or in naval parlance the "country,"

boiler space. Just forward of these and located amidships is the galley with a laundry attached, and next to it two small rooms for the officers and crew. The captain's quarters accessible from the pilot house also, and a couple of staterooms for the officers, and their mess room 10x6 ft. The forecastle, or rather "berth deck," is fitted up for a crew of fourteen well ventilated by four ports in the side, and lit by four deck lights above. The passageway on the port hand abreast of the mainmast, and forward of the mainmast to a novel purpose. It is 70 ft. long and 7 ft. wide, and will be used as a "promenade" during bad weather. There is not a particle of paint used in the accommodations below decks, everything being of hard and bright wood finish. The Yosemite was built at Chester, Pa., by John Roach & Son, and was launched August 9, 1880, and is now ready for delivery to her owner, Mr. W. Belden, of this city. A silly story about racing the Arizona across for heavy money, and about by an unreliable party who felt himself "specially authorized" to announce the terms in double headed type, oblivious of the fact that the yarn had been a standing hoax in Chester ever since the Yosemite's keel was laid. Of course there was neither truth nor sense in the announcement, as the Yosemite has bunker capacity for only four or four and a half days, and when loaded down below her lines with sufficient fuel for a trip across, a trial against the Arizona's time is out of the question. However, a match run over a measured mile will be much more easily made, and of far more value to engineers, and we hope that something more definite than a "vague statement of speed" will be vouchsafed the public. Of the performance of Corsair and Stranger no one knows anything, not even the builders, whose experience with them is limited, we believe, to a trip down the Delaware, with new and still machinery, but few diagrams by which a card having been taken, and the consumption, evaporation and other points having been only rudely approximated. The accompanying table illustrates examples of the types of steam yachts most in use in our waters.

The forecastle of the Bretagne is 46 ft. deck to boulds; mainmast 48 ft. and mainmast the same; topmasts respectively 37, 37 and 48 ft. Yards on fore and main, 60, 46 and 37 ft. bowsprit, outboard, 15 ft. The Yosemite's spars are about 62 ft. deck to boulds with topmasts of 30 ft. The Corsair and Stranger have spars 60 ft. deck to boulds and 28 ft. topmasts. The area of Henriette's sails is 25,000 sq. ft. Polynia has three pole masts, foremast 46 ft. above rail, mainmast 50 ft. and mizen 44 ft. The Rhada, Vidette, Ideal and Gleam have only light rigs, the Rhada has no spars, but a high deck house. The Gleam is a "high speed." The speeds of all the rest are estimated, as no authoritative mile trials have ever been made with them. The coal consumption of Polynia at fair speed is said to be about 8 tons per day; that of Corsair and Stranger about 11 tons and that of the Yosemite near 12. These figures refer to steamer anthracite of the usual quality.

**TORONTO CANOE CLUB.**—A new club under this title has been formed in Toronto, Ont., with the following officers: Commodore, J. W. Bridgman; Vice-Commodore, Mr. Nicholson; Secretary, Robt. Tyson; Treasurer, E. M. Barrett. The next meeting is called for February 2.

**"LE YACHT."**—Our esteemed French contemporary comes to us in a new dress, and enlarged in its pages. We congratulate our French cousins upon the possession of an enterprising organ of the sport which is a credit to its management and speaks volumes for the increasing popularity of yachting in La Belle France.

**THE PERKINS SYSTEM.**—One Dent, "late commanding steamer Anthracite," writes to the London Field that "of the many visitors in the United States (both naval and mechanical), all were convinced that in a vessel of the same dimensions and the same indicated horse-power, no other engines and boilers could compete with those of the Anthracite." For this brainless statement the worthy Dent draws upon his imagination. It is not of mere cloth. No practical Americans are prepared to give preference to a system which, by the patentee's own showing, is more costly, heavier, requires more space, shows more wear and tear and is less economical than any other system in general use, including the ordinary tubular boiler and compound engine. What Dent states in the Field is a libel upon American engineers, not one of whom has induced the Anthracite to the exclusion of all other systems. A little more honesty and modesty on the part of the Perkins clique would be to their own interest.

**CHICAGO ICE YACHTS.**—A correspondent writes that a good deal of excitement is being created by a number of ice yachts on the lake, and that the fleet is growing in numbers.

**VALUABLE EXPERIMENTS.**—Mr. Dixon Kemp has been selected by the Marquis of Exeter to conduct an exhaustive series of experiments on models of wave lines and other forms, also of deep and narrow and wide and shallow models with equal displacement. These experiments will probably contribute more important and definite information on the subject of naval design than anything yet undertaken. We await the results with the greatest interest.

**NATIONAL YACHT CLUB.**—At the annual election in Jersey City James King was elected Commodore, William J. Jones, Vice-Commodore and T. H. Gibson, Corresponding Secretary.

**MAN LOST.**—In a gale off the coast, Jan. 5, the Nokomis lost a man overboard. The schooner was bound South with Mr. Paddiford on board. When in lat. 32 deg. 55 min N. and lon. 78 deg. 35 min W. she took a gale from S. W. by W. and was "knocked down." The steersman was killed and the vessel was forced to run before the wind. The cutter was sent after them and life buoys thrown to the men. One was rescued, the other sank. The Nokomis illustrated her violent behavior and desire to "stand up" the danger and discomfort of our flat-bottom style of building, and the Nokomis is one of the least objectionable on that score in the fleet. There is danger in going to sea in yachts which can be knocked down, with doubts as to their righting. A few disasters will be needed to sharpen the intellects of many to comprehend the necessities of a cruising yacht.

## Answers to Correspondents.

No Notice taken of Anonymous Communications.

SOUTH BEND.—J. T. B. Smith, Omaha, Neb.

H. D.—You will find article on canvas canoe in our issue of Aug. 7, 1879.

W. A. S.—Canoe Pilot will appear very soon. Will notice in our columns.

CHALLENGE.—A foreign clip, if over 30 tons, is entitled to challenge for the American Cup. See recent dates of this paper.

F. P. W., Orange, N. J.—The gun is highly spoken of, and the only objection urged against its action is that it is inconvenient. There is some wear, but it is practically insignificant.

B., Belleville.—Mischievous, 67.5 ft. over all; 61 ft. on w. l.; 19.9 ft. extreme beam; 7.75 ft. depth; draft 5.8. Hoist about 68 ft. Gracie, 79.10 ft. over all; 70.8 ft. on w. l.; 21.5 ft. beam and 6.7 ft. depth with 6.5 ft. draft.

T. S. Van Dyke, the favorite contributor to our columns on topics connected with the use of the hunting rifle, is to publish a book on the whole subject of game shooting, and uniting as he does a varied experience with an attractive and instructive method of writing, his book cannot but be useful and interesting.

PAMLICO, Baltimore.—Kemp's Yacht Designing will serve your purpose. The principles underlying design are the same, of course,

for English and American yachts. You need not be bound by the lines of English yachts unless you choose. Nothing else of the kind published. Price \$15. Brentano's, Union Square, N. Y., or can send it to you upon receipt of price.

W. R. W.—The yacht to accommodate six in cabin and have two staterooms would have to be 50 ft. water line. Refer you to any of our advertisers as the best builders. No other works published but those of Mr. Kemp which can be recommended. A work on ship building and Lloyd's Register of yachts would meet your wants. Do not know price asked for Polynia. Write to Mr. Jas. G. Bennett, care Herald.

A READER, Leominster, N. H.—I have a Newfoundland bitch which was served six days ago; the dog has been with her all the time since until to-day. She escaped from the stable and was served by a cur. Can you tell me if it is possible for her to have puppies in a few days, or if it can injure those of the first dog? Ans. Yes. It is possible that she may have puppies by both dogs, in which case each lot will be distinct.

N. R. A.—At the first intimation that he had been chosen as the President of the National Rifle Association Mr. E. A. Buck sent a declination on the ground that he would be out of town during a large part of the year. Lieut. A. H. Weston, the very efficient Assistant Secretary, was induced to withdraw his resignation, and he will continue to fulfill his duties as usual. Among the life members chosen were Maj. E. A. McAlpin, H. R. Russell, J. W. Mangum and Ralph Troutman. A special meeting of the Directors on the 20th considered the question of the Presidency.

VCTR, New York City.—I this morning upon visiting my litter of mastiff puppies I found one of them much swollen about the right side of the face. The swelling, which has come on within the last twenty-four hours, is quite hard and extends from the eye which is closed, to the lower jaw. The little fellow presents a very ludicrous appearance as he totters about, his head being nearly double its former size. He seems, however, to experience no pain and nurses as greedily as ever. My first impression was that the pup was afflicted with mumps, but the fact that he is the only sufferer seems somewhat to discredit this supposition. 2. Has such a case ever been heard of before? Ans. 1. The swelling is either inflammation of the glands, or the formation of a chronic abscess; impossible to say which without seeing the youngster. Show him to a skillful surgeon in your vicinity. 2. Yes.

C. E. W., Nashua, N. H.—My puppy four months old passes worms. They are whitish in color, about three-quarters of an inch in length and flat in shape. 2. He also has a bunch under his lower jaw. It has been coming for four days and is nearly half as large as a hen's egg. Ans. 1. It is the maw worm that you have seen your dog pass with his excrement. The maw worm is the least harmful of the three most common. Give antimony from two to four grains, after keeping all food from the dog for ten hours. Follow later with olive, or castor oil, 2. From description we would term the swelling, or lump, goitre. It is especially a disease of old dogs, although it occurs in ill-fed and scrofulous puppies. The treatment consists in applying the following ointment daily till the swelling disappears. Give cod liver oil in doses of a teaspoonful twice a day for a month or two, or, in same way iodide of potassium, in doses from two to four grains, in water, or decoction of sarsaparilla. Ointment: Take iodide of potassium, one drachm; lard, seven drachms. Mix and apply as directed above.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpets, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—LAD.

FOREST AND STREAM PUBLISHING COMPANY,  
New York City, N. Y.

is handsomely finished in true Eastlake. Slate rooms, 8x15 ft., open into this stateroom, one on each side. Sliding doors, paneled in mahogany, ebony, maple and ground glass, lead into the main saloon, 20x20 ft., a most handsome specimen of the joiner's art, rich in color, yet well blended and harmonious in effect. Ash, mahogany, white holly, ebony and walnut all contribute their quota to the delightful and almost surprising pleasure of the eye. Overhead the deck is finished in ash burl panels, with trimmings of satin wood, amaranth and holly. The mainmast is encased in panel work to correspond with the rest, and a grand buffet and looking-glass lend a sumptuous flourish to the enchantment, comfort and luxury to these quarters. A passage of 34 ft. long and 3 ft. wide leads aft from the saloon, and into the various staterooms open. On the starboard side is the owner's room including bath and lavatory, 14 ft. long and 8 ft. wide. This and all the other rooms are lighted by 12 in. air ports, the framing being nickel plated on the interior. Further aft are located two staterooms for guests, 9x7, with lower berths fixed and upper berths ready to let down from the Pullman sleeping-car principle. Beyond these is the retiring room and a nursery for children across the stern. On the port side the arrangement is similar, a servant's room taking the place of the retiring room. Forward of the accommodations for passengers we find on the starboard side, besides pantry, ice-box and kitchen, a room for the chief engineer, 13 x 14, and the quarters for his assistants in a room 16x4. These are abreast of the engine and

—Scarcely less rare than a black tulip, a red-haired negro, or a four-leaved shamrock, is the amazing natural curiosity now being exhibited in the Berlin Aquarium, to the material augmentation of that admirable institution's daily receipts. A milk-white raven, with pale pink eyes and red legs, received admission a week ago to the great central aviary in which scores of beautiful birds flutter and chirp and build their nests in comparative freedom, but his presence there spread such general panic among the remaining inmates of the aviary that it has been found necessary to remove him to a separate cage. Strange as it may seem, the other birds instinctively recognized that this corvine albino was abnormal, and therefore terrible. Many of them became total abstainers from food and drink through sheer fright while he shared their quarters, and huddled together, shivering, at as great a distance from the fearful anomaly as the limits of their prisons would permit them to attain. In all respects save its extraordinary hue, the raven is as other ravens. Its appetite is apparently insatiable, and he ministers to it with a formidable beak. Neither in tone nor delivery is there any unusual mellowness or tenderness about his croak. His pink eyes could not be more steadfastly engaged in contemplating the main chance were they as yellow as burnished gold. He was found, with a coal-black brood of brothers and sisters, in a nest built by his parents—whose surprise at his peculiar appearance must, we should think, have been considerable—on the topmost branch of an old tree in the Georgenthal, a valley of Thuringen. Doubly an anachronism, this snow-white raven is at present one of the "lions" of the German capital.—*London Times.*

—The cricket field, the hunting field, the race course, the racket court, and the arena of athletic sports, says the *London Lancet*, in all number a good many maimed, or even killed, among their votaries, but the undoubted value of athletic exercises to the individual and the nation more than counterbalances the occasional mishaps which must inevitably occur. While it is advisable to avoid anything approaching to brutality in our pastimes, it is equally necessary not to encourage effeminacy, especially in this age, when manufacturers of "gentlemen's corsets" flaunt their advertisements in the public press, and men of the modern æsthetic school write maudlin poems in praise of each other. There are many pastimes infinitely more ruinous to health than we have enumerated above. Dancing night after night in crowded non-ventilated rooms is among the most unwholesome and dangerous practices of modern life, and kills infinitely more persons (though more indirectly) than either the "Rugby" or the "Association" rules. The men who are killed by sitting in public houses or (what is very much the same thing) in club houses, playing billiards or cards till the small hours, and drinking "B" and "S," are not held up as warnings.

BRAIN AND NERVE FOOD.

VITALIZED PHOSPHITES.

Composed of the NERVE-GIVING principles of the ox brain and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excesses or nervousness. It promotes digestion and strengthens a failing memory. It prevents debility and constipation. It strengthens the brain, gives good sleep, and recovers after excesses. Physicians have prescribed 100,000 packages.

For sale by druggists or mail, \$1.

F. CROSBY, 664 and 666 Sixth Avenue, N. Y.

Allen's Decoy Duck Frame.

Used by the best duck shooters. Is simply a device for holding the dead duck in a natural position in the water, on the ice or on land, as a decoy. They weigh from three to six pounds per dozen. You can carry two dozen in your hunting-coat pockets. We make three sizes: No. 1 for mallards, pintails, etc.; No. 2 for wildgeon, broad-bills, etc.; No. 3 for teal. Sent to any address, C. O. D., on receipt of money; draft or post-office order, at \$4 per doz. For sale by all gunsmiths or by F. A. ALLEN, Mount Morris, Ill.

ALLEN'S NICKEL-PLATED DUCK CALLER.

Will not shrink. Can be tuned to any desired pitch. The smallest, easiest blowing, and most natural duck call in the world. Sent by mail on receipt of \$1.

# Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

ing or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Waterst., NEW YORK

Birds and animals preserved by superior French and American workmen.

\$72 A WEEK, \$12 a day at home easily made. Costly outfit free. Address TRUE & CO., Augusta, Maine.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote. CHARLES E. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 6th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth.

GUNPOWDER!  
Dupont's Rifle, Sporting and  
Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

**Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1½ canisters.**Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1½ and 2½ canisters and 4½ and 12½ kegs.**Dupont's Choke Bore.**—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 4½ kegs and 1½ canisters.**Dupont's Rifle.**—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1½ canisters and 4½ kegs.**Dupont's Rifle Fg.**—"Sea Shooting."—Fg. and FFG. The Fg. for long-range rifle shooting, the FFG. and FFGG. for general use, burning strong and moist. Packed in ¾, 1½ and 2½ canisters, 4½, 12½ and 25 kegs. Fg. coarse, FFG. fine. Dupont's Sporting, Mining, Snapper and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Conical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KEELE, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

The Hazard Powder Co.,  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1½ lb. canisters and 5 lb. kegs. A fine grain, quick, clean, for upland and prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG. and "Sea Shooting." FFG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFGG is also packed in 1 and 1½ lb. canisters. Burns strong and moist. The FFGG and FFG are favorite powders for ordinary sporting, and the "Sea Shooting" FFG is the standard Rifle Powder of the country.

**Superior Mining and Blasting Powder.** GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 27, 1881.

THE TIDE OF TRAVEL is setting in to the equator. Many scores of tourists are on their way to Florida in pursuit of warmth, health and sport.

A LETTER PUBLISHED in our game columns shows how the proposed "refrigerator amendment" is regarded in the interior of the State.

THE SPORTSMEN'S ASSOCIATION OF WESTERN PENNSYLVANIA reports a roll of nearly 200 members, that number being the limit allowed, a sound financial condition and increasing popularity.

The officers elected to serve during the present year are: President, Robert Dalzell; Vice-Presidents, D. C. Phillips, F. H. Kennedy, S. B. Switzer; Treasurer, W. C. Macrum; Secretary, J. C. Brown; Naturalist, H. S. A. Stewart; Board of Directors, Ormsby Phillips, R. C. Gray, Howard Hartley, W. T. Dunn; W. C. Taylor; Election Committee, John Calwell, Jr., C. A. Carpenter, Chas. Hays, Edward Gregg, W. A. McIntosh, Henry Holdship, Benj. Bakewell

THE MIXTURE of sand or pulverized glass with gunpowder, in order to separate the grains of the latter and thereby make its transportation safer, is nothing new. It was tried as far back as 1835 by Pibert, in 1841 by Fadeiff, and again in 1855 by Capt. Ritley and by Gale of England. The man who is alleged to have been exhibiting this device to "scientific and practical men in Jersey City," must have talked very loud to have made them believe that it was a "recent English invention," or else the company was not so "scientific and practical" after all.

THE COCKER CLUB.—We have received the names of seventy-five persons who have expressed their desire to join the proposed Cocker Club, and in accordance with the plan already stated, we send circulars this week to the members calling for the selection of a committee to perfect the organization of the Club. It gives us much satisfaction to congratulate the owners and breeders of cockers upon the promising condition of affairs and the assured success of the Cocker Club.

### GEN. HANCOCK AND RIFLE PRACTICE.

THE acceptance of the Presidency of the National Rifle Association by Gen. Winfield Scott Hancock puts a man with rare executive ability in a place where he can have a full exercise of it. The election was unanimous, and the General can rest assured that that feeling is shared by every member of the National Rifle Association. He is not an untired man, and for one holding a position of so many and such important responsibilities, he has found time to give considerable attention to the matter of rifle practice. He it was, first of all army officers holding commanding posts, who appreciated the fact that the volunteers were far ahead of the regulars in the matter of skill with the rifle. When the fact became apparent there was a frank acknowledgment of it, and Gen. Hancock instituted prizes and in various other ways set about supplying the deficiency which he saw existing among the men under him. The other departments fell into line, and with the establishment of the Hilton trophy, which might without impropriety, and with an entire regard for fact, be styled the Hancock trophy, the new president completed an effective plan of getting rifle practice on a firm basis in the army.

Gen. Hancock, too, will command the entire confidence of every class of the shooting men. Though an army man all through his life, he is thoroughly aware of the fact that rifle-shooting is far more than a mere branch of the soldier's duties. He is a man of society and the world, and will appreciate fully what is being done to build up rifle practice throughout the country as a gentlemanly sport, free from all tendency toward gambling and questionable practices. It is entirely proper that the head of the National Rifle Association should be an army officer of high rank. The British National Rifle Association is presided over by the Commander-in-Chief of the British army, and under the Duke of Cambridge the small bore men have had no real cause of complaint that their wants were not looked after. Ample provision is made in the Wimbledon programme for the shooting of any-rifle, all-comers matches, and Gen. Hancock will see to it that the division of the work of the N. R. A. is well looked after. Under Gen. Hancock the association may become truly national in extent, in influence and in power to unify and systematize rifle shooting, as well as in name. He has assumed the position with a very clear idea of the work to be undertaken, and he has declared his conviction that the association can be built up to a position of general respect, and be made a valuable adjunct to the army and its methods. Under such a presiding officer there should be no difficulty experienced in securing a liberal prize list, and with this the entry lists soon fill up; and while we are not over sanguine of ever seeing anything more than sudden rushes to Creedmoor so long as it remains isolated as at present, we do expect to see the year 1881 make a showing in target practice as fine as any of the preceding ten-years of the association's existence. The desire to enjoy the rivalry of competition before the bulls is as strong as it ever was, but in very few cases is it strong enough to induce men to make a toil of a pleasure, and sacrifice a day for an hour, to give up to riding and waiting about in railroad depots above five hours to secure an hour's practice on the range. There has been too much of the *laissez faire* policy in the past, and with attention and zeal in place of neglect and apathy great results may confidently be looked for.

In Boston the Walnut Hill range shooters have shown an appreciation of things by the selection of L. L. Hubbard for the Presidency and A. C. Gould for the Treasuryship of the Mass. Rifle Association. They are men well versed in the technicalities of rifle shooting, and it is certain that under them the wants of the actual shooters will be looked after; and Boston, if such a thing were within the probabilities, may be expected to surpass her own champion record.

TRANSPORTING YOUNG FISH EGGS.—The letter from Mr. von dem Borne in our last issue on the subject of his experiments in transporting fish eggs which had never been in water, in the bladder of an animal, is worthy the attention of our pisciculturists. If this can be done with eggs which are as delicate as those of the cod and shad or other floating eggs it will prove of great practical value.

### THE MAINE SYSTEM.

ONE year ago the plan of making the Maine Commissioners of Fisheries Commissioner of Game also was an untried experiment. It is such no longer. The wisdom of the system and its efficiency are amply attested in the detailed report just published by Messrs. Stillwell and Smith. Portions of the report are published elsewhere. As the record of the first year's working of the new system it is worth a careful study.

There were serious obstacles in the way of the Commissioners. In the first place there was no adequate provision of funds to enable them to do the work as it ought to have been done. As soon as it became known that there were two officials whose duty it was to prosecute violators of the game law, a flood of complaints poured in upon the Commissioners from every part of the State. To attend to all of these separate complaints the writers of the report tell us was beyond their power, and the result was an imputation of blame where it did not properly belong.

But hampered as the work was, the accomplishment was most gratifying and creditable and full of promise for the future. The Commissioners have really done something. Men who have killed game out of season have been prosecuted and made to pay their fines. Others, who saw that the prosecutors meant serious work, came forward and paid their fines of their own accord; other cases are now on the docket awaiting their turn.

These prosecutions mean much more than the punishment of these individual violators. They are showing the people throughout the State that the game laws mean something and are not to be ignored. It is for this reason that we say that this first report of Game Commissioners of Maine is full of promise for the future.

If a system of game protection, whereby the laws are enforced by game wardens and a game commission, works well in Maine, why will not the same system work equally well in other States?

MICHIGAN SPORTSMEN'S ASSOCIATION.—The special dispatch to the FOREST AND STREAM, published in another column, reports a large convention at Lansing, and a meeting, which like previous assemblies of the Michigan sportsmen is characterized by a spirit of earnest work. The report of the papers read and the transactions of the society are necessarily too brief to warrant extended comment upon them now. We shall publish the proceedings at length hereafter, and meanwhile congratulate the people of Michigan that there are among them a number of sportsmen so intelligently and faithfully endeavoring to conserve the fish and game interests of the State.

THE PRESENT DEMAND upon the columns of the FOREST AND STREAM is altogether unparalleled in the history of the paper. To do justice to the paper and to its friends it has become absolutely imperative to make some provision where, by the capacity of the pages shall be increased. Next week, therefore, the first number of Volume Sixteen will appear with a change of type in several departments. This change will be equivalent to an addition of two pages to the paper, and with the increased facilities thus afforded it is hoped that the value of the FOREST AND STREAM may be proportionately enhanced.

OUR ALASKA LETTERS.—The map which we republish with the "Log of the Favorite," is the first chart of that part of the Alaska coast ever made. It is due to the writer of these articles, Capt. L. A. Beardslee, of the United States Navy, to note here the wide interest awakened by his letters to FOREST AND STREAM. Capt. Beardslee is to-day the best informed man on Alaska affairs in the country, and his descriptions of the land, its products, fauna and inhabitants, are the most vivid and truthful pictures of that country to be found in print. The series, of which the present paper is the fourth, was begun in our issue of Nov. 25, with the account of the Chilcats and Chilcoots. It will extend through one or two more numbers, the concluding chapters being fully equal in interest and information to those already published.

AMONG THOSE who called at the office of the FOREST AND STREAM last week was Hon. Jno. S. Wise, of Virginia.

Mr. Willoughby afterward in speaking of this interview remarked "that the Cap. played it low down on the old Siwash and naked in the pot," whatever that may mean.

We had planned for an excursion to the glaciers, but an advance guard of icebergs which were drifting past the mouth of the harbor passed as it reached the western cape, reconnoitered us, and whirling began to slowly advance upon us. The leader who was a huge fellow soon paused, for his foot came in contact with the bottom, but several smaller ones were not so considerate, and we came to the conclusion it was best to respect their pre-emption claims and seek for a better shelter, so hurried up our anchor and started for Mud Bay, where we passed a comfortable night.

Having thus brought the log up to date, I will devote a few lines to the sea otter, which in my last letter I spoke of as a noble animal. To me he seems, both from a commercial and sportsman's point of view.

The skin of the otter is worth more than that of any other animal excepting the royal ermine it brings in Alaska from fifty to one hundred and fifty dollars. Unlike all other skins of this country, it needs little assistance from the fur-dresser's arts; the black hairs are not dyed, and the white ones not sewed in, therein differing greatly from the imitation called "pointed beaver," and from the fur seal, the raw pelt of which has no more beauty than that of a calf.

They are very wary animals and are worthy of being considered game, for none but the most expert hunters are successful in capturing them. The fur seal, too, is worth millions of which return annually in great herds to the Prydzloff Islands where they are driven and slaughtered by clubbing, the otters go singly or in pairs, and their range is a large one. I believe they are found on the western shores of Behring Straits, and they have been plentiful from our westernmost possession, the island of Atton, along through the Aleutian group through the Gulf of Alaska, and the Indians of Vancouver Island kill them on the western coast while in spring months they are very numerous.

Men of all nations join in their pursuit, and even undergo the hardships incident to marriage with native women for their sake.

The otter was to a certain extent protected. No white man could kill them, and no firearms could be used in hunting them, but with inadequate force to carry out the law it soon became a dead letter. A number of white men of various nationalities had settled upon the island of Ounga (near the point of Alaska), and employed themselves in otter hunting. In 1878 the Treasury Department gave special permission to such whites as were married to native women, and intended to remain in the territory, to hunt them, which permission put otters at a discount and women at a premium. But very little ceremony was needed to give them full rights to both otters and women, which without it they had owned.

These squaw-men by their steady hunting, frequently with guns, are greatly reducing the supply. At Atton, where they were once abundant, but seven were killed last year, and in other resorts they are decreasing. A skin worth \$50 per square foot is worth working for.

The method of hunting the otter, as practiced by the Indians of Southeastern Alaska, and I presume much the same elsewhere, is as follows: The hunters go in companies of three canoees, each carrying ten paddlers, the one in the bow being armed with a spear or bow and arrows. Lately, muskets have been introduced, which are loaded with buck-shot; but this is illegal, and tends to drive the animals from their breeding grounds, which are on rocky islands close to the shore, just to the northward of Cape Spencer.

The animals seek these islets in May, and the hunters rendezvous at them. When an otter is seen approaching they endeavor to form a circle to seaward of it, as quietly as possible, and then close on it. When alarmed the otter dives and endeavors to make its way to sea. Although less able to remain under than the beaver, its first dive will sometimes last for half an hour, but if quickly discovered and followed on reappearing, it soon becomes fatigued, and falls to the lot of the boat which first wounds it. Great care is taken to hit it in the head, and some of the Indians are expert shots.

Any dispute as to ownership is referred to old Kah-hoo-doo-sak, who listens to all of the evidence, and gives a decision which is never questioned. Willoughby was present at one such arbitration. The old man gave the skin, worth \$25, to the victor of the contest, who was to pay to the other seven blankets, worth \$21.

All captains of companies report to this chief the number of their otters, and he keeps a tally. This year 127 have been killed, worth probably at least \$10,000. The Indians say that they don't kill the female at this spring season, but the skins of unborn sea-otter pups are frequently on sale. I suppose that they do refrain, fully as much as does the ordinary sportsman, from going into New York from killing dogs, and the Alutians and out of meat.

In fall there is another short season, during which all adults are killed without distinction. On nearly every one of the Aleutian Islands, in several places in the Alaska peninsula, and in as many or more along the western coast, the Alaska Commercial Company and the Northwest Fur Company have agents stationed who practically monopolize the market in the vicinity.

Hoonah Dick admitted that some of the Alaska hunters used traps. I asked him why they did it, and he said that the English Indians used them, and unless they did also they could not get near enough to kill the otters by other means. He and Kah-hoo-doo-sak have promised to break up the custom.

To-morrow we start for Chilcat and the glacier. PISCOS.

#### FROM NORTH CAROLINA.

It has been said that we, like Rip Van Winkle, sleep. I do not write to deny the charge, but to tell you how blue the sky and bright the sun under which we sleep. We do not know much about the excitements and turmoil which disturb a great city, nor do we swelter through a breezy night among heated brick walls. We do not hear Mr. Beecher or Mr. Talmage on Sunday, or know about the last opera. We see the caricatures of Nast and occasionally read of the mud which our politicians and our own stir up, but they only, and they never inclusive, no longer disturb our minds about it, but revel in the genial climate, harvest fields, summer fruit, shady groves and soft winds, sweetly dreaming of the charms of the beautiful forest, "the mellow horn," "the voice of the hound on the breeze of the morn" and the rustling wing—at the falling of the leaf. The United States of North America is probably by natural endowment the finest country in the world, and North Carolina is as rich in all that goes to make a natural life desirable as it is possible to

bring together in any one State. Why should we not be happy, and if we wish, sleep? The game prospect is quite good. Most of the early broods are large enough to escape the recent heavy rains, so that quail shooting will probably be very fine. I understand there are a great many young turkeys, and no doubt the deer are doing well.

The State is divided into three belts running northeast and southwest. The first is from one hundred to one hundred and fifty miles wide, and lying on the coast (sea) known as the pine belt, is a level country, and has for game quail, turkeys, ducks, deer, and in the heavy swamps near the coast black bear. The middle belt is a rolling country and extends about one hundred miles further inland. Being a small grain country it has more quail and squirrels. Turkeys and deer are reasonably plenty. The next, the mountainous portion, has grouse, quail, turkeys, deer and bear. The middle and western portion, especially the middle, affords as fine quail shooting as any reasonable sportsman ought wish. There are some quail and deer in the mountains, but there are so many convenient swamps and thickets to which they usually take at the first flight that one need be somewhat expert in thick cover to make a good bag. Indeed, he need by no means be ashamed to bag only half his shots unless he is a poke who takes only open shots.

There is hardly a place in North Carolina where a true sportsman may not enjoy himself. The great trouble with those who come into this State for shooting is that through a long summer they have dreamed of, and wished, the time to come, until when they do start it is with inflated imaginations, and they are soon disappointed because they don't drop immediately into an Indian's heaven. Let one leave the false glare and glitter, the hollow show of a city life with a view to some weeks with nature and her charming loveliness, and he may be assured that he will find it, with fair sport added, in North Carolina. He can amuse himself with ignorance as primitive as the most fastidious could desire or test his manners with intelligence and grace as courteously as adorns any house in America. He can see "little spotted" built in harness to the plow, and not a mile distant the most perfect modern machinery and implements of agriculture. Altogether we offer both a field of sport and interest. We are a peculiar people, with our "peculiar institution" gone, and although we have gotten used to the loss, we have not all learned the most profitable ways of the "new departure." It is sad to think that many years will come before a clear, round shape will be given to what should be the prosperity of a people so blessed in soil, climate and nature. We say that it is hard to teach an old dog new tricks is as applicable to men as dogs, and I am inclined to think it especially so of men who live under a Southern sun. No condition, however, of climate, age or poverty seems to dull the senses of sportsmen for the fine points of the "new departure" in guns and dogs. In early autumn the sharp crack of the breech-loader is heard all over the State from the sea to the mountains. Those beautiful October days, when the blue hills seem sleeping in the distance, the faintest misty veil hangs over the gray woodland, and the eye searches for here and there, the fields of brown stubble, more beautiful to us than foliage or flower. 'Tis blessed to have life on such a day, no matter how much we "think what might have been."

E. L. H.

## Natural History.

### DOMESTICATION OF THE OSTRICH.

BY E. B. BIGGAR.

IT will perhaps surprise some of the readers of the FOREST AND STREAM, to find that the ostrich, which has been so long used in the civilized countries come from the hands of farmers and are clipped from hand wings as wool is taken from the sheep. Yet such is the case, and as I have no doubt that all readers of the FOREST AND STREAM would be glad to know something of these "farms," I will take them on an imaginary visit to one in the colony of the Cape of Good Hope. It was here, about twenty years ago, that a Cape farmer, whose sheep had failed him through disease and drought, conceived the idea of domesticating the wild ostrich and breeding them for the sake of his feathers and of making a business of the industry. With much public spirit he advocated this for the benefit of his fellow-colonists as well as himself; but although some farmers had occasionally, from almost the earliest days of settlement, caught some wild chicken and kept it on their farms, no one seems ever to have thought of making it a trade or business. The farmer mentioned above, whose name was Kinnaird, demonstrated that the sale of the feathers was profitable, but it was not until about 1865 that other farmers began to adopt the business. In that year there were eighty true ostriches in the colony in various districts, but so profitable did the business turn out and such a mania did it become that within the succeeding ten years the number had increased to 50,000, and within the past five years that number has again been doubled. It is now, therefore, a regularly settled industry, spreading through the other colonies of South Africa. It is not the object of this article to tell of the "trade," but rather to give some idea of the character of the farms and the kind of life the farmer leads. Imagine yourself planted down in an inland district, or as it would be called here, a county of the Cape, say Graaff Reinet. In one quarter of the horizon perhaps some gray mountain rises high over the surrounding land, but on all other sides is a bare ocean of treeless undulations, rolling endlessly out of sight. Here and there, on a closer view, we see far away a clump of bushes, or a ridge of gray rock, awaiting the light of a "white cap" in the water of a break the monotony of colors, and here before us, a white-washed dwelling shines like the face of a light-house in the bosom of the ocean. It and its attached buildings are the only houses in sight, and these are the ostrich farm. The farmer is not an old Cape colonist of Dutch extraction, but a recent Englishman, and to your astonishment greets you with the genial and polished style of an educated Londoner. How did he get here in this wilderness, resigning the privileges of refined society for the enlightened land, with all the comfortable surroundings of a fashionable life, perhaps? And he tells you as we enter his home that these are the very things that have driven him here. He tells you that English refinement is cloaked hypocrisy, and the modern five-meal-a-day style of living is bringing the noble Englishman with his contemporaries down to the effeminacy of women. He has broken through these toils and is now here in an air where he gets a good appetite, and endeavors to live a life more in accordance with nature. Brown bread, mutton and the plainest, lightest pudding now takes the place of the

injurious dainties of the English "highly civilized" table, and he finds his dyspeptic miseries vanishing without medicine. But we have come to see his ostriches not to hear his life. "You hear that noise?" asks the farmer in seemingly irrelevant reply to our statement of the object of our visit. "Yes; it is like the low trill of a policeman's whistle. What is it?" "Here, Nasilwani," says the farmer, "take the cover off that box."

Nasilwani, a stout, well-conditioned colored boy, born probably of some wild-bird seller in England, removes a rug from a biscuit box in the corner, and up starts the head of a beautiful bird. You name three or four birds which on after-thought you conclude it isn't, and then you make up your mind it is some wild African bird you have never seen. And it is, for it is a chicken ostrich. "And is that the way you hatch them?" you may ask. "No; that is a chick, the last of a whole brood. I suppose the old bird got tired waiting for it to come out, and left it to its fate. But the old birds are generally very careful hatchers, and when a chick is too feeble to pick the chick the shell, they help it out often by breaking it themselves." "I thought they hatched their eggs in the sand like a turtle." "Not in this country. Many of them never leave their nests during the whole time of sitting, not even for an hour; but some birds lay their eggs about, and will not hatch at all. Wild ostriches are often so disposed, they say, and this has been the origin of the notion among hunters that eggs were hatched in the sand. This little chick I brought out yesterday, and the mother is sitting on it, and will not let me near it to-day. When I bring the old birds up I will try to struggle this bird among them, for they sometimes refuse to acknowledge a chick that is not their own, and frequently kill them—perhaps eat them afterward." The chick is now set out on the floor, and what a beautiful creature it is to be sure. Its scaly legs, very stout, but not ugly, stand upon two toes each—two comical looking members, one large and one small, the large one terminating in a hooked nail that depends into a formidable weapon in the old bird. Its chunky body is already as large in appearance as a hen's, and covered with a down, yellowish on the breast and brownish on the back, while over this down little porcupine-like quills, about an inch long, some dark and some light, stick out in all directions, as if chopped hay had been sprinkled over the creature's back. Its well-shaped neck is covered with a sort of fur like fine seal, prettily mottled and striped in black and brown, and this organ is surmounted by the most beautiful and shapely head possible to imagine in an undeveloped bird, with such a small body. The head is covered with its intelligent looking crown spreads above a pair of eyes remarkably full and expressive, and a most comely beak completes the picture. When placed upon the floor he sits comically upon his haunches and looks inquisitively about as if to inquire what is the meaning of it all. We are now told that this is the way they do for the first two or three days of their open air existence and that at the end of that time the first thing they eat is not food but pebbles and sand and pieces of their own skulls. This is to prepare their gizzards for the entrance of food. They then eat insects, snakes, lizards and grasses. Now let us follow the farmer to the ostrich camp. What is a camp? On this farm it is an inclosure of varying size from half an acre to ten acres, fenced in with a hedge of dry brush known as "grass" in many parts here. The fence is only three or four feet high, yet it is sufficient to keep the largest ostrich within its limits, and we are confidently told by the farmer would serve that purpose if it were made of stone or iron. The first fence he goes to is a rude little gate in a peculiar drawing which the farmer slowly leads us to. The gate is a large circle of thorn with a knot on the top of it rises out of the thicket at the other end of the camp. No, it is the neck of an ostrich, as we can now see by its large black body, moving out into the open space. He knows the call well enough, but he is not so anxious to respond even at the sight of a dish of mealies (Indian corn), as he was before he had charge of the little brood that may now be seen moving about in it. In fact, he has become the other more truly than the other herds who now appears to view in another part of the camp. Whether he might come if a stranger were not present is a question, but at all events he merely walks to the other side of the camp and takes observations. At last our host considers it best to take the chicken in to him, if he will not come. The little basket in which the chicken now is placed, covered from sight, is taken up, and he enters. "Do we wish to go in with him?" Certainly we do. "Then take this in one hand," the farmer says, handing one of our long sticks with a small cluster of the thorn bush left on the end. "What is this for, we ask. "That is a tick. When either of them make at you just keep that at his neck. As long as you can do so you are safe. But if—"

At this point we conclude that it will be better fun to sit outside and watch. The farmer smiles a grim and cruel smile and goes in alone with the "tick" in one hand and the basket in the other. On approaching the great black bird, with his head high above the thorn, the slowly moving, like the deliberate swing of a pankal, and begins to hiss like a serpent. At the signal the chickens flutter, scatter and disappear in a most unaccountable way. The farmer, after an ejaculation of disappointment, edges the bird down toward where we are staying, and going to the spot near where the birds have disappeared, takes advantage of a moment when the old one does not seem to be watching and empties the tick out. Strange to say, the little fellow disappears, too, from my sight, but the grass, which he has been eating, remains. We now retire to a distance from the camp and wait for events. By and by, after the old birds seem to have forgotten that we have not gone away, the cock bird utters a plaintive sound, a sort of whoop without the p, and in a few moments the chickens, well knowing the sound, are again at his side. Rather to the surprise of the farmer, on counting them there is one more chicken than the original brood consisted of, so that the lately hatched chick had come, too, in the ready response to the call he had heard in the distance. And the old bird, as it afterward transpired, did not know or did not object to the increase in the family. Now we go to another "krall" or camp. Here is another pair of birds whose pale legs, sickly beaks and poor-looking figures are pointed out as signs that they have finished their incubation, and their broods being taken away are recuperating their strength for another season. At this time they are quite tame, and there is seldom any need of the "tick" when going among them. The camp adjacent to this one is a little different. They have just begun their labors, which for the first time of an ordinary hen, and their legs and beaks are crimson red in some parts. The hen is now on the nest and is not easily perceived, although there are so few bushes in the camp, and even those small and straggling. There she lies, with her head and neck stretched prone upon the ground, but her eye quietly watching our movements. Under her doubled-up legs two or three of her monstrous eggs may be

*Cynis occidentalis* var. *aler*—all presented. One axis deer, *Cervus axis*; one Emu, *Dromas nova hollandia*; one sambar deer, *Cervus aristoteles*; two Ambers pheasants, *Thaumatocera amherstii*; two blue jays, *Cyanurus cristatus*—all received in exchange.

FRANK J. THOMPSON, Sup't.

**ALBINO QUAIL.**—Mr. Frederick Fair, of Cranbury, N. J., has a case of game birds, put up at least forty years ago for his father, and still in a perfect state of preservation. He has recently added to the collection a beautiful Albino quail, shot by him a year ago near Dayton, N. J.

A hawk, nearly jet black, five feet from tip to tip, was caught on Friday, near Hightstown, by D. Oakerson.

## Fish Culture.

### THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

**MR. MILLER:** We would like discussions upon the merits and demerits of this Iowa fishway law, the plea of this Iowa mill-owner and on Mr. Shaw's reply to him; also decisions of the different State courts upon this question, with citations of authorities, through the columns of *FOREST AND STREAM*.

**MR. SHAW:** It is no doubt about the constitutionality of the law. It simply needs enforcing. You have placed obstructions in streams and prevented the people living upon them from drawing their fish food from the waters where it was placed for man before mills were thought of.

THE SECRETARY then read the following paper:

#### THE GROWTH OF CARP IN AMERICA.

BY FRED. MATTHEW.

It is a well-known fact that when an animal undergoes a change of climate it seldom remains as it was before the change. It either improves or deteriorates and often quite rapidly. A case which illustrates the latter phase is that of the bullock, which, taken to India, loses the courage which distinguished it in the British Islands and becomes a complete coward. Other instances are recorded in the pages of natural history where room will now have to be made to note the fact that the carp, after transplanting to America, has grown to three times the size, in the same space of time, which it did in Germany.

I propose in this paper to give the rates of growth in different parts of our own country, compiled from correspondents in different States, and also the rate of growth in Germany, obtained directly from the most reliable fish culturists of that country, and think that this testimony will bear out my assertion regarding the increased rate of growth of our newly-imported food fish, which thus becomes more valuable than it was thought to be on its first introduction. The first witness I will call is Mr. Volney Metcalfe. He writes as follows to Prof. S. F. Baird, who thought the latter of importance enough to publish in *FOREST AND STREAM* of August 19, 1890:

KOSSE, LIMESTONE COUNTY, TEXAS, June 28.  
PROF. SPENCER F. BAIRD, United States Commissioner Fish and Fisheries:

Dear Sir—The German carp, sent Sam Bell and me last fall, are doing as finely as any one could possibly ask. \* \* \* We put five of them in the tank (or pond) and fed all of them on corn bread and vegetables that had seed, such as tomatoes, squashes, etc., all of which they ate. They seemed to like the squash best and preferred it baked. Several of them seemed to be sick when they reached us, and died soon afterward; the remainder are now about four inches wide and a foot long. Corn bread is their favorite diet, and by feeding them at the same place every day they become accustomed to look for it. \* \* \*

A gentleman from Tennessee, who signs himself J. H. D., writes to *FOREST AND STREAM* of August 20 as follows:

NASHVILLE, TENN., Aug. 6.

Colonel Akers, our Fish Commissioner, received last week from Prof. Baird, a quantity of German carp. Mr. Frank Green obtained forty of these little strangers to place in a pond on his farm near the city. He reports them having grown to five or six inches in length, and says that he has noticed an enormous number of small minnows in the pond lately. Can they be the product of the carp so recently placed there? At what age do they begin to spawn? Mr. Green says that there were a few mud-cat in the pond when the carp were put in it. Could it be that the minnows referred to were of that species. It would be a matter of interest to have an answer from the *FOREST AND STREAM* to these questions.

To this the editor replies:

There have been many reports of the spawning of carp which were distributed last year, and it is possible that yours may have done so. It is also possible that the young fish referred to are carp. It does seem possible that they could be confounded with "mud cats." Send specimens to Prof. S. F. Baird, Washington, D. C., and then you will get positive information.

The rapidity with which this fish has grown in southern waters is something wonderful, and it is to be remembered that all the accounts of extraordinary growth so far have come from the South, proving the assertion that the warmer the water the greater the growth, or perhaps to say that the longer the warm season lasts the greater the growth is, would more nearly express it.

A Florida carp culturist writes Prof. Baird, and his letter was also published in *FOREST AND STREAM* of September 16, and drew out correspondence from Germany's foremost fish culturist, Herr von Behr, whose letter is given further on, as follows:

RIXFORD, Fla., Aug. 5.

**PROF. BAIRD:**  
Dear Sir—It will doubtless be a pleasure to you to learn that the carp you furnished me with last November are doing finely. I ascertained on my return from Savannah that the pond that I was not ready for their reception, owing to the fact that there were many more black bass in it than I had supposed. I accordingly confined the carp in a pen at the side of the pond, giving them water through holes in the side covered with wire netting. A few weeks since I discovered that a portion of the wire had been misplaced and some of them escaped into the pond, and I then concluded to let them all into it, as I had nearly all the bass out. Their growth since that time has been simply marvelous. Many of them are ten or eleven inches long and I feel certain they will spawn this fall. Will it be too much trouble for you to acquaint me with their habits? Do they bed, like some other varieties, when they spawn? I will add that they seem

quite tame, and come to the place where I feed them as quickly as a drove of pigs would come for corn, whenever they find I am there. I am confident they will prove a great addition to the food fish of the South, and I shall take pleasure in distributing them as soon as they propagate.

Very truly yours,

Geo. C. Rixford.

Mr. Rixford also writes to *FOREST AND STREAM* as follows:

It may interest some of your readers to learn that the German carp are thriving splendidly in our waters. Last November I received a lot from Prof. Baird, which I think were then from three to four inches in length. They are now from ten to twelve inches, and appear to make a visible growth from day to day. I think they are the greatest addition to our food fishes that has ever been made.

That the carp makes rapid growth in the State of New York is attested by the following item from *FOREST AND STREAM* of October 4: "Mr. Geo. W. Hopkins, of Mount Sinai, Long Island, N. Y., received some carp last spring from the national carp ponds at Washington, through Mr. E. G. Blackford, Commissioner of Fisheries for New York, which were then about three inches in length, but by October 1 would measure from twelve to fourteen inches."

The same paper contains the following from Texas:

OFFICE OF THE FISH COMMISSIONER,

Austin, Texas, Oct. 4, 1890.

PROF. SPENCER F. BAIRD, Washington, D. C.

Dear Sir—I saw a day or two ago one of the carp sent me last winter (these fish were the young of 1879 and about three or four inches long when received). It measured twenty inches. I am inclined to think they spawned this last summer, for the reason that the pond is now filled with small fry, unknown before in the pond. Should it prove to be correct I will inform you. Respectfully,

J. H. DINKINS, Fish Commissioner.

An account comes from Georgia, which gives the largest growth attained by this fish in America. It must, however, be remembered that this is the first season in which the fish has had a good trial in the South, and also that these Georgia carp are measured late in the season, having an advantage of several weeks over those before recorded. It appeared in *FOREST AND STREAM* of December 9, headed "Astounding Growth of Carp," and says: "It is a fact that the carp has grown faster in America than it does in its original home; but the most wonderful story comes from Georgia. A gentleman in Macon sends Professor Baird the following slip from a local paper and vouches for its truth. It says: 'Yesterday afternoon Mr. E. Witkowsky, who owns the tannery on the old Confederate property, concluded to cut the dam and clean out the pond in order that he might introduce his new German carp. The pond contained a large number of smaller fish, and among them Mr. Witkowsky hoped to find his four carp which had been put into the pond last May. He found three of the fish, but to his astonishment they were by actual measurement twenty, twenty-two and twenty-five inches in length respectively. The fourth escaped through the cut in the dam. These carp were but two or three inches long when put in the pond and their growth is remarkable. They are now in the tank in the rear of their owner's store on Cherry street, where we saw them last night and where the public are invited to see them today.'"

The correspondence between Mr. Rixford and Herr von Behr, President of the German Fishery Association, alluded to above, I take from *FOREST AND STREAM* of Nov. 18, and consider it worthy of a wide circulation as coming from a gentleman who has devoted his time and money to promote fish culture as a means of producing food, with no thought of personal benefit to himself, and who has known the carp for years. The editor prefaces the correspondence with these remarks:

The widespread interest manifested in the culture of this fish since its introduction by the United States Fish Commission is so great that we are certain that our readers will find the following letters from Mr. Rixford and Herr von Behr, the well-known President of the Deutsche Fischerei Verein, who has done so much for fish culture in Germany, of great interest.

Although we have many fish which excel the carp as a table fish, yet we believe that its introduction will prove of the greatest value in those portions of the country where the warm waters produce nothing edible, and that we could with more profit dispense with any other fresh water fish, outside of the whitefish of the lakes, than the carp, speaking from the fish culturist's and an economical point of view, for there is no fish which, in connection with its food, costs little or nothing.

Its rate of growth here has exceeded that in its native land, and its introduction into American waters will prove to be worth a vast sum within the next ten years to our hog-eating farmers, who seldom get a fish dinner. With this preface we give the following correspondence:

RIXFORD, Suwannee Co., Fla., Nov. 1.

Editor *Forest and Stream*:

Your favor of the 23d of October, covering a very interesting letter from Baron von Behr, came to me in due season. It appears that I am indebted to you for this correspondence, as it was through the medium of the *FOREST AND STREAM* that the Baron's attention was drawn to my letter to Prof. Baird, which you published, and I cheerfully send you a copy of his letter for your use, as well as a copy of my reply, which you can use or not, as you deem best.

Geo. C. Rixford.

SCHMOLDOW, in POMERANIA, Germany.

October 4, 1890.

My Dear Mr. Rixford:

It is after having read in *FOREST AND STREAM* of September 16 your letter about carp that I take the liberty of writing you some lines.

I have been receiving such manifold assistance from your countrymen in my fishcultural interests that I am glad to be able, perhaps, to assist you, though of course Prof. Baird will have furnished you with the most needed hints.

My carp will delight in the climate of Florida. They are a fish liking warmth before all, and therefore retire, in my climate—Northern Germany—from October to May, into the deepest possible mud in the ground of our carp lakes and seem to slumber there in entire apathy. They spawn with us in May, June and July, the special time depending entirely upon the warmth of the water. We are of the opinion that they need for spawning something like 15 degrees Reaumur—about 60 degrees Fahrenheit. All this is rather superfluous for you, but now I may be able to give you good hints.

We put branches of different trees—evergreens or others—in the pond a short time before hatching begins, fixing one end of the branch in the soil, and leaving it swing in the

pond some six inches below the surface. As soon as the carp begin to spawn, they fix their glutinous—adhesive—eggs in innumerable quantity upon the branches we had put in; but, alas! at the same time Mr. and Mrs. Carp begin to eat eagerly their own eggs. It is only in consequence of the immense quantity of eggs they spawn that the carp is as plentiful as it is. But as for your country, which wishes to get quickly great quantities of young carp, it could make no better arrangement than to take out, after securing the branches covered with eggs, either these branches—transplanting them in a tub of water, in order that the eggs do not get dry—and bring them to a neighboring pond, quite empty of other fishes, or take out the old carp altogether from your spawning pond, and leave this alone to the young ones, which after a short time, will swarm there by many thousands, and very soon begin to take food of any kind, say cooked potatoes or bread. By giving bread constantly my friend got our carp so tame that they would come and eat bread from their hands. They get very tame, indeed.

The best plan is to have many ponds for the carp, all of them being arranged in such a way that they can be made entirely dry. That gives you the possibility of having the carp divided according to their ages—say of one, two, three or four years.

At four years they will grow in your climate to about ten pounds, easily. You know that in rare cases we have carp of thirty or forty pounds, while it is nothing unusual to have them up to twenty pounds. If you read German, or have anybody who understands this my language—I could send you, by care of Prof. Baird, some books about carp, their breeding and nursing. You know that the Greeks (Aristotle) and the old Romans knew this. They came from Italy to Germany in the eleventh century—of course, by the monks, who were the great protectors of fishes.

In the ponds which contain your carp of three, four and five years, you will do wisely to keep within a few voracious fishes as *Bass* (pike), or similar ones. This seems to prevent their desire to spawn, and therefore assists their quick growing. This principle is generally followed wherever we have large carp culture in Germany or Austria—Bohemia. Beware of having other fishes of a similar family in the same pond with your carp—the crossing gives very bad fishes, full of bones and of bad taste.

Now, this, my letter, may go. It reaches you, I hope you may find it of a little use. I finish by begging that you send kind assistance from your countrymen, that I shall be very glad to be useful to you. Newspapers make now in a few weeks *le tour de monde*. Let everybody try to make use of them, and be of use through them to mankind. "Goodwill to nations" is a beautiful duty. I subscribe myself,

VON BEHR,

President of the German Fisheries Verein.

RIXFORD, Fla., Nov. 1.

BARON VON BEHR:

My Dear Sir—Your letter under date of the 10th of October was forwarded to me through the courtesy of the *FOREST AND STREAM*, and reached me in due season. Allow me at the outset to express my hearty thanks for your kindness in writing me, as well as for the valuable information you have given. My carp, which are of the scale variety, continue to thrive splendidly and are a marvel to all who see them, especially those who saw them when I first purchased them in November when they were only about three inches long, and who now compare them. Many of them are from fifteen to seventeen inches in length and six to seven inches in breadth. They show no signs as yet of going into winter quarters, coming for their food regularly, and I hope to be successful in carrying them through the cool weather without their resorting to the old habit. I find our natural ponds are not exactly fitted for them, as they are generally deep and not easily drawn off, with no visible outlet or inlet. Small fish, such as minnows and perch, generally inhabit them, which were better destroyed, as they will likely feed upon the eggs. Turkeys are also plenty, but we must do the best we can to destroy the pests.

Your information that the carp devour their own eggs was new to me and has suggested the idea to me that possibly at that time they need a different variety of food, and I shall about that time change it to one composed more of meat. At the same time I can protect the bushes on which they have deposited their eggs from their depredations by a wire fence. I expect they will spawn in the early spring, say March or April. I will be much obliged to you for any works on their culture that you may send me, as I have friends who will take pleasure in translating them for me, and the publication of them may benefit others who have the fish in other portions of the country. You will, I am sure, pardon me for the liberty I have taken in sending a copy of your letter to the *FOREST AND STREAM* for publication, as the information given will be valuable to many of its readers and will very likely be copied into many other papers, as the subject is one that is attracting much attention. Your allusion to the assistance that has been afforded you by my countrymen is certainly a compliment to them and I feel warranted in saying that, as in the past, they will in the future do all in their power to promote and strengthen the "beautiful duty" to which you have so pleasantly referred.

Allow me to subscribe myself, very truly yours,

Geo. C. Rixford.

While in Berlin last summer in charge of the Fish Cultural Exhibit of the United States, I obtained, by request of Prof. Baird, the rate of growth of the carp in that country from three of the prominent fish culturists there which, compared with the above rates, shows that the change of climate has increased its ratio of growth here. Mr. Robert Eckardt, trout and carp culturist at Luebenchen, gave the following average:

Carp at 1 year 10 @ 12 centimetres =  $\frac{41}{10}$  @  $\frac{5}{10}$  inches.

" 2 " 15 @ 18 " =  $\frac{6}{10}$  @  $\frac{7}{10}$  inches.

" 3 " 1 " 1 lb.

" 4 " 3 lbs.

Mr. Herman Haack, Director of the Imperial Fish Cultural Establishment at Hueningen, answered questions as follows:

Carp at 1 year 1 to 8 inches

" 2 "  $\frac{1}{2}$  to  $\frac{3}{4}$  lbs.

" 3 " 1  $\frac{1}{2}$  to 3 lbs.

" 4 " 2 to 5 lbs.

Depending upon temperature and food.

In this connection it must be remembered that Germany has a cooler summer, and as the carp grows, according to our best evidence, in direct proportion to the warmth of the water it is difficult to believe these accounts of its wonderful growth in America with its broiling temperature, most especially in our Southern States. A most convincing proof that it thrives best in warm situations is the fact that in Germany a carp pond received the condensed water from a low pressure steam

engine which frequently raised it to a temperature as high as 100 deg. Fahr., and the carp in it grew with surprising rapidity, astonishing the carp breeders who had ponds in that neighborhood.

The evidence as above given, taken with the fact that at the national carp ponds in Washington, D. C., a carp was taken weighing twelve pounds, which was one of the original lot put in by Mr. Rudolph Hessel, the superintendent, only three years before when it was only four inches long, I think shows that the fish in its new home has exceeded its rate of growth in its native land at least four times, for I have no doubt that in the cooler waters of its former home it would have taken twelve or fourteen years to reach that weight.

From the report of Mr. J. H. Dinkins, the Fish Commissioner of Texas for 1880, I take the following: "Last February out of a shipment of 150 carp from Washington I gave Mr. J. B. Rogers, living about twelve miles north of Austin, ten, averaging not more than four inches in length. While Mr. Ellis was here we rode out to Mr. Rogers for the purpose of getting a specimen to take back to Washington to show the extent of their growth. We caught five out of the pond in which they had been placed the February previous, and they varied from nineteen to twenty-two inches in length, and had increased from about three ounces to about four pounds in weight. The one taken by Mr. Ellis to Prof. Baird at Washington was twenty-two inches long, and I doubt if an example of more rapid growth can be found anywhere."

I am also informed by Mr. E. R. Miller, of the Michigan Fish Commission, that they received some young carp last year, none of which were over an inch and a half in length, and that, when they had occasion to move them this year they found that they had grown up to October to a length of seventeen inches and a weight of three pounds.

[The remaining papers and discussions will follow as fast as we can publish them.]

**SHIPMENTS OF WHITEFISH EGGS.**—From the U. S. Hatching Station, at Northville, Mich., in charge of Mr. N. Clark, the following shipments of *Coregonus* eggs have been made. 250,000 to the Deutsche Fischer, Verein, which, according to a telegram received by their New York agent, Mr. Fred Mather, arrived safely; 50,000 to Mr. E. M. Stillwell, Bangor, Me.; 250,000 to Mr. Wm. Griffith, Louisville, Ky.; 500,000 to B. F. Shaw, Anamosa, Iowa; 250,000 to R. O. Sweney, St. Paul, Minn., and 250,000 to B. B. Redding, San Francisco, Cal.

## Sea and River Fishing.

### THE TROUT LAW.

THE following letter from one of the game protectors of the State of New York seems to us so sensible and to the point that we commend it to those having its revision under consideration:

Editor Forest and Stream:

I notice in your edition of this week an article on "The Game Law Revision," and I would say that it is a matter that now needs the closest attention. I am living in one of the best "speckled trout" regions in this State, and the present law reads, Sec. 10, Laws of 1879, Chap. 534: "No person shall kill or export for sale, or have in his or her possession after the same has been killed, any speckled trout, save only from the first day of April to the first day of September," and then follows the penalty, etc. Now, you see from that section that unless the trout are killed, the party taking them is not liable. And we have two men near here that have private trout ponds and fish the year around, and put the trout into their ponds, where they sell them out in season for one dollar per pound. And during the past season I know of one family that caught and sold to one of these men six thousand brook trout, and they were mostly caught from a single brook that runs into the West Canada Creek. Those six thousand small trout were sold for \$2 50 per hundred, and by being fed up in a private pond, another season many of them will be large enough to be caught out at \$1 per pound, which looks to me all wrong, as this particular brook, with several others that are tributaries to the West Canada Creek, were stocked with trout from the State Hatchery two years ago, and if left alone would soon make fine fishing in the creek. And this is only one family and one brook out of a dozen that I might quote. You can readily see that it is a large drain on the main stream. And besides these fish ponds men can go and catch them off from the spawning beds, provided they catch them with hook and line, and do not kill them, all of which serves to keep the people living in those localities and who own the land through which the streams run uneasy and discontented, because these men are allowed the privilege of cleaning out the stream in or out of season.

I would suggest that that section be amended so as to read: "No person shall catch or kill," etc. That one word will stop the stocking of fish ponds out of season. And I believe it would be well to amend it still further by prohibiting entirely the catching of trout out of public waters for the purpose of stocking private ponds, for in every number of the great North Woods with copies of the game laws and, with few exceptions, they have expressed a willingness to stop depredations themselves and assist in enforcing the laws if it was going to become general. But the game laws had been a dead letter so long that it has taken some time to convince them that the laws are going to be enforced, and that though parties may sometimes get through without being caught they are liable sooner or later to come to grief.

This particular flaw in the law has been more trouble to me than any other. I have taken pains to supply most of the guides and resident hunters living on the edge of the great North Woods with copies of the game laws and, with few exceptions, they have expressed a willingness to stop depredations themselves and assist in enforcing the laws if it was going to become general. But the game laws had been a dead letter so long that it has taken some time to convince them that the laws are going to be enforced, and that though parties may sometimes get through without being caught they are liable sooner or later to come to grief.

There is quite a misgiving notion among men calling themselves sportsmen, and who belong to sportsmen's clubs and are members in good standing, that if they are in the woods during the months of June and July on a fishing excursion and want a "little venison to eat while in camp" they have a right to kill it, but it will not do. It works harm to the general enforcement of the law to allow it, as guides and parties living back in these localities claim, with good grounds,

that it is no worse for them to "crust" deer for meat for their winter use than for these sportsmen (??) to kill them out of season for their use.

The season thus far has been quite favorable for deer. We have not had a very deep fall of snow as yet, and what we have is light and loose, so that deer can roam at will, and yet the snow is deep enough to prevent a dog from running with any effect and so light that snow-shoes are worse than nothing for any one disposed to try a "little still-hunting out of season," and until we have a thaw to make a crust the deer are comparatively safe from the poachers. There are some other sections of the game laws that I wished to speak of, but as I have already drawn this letter out to considerable length I will make them the subject of another communication.

Since writing the above we have had a terrible fall of snow, but it is so light that the chances for the deer are still in their favor, for a dog can't run at all and snow-shoeing is almost impossible, and until there is a crust they are comparatively safe.

Wm. P. Dodge.

### PICKEREL FISHING THROUGH THE ICE.

THE law has been changed in Chautauque County, N. Y., and the "snake-esters" can now be taken in winter. The *Countrywide* complains of it and says that there are 500 fishermen's huts now upon the ice and that the crop is in danger of being over-harvested. Well, there are better fish, and all who are interested in pisciculture can well spare the long-snouts, for they kill tons of better fish than themselves. Our private opinion is that they are not eatable, although we often hear of localities where they are "excellent." This point we will admit, for other palates than our own; but, as for us, we admire not the flavor of mud and weeds combined in a soft paste.

A Campbell's, Mass., correspondent writes: "Nippenickett Pond, some four miles from this place, has become noted for its pickerel fishing through the ice, and last month large quantities of them were taken. A party of three from this place caught some eighty or ninety in an afternoon, weighing from one-half pound to three and a half pounds—not great fishing, surely, but it shows what our ponds might do if protected."

And "Webb" writes from Nashua, N. H.: "Pickerel fishing has not been as good this winter as usual, though some good strings have been taken. The outlook for trout fishing in these parts for the coming summer is poor. Some, if not most, of our best trout brooks were dry all the fall and of course no spawn were cast in them. Many trout were destroyed in pools, where they had congregated, by their enemies, the kingfisher, the heron and mink; others were left to decay in the dry beds of the streams. The Commissioners would, perhaps, furnish you with fry to stock the streams, as far as they could, if parties interested should apply."

### THE NORTHERN RANGE OF THE CATFISH.

ST. PAUL, Jan. 1.

YOUR correspondent, Dr. E. Sterling, of Cleveland, O., is "in search of the most Northern range of our catfish." He suggests "perhaps the waters of the Mississippi will be found to carry this fish farthest in that direction." He calls for information as follows: "In case it is found in water south of the divide, that flow into the Arctic seas, please let us hear from the captor, etc."

The Red River of the north flows into the Arctic seas. In the month of August, in the year 1860, the writer was one of a party of eight or nine persons who made a trip from St. Paul to the mouth of Red Lake River, a place on the Red River, now the site of a flourishing city called Grand Forks, some sixty miles south of the boundary line between the United States and Manitoba. The whole country was then a wilderness. The object of the expedition was to make a treaty with the Red Lake Chippewas, and the Commander-in-Chief was one Goddard Bailey, special commissioner, who soon afterward became somewhat notorious in connection with certain securities misappropriated at Washington belonging to some of the Indian tribes.

Major Wm. J. Cullen, well known to all old settlers in the Northwest, was the best general traveler and companion in the world, then Superintendent of Indian Affairs in this department, was "high joint" with Mr. Bailey and accompanied the expedition. The writer was secretary to the commission. The treaty failed but the catfish question was settled.

At one of our camps, at a point on the Red River near the present crossing of the Northern Pacific Railroad, our cook set out a hook and line properly baited with a pork and cod, and in the morning a catfish was found on the hook and secured, the weight of which, in the judgment of the party (we had no scales), was at least forty pounds. After slicing off enough for breakfast for the party, our cook, having no convenient place in his wagon for such a monster, hung him with a chain under the wagon reach and toled him along, and we fed on catfish for several days and found it delicious.

God doubtless could make a better fish food than the Red River catfish, but he doubtless never did at least that is about the way it struck the party who consumed this one. The Red River catfish, if this was a fair specimen, is vastly superior in flavor to those found in the waters of the Mississippi. The writer is not very familiar with the habits of the Red River half-breeds whose log cabins adorn the banks of this river between Pembina and Winnipeg, but he understands the fact to be that the catfish of this river are their main stay for food, and contribute in good part to make them so fat and lazy. Take a trip down that stream by steamboat on any summer day, and you will see their lines bobbing from every branch overhanging the water, all the way down. In this section of the country these facts are notorious. The Doctor evidently has not traveled this way.

CLEVELAND, O.—The inclosed postal card gives you another item on the range of the catfish (*Pimelodus*). Have information from a reliable source that the fish is taken in the Bay of Superior City, and also near the mouth of the St. Louis River at the head of Lake Superior; the fish often weighing twenty pounds or more. Taken in such cold, clear water it must prove a very superior fish for the table, especially when cooked according to Dr. Kirtland's way. This fish from Lake Erie when salted brings two dollars more per barrel in the Southern market than our much valued whitefish (*Coregonus*). The catfish can be easily propagated artificially. Have any of your readers anything to say in favor of this fish?

Dr. E. STERLING.

FORT OMAHA.—Feb. Jan. 2.—The Missouri River is full of catfish, to my knowledge, as far west as Fort Buford and the Yellowstone west to Tongue River.

W. L. CARPENTER, U. S. A.

WINCHESTER—Va., Jan. 4.—In reply to the inquiry of Dr. Sterling in your last issue I have to state that more than a score of years ago while stationed at Fort Abercrombie on the Red River of the North I was accustomed to capture many of these fish. They were of a golden color, rather slender than the common catfish. Their flesh was white, firm and of most delicious flavor. As the R. River connects with Lake Winnipeg I think it probable that they may be found as far north as the latter point. LIEUT. ASA WALL.

A NEW FISH MARKET FOR NEW YORK.—The Times gives over a column to the history of the efforts to abolish the rickety old Fulton Market and build a respectable one on its site. It has at last been accomplished and \$80,000 granted by the city for this purpose, news which all fish culturists who flock there on April 1st to see the trout show will appreciate, although it will not be begun until after the next one. The old building has been condemned by the Health Department several times, but the opposition of the politicians and small stand holders has, until now, proved too strong for them. The new building is thus described by the Times:

"The cellars, grog-shops, etc., are all to be filled up. New walls 31 feet high and 34 feet apart are to be erected. The central portion is to be made perfectly secure, but for the present the internal arrangement will not be disturbed. As the market exists to-day, you have to move a series of dirty wooden stairs to approach the centre of the market, which you have to descend again. With the new plan there will be a continuous ground floor and no stairs. The greatest care will be taken as to drainage, and every possible convenience will be presented for the washing or flushing of the floor. There will be plugs of water at proper distances. There will be a truss roof over the new portion. The floor will be two-inch-thick yellow pine laid in and called. There will be three entrances on Front street, with one on Beekman and one on Fulton. The South street front, between the two wings of the market, will remain as it now, open. On each corner of Front street the building will rise above the level of the roof. For ventilation there will be ample provision by means of spacious windows. It is proposed that the demolition will begin some time from the 1st to the 15th of April, and the new building, it is expected, will be entirely finished and ready for market purposes by the middle of August. A number of the leading stand-holders, among them Mr. E. G. Blackford and Mr. William Ottman—these present premises being situated on the site of the proposed improvements—are ready to spend a great deal of money in embellishing and fitting up the interior of the market in a manner appropriate to their business. Certainly the trout exhibitions made hereafter by Mr. Blackford, of the New York State Fish Commissioner, will be doubly attractive when they have these new surroundings in 1882. In regard to the central portions, they will in time, perhaps not later than 1882, be reconstructed in harmony with the rest of the building."

"New York is to be congratulated at last in having this offensive nuisance torn down and an appropriate structure erected in its place. The committee are to be lauded for their energy and determination in having the old eye-sore removed, and most especially the thanks of New Yorkers are due to Mr. E. G. Blackford, who has for the last year devoted his whole time and efforts in this direction."

## Game Bag and Gun.

[SPECIAL TO FOREST AND STREAM.]

### MICHIGAN SPORTSMEN'S ASSOCIATION.

LANSING, Mich., Tuesday, Jan. 25.

THE Michigan Sportsmen's Association met in this city this afternoon. The purpose of the organization is the protection of fish, game and birds. It comprehends a large number of local societies and has individual members in all parts of the State.

The present meeting is very largely attended, exceeding in that respect any previously held by the Association. Large delegations are present from Kalamazoo, Saginaw, Battle Creek, Iart, Jackson, Bay City, Grand Rapids, Detroit, Monroe, Hastings, Grand Haven and other points. Dr. E. S. Holmes, of Grand Rapids, is President; Prof. H. B. Roney, of Saginaw, Secretary. Many individuals were elected members, and four new clubs were admitted—the Hastings, Grand Haven, Bay Point and Iart Clubs.

Letters were read from gentlemen from Georgia, Wisconsin, Illinois, Indiana, Ohio and New York, interested in the preservation of the game of the country, and hopeful of the passage of such laws in all the States as will fully protect migratory birds and fishes. At the evening session a paper was read from Seth Green, the noted pisciculturist. He regretted that the New York State Association was chiefly given to shooting rather than to conserving of game. He gave as his opinion that the game of the country would soon become extinct. He urged better legislation and spoke of the good effects of having a game constable in the vicinity of Rochester, and hoped that angling with rod and line would be made lawful in streams inhabited by game fish.

A report was read by the Committee on Laws for the protection of game animals and birds and insectivorous birds. It was accompanied by the draft of a bill. The Committee on Fish Laws, including propagation as well as protection, made a report confining it chiefly to the waters of the great lakes.

A letter was received from Professor Spencer F. Baird, of Washington, who doubted the jurisdiction of Congress over the waters of the lakes for the purpose of regulating the fisheries therein. He thought that the object might best be attained by State legislation. Chairman Clark advocated laws making artificial propagation of fish obligatory.

Letters were received from gentlemen at Menominee requesting legislation that would prohibit the digging of pits for entrapping deer and of firelight shooting.

The report of the Committee on Sporting Dogs favored legislation that would protect such animals. The report also took ground against summer shooting, and abounded in suggestions as to the proper season for various birds. A letter was received from Mr. Hyatt, of Fond du Lac, Wis., regretting that poachers had begun to make ruthless raids on the hunting grounds of the Upper Peninsula. He thought that five thousand deer must have been slaughtered there last season, and hoped the open season would be shortened by the Legislature.

Secretary Roney read his annual report, in which the growth and prosperity of the Association were adverted to and certain legislation recommended. The session continues to-morrow, and a large number of papers by distinguished sportsmen will be read.

#### THE GAME OF MAINE.

FROM the advanced sheets which have been furnished to the FOREST AND STREAM through the courtesy of Mr. Everett Smith, we take the following extracts from the report of Messrs. Stillwell and Smith, Commissioners of Fisheries and Game of the State of Maine:

All game (*Pere nature*) is the property of the State within which it exists. And no person has a legal right to pursue or take it, except by the means and at such time as may be permitted by the laws of the State thereunto pertaining.

By an act of the Legislature, approved March 9, 1880, it became the duty of this department to enforce the game laws, as well as the laws relating to our fisheries. Although no appropriation of funds to be applied to the enforcement of the game laws had been made, we took such steps as were possible to bring offenders to justice. An offence committed on March 13, only three days after the act referred to became a law, we successfully prosecuted, as our first case. This cost the offenders \$71 for their amusement, if it places them to regard as sport the running down a game bird in the snow, and butchering it when exhausted. The list of prosecutions was in some districts, the more energetic efforts in the discharge of our new additional duties, and we hope to receive the support and assistance of our citizens and sportsmen in the continuance of this work each year. Our citizens are awakening from their apathy in regard to our fish and game laws, and the general desire for a vigorous enforcement of them, calls forth the support and assistance needed, and without which we can do but little.

#### GOOSE.

We wish to call attention to the work of extermination, practiced by parties engaged in snaring grouse or "partridges." Very few of our citizens are aware of the extent to which snaring is practiced, and, although the grouse are nearly exterminated in some of our districts, the public are at a loss for a cause to which it may be ascribed. The practice is carried on so secretly that it is often known only to those engaged in it, and perhaps those to whom the birds are sold. It often happens that many broods of grouse are observed in some locality during the summer, but when sought for in the mellow days of October but few, if any, can be found. Since summer woodcock shooting has been prohibited by law the grouse have increased in numbers, and it was not until the winter of 1879-80 that we learned the young grouse were slaughtered in great numbers before September 1; every one found in the woods with a gun and dog being ostensibly there for woodcock. Fortunately for the preservation of the grouse no woodland game can now be legally killed before September 1, and he who goes to the woods with gun and dog in July and August becomes an object of suspicion, while the sound of a gun is *prima facie* evidence of a violation of the law. We warn sportsmen who may take young dogs out for training, to leave the gun at home, if before September 1, lest they incur the odium, at least of being suspected of poaching.

#### WOODCOCK AND SNIP.

Although the spring was very favorable to the breeding of woodcock, the almost unprecedented drought that extended well into the autumn, and past the usual rainy season of September rendered the earth so parched and dry that the customary resorts of these birds yielded no food, and they were thus driven to seek other feeding places. Usually the woodcock remain throughout the summer in the vicinity of their breeding places, and are not until the autumn when they are their regular resorts. But this year these covers have comparatively been almost deserted, the birds having scattered over the country, along the banks of streams and shores of lakes, the edges of meadows, and places where they have not been observed before. Reports from Canada show that woodcock were exceedingly abundant in the autumn, and places that usually have afforded but little shooting, seem to have been thronged with birds. This has been true, also, of snipe, which were scarce in Maine from the same causes that occasioned the scarcity of woodcock; the meadows and marshes being very dry at the time of the usual appearance of the snipe during the autumn.

As is usual after a poor season, many of our sportsmen discuss the advisability of restoring the old law, permitting woodcock shooting in summer. We trust that this will never be done, for it would open the door to a slaughter of young grouse, and, most certainly, four months' shooting at woodcock instead of two months, will not serve to increase their numbers.

Since Maine abolished summer shooting other States have done likewise, and with good results; and we hope that all other States will follow the example.

It is true that ten years ago one could show more birds as the result of a day's shooting in Maine; but there are now ten or twenty times as many persons hunting woodcock as then, and all the best covers are hunted through almost daily during the whole season. Hence the birds are not suffered to collect in numbers, but the aggregate number killed each year far exceeds that of the years before summer shooting was prohibited.

#### DUCKS.

It will be remembered that within ten years the ducks that frequent our lakes and streams gradually became scarce, and

even exterminated in some localities where previously accustomed to breed. This scarcity was owing to extensive netting, but the perpetrators were driven off for a time, and the ducks increased, until they regained their former abundance last year.

It has recently come to our knowledge that the same causes of extermination have been in operation this year, and we call especial attention to the fact. We intend to publish in the future the names of those who persistently violate the fishery or game laws, and we now brand as a professional poacher and persistent violator of our laws, Daniel Y. McFarland, of Lamoine, Me. This man, with his associates, has been engaged in the business of netting ducks for many years, and we can only call upon all good citizens to aid in forcing him or offenders of this ill-reputed trade, but warn the citizens and officers of the law in other States, and our Canadian neighbors, that the operations of this man are not confined to Maine alone. He is the leader of a gang of poachers whose operations a few years since bade fair to exterminate all the wood ducks and "black ducks" that bred in the State, and he has been operating again upon an extensive scale in Maine within the present year. He is wanted in Maine to meet the justice that awaits him and the heavy penalties that he and his associates have incurred.

#### QUAILS.

It is quite generally known that a large number of quails were imported from Europe this year, and liberated at various places in the United States and Canada. More than one-half of the total number were distributed in Maine. These birds were purchased by private subscriptions, but as they have now come under the protection of our department we give this mention of them, which may prove of interest to our farmers and sportsmen.

This quail, *Coturnix communis*, is the common migratory quail of Europe, that for centuries has crossed the Mediterranean sea from the winter home in Africa to its breeding places throughout Europe, returning again to Africa in the autumn. The bird resembles in outward appearance our American partridge, *Ortyx virginianus*, that is termed "quail" in New England. The migratory quail is one-third smaller, and the throat of the male bird is marked with dark brown or black, that extends from the bill downward. The note of the quail may be expressed as nearly as possible to translate into words or syllables, by "who cat—whet—whet," the first sound being "who" and the second "whet" at a great distance, but the three clear notes may be heard a quarter mile away. Often the notes seem to come from a bird near by, but really afar off, and perhaps in another field not near the listener.

The quail is strictly a terrestrial bird, and inhabits the fields, where it also nests. Fifteen eggs to a nest is not an unusual number, and as each egg, laid by a bird of but three or four ounces weight, is as large as the egg of our robin, we have been frequently asked how so small a bird manages to hover and hatch so many eggs in one nest.

The nest is a depression hollowed in the ground, and lined with grass by the bird. In this nest are laid the eggs in regular order, upon the bottom and around the sides of the nest, the upper ones supported by the eggs beneath and the sides of the shallow, bowl-like nest. While sitting, the body of the bird is surrounded upon breast and sides by the eggs, while its wings are raised to cover the top layer of eggs upon each side. Many nests of fifteen eggs each have been reported as found, and all the eggs were hatched.

One nest of eighteen eggs deserves especial mention, as of interest to students of ornithology. The eggs in this nest were laid in tiers or layers most carefully and compactly arranged, one above the other, as if placed by the hand of man, the bottom layer most entirely hid from view by the eggs above. But twelve of these eggs were hatched, and evidently the bird was too ambitious. Probably the bottom eggs were so covered by others that sufficient warmth was imparted to them from the body of the bird.

The eggs of the quail are of a greenish color, profusely blotched with brown. Like other eggs, if deserted and left exposed to the sunlight for days, the color will fade until it becomes almost white. This year the eggs were laid in June and hatched in July. The young birds leave the nest as soon as hatched, and mature very rapidly, being strong of wing in September.

Among the noteworthy characteristics of the quail are its gentleness, and the extreme pertinacity with which it adheres to its domestic duties. We found two nests with eggs within a few rods of a farmhouse, where a lot of the birds had been liberated, and close by a traveled highway, as well as near a railroad. The birds were occasionally observed among the chickens about the house.

Quite a number of quails have been killed by mowing machines. One man naturally suppose that the clatter of one of these machines approaching would sufficiently alarm any bird, even while sitting upon its eggs, to cause it to leave its nest temporarily. But some have had their heads cut off by the knives, and in one instance the machine was a typical "Juggernaut," the wheel passing over and completely crushing the quail and its eggs in the nest beneath it.

The quails have a strong scent, readily detected by setters and pointers, but they often seek to escape by concealment, or without taking flight. They are fast runners, and in a field trail on these birds under the present system of awarding demerits, the dogs possessed of the finest "nose," or scenting powers, would be handicapped, and receive a score of demerits for false "points," as it would not infrequently occur that the bird or birds, would not be flushed before the dog, although there when the point was first made.

Some young quails were captured near St. John, N. B., this year, although none were liberated nearer than at St. Stephen. Several quails were also seen near Machias throughout the summer and autumn. None had been liberated nearer than the Penobscot valley on the west, and at Calais, forty miles to the east. This is not remarkable, however, in consideration of the fact that a quail can easily fly fifty miles within an hour. Unlike our American partridge, or "quail," it is capable of long sustained flights, without stopping to rest.

Quails live upon the ground in open fields, and feed upon seeds and insects. Farmers should be interested in protecting these birds for propagation, and public attention is called to the special law for their protection:

"No quail shall be killed, or had in possession except alive, any time previous to September 1, 1883, under penalty of \$25 for every offence, and \$1 additional for each quail killed or had in possession except alive.—Chap. 189, Public Laws 1880."

The general law of the State provides for their protection after the expiration of this special law.

#### CATS.

We mention cats, not as game, but as the most deadly

enemies to our feathered game and song birds. Many instances have been already reported of quails caught by cats, and the unsuspicious nature of these birds render them an easy prey to the feline marauders. One cat is reported as having been home to rest with six quails in the course of a few weeks during the nesting season. Of course one can only conjecture how many that cat killed and ate without being observed by any one. Another cat was seen to bring home three woodcock.

But although the cats commit this havoc among our game birds, by far the greatest evil caused by them is suffered by the farmers, to whom a cat is a costly pet. All through the spring, summer and autumn the cats venture out from their holes, burrows, and favorite haunts, and the birds, and the host of care and food will not keep them from doing this. One may frequently see them crouching by the roadside or skulking along a hedge or ditch, seeking not for mice but for birds, destroying the mother bird setting on its nest and the fledgling birds. Now do the farmers realize the evil results to them caused by the death of these birds? We think not and would therefore call their attention to what is really serious evil.

Except the hawks, and other rapacious birds, all our birds are insectivorous in their habits, very many of them subsisting wholly upon insects and their eggs, of which a single bird will consume an immense number daily. But for these birds the face of the earth would be made desolate by a scourge of insects. As the birds about a farm destroy millions of insects every year, it behooves the farmer to afford all possible protection to these birds that render him such valuable service. There is a sufficient number of natural enemies to the birds to preserve the balance of nature and prevent a too great increase of birds, and the domestic cat has been introduced by man and by him should be removed.

The mischief that might be done by all the rats and mice caught by the ordinary cat in the course of a year would be but a trifle as compared to the evil results possibly due to the destruction of the birds. We urge our farmers to kill the cats. You cannot afford to keep them, unless it be in confinement constantly, except while the snow is on the ground and nearly all our birds are dead. Every little bird killed by them grates life to many thousands of insects.

#### MOOSE, DEER AND CARIBOU.

The law prohibiting the killing of moose, at any time for five years, expired October 1, 1880.

Unfortunately, violation of the law deprived the State of the full benefits for which it was enacted, yet the moose has increased in numbers within the period named, and we trust that the examples made of several offenders brought to justice, and the penalty of \$100, for each moose killed or had in possession, may deter others in the future from so offending. Caribou are much better able to take care of themselves. They can travel rapidly and for long distances in the deepest snow, and owing to their roving habits they are perhaps plentiful in a given locality one year, and none at all observed there the next year.

The violations of the laws protecting deer have gradually become better observed, and deer have increased materially in the eastern portion of the State. Unfortunately the laws of New Hampshire do not conform with those of Maine, and many deer are killed along the border during the summer months. There seems to be an apathy among the people in that portion of our State, and there have been repeated violations of the fish and game laws, without any apparent attempt at concealment, yet no one has been public spirited enough to enter a complaint. We hope for a speedy change in that region.

We are opposed to constant changes in the laws, as experience has shown that they too often tend to make confusion, and render enforcement more difficult. We therefore recommend but a single change in our game laws, and that change such a one as will, we believe, render the law more simple and effective.

We have alluded to the desirability of uniformity in regard to close times. The season for ducks, woodcock and grouse or "partridges" opens September 1. We recommend an amendment to the laws for the protection of moose, deer and caribou, that shall make the open season conform with that of grouse—September 1 to December 1.

September is the month when our forests are most frequented by hunters, or those in quest of health and recreation. It is very difficult to prevent one kind of game being killed then where it is lawful to kill other game, and deer are then in prime condition, and their young no longer dependent upon the doe. In New Hampshire the season opens August 1, but we regard that date as too early for this latitude. Our present law makes the open season from October 1 to January 1. The change recommended gives no longer time for killing deer, but it cuts off the month of December, giving September instead. It sometimes occurs that the snow lies deep in our forests before January 1, and occasions are sometimes offered when the increase of years may be slaughtered in one season during the month of December.

#### COMPLAINTS AND PROSECUTIONS.

Complaints for violations of the fish or game laws may be made to any warden, whose powers and duties are here given. All such complaints should be accompanied by evidence, or such information as will enable an officer to obtain the evidence necessary for prosecution and conviction.

#### LAWS RELATING TO PROSECUTIONS, ETC.

"An act to enlarge the powers and duties of the Commissioners of Fisheries and Wardens.

"Be enacted, etc., as follows:

SEC. 1. The powers and duties of the commissioners of fisheries, and wardens, shall extend to all matters pertaining to game, and they shall have the same powers to enforce all laws pertaining to game as they now have in enforcing the laws relating to the fisheries.

SEC. 2. The Governor is hereby authorized, with the advice and consent of the Council, to appoint wardens, whose duty it shall be to enforce the provisions of all laws relating to game and fisheries, arrest any person violating such laws, and prosecute for all offences under the same to the full extent of their knowledge; and shall have the same power as sheriffs and deputy sheriffs, to serve all criminal processes for violations of the provisions of any law pertaining to game and the fisheries, and shall be allowed for said services the same fees as are provided by law for sheriffs and their deputies for like services. It shall be the duty of their duties they shall have the same right to require aid that sheriffs and their deputies have in executing the duties of their office; and any person refusing or neglecting to render such aid when required, shall forfeit ten dollars, to be recovered in a civil action before any trial justice or municipal court. Chapter 295, 1880."

#### GAME LAW VIOLATIONS.

The following named cases have been brought up, and there are others in the hands of the officers, but not yet settled:

April 16, 1880. Killing one deer in March, 1880. Penalty \$40. Fines and costs paid.

\*The appropriation of 1880 was for the "propagation of fish."

June 4, 1880. Killing song birds in June, 1880. Fines and costs paid.  
 August, 1880. Killing woodcock in close-time. Fines and costs paid.  
 September, 1880. Killing four deer in February, 1880. Penalty \$160. Indicted and bound over.  
 September, 1880. Killing one deer in February, 1880. Penalty \$40. Indicted and bound over.  
 September, 1880. Killing one caribou in close-time; \$40.00 and costs. Paid.  
 September, 1880. Trapping mink in close-time. Fined.  
 November, 1880. Killing one moose in close-time. Penalty \$100 and costs. Paid.  
 November, 1880. Hunting deer with dogs. Trial deferred.

There are cases now in the hands of wardens against various persons for killing moose, deer, caribou and woodcock in close-time; for scaring grouse or "partridges," hunting deer with dogs and netting ducks.

Many past offenders have come forward and acknowledged their guilt thereby saving to themselves costs of a trial.

Two thousand six hundred quails (*Colinus communis*—the common migratory quail of Europe), purchased by private subscriptions and imported from Italy, have been liberated throughout the State.

One thousand six hundred copies of an "Abstract of the Fish and Game Laws" have been compiled, published and distributed.

Correspondence, to the extent of some 1,500 communications written, has forced one item of our work.

Five hundred placards giving close times, etc., for fish and game, have been distributed throughout the State; and we expect to be able to issue in pamphlet form next year a complete copy of all our State laws relating to Fisheries and Game, revised and codified. Hardly a year has passed without some change in our fishery laws. Special laws have been enacted from time to time, such as the still for snipe while others are not. New laws have been enacted, and old ones remain in force unless repealed by the vague expression, "all laws inconsistent with this act are hereby repealed." We have employed a skillful lawyer to make a revision and codification of all our laws relating to fish and game, and prepare the same for publication, with notes, references, etc. The work will cover the period from 1820 to 1880, inclusive, and will be an important addition to the records of the State for the reference of lawyers and future legislators, as well as a work that is needed for the use of justices, wardens, the Commissioners and others in the performance of duties connected with the Department of Fisheries and Game.

#### "THE REFRIGERATOR AMENDMENT."

STRACTION, N. Y., Jan. 10.

YOU "invite expressions of opinion on the subject" of an article in your last edition entitled "The Refrigerator Amendment," in which you take strong grounds against the proposition to legalize the sale of venison, quail, woodcock and partridge all the year round and also call for such legislation as will prevent the exportation of game. I want to speak what I know to be the sentiments of every true sportsman, wherever he may be found. All such are sadly aware of the fact that game has come to be a delicacy in this State and many other States. The wanton killing of it has so decreased the supply that it can no longer be considered a luxury abundant to all, and sportsmen everywhere look with alarm upon the persistent efforts made by politicians and lawyers to procure the enactment of laws which might probably be entitled "An Act for the Total Destruction of Game."

Refrigerators would become the best of mediums for making the slaughter as well as the sale of game an occupation lasting through the year. What would there be to prevent the packing of game in boxes or barrels bearing a fictitious label of the contents and their shipment to dealers during every month? It is not a very difficult matter to forward a "subject" to a medical college by railroad, if it be securely packed and bearing an appropriate label. How much easier to furnish the New York market with game at all seasons, with the refrigerators to swear that it was killed in season.

The exportation of game gives a great many pot-hunters employment, and what can they do for its preservation so long as they can make a scanty living by robbing the plains, the woods and the streams of their attractions to sportsmen, who find health and recreation in killing spring-while they enjoy the pleasures which such sports afford? Our game does not belong to pot-hunters and marketmen; it does not belong alone to sportsmen, it belongs to all alike, I may say, though I dislike to admit that a pot-hunter should have any right to it. But as the number of sportsmen is vastly larger than the number of those who make shooting and fishing an occupation, it seems clearly proper that the majority should have the most potential power in legislation, and I am sure the good public would support the sportsman, for the consumer as well as the sportsman sees that unless good game laws are rigidly enforced at once, game will very soon wholly disappear from the markets.

I am a frequent visitor to the great wilderness in the north-eastern part of this State, and have been for many years, and have seen the gradual but certain decrease of deer and trout there. The same causes are operating there as are operating throughout the country, and with the present rate of depletion continued but a short time longer, sportsmen may lay their guns and rods aside and thank tardy or deficient legislation for depriving them of the most health-giving of all enjoyments. D. H. BRUCE.

NEW YORK, Jan. 17.

LET ME thank you for sounding the alarm against the proposed Refrigerator amendment to the New York Game Law. Your intimation that such an absurd proposition is fathered by a Game Association is surprising. Has that society the "protection" in its title? If so it is a palpable misnomer; "destruction" should be substituted. Every word you print in condemnation of this revolution of our game laws must, it seems to me, merit and meet the warm approval of all the friends of the deer, quail, grouse and woodcock. If this amendment is pushed do not fail to parade the name of every legislator who gives it his voice or vote.

I notice with dismay what "Wollast" and C. Fenton write you about deerOUNDING in our great New York wilderness. Their information confirms my predictions in your columns when the open season for hounding was enlarged. Banish the dogs entirely from the Adirondacks and plenty of venison will still be secured by all sorts of ignoble methods. But if hounding is to be allowed the first two weeks of September, as Mr. Fenton suggests, would probably satisfy, in date and duration of open season, all except pot-hunters and marketmen. Put me down as more than ever in favor of a commission of our most experienced practical men, to be

named in the enabling act, to revise this whole subject of game preservation, and to mature a succinct code to replace the laws and amendments scattered over the statute book. H. H. THOMPSON.

BRADFORD, Pa., Jan. 15.

YOUR editorial ought, I think, to convince the late and skeptical of the evil results which would inevitably follow the passage of such a law, and to arouse to action those sportsmen who are in a position to contest the passage of this bill.

If the game dealers are so unsound in the head that they cannot handle game in the proper season without suffering a pecuniary loss would it not be a kindness to extend to these sorely tempted men the benefits of a law similar to that framed for the prevention of drunkenness, and forbid altogether the sale of game? It would undoubtedly cause great suffering among certain classes, but the game, and what appears just now a far more important consideration, the game dealer's money, would be saved. Jesting aside, I hope every legitimate means to defeat the bill will be tried, and that the dealers will have common sense enough to spare the goose that lays the golden egg. J. A. T.

#### OUR ROCHESTER LETTER.

ROCHESTER, N. Y., Jan. 1891.

YOUR correspondents have recently contributed a number of interesting facts in relation to the late and early appearance of birds, their autumnal and vernal migrations, but if anything on the subject from the editorial pen has graced your columns it has escaped eyes that glance through the pages of FOREST AND STREAM as eagerly, or nearly so, as they ever did through the leaves of the "forest primeval" to see a ruffed grouse tumble after a snapshot. This silence should be broken, and hence it is that, assuming the privilege of an "anxious inquirer," I would send the following to see some additional information to the world about the fall migration of Wilson snipe, by detailing his observations on that pair of our old familiar friends which in the autumn of 1874 became semi-domesticated on the mosses of the spring creek that fed the trout and grayling ponds of Fred Mather at Housey Falls.

You have probably forgotten the young man who, in October or November of that year while assisting in the construction of the Rochester and Albany Railroad, called at your house and was introduced by Beneder. But the incident was impressed on my memory by a variety of circumstances, and is likely to be remembered while memory holds its seat, etc. I think it was a wet day when the *navies* were "knocked up," and the inspector had a chance to see some of the objects of interest in and about that village of the plain—Housey.

I had a chance of borrowing a gun and going shooting, or visiting the Natural History Museum, but, having none, etc., of one whom our friend B. said was a genius, I chose the latter, and have ever since regarded it as a lucky choice. To say nothing of the privilege of forming the acquaintance of the host, the place and all about it were of peculiar interest. The tame mink, the trout, the rare and beautiful graylings (at that time recently introduced in Eastern waters), the grotesque specimens of animals set up with rare skill by the amateur taxidermist, and, not least interesting, the snipe aforesaid that had become so tame that the visitor was allowed to approach them without their showing any sign of alarm.

Do you remember how late they remained that year, and did they come again?

The eternal tinkering at the game law continues with unabated vigor and with as little prospect of ever arriving at any conclusion that will be satisfactory. I wrote you last year that the Board of Supervisors of this county, Monroe, had passed a law limiting the season for shooting to Thursday and Saturday of each week in season, and prohibiting grouse and quail shooting totally for three years. I started the movement for the limitation of duck shooting, for I thought, and still think, it would result in better sport for all. The prohibition of quail and grouse shooting was approved by some and condemned by others. I know that some conscientious men observed the law, but fellows of the baser sort laughed at the law and killed all the birds they could reach. This angered the fair minded sportsmen, and they determined that if the birds are to be exterminated the true men might as well be "in at the death" as the knaves, and they favored the repeal of the prohibition, or making the original law so strong as to protect in fact. A draft of a law was presented to the Board this week to amend that of last year, and as it was rejected, the mover in dissent offered a resolution repealing last year's law, and it was adopted; so now the County is in the same footing as other counties in the State. There is only one man in the town who knows a shot-gun from a rifle, and none of the grangers have a prejudice against game laws, so no matter how wise a proposition should be presented to them it would be treated coldly.

In honest truth the prospect for sportsmen who love shooting is not bright in this otherwise favored county. Between the clearing away of cover, the improvement of arms, the increase in the number who shoot and other causes, it looks as if birds that have become rough and razorable, be numbered with the dodo and other creatures interesting only to the paleontologist. The proposal to make shooters take out licenses won't do. It is undemocratic in the first place, and we are not yet so tired of the Republic that such a law would go through. Furthermore, the Constitution of the United States provides that the "right of the people to keep and bear arms shall not be infringed," and I think a license bear arms shall not be a decided infringement of that venerated instrument. None of it for me, game or no game. How would it work if men who shoot for sport and don't want all the game to die with them, were to form a voluntary association, each member of which would pledge himself not to kill more than a certain number of birds in a day? It might put off the extinction of some birds a little longer.

On Wednesday last there was a shooting contest at game pigeons on the Driving Park in this city. The weather was rather cool but not so keen to abate the ardor of the veterans who turned out in force and during the day kept the traps moving briskly. Cash prizes were shot for, but as about half the men entered under assumed names it would not be of much interest to give the scores.

Since my previous letter an event peculiarly sad to sportsmen occurred here in the accidental death of a much respected member of the Monroe County Sportsmen's Club, Henry Walker, who, on December 22, accidentally broke through the ice on Irondequoit Bay within sight of his home, and was drowned. He was walking alone down the bay on ice apparently a foot in thickness, and broke through over a spring hole. There was not a man in the town but who risk his

own life to save Henry, who had himself rescued many from drowning; but in the crisis there was no assistance within call, and one of the most popular men in the county perished. He had been proprietor of the Newport House, the most popularly conducted pleasure resort in the county for twenty-five years, and was known all over the State as an enthusiastic sportsman. He must be remembered by most of the men who have attended the conventions of New York State sportsmen's associations during the last twenty years, for he was a constant attendant and one of the best shots. An estimate of the regard in which he was held may be formed when the fact is stated that his funeral was a mile long, and was attended by delegation, from the Monroe County and Adirondack clubs of this city; Genesee Club, of Irondequoit and Seneca Gun Club, of Seneca Falls. B. R.

#### ATTRACTIONS OF PRINCE EDWARD'S ISLAND.

ON the first day of August I, and myself left Boston en route for Prince Edward's Island, to devote the entire month to shooting and fishing. We left T wharf at 12 m. on Saturday, and arriving at Charlottetown the ensuing on Tuesday at 2:30 p. m. took the train the next morning on the P. E. I. R. R. for Tignish, the terminus of the road and the most northern town on the island, its chief industries being agricultural pursuits and fisheries.

We then took up our quarters at the house of a well-to-do farmer, the proprietor of some three hundred acres and sole owner of a grist, saw and woolen mill, all worked by water power.

"Two miles to the eastward and five to the northwest" is the sea coast, with its sandy beaches indented with small bays and salt marshes stretching in places far inland and intersected by sally-winders, which meander through their muddy courses soon to empty into the sea.

The nature of the country generally is undulating, and where intact from the woodman's axe is covered with a low growth of woods, struck by the rigorous storms and severe winds of winter which lap well into the mouth of April. The color of the soil is red, similar to that of New Jersey, but of a deeper hue, a peculiar characteristic of the island, and that it is easily tilled may be inferred from what Farmer Haywood said one day to me. "Why, you can plow a ten-acre lot without meeting a single stone to turn the edge of your plowshare."

Such was the scenery on our halcyon days. Such the ground on which we shot, the waters in which we fished.

And now in palliation for this dry description of wood and wild, depicted in such crude but true colors, let my fancy wander and my tale wax merrier as the tide is taken and our lines wetted.

"Hey! hello there! Get up, you lazy dogs. Here Fred's been killed here in the wagon this half hour, and breakfast's getting cold; and if you don't hurry up the tide 'll be well down again."

By this sonorous summons we made haste to don our shooting clothes, and sitting down to a good breakfast of hot coffee, eggs, fried trout and toast, which was duly dispatched, jumped into the wagon. The two miles of ground is shortly covered, and we rein up at the side of a fence barred by the marsh, where yet the morning sun had failed to dissipate the early mists which still hung heavily over the lowlands.

We now separate, and after choosing suitable situations, where we build the blinds, we set out the decoys, and await in silence the much-desired arrival of some bunch of bay snipe of which we are in quest. Soon a small flock of curlew is descried, and we vie with each other in nith to see who can allure the birds within gunshot by the deceptive whistle. See! now they poise overhead, and look down upon their companions peacefully feeding on the strand before us; and now they purrily close their wings to lower their uncertain flight. The gun is now slowly raised, and instantaneously with the hovering motion, which curlew are wont to exhibit just before alighting, the triggers are pressed in quick succession, and the double report invokes the echoes of the silent hills adjacent to the marsh.

Prono to the earth three curlews drop, Hard rattled by an onrush of shot; Giving good proof of good sport to all. While startled from their safe retreat, The golden plovers oft repeat Their clear and mild measured call.

As soon as the birds are gathered I resume my place at the blind, and again wait patiently until another shot is offered. So the sport continues, and ere the sun is heard overhead, I have secured in my sweep harvest a summer sunset, the favorable, if not the swiftest, hour of the day, to say nothing of the hordes of little sand-pipers and plovers which could be shot by the bushel if one desired to.

#### TROUT FISHING.

Seated in a light ducking-ski, a short paddle of some twenty minutes brings me to the margin of a deep and darksome pool, where silence reigns supreme and all nature seems hushed in a profound quietude; the hitherto rippling surface of the water is still; the sun fast sinking in the western sky throws forth rich tints of saffron yellow, commingled with red landward. As the last strokes of the paddle are finished, the skill glides noiselessly beside a log half immersed in the clear water. Anon the leap of some wary trout, as it seized a dainty morsel in the shape of some hapless fly or miller whose flick flight had brought it too near the surface, breaks the universal stillness; or perhaps the winnowing of a flock of dusky ducks leaving the forest aisles is heard overhead. I grasp the rod; one backward sweep and both wind and trout are in my hand; the line unfolds itself and speedily the stretched and bobber alight softly on the tranquil surface and then—ye Naiads and Fluviales! what sport doth lurk within thy limpid waters, as with a mighty rush the spotted quarry cleaves through the yielding liquid. Flip! swish! he breaks, and in his downward plunge captures the sportive huckle which lured him from the depths below, and now he feels the sharpened hook, and, pained by its exquisite pain, redoubles all his frantic efforts to escape the rod.

But hold! my precious deer, your stratagems are indeed most clever and you would fain double on your hemlock snag; but stay your mad career and to the bending Leonard mould thy stubborn will. Seek not the muddy bottom, there to sink, but—there! that's right; a little nearer and you will be safe within the meshes." So the net brings him to the reel.

But now the waning day and gathering gloom warn me to

reel up my line, disjoint my rod and ply the paddle homeward; and when the string of "lusty trout" are weighed the very scales groan under the weight of nineteen pounds.

## DUCK SHOOTING.

Still another variety of sport can be enjoyed on the island, that of black and wood-duck shooting. These fowl, though not strictly abundant, can be found in numbers sufficient to warrant a fair day's bag. True, the pursuit of them is productive of both toil and fatigue, but to the indefatigable sportsman who seeks the field with the intent of animating the senses, invigorating the body and communing with nature, it is a matter of secondary importance, and to him alone is it *me, jubeat*, the name and honor of a sportsman.

And now my tale is finished, and should these lines ever meet the eyes of my good friend—who, alas! is now separated from me by many a mile—I have only to add that his jovial ways and sweet companionship shall always have at least one spot ever fresh and verdant in the memory of his fellow-sportsman.

H. W. A.

## DUCK SHOOTING AT SHINNECOCK.

Editor Forest and Stream:

In your number of Jan. 20, 1881, you publish a communication from "Shinnecock" in which he takes exception to the suggestion made by Mr. Pike in his speech before the Long Island Sportsmen's Association. He says "that Shinnecock Bay is not adapted for point shooting."

To my one acquaintance with the bay, and many of your readers are doubtless, that statement seems unwarranted, for as between Quogue and Southampton, many duck points, notable among which are Pine Neck, East and West Ramapure, Hole-in-the-Wall, and the east and west points of the big bar. I speak of these particularly, because I have shot from or near them all, and have had fine sport in the days gone by. I recall the first time I ever shot on Shinnecock Bay; it was in the spring of 1876. Batteries were not so numerous then as now, and the shooting was much better. I shot for a week, and secured each day had good sport, securing a fair bag. The birds fed near the shore and came to stool gently, but since that time the shooting has become gradually poorer, until last fall it amounted to nil. I spent a week there, and between the three days' law, the adverse weather and the scarcity of birds I came very near being "whitewashed."

The open season for fowl shooting on Shinnecock Bay commenced last October 20, and for about three days the birds were plenty and gentle. There were five shooting days, which was ample time to disgust them with batteries and the use to which they were put. I will cite my own case. My gunners were anxious that I should have good sport, but no more so than were other gunners for their sportsmen, consequently there was a great rivalry as to who should secure the best places where the ducks live. The result of the rivalry was that the gunners with the batteries would start out at midnight to secure the ground for the next day. The whole of the flats from Southampton to Quogue at intervals were occupied that way, driving up the fowl during the night as the time when they do most of their feeding. I ask, what chance had ducks to feed under such circumstances, and if they cannot procure food, what object is it for them to stay? They certainly have to feed and will go where they are not disturbed at night, which is their natural feeding-time. If you will allow me the space I would like to quote from "Wilson" in support of my views. He says, in page 312, "Vol. 3," "American Ornithology," speaking of the black duck: "In the evening they resort to the muddy flats and shores and occupy themselves throughout the greater part of the night in seeking for food." Again, on page 342, same volume, in speaking of the canvas-back, he says: "But of all the modes pursued, none intimidate them so much as shooting them by night and they soon abandon the place where they have been thus repeatedly shot at." Again, on page 355, same volume, in speaking of the scaup, or broadbill (which is the most numerous duck on Shinnecock Bay), he says: "When disturbed by the fishermen along the Jersey shore, in the spring, they resort to other feeding places."

Giraud, in his "Birds of Long Island," on page No. 323, says of the scaup, or broadbill: "It passes the night on the flats in large flocks." The nature of wild-fowl to-day is the same as it was in the days of Wilson and Giraud and as they would not remain then on waters where they were disturbed night and day, neither will they now. For my own part, and on behalf of many brother sportsmen with whom I have conversed the subject, I should like to have batteries abolished from Shinnecock Bay, but as I am willing to give an equal chance to all, I would suggest, as a compromise, the following:

1. Abolish the three-days law.
2. Pass a law that no battery shall be placed more than twenty rods from the nearest shore; and,
3. That no battery shall be rigged and anchored on the shooting grounds until one hour after sunrise and must be taken up at least thirty minutes before sunset.

If such statutes as the above were passed, we would once more see the shooting as it was. WM. DUTTON.

## OUR PHILADELPHIA LETTER.

FOR the first time in very many years I noticed a quantity of sharp-tailed grouse for sale in the street last week. The party who was selling them did not know but that they were prairie chickens, and called them such. The very severe weather we have been having the past three weeks has enabled game dealers to go West, to ship many prairie chickens by express freight in a frozen state. I saw also numbers of ruffed grouse being offered on our main thoroughfares by peddlers or "street-hawkers." These birds have the appearance of having been snared. You know our Pennsylvania law prohibits the offering of many varieties of game (among which is the pinnated and ruffed grouse and quail) after January 15. This may in a measure account for the great quantity noticed everywhere, dealers being anxious to get it off their hands before the date of the law's taking effect. Some of these peddlers of game don't believe questioned state that they will offer prairie chickens and birds not native of this State after January 15, stating that the law will not "hold water" if tested, except as relating to our own game. And yet the law distinctly names the several varieties of grouse, and imposes a penalty on their sale after the above mentioned date.

Our enterprising restaurateur, Lauber, had two enormous wild bears hanging before his door this morning. These animals were shipped to him from Germany, advantage be-

ing taken of the cold weather. They are to be served up for those who will partake.

It must give those interested in the preservation and protection of game much pleasure to note the anxiety shown by sportsmen on the subject, which is now plainly evinced by the numerous articles in your last edition of *FOREST AND STREAM*. It is a good work, Messrs. Editors, a truly good work, and as the organ of the sportsmen of the country your journal should champion the cause. To illustrate that the severe weather we have experienced, and which has proved most disastrous to birds of the gallinaceous order, as I surmised early in the winter, has damaged the game of the South, read the following from the Columbus (Ga.) *Enquirer-Sun*: "A negro, while hunting in Perry County, Ala., a few days ago, came upon a covey of twenty-four partridges, which he proceeded to pick up one by one and put in his bag. They were well frozen and unable to fly." This is but a single case. How many just such incidents have occurred in the Eastern and Middle States?

Certainly there should be no trouble in having a ready response to a call by *FOREST AND STREAM* for a convention of sportsmen of the East to take some steps regarding a cessation of the hunting of ruffed grouse and quail for at least one year, if not two. I know there will be an outcry against such a movement on the part of some dog breeders, who depend entirely upon the sale of their animals for a livelihood. This will be seen at once, indeed it is already shown by one or two articles I have read. It was only to-day I heard an inquiry from a gentleman living in Chester County for live quail which he desired to keep in his barn through the winter and liberate in the spring. "For," said he, "in our section of the country we have not one covey left; the birds have all perished." The subject cannot be agitated too much, and an effort on the part of *FOREST AND STREAM* looking to a call of gentlemen interested in the cause would doubtless meet with success. We have doubts that it will be found difficult to obtain live birds in any great numbers from North Carolina, as reports from that State show the quail has suffered there likewise. Let me repeat, such an undertaking on your part will be as laudable as your exposure of the nitro-cellulose Dittmar powder.

The County of McKean, of Pennsylvania, is now our best region for deer, especially in the Sinnemaunooking section. Our mutual friend, Capt. A. Clay, who resides in the locality mentioned a portion of the year, could relate interesting hunts participated in by himself and friends.

Homo.

## BUFFALO EXTERMINATION.

Editor Forest and Stream:

Let me say a few words on a subject to which attention has been called several times in your paper, namely, the wanton destruction of buffalo. That they are rapidly approaching extermination is abundantly evident. The action of the Game Protective Association of Wyoming testifies to that fact. The letter of W. A. Allen, of Montana, in your issue of December 23, says: "We found parties killing them for the tongues alone, not even taking the hides."

Let me give the results of my own observation. In the spring of 1876 I went from Dodge City, Kansas, across Indian Territory and into the staked plains of Texas. The herds which we saw were very small, none numbering more than four hundred; few were nearly so large. An officer of the expedition told me and passed through the same country a little more than two years before in pursuit of some Indians, told me that so large were the herds there that it was necessary to halt the cavalry and fire into the herds, in order to break them up and scatter them, so that the column of cavalry might pass through. In 1876 the few remaining ones would that they fled precipitately before us, and when it was necessary to kill them for the meat we were compelled either to use the utmost caution in approaching them, or else ride them down and fire upon them from horseback. The same officer told me he thought that in his first expedition there were ten where one was found in the second.

Upon all sides we found hundreds of carcasses bleaching in the sun. In one locality, where they were most abundant, the crack of the rifle was heard everywhere. Our nostrils were constantly offended by the stench of decaying bodies that almost literally covered the plains. Of course these were killed for their hides, but the inevitable result, extermination, will surely follow unless some limit is put to the numbers killed. It is only necessary to say that in one year three hundred thousand hides were shipped from Dodge City, Kansas.

When the two railroads that cross Kansas were opened it was not unusual to have to stop the trains till the buffaloes had crossed the track. Now a buffalo is never seen on either one of them. And this is not simply the result of advancing civilization; it is the direct consequence of the merciless war which has been waged against them, and unless something is done to prevent it, the day will soon come when this characteristic American animal will be one of the things of the past. Cannot something be done to put a stop to this wanton destruction? Is there not some action which could be taken on the part of the General Government that would do something toward the preservation of the bison? It will not do to plead that the hunters make a living by their hunting. The same amount of time, labor and energy (and a much less amount of exposure and hardship), expended in nearly all other directions, would hardly fail to be as fully remunerative, if not more so, for the hides delivered at the railway station bring but little more than one dollar each.

Even if legislation should compel some men to seek an other mode of making a living, it would be better than to exterminate the buffalo. But I do not propose to discuss the matter; I want to lay the facts before your readers, and let all draw their own conclusions. It seems to me that the conclusion must inevitably be drawn that it is desirable to place limits to the slaughter of this animal, and to do something toward its preservation. C. B.

The Central New York Sportsmen's Club have elected the following officers for 1881: Charles W. Hutchinson, President; A. A. McMillan, Secretary; Sylvester Sterling, Vice-Presidents; John D. Kernan, Promoting Attorney; Major D. T. Evers, Treasurer; Frank I. Meyers, Secretary. Dr. John W. Greene, of New York, was unanimously elected an honorary member of the club. The society calls attention to the necessity of incorporating into the game law sections preventing sportsmen and others from leaving fires burning in the woods, so destructive to our forests, and also to prohibit those parties from leaving carcasses and offal near the camps and springs in the Adirondacks.

## DUCK SHOOTING AT COBB'S ISLAND.

THE brant are more plentiful here this season than for many years. I secured twenty-five a tide during my stay at the Island, but I happened to strike the spot at the right time. Sometimes one will have to wait for a week or ten days before he can have a good day's duck shooting.

There are three absolute requisites to stool brant: the tide, the wind and the sun. If the tide is right and the wind is wrong it will not be a sportsman's day. Should the wind set strong and it is cloudy, then you might as well remain away from the blinds; but when the flood tide is running, a strong wind blowing and a bright sun is shining, then it is that the birds fly and come in readily to the decoys. In a winter's season there is certainly not an average of over two such days in the week, and the hunter will have many hours of weary waiting, which on this island, unless he has companionable comrades, is almost unendurable.

Never was there such an illustration of killing the goose that laid the golden egg as this place presents. The Cobbs, by their extortion and high prices charged sportsmen, have effectually killed their island; for five years ago there were dozens of Northern sportsmen, and one would find here for duck shooting, now there are none. I being the sole, solitary visitor, and as the ice prevents any boats from leaving the Island, or from hunting, I feel as desolate as Alexander Selkirk on Juan Fernandez. Even Nathan Cobb is getting sick of his enforced idleness, and wanders disconsolately around his decoys, which he can't use. "This is the first ice blockade that has isolated the island from the mainland since the famous winter of 1857."

I send this squib at a venture, and by strange hands, as we used to do in Richmond during the war, and fervent the uncertain word by a notice on the outside of the envelope, "Via Grapevine Telegraph." Anyway it will reach you some day, I trust.

The Cobbs have made heavy bags this season, Nathan sending many dozen to Northern markets. I only average some twenty brant on each tide.

To sportsmen coming here I add this advice, don't come alone, but the more the merrier.

CHASSETTE.

Cobb's Island, Jan. 1.

## CALIFORNIA GAME.

COSUMES, CAL., Dec. 23.

OUR rainy season, which answers to winter, has set in and for the past four weeks we have had plenty of weather, whether we liked it or not. It has brought us an abundance of ducks, however, and a larger proportion of canvas backs than we have ever known before, in fact they were the only duck to be found in the market. Quail are very abundant, and afford fine shooting, when the weather permits. I promised to say a word about our game birds and their habits, so I will say a word about quail. There are several varieties on this coast, the best known being generally distinguished as mountain quail and valley quail. The former frequent the mountain only, except as very severe storms drive them lower down, and are much larger than the valley quail. Both varieties are tuffed and armed with handsome plumage than the eastern quail. I send you two skins from the head of valley quail. The quail here do not frequent open fields as much as those in the East, except corn fields along the river bottoms and near to willow clumps. They are difficult until after the frosts have stripped the trees of foliage; first because their first flight is generally into trees or bushes, where they hide very closely; and second, because they are much more uncertain in their times and places of feeding, pruning themselves, etc., than the Eastern quail. I notice with them the same mysterious power of withholding their scent that Eastern quail have when first flushed. In some parts of the State they collect in coveys of two or three hundred, and will run along the road ahead of a tram sometimes for some distance. But alas for the hopes of the Eastern sportsman who thinks he has a soft thing; after the first shot there is a roar of short wings and the birds have dropped into a dense chaparral composed of thorny bushes and almost impenetrable, except for the grizzly bear, and he may spare his time in looking for them and hunting for them. In spite of such drawbacks, however, there are plenty enough to make fine bags, and I have known three brothers to kill in two months' shooting 1,300 dozen. Deer are very plenty along the foot hills this winter. I am sorry to hear, however, that great numbers have been slaughtered for their hides, a practice which unfortunately is exterminating the deer in some parts of the State. I am afraid this letter will trespass on your time and space, if it does use the blue pencil. W. L. W.

## AN ADIRONDACK TRIP.

UTICA, Jan. 6.

Editor Forest and Stream:

Would "Nessmuck," through your columns, inform a friend and myself of a trip through the North Woods that would occupy about three weeks or a month, where one would not meet every few miles with a host of people and all the attendants of civilization? Hard work not the slightest consideration. I forgot to mention that we reside in Utica, and a radius of fifty miles would suit us. We went in last year from Bucarts above Moorehouseville and a carry of two and one-half miles to Wilhurst Lake, where we intended to stay for our trip, the fishing in the lake being grand. The first morning we were out with two rods we caught seven teen fine fellows, full of life, the least of them weighing one and three-quarters pounds and the largest about two and one-half pounds. But things at the house are not a joy forever (there are sharks in the wilderness), so we struck camp, and taking boat to the end of the lake with our camping out outfit which we had brought with us in case of an emergency, we went to Snag Lake, which is a small lake about two miles from Wilhurst Lake and the roughest and longest I ever wish to carry sixty pounds over. At Snag Lake we had splendid sport, the fish being very plentiful. From there we went to the Meical River, but it being rather late in the season—the second week in August—we did not get much sport and returned to camp on Snag and from thence home, occupying about two weeks. A better time or better luck I never struck. The last day we walked down from Moorehouseville to Prospect, a distance of twenty-nine miles without turning back, a feat that without our two weeks training we should have considered several times about. I mean to send you a full account of our next trip and all particulars. H.

ELLIOTT CAMP, an Indian guide, thinks that he has discovered two Adirondack lakes never visited by a white man.

## CENTRAL WISCONSIN.

I HAVE happened upon a good many partridges since fall while hunting rabbits, and while I have seen none "tree," my experience is that they are with a good deal of "previousness" on the approach of either man or dog. Until within the past few days I have not raised any from the ground, they being almost invariably found in the trees. It would take an extra good "ariser" to kill six out of every twenty, taking them as they leave the trees and not picking shots in our tannery, poplar and alder thickets.

I shot a squirrel the other day in size about midway between a red and gray squirrel. It was colored like a gray, except that it had a red strip about an inch wide along its back, and a red tail like a fox squirrel's. What was it?

Our thermometers have marked as low as 40 degrees below zero more than once, and from 20 deg. to 30 deg. has not been uncommon this winter, and yet a few days since a gentleman riding near a spring creek put up a flock of eleven mallards. Do you suppose they were waiting for cold weather to set in before going south?

Rabbits and foxes are our only legitimate game now. The former are usually very plenty here, but this winter have been thinned out by Reynard whose family is largely represented, and affords good sport. BADGER. Jan. 16.

## SQUIRREL SHOOTING AT GREENWOOD LAKE.

I SEE that the framers of the proposed new law for this State want to deprive me of going up during the months of September and October to my friend George Smith Bradner's, at Greenwood Lake, to shoot squirrels. Start out early from his house, put in your pockets a dozen cartridges, a little lunch and a copy of the *Forest and Stream*, your gun, but no dogs. Take it easy, roaming along the grand hills, looking down on fair pretty Greenwood Lake, you catch a glimpse of it now and then, the little steamer *Montclair* puffing away on its bosom. Select a shady spot and an easy seat near some hickories, read your *FOREST AND STREAM*, eat your lunch, watch the pretty birds near you, and see the ruffed grouse strut on a distant rock or plume himself in some tree. Now you shoot a squirrel, sometimes a hawk; but the main object is to enjoy the beautiful woods, fine scenery, breathe pure fresh air and study nature, getting to Bradner's in time for supper, hungry, happy and fully content if even the big only contains two or three squirrels. After a good meal, with a bottle of Milwaukee, sitting on the front porch, the sun is just setting over the Warwick Hills—what a contented, happy feeling comes to us. You say, Yes, this is worth living for—health, good spirits and at peace with all the world. Yet they want to rob me of this. WILLOUGHBY.

MICRONIAN—Cheboygan, Jan. 11.—Editor *Forest and Stream*: At the annual election of the Cheboygan Gun Club the following officers were elected: W. S. Humphrey, President; C. R. Kitchen, Vice-President; H. J. Miner, Treasurer; T. A. Martin, Secretary. We have a team of four members who are practicing with the rifle. They shot several matches last summer and were successful each time. They propose to challenge a team from any club in the State next summer, to shoot any rifle, open sights, 200 yards; position, standing; friendly matches, not for money. This may be big talk, but that is the way the boys feel, and if they should get badly beaten it may calm their nervous system and get it in a more healthy condition.

I mail you to-night a note of the Mullet Lake House, at the head of Mullet Lake. This is the house I mentioned in my communication some time ago. P.

KENT COUNTY SPORTSMEN'S CLUB—Grand Rapids, Mich., Jan. 19.—The officers of the Kent County Sportsmen's Club (Mich.) for 1891 are: President, Dr. E. S. Holmes; Vice-President, L. D. Follett, Esq.; Secretary, A. B. Richmond, Treasurer, George A. Gould, who are ex-officio members of the Board of Directors. The Directors are: A. J. Hall, Geo. S. Baars, J. C. Parker, Wm. H. Calkins and Ed. M. Barnard. Delegates to the State Association—Hon. L. D. Morris, T. Stewart White, Ed. M. Barnard, Geo. A. Gould and Wm. C. Dennis. O.K.A.

DEER IN STEUBEN COUNTY—Hornellville, N. Y., Jan. 9.—Deer have been quite plentiful in Steuben County. Five or six years ago only one or two killed during season. Within fourteen miles toward the Pennsylvania line, in the season of 1879, fourteen deer were killed. In the season of 1880 thirty-six were killed. What was the cause? Was it due to the game laws, or was it natural increase, or were they driven out of Pennsylvania by fire and bounds? J. ORIS FELLOWS.

REMEDY FOR POISON OF TOXICODENDRON (POISON OAK).—One application of a solution of twenty grains of crystallized nitrate of silver in a quart of water, applied with camel-hair pencil, has proven an invincible cure in experiences of the undersigned. Avoid getting any of the solution in the eyes and let the discoloration wear off, unless a skilled druggist or physician volunteers to remove it. KENTUCKIAN. Mill Springs, Ky.

THREE IN OVERBOARD—Rockland, Me., Jan. 14.—E. S. McAllister, game warden, seized three carcasses of deer on Tuesday, a fourth carcass was thrown overboard by the crew of the Steamer *Lewiston* which brought them from Cherryfield and they were being transferred to the Boston boat. Last week a dozen carcasses went over the same route, but the game is up now as Ed. means business. W.

SOUTHERN LOCATION.—Perhaps some of your Southern clientele may be disposed to indicate favorable points from whence to prospect with a view to final location in Virginia, the Carolinas or Georgia. I expect soon to start out on a tour of observation which, as my family is portable and my "carpet bag" not one of those old-time empty ones, will be quite deliberate and amenable to suggestions. H.

TENNESSEE—Brownsville.—Game plentiful in this part of country, though the recent heavy snows and cold weather are telling on them to a fearful extent, making all kinds of game lean in flesh. A. M.

A CORRESPONDENT WISHES TO KNOW where, in North Carolina, he can obtain good quail and duck shooting combined. Can any of our readers tell him?

## SHOOTING MATCHES.

Dr. CARTER will shoot a match with W. Scott, of London, the champion pigeon shot of England, Feb. 1. The match will be at 100 pigeons each, £200 a side; five traps, five yards apart, the shooter to stand thirty yards behind the centre trap. The traps to be pulled with a patent pulling apparatus. The boundary to be eighty yards from the trap, if on open ground, but if on inclosed ground the boundary to be of string two yards inside the fence on both sides, in front and in a straight line level with the shooter for the year. The weight of shot, 1½ ozs.; no restrictions as to powder; guns not to exceed 8 lbs. Each competitor shall supply 110 birds, English blue rocks, and the two lots of birds shall be put into one hamper and trapped from one hamper. The trapper and puller shall be mutually chosen. If the competitors are unable to agree the referee shall have the power to appoint the above-named officials. In all other respects the match to be under Gun Club rules.

NEW YORK GUN CLUB.—New York, Jan. 8.—The following dates have been decided upon for future competitions for the "Barrow" trophy: Jan. 22, Feb. 12 and 26, March 12 and 26, April 9 and 23, May 14 and 28. Shooting will commence each day at 2 o'clock. Conditions—To be won three times, not necessarily consecutively, before becoming the personal property of the winner; 10 birds, handicap rise, entry \$1; tie to be shot off at three birds. Should the cup be finally won previous to May 28, then another trophy will be offered under similar conditions. The Executive Committee have decided to offer the following prizes:

The club challenge cup, value \$100. First to be competed for on Saturday, Jan. 22. Shooting will commence at 10:30 o'clock a. m.; entry, \$25; 25 birds, 30 yards rise. The winner will hold the cup subject to challenge to shoot for the cup on each Saturday following at 10:30 o'clock. On January 1, 1892, the cup will be finally awarded to the one who has won it the largest number of times. Should there be a tie it will be shot off at 25 birds, 30 yards rise.

The club fund club, value \$100. Entry \$1; 10 birds. To be awarded to that competitor who shall first win it twice consecutively.

GULF CITY GUN CLUB.—Mobile, Jan. 17.—For the monthly medal in the December match, Master Willie Voges went to the front and captured the medal with a clean score of 20 balls. The youth is following after his father. For the January shoot our Frenchman came in first with a clean score. It being our busy season there were only four in the shoot:

R. Carre	.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	20
G. W. Voss	.....	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	19
G. W. Tunstall	.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	18
J. S. Alexander, Jr.	.....	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	17

Sweepstakes match, 10 balls:

Carre	.....	1 1 1 1 1 1 1 1 1 1	10
Tunstall	.....	1 1 1 1 1 1 1 1 1 1	9
Voss	.....	1 1 1 1 1 1 1 1 1 1	8
Alexander	.....	1 1 1 1 1 1 1 1 1 1	8

Carre had broken eight before the shoot commenced, thus making thirty-eight straight balls, all that he shot at.

S. C. ORER.

WASHINGTON GUN CLUB.—Ridgewood Park, L. I.—Monthly shoot for champion badge; 7 birds:

John Evans	.....	1 1 1 1 1 1 1	7
H. Hedeman	.....	1 1 1 1 1 1 1	6
Wm. De Nye	.....	0 1 1 1 1 1 1	6
Wm. De Nye	.....	0 1 1 1 1 1 1	6
Thomas Kellett	.....	0 1 1 1 1 1 1	6
John Collier	.....	1 1 1 1 1 1 1	6
John Kneibell	.....	0 1 1 1 1 1 1	6
Theo. Obrig	.....	1 1 1 1 1 1 1	6
John Dunkel	.....	1 1 1 1 1 1 1	6
Geo. Ambrose	.....	0 1 1 1 1 1 1	6
Geo. Grauer	.....	0 0 1 1 1 1 1	5

Match for three prizes left from Christmas shoot; 3 birds, 25 yards:

H. Hedeman	.....	1 1 1 1 1 1 1	7
John Collier	.....	1 1 1 1 1 1 1	6
Wm. De Nye	.....	1 1 1 1 1 1 1	6
J. W. Watts	.....	1 1 1 1 1 1 1	6
Theo. Obrig	.....	1 1 1 1 1 1 1	6
J. M. Hays	.....	1 1 1 1 1 1 1	6
John Evans	.....	1 1 1 1 1 1 1	6

In shooting off the ties Theo. Obrig won the first prize, John Moller the second, and George Ambrose the third.

THE LONG ISLAND SHOOTING CLUB.—Deer's Park, L. I., Jan. 17.—Regular monthly contest for the champion cup, shot for at seven birds each from H and T ground traps, handicapped rise, 80 yards boundary; L. I. S. C. rules:

A. Eddy	.....	0 1 1 1 1 1 1	6
R. Robinson	.....	0 1 1 1 1 1 1	6
Dr. Hays	.....	1 1 1 1 1 1 1	6

W. Mills, H. Kneibell, J. Ackhurst, G. Gildersewe, J. Langenke, J. Henry, J. Vanneus, A. Appleyard, W. Wynne, W. Banister, R. Midmer, R. W. West, G. Creed and Dr. Morton withdrew.

MICHELL BEATS BOGARDUS.—Richmond, Va., Jan. 21.—Editor *Forest and Stream*: W. T. Mitchell, of this city, who is shooting for a place on the American team of pigeon-shooters, defeated Captain Bogardus at our State Fair Grounds on the 19th instant in a match at thirty yards' rise from five g. and traps, under English rules, by the following score:

Bogardus	1111 1111 1101 0111 1111 1101 1011
Mitchell	1111 1111 1111 1100 1111 1101 1011

Capt. Bogardus used his 10 lbs. 10 bore Scott gun, said to be charged with 5 drs. Dittmar powder and 1½ ozs. No. 8 shot in first barrel and 5 drs. Orange Lightning and 1½ ozs. No. 7 shot in second. Mr. Mitchell used a 10½ lbs. 10 bore Nicholas & Lever gun, with 1½ ozs. shot in the first, same quality of No. 6 in second barrel, with 5 drs. Dead Shot FFG powder. Both men were in fine form, as the score will attest, which probably would have been better had the cloudy weather not caused the smoke to interfere with the use of the second barrel. Capt. Bogardus expressed himself as greatly pleased with Mr. Mitchell's shooting, and told him he would have no trouble in getting on the team. T.

FLORIDA ORANGE CULTURE is yearly assuming more importance as one of the industries of the Southern States. We print in our advertising columns a notice of DeLand, Fla., and advise those of our readers who are looking toward a home in the South to inquire into the advantages of this settlement.

Hock River Valley Poultry and Kennel Club show—Sterling, Illinois, Feb. 10, 11 and 12. R. B. Commerford, Sec.  
April 1, Columbia, Tenn.—Meeting of the National American Kennel Club's second American Field Trial Derby. Joseph H. Dew, Sec.

## THE PITTSBURGH DOG SHOW.

THE third annual bench show of dogs, given by the Western Pennsylvania Poultry Society in the "Iron City," we have already stated in last week's paper, was a complete success, not only as a creditable exhibition, but as a financial enterprise. When it is considered that Pittsburgh is one of the largest manufacturing strongholds in America it is encouraging to see the working classes turn aside from labor and money-making and expend a little of their energy and enthusiasm in assisting to promote to the highest rank the animal we love so well. Crowds flocked to the old City Hall, where the show was held, and it was almost impossible to move about an hour after the doors were thrown open. To those of our readers who had not the pleasure of blackening their hands in this smoky of smoky cities, we will say that Pittsburgh is situated at the confluence of the Allegheny and Monongahela Rivers and is probably the dirtiest city in the universe. It glories in having, for miles around the banks of its river, vast furnaces, rolling mills and manufactories, whose tall chimneys belch forth perpetual clouds of the darkest smoke, which settles down over the city like a shroud, changing day into night. It is said, but we cannot vouch for the assertion, that for many years the sun has not been seen by the inhabitants, and that young children have to be taken several miles out of town in the horse-cars to be taught what the luminous orb really means. A glance at the past reveals that this spot was hallowed by the adventurous steps of the youthful Washington, and here, at the "meeting of the waters," one hundred and twenty-eight years ago, his calm eye surveyed and his apprehension grasped the natural advantages for future—canine exhibitions.

It was not, however, until ten years ago that this "happy thought" was substantially put in practice and the inaugural bench show instituted, and even then there were but three dogs exhibited. In 1878 doggy matters began to look up and a good show was the result, which was followed a year later by a much larger and better one, held at the Coliseum, at Allegheny City, but both were eclipsed by the one of last week.

As the rules of the dogs were of grand quality, the classes of English setters, Irish setters and pointers being most prominent. The judging was excellent, and both Major J. M. Taylor, who judged the setters and pointers, and Dr. L. H. Twell, who took charge of the other classes, are to be commended for their tact, good humor and fair decisions. There was little to mar the pleasure of the meeting and we shall always remember the Pittsburgh show as deserving a red letter.

CHAMPION ENGLISH SETTERS.—In the dog class there were but two entries, but these were such well-known favorites that there was much discussion before the judging whether old Lester or St. Elmo would win the "humble blue ribbon." But Leicester was the finer show condition we remember ever having seen him, and the prize justly went to him. He tipped the scales at 62 pounds. St. Elmo was not behind as to get up, and considering the long siege he had of it in the field last autumn, he was well feathered and in sound form. In the bitch class Peep o' Day had a walk over, and added another ribbon to the one won at St. Louis last year. Rosy Morn, the only other entry, was unavailably absent. We regret this, because she is one of the most beautiful bitches in the country. Peep is a rattling good little bitch for her age, and has a much more healthy look than when she was running in the trials, west and east. She weighed 46 pounds on the day of showing.

IMPORTED ENGLISH SETTERS.—A full class of eight entries turned up in the open dog class, and on the whole they were a very good lot. Major Taylor had the dogged around him, and he was very much pleased with the results. Some of these days, and each entry in turn fell under his careful scrutiny. We never have seen dogs more thoroughly inspected and handled; mouths, eyes, feet, and all examined. To judge in this way takes time, but no owner can leave the ring with the plea that his dog did not receive attention, and this system brings both perfections and imperfections to light. The result was that there was little or no outside criticism. We were very much pleased with the results. The light in the hall was very dim, and the dogs had to be looked over near one or other of the windows. Soon the brothers Thunder and Duke of Beaufort, both being out of Fairy II, by Pride of the Border, but of different litters, came together, and the former, who has a year more age, received first and the latter second place. Thunder was in fine hand condition, and as good on the bench as in the field; he weighed 53 lbs. Duke of Beaufort was looking even better than when in New York last year. Temple Bar and Vandevor's Rock each got three letters, and Mr. E. Moore's Dashi deserved a high commendation. Ten entries marked the bitch class, but as Moore's Lily was absent and Hacke's Duplex (dam of Sanborn's illustrious Nellie) was in fine condition, but on exhibition only, the same quota as in the dog class were led to the ring. As a class they were of much better quality than the dogs. Mr. Wilson, with his recently purchased Spark, which he has already won in our report of a previous show, is a remarkably fine all-over bitch, her head is like her sire's (Carlowitz) and she has a fine field-like form. Her weight is 51 lbs. Mr. Hartley, with his very handsome and well-proportioned Ruby, came in for second; she was looking well for having whelped but three weeks ago. Lass o' Gowrie was marked a v. h. c., but she was evidently a little off. Wanda was in much better condition; she is a charming animal, and has already won in our report of a previous show. Minerva, who Mr. G. H. brought from Sanborn and Peers also, showed to advantage, and they deserved all they got. Major Taylor is not apt to scatter his awards with a lavish hand, and only the pick of the flock came in for his favors.

NATIVE ENGLISH SETTERS.—This class, a fair one, was the largest one of the show; it contained twenty entries, out of which only two failed to show up. Messrs. Stenlender & MacKenzie's Mack Laverack and Mack Laverack were first and second, but by different litters, secured first and second. The former is a finely developed youngster and weighs 40 lbs. Sam II., a powerful young dog with compact body and good legs, was very highly mentioned, and Hennessy's Daniel the Prophet, second at St. Louis last year, and Young Belton also came in for like award. Belton III., who showed himself such a

good field dog at the Pennsylvania field trials last year, and his kennel companion King Dash, came in order. In the bitch class fourteen out of the fifteen entries came to hand, and again, as in the imported classes, they were a superior lot comparing them with the dogs. Dr. Speir showed in Lizzie Lee one of the very best bitches in the show. She was a lovely, sleek, very handsome, but has improved greatly since we saw her in the field last autumn. She has a fine head full of sweetness and intelligence, and is in our opinion the most valuable animal in her owner's kennel. Her condition was excellent (weight, 51 lbs.) and she won on her merits, although in grand company. We have seen a great number of Druid bitches and she compares most favorably with the best of them. Daisy Laverack came in for second, and her little sister Daisy Laverack for well-merited mention. It was recommended that the latter was the little bitch that performed so creditably at Vincennes. In the order of the rest of the class was placed, as was the young bitch Dip, a well-made animal with fine legs and the best of feet, a good neck, body and shoulders, but with rather a faulty tail. We heard it said she should have had higher commendation, but consider that she was well taken care of.

**ENGLISH SETTER PUPPIES**—The dogs were a very fine lot of puppies, and out of the dozen entries only one was missing. Jack Laverack, the winner of first in the native class, came first, and the Baltimore Kennel Club's very handsome eight-month-old puppy Dashing Bob took second. Two in the class received very high mention, namely, Prince Lofty and Given's Dan; the former is to be sent at once to P. M. Short, to be trained for this year's events. The bitch puppies were a fair class, but not equal to the dogs. Mr. Moore's Dolly Day, a sprightly and well-made ten months' old bitch, came first, but Minerva II. and Countess Anna pushed her for the place. Of these two we rather fancied the latter, who had a better tail.

**CHAMPION IRISH SETTERS**—Mr. Moore's Berkley, so well known as the really beautiful type of the breed, was in his finest bench-show condition and easily won over his only opponent, Derg. Berkley's weight was 54 lbs. Two bitches were entered in the bitch class and Mr. Moore's Loo II. readily secured first. She is a small, well-patched together animal, whose weight is 46 lbs.

**IRISH SETTERS**—Although there were fourteen entries in the bitch class, not one of them was shown, and we could compare with exhibits of the kind seen at our first-class shows. As we have said, the red Irish and red and white dogs were bunched together and were judged under one heading. Mr. McIntosh's Jiz (weight, 55 lbs.), a fine, up-standing, blood-red dog, good all over, easily secured first. He is a dog of gauness and endurance and is perfectly field-broken; Chubb, of Cleveland, is his breaker. Mr. Moore's Raleigh took second and Mr. Strother's handsome Flint was very highly commended. He is a remarkably well-made dog. The bitch class was a full one of eight entries. Taken collectively it did not compare favorably with that of the dogs. Prominently, Mr. Pierce's Gussie came first, most richly deserved. She is a fine, large, healthy-looking bitch and was shown in her best style (weight, 56 lbs.). Nora came in for second; at St. Louis, last year, she did not receive mention. Abbey W., who ran in the Derby at Vincennes last autumn, was awarded three letters, as was also Dr. Downey's Kathleen. The former is a very pretty, sleek, old girl, of good color and, when she has attained age, will hold her own with those of her type. The puppy classes contained five entries, three in the dogs' and two in the bitches'. The dogs were all good ones. Mr. Dayton's Flash, who received first, was the best-colored of the lot; a very promising youngster of six months in every respect. Mr. Bulley's Nell had the best head in his class and rightly came second. Of the bitches Mr. Dayton's Red Lion, sister sister to Flash, winner of first in dog class, was third. We consider that she is better than her brother in at least two points.

**CHAMPION GORDON SETTERS**—The dog class was composed of two rattling good entries—Mr. Moore's Bob and the Goldsmith Kennel's Rupert. After a somewhat lengthy inspection, the former was declared the winner, a decision that we consider just. Both dogs were shown in fine condition and both are first-class in every respect. While Bob's coloring is too light, that of Rupert is too dark, so it was a stand-off in the dog class, but in the bitch class, where the latter is older than the age entered in the catalogue, Bob is about half this age and is a more showy dog. He has a rich, glossy coat; good, long, lean head; long, well-proportioned back, set well on straight legs (weight, 65 lbs.). In the absence of other entries, Mr. Moore's Stella, a litter sister to Bob, secured first (weight, 57 1/2 lbs.).

**GORDON SETTERS**—The open dog class was a very good one; it contained five entries. An unnamed son of Rupert's (weight, 60 lbs.) was a very pretty, sleek, old girl, of good color and, when she has attained age, will hold her own with those of her type. The puppy classes contained five entries, three in the dogs' and two in the bitches'. The dogs were all good ones. Mr. Dayton's Flash, who received first, was the best-colored of the lot; a very promising youngster of six months in every respect. Mr. Bulley's Nell had the best head in his class and rightly came second. Of the bitches Mr. Dayton's Red Lion, sister sister to Flash, winner of first in dog class, was third. We consider that she is better than her brother in at least two points.

**CHAMPION POINTERS**—There was but one entry in the large class, namely, Mr. Gillman's Gumbo, and he was conspicuous by his absence. In the small dog class Mr. Orgill's Rush met Mr. Moore's Donald for the first time, and after a nip and tuck race came off the winner. Seldom have two dogs been so evenly matched. Mr. Donald, it will be remembered, was promoted to the champion class at St. Louis last autumn; he has a better body than Rush, but not as good head or forelegs or tail. His condition was splendid and his evenly marked coat of liver and white shone like satin. Rush was looking well, as Mr. Orgill's dogs always do; his weight was 53 lbs. In the bitch class Mr. Moore's Lady Romp won with ease; she is a much better bitch to our notion than even Donald's girl. She has a splendid head, perfectly proportioned body, good tail and a way of carrying it that indicates dash and gauness (weight, 44 lbs.). Mr. Moore's other entry, Rose, was absent, and Cornon, shown in good condition, made up the class.

**POINTERS**—In the open class for dogs over 55 lbs. five entries were shown. Mr. Moore's Banjo (59 lbs.) captured first. It is a fine, working-looking dog, with good body, legs and tail, fair head, but is too short between stop and nose. He is nicely marked with ticks and was shown in good form. Mr. Bulley's Nell, a very pretty, sleek, old girl, of good color and, when she has attained age, will hold her own with those of her type. The puppy classes contained five entries, three in the dogs' and two in the bitches'. The dogs were all good ones. Mr. Dayton's Flash, who received first, was the best-colored of the lot; a very promising youngster of six months in every respect. Mr. Bulley's Nell had the best head in his class and rightly came second. Of the bitches Mr. Dayton's Red Lion, sister sister to Flash, winner of first in dog class, was third. We consider that she is better than her brother in at least two points.

large bitch class, and consequently Mr. Ealy's Nellie R. (57 lbs.) took first. The small dog class was a good one. Mr. Moore's La Guy was absent and both Mr. Illig's Ned and Messrs. Naysmith and Williams' Duke—good dogs, especially the former—were ruled out for being of overweight. Mr. Fawcett's lemon and white Duke (45 lbs.), a good all-over young dog, but deficient in head, came first; Dick, a dog with better body than head, took second, and Rover, fine-headed liver dog, was highly mentioned. A full class of seven entries was shown for the small bitches. They were a remarkably good lot. Mr. Orgill's little beauty, Rue (38 lbs.), gathered in the laurels for the best. She was shown in good condition and attracted much attention. The Baltimore Kennel Club's Cleo got second. She has a more perfect body than head, and her litter sister Clymont, with an unusually good head, received a v. h. c. Mr. Anderson's Fraud, a very well-made and showy little bitch, received no mention. But for a defective eye she would have deserved second place. Eight entries made up the dog-puppy class. The youngster Garfield was awarded first. The Goliath of the show in the sporting class was turned up in Mr. Carr's Rip, a nine-month-old puppy of 80 lbs. He was well proportioned and free from the awkwardness usually found in mammoths. He stalked around the ring to show music and accomplished the routine in about four minutes. We to all his class, who came within reach of his tail. He possessed a dignified expression that brought out shouts of laughter and set the tongues of the wisps-wagging. It was suggested that he would be a good dog for a tired man to hunt, for when he got "bushed" he could get on and ride home. In the bitch puppy class of four entries Mr. Joseph Lewis' Nell and Fan had a close race for first. They were as like as two peas as far as points were concerned, but at last the latter got the ribbon and her litter sister Nell was h. c.

**IRISH WATER SPANIELS**—In the Irish water spaniels there were five entries. Only two, however, Major and Dan, a brace of four-months-old puppies, had any claims to consideration, and with age may develop into creditable specimens of the breed. The other entries showed a preponderance of Sussex and cocker blood.

**COCKER SPANIELS**—First went to the liver and white Nell, belonging to Mr. A. H. Moore, a good-styled bitch, but too fat to show at her best. Florin, who got second, is a very nice one, and Flo, highly mentioned, also good, but rather large.

**FIELD SPANIELS**—Only one entry in this class. Lu, a black and white, a very fair bitch, justly received first.

**FOXHOUNDS**—This class comprised five entries. First fell to Granger, a capital hound, full of quality. Rover, who received second, is a large hound, but very symmetrical withal. Poodle, a black and tan, got h. c. He is of medium size and is a very nice one, barring his rump, which slopes too much. Lead is of medium quality only, and Hinggold ranks about the same.

**BEAGLES**—These merry little dogs were a strong class and of excellent quality throughout. As there were two distinct types on exhibition—one the ordinary English straight-legged beagle, the other the bench-legged beagle (so named from the turning out of the fore feet), common in Maryland and Delaware, and as judged by the English standard, the bench-legged beagle could be virtually excluded from competition at the committee, at the solicitation of Dr. L. L. Twaddell, the judge, Dr. Maddux and Gen. Bond, two prominent exhibitors, decided to establish a new class with a similar prize list, for the benefit of the breeders of the bench-legged dog. In the straight-legged class the first went to Fly, black, white and tan, a very neat, nice dog. His only competitor, Harry, a mottled black, white and tan, is a close-built cobby dog, whose defect is that he is rather scant of ear, but a good one withal. He was well worthy the second he received. In the straight-legged bitches Lullie was an easy first; second went to Nancy, a very neat young bitch. Venus, v. h. c., is a very good one, but just a little long in the back. Dot, v. h. c., is well eared, but a little throaty and coarse in tail; in other respects good. Lucy, h. c., we fancied a little weedy. In the straight-legged puppies Baker's Belle, a very beautiful four months' old youngster, was clearly the best, and this in a strong class both in numbers and quality. Bench-legged dogs, only two entries turned up. Major, dog breed, was the best of the bunch. In some of these of this type we have ever seen. Dyke, winner of second, is a fine dog, full of the character of his race, but lacked the quality of his competitor. In the bench-legged bitches, first went to Dell, a beautiful black, white and tan bitch puppy, entered in the aged bitch class. Second to Jennie, black, white and tan, a very fair one. These were the only entries. Three entries were in the bench-legged puppies. Dale, a very pretty, sleek, old girl, of good color and, when she has attained age, will hold her own with those of her type. The puppy classes contained five entries, three in the dogs' and two in the bitches'. The dogs were all good ones. Mr. Dayton's Flash, who received first, was the best-colored of the lot; a very promising youngster of six months in every respect. Mr. Bulley's Nell had the best head in his class and rightly came second. Of the bitches Mr. Dayton's Red Lion, sister sister to Flash, winner of first in dog class, was third. We consider that she is better than her brother in at least two points.

**DACHSHUNDS**—There were only three entries of the hound type and the judge awarded first to Marguerite, a handsome young black and tan bitch, with good head, plenty of leather and well-bent fore-legs. Second went to a fallow-red, Gretchen. We did not fancy her much, as she is too much out at elbow. Jim, v. h. c., is short in body and ears, too thick in substance and, besides, his color is bad. Two small dachshunds of the Sauerbrück breed were awarded a special first prize, as they are a distinct type from the foreleg and are essentially a vermin dog, while the dachshund of the hound type is a dog of the chase.

**FOX-TERRIERS**—First went to Bowstring, a little dog with immense muscle and good coat. The second went to Shot, a neat dog, good jaw and well-set ear, but rather high on leg and not so good in coat as first. V. h. c. was well earned by Nailor. In bitches Tussie was awarded first, closely followed in merit by Venus. Between them there was little to choose. The rest of the class did not merit as they were placed. Allamuchy Nell was first in puppies and was a very good one. Joker deservedly came next with three letters and Prince we did not like, being too leggy. Sally was fair.

**GREYHOUNDS, SCOTCH DEERHOUNDS AND MASTIFFS**—The former were absent and the two last-named classes contained no entries.

**ST. BERNARDS**—Three entries—one smooth and two rough-coated. They competed in one class. First went to Tiger, rough-coated dog of imposing appearance, but needs more flesh and is deficient in jaw; he also lacks dew claws. Snowball, the smooth-coated, was awarded second. She is also weak in muzzle and lip and her fore-legs are not of the best. The other entry was a large liver-colored cross-bred, who received no recognition.

**NEWFOUNDLANDS**—Only three entries—one a fairly good Landseer, the others claiming to be the St. John's dog. First went to Mr. Bulley's Lion, of the Landseer type. Second to his dog, Flash, whose coat was rather too curly and whose tail had. Jessup's Lion was entirely too curly-coated to win the recognition he received.

**COLLIES**—These were a strong class in numbers and quality. The black and tan Tweed II. went to the front. Close to him in merit was the beautiful Lass o' Gowrie. Tweed II. is the dog that distinguished himself in the international collie trials at Philadelphia in September, 1880. Sheep was very highly commended and is a very fair collie, Stella, same award, was wrongly entered in the smooth collie class, as were the puppies, Nell h. c. and Bruce. Lucy is also a good-looking bitch.

**HULL DOGS**—First went to the brindle and white Doctor, a dog of pronounced character. Second to Moore's Turk a brindle and white, rather long in the nose for a high class dog, and scarcely enough undershot, but in other respects excellent.

**HULL TERRIERS**—Silk II. had an easy race for first place, a very handsome young dog good in everything, but his tail, which might be a shade lighter. Rose, who took second, is a long way behind in muzzle, which is too short. Bell is off color, a dark brindle, in form a very neat looking bitch. Belle only ordinary and off color at that.

**SKYE TERRIERS**—Of the Skyes there was a large entry, but only about five that would pass muster, the others lacking terribly in coat and other breed marks. Mack, a very handsome dog of steel gray color in magnificent coat, deservedly was placed first. Tuck, a blue gray, a little out of coat, got second. Whistling Queen was very close to Tuck in quality, and both the specimens, but we favored Nip rather than Isia, in body though a very muscular little dog. Isia was only ordinary.

**PROS**—Young Sooty, the first, is a good pug at all points. May, winner of second, is also a very nice one. Jack is of nice color and even quality, not however equal to the winners, the other competitor Bob is very deficient in carriage of tail.

**SCOTCH TERRIERS**—First went to Captain, whom we thought a trifle too soft in coat; second to Sir Walter Scott, an immature puppy too young to have much character.

**BLACK AND TAN TERRIERS**—Nell, a very handsome little bitch, good in coat and color, was an easy winner of first; second went to Primie, who was behind her competitor in several points. These were the only entries.

**YORKSHIRE TERRIERS**—First was awarded to Jimmy, who was about the best; second, fairly good; after them Sport we liked best, the other lacked cut.

**CAVENDISHES**—Mr. H. Moore's Cream was in the best form and won by that alone. Pearl looked out of condition, but will be a splendid specimen when in show-bench trim, and we think will, all things equal, beat her kennel mate. Crissie is a moderately good bitch; her tail is defective, which mars her chance for high-rating.

**MISCELLANEOUS DOGS**—This class was a hotch-potch, made up of all breeds. Among the lot was a foxhound entered as a "backhound," a dog, Flash II.; called a Bedlington terrier, which he was not; poodles, Culy-lapdogs, etc., made up the exhibit. None of the dogs showed much merit, the best bred animal in the lot being the foxhound. If there is any class at a dog show that "stumps" the noble army of spectators, it is the miscellaneous class, and sometimes the judges are bothered to an extent that borders on uncertainty. The unfortunate "Bedlington" came in as a 13, 15, 14 puzzle for the crowd, and was taken in turn for a Skye, a poodle and a retriever; he was in fact a dog of many breeds, and was entered in the proper class.

Several typographical errors having occurred in our last issue in publishing the list of awards, we reproduce this week a corrected list. Such errors are unfortunate, but will occur when reports come in late.

#### OFFICIAL LIST OF AWARDS.

[v h c, very highly commended; h c, highly commended, and c, commended.]

Class 1.—Champion English Setter Dogs—First, A. H. Moore's Leicester.

Class 2.—Champion English Setter Bitches—First, Dr. Bryson's Peep o' Day. A. H. Moore's Rosey Morn absent.

Class 3.—Imported English Setter Dogs—First, Snellenburg & McConnell's Thunder; second, A. H. Moore's Duke of Beaufort; v h c, A. H. Moore's Temple Bar and R. T. Vandeyort's Rock; h c, E. Moore's Dash.

Class 4.—Imported English Setter Bitches—First, B. F. Wilson's Spark; second, Howard Hays' Ruby; v h c, Snellenburg & McConnell's Peerses, A. H. Moore's Lass o' Gowrie, E. A. Given's Minerva; h c, S. Fleet Spier's Wanda. A. H. Moore's Livy absent.

Class 5.—Native English Setter Dogs—First, Snellenburg & McConnell's Mack Laverack; second, Snellenburg & McConnell's Dick Laverack; v h c, Philip Wolfenden's Young Belton, James Hennessy's Daniel the Prophet, Samuel C. Hunter's Sam II., Henricks & Stayton's Belton III.; h c, Dr. T. Clay Maddux's Marquis of Lorne, D. O. Phillips' Tony, Henricks & Stayton's King Dash. K. Sleeth's Nimrod and J. N. Dodge's Duke, absent.

Class 6.—Native English Setter Bitches—First, S. Fleet Spier's Lizzie Lee; second, Snellenburg & McConnell's Lady Laverack; v h c, Snellenburg & McConnell's Daisy Laverack, Henricks & Stayton's Skip, James Hennessy's Inn, and E. A. Given's Minerva; h c, Snellenburg & McConnell's Mrs. Lee, a Cuck, Wilson Duff's Dip and Philip Wolfenden's Nettie; c, Henricks & Stayton's Floss II. Theo. Schwartz, J. R. Fay, absent.

Class 7.—English Setter Dog Puppies, Under 12 Months—First, Snellenburg & McConnell's Mack Laverack; second, Baltimore Kennel Club's Dashing Bob; v h c, Henricks & Stayton's Prince Lotfy, John Given's Dan; h c, S. Fleet Spier's Boland; c, Geo. W. Stevenson's Toss and J. M. Hunter's Pride of the North. D. D. Evans' Jim, absent.

Class 8.—English Setter Bitch Puppies, Under 12 Months—First, Geo. W. Stevenson's Dolly Day; v h c, Snellenburg & McConnell's Luv Laverack, Baltimore Kennel Club's Countess Anna and W. A. Given's Minerva II.; h c, James Hennessy's Kitty M.; c, W. L. Carr's Style.

Class 9.—Champion Irish Setter Dogs—First, A. H. Moore's Berkley.

Class 10.—Champion Irish Setter Bitches—First, A. H. Moore's Loo II.

Class 11.—Irish Setter Dogs—First, John S. McIntosh's Bix, second, A. H. Moore's Raleigh; v h c, W. A. Strother's Flint; h c, James Hennessy's Conn; c, Edward Gregg's Bob II. N. Dodge's Bob, absent.

Class 12.—Irish Setter Bitches—First, Wm. H. Pierce's Gussie; second, James Hennessy's Nora; v h c, John S. McIntosh's Annabel Lee; c, John Fawcett's Juno.

Class 13.—Irish Setter Dog Puppies, Under 12 Months—First, Chas. H. Dayton's Flash; v h c, Reginald II. Bulley's Ned; h c, Dr. C. Spah's Red Hunter.

Class 14.—Irish Setter Bitch Puppies, Under 12 Months—First, Chas. H. Dayton's Red Lion.

Class 15.—Champion Gordon Setter Dogs—First, A. H. Moore's Roy.  
 Class 16.—Champion Gordon Setter Bitches—First, A. H. Moore's Stella.  
 Class 17.—Gordon Setter Dogs—First, Goldsmith Kennel Club's Rupert-Cuen; second, R. W. Ardary & Bro.'s Stubble; v h c, D. O. O. Patterson's Check; h c, Dr. H. H. Hopkin's Grouse II.  
 Class 18.—Gordon Setter Bitches—First, R. W. Ardary & Bro.'s Jessie; second, A. H. Moore's Nell; v h c, Ed. L. Mills' Grand Duchess. A. H. Moore's Lady Rapid, absent.  
 Class 19.—Gordon Setter Dog Puppies, Under 12 Months—First, James Hennessy's Grouse II.  
 Class 20.—Gordon Setter Bitch Puppies, Under 12 Months—First, James Hennessy's Gypsy II.  
 Class 21.—Champion Pointer Dogs, over 55 lbs.—One entry; E. H. Gilman's Gumbo, absent.  
 Class 22.—Champion Pointer Bitches, over 50 lbs.—No entries.  
 Class 23.—Champion Pointer Dogs, under 55 lbs.—First, Edmund Orgill's Bush.  
 Class 24.—Champion Pointer Bitches, under 50 lbs.—First, A. H. Moore's Lady Romp. A. H. Moore's Rose, absent.  
 Class 25.—Pointer Dogs, over 55 lbs.—First, A. H. Moore's Banjo; second, Harry Reynolds' Tom; v h c, J. M. Taylor's Twig.  
 Class 26.—Pointer Bitches, over 50 lbs.—First, A. J. Ealy's Velvet R.  
 Class 27.—Pointer Dogs, under 55 lbs.—First, John Fawcett's Duke; second, J. C. Hobang's Dick; v h c, Dr. O. Spahr's Rover. A. H. Moore's La Gay, absent.  
 Class 28.—Pointer Bitches, under 50 lbs.—First, Edmund Orgill's Rue; second, Baltimore Kennel Club's Gyp; v h c, Baltimore Kennel Club's Clymont; v h c, W. A. Sletch's Queen.  
 Class 29.—Pointer Dog Puppies, Under 12 Months—First, John Fawcett's Garland; v h c, John Fawcett's Duke; v h c, Joseph Lewis' Duke.  
 Class 30.—Pointer Bitch Puppies, Under 12 Months—First, Joseph Lewis' Fan; v h c, Joseph Lewis' Nell.  
 Class 31.—Irish Water Spaniels—First, withheld; second, Samuel Cowley's Major; v h c, Samuel Cowley's Dan.  
 Class 32.—Cocker Spaniels—First, A. H. Moore's Nell; second, Thos. D. Adams' Flora; v h c, Thos. D. Adams' Flo.  
 Class 33.—Irish Water Spaniels, Other Than Cockers—First, Geo. W. Moore's Luz.  
 Class 34.—Fox Hounds—First, Steel Bros.'s Granger; second, Joseph Lewis' Rover; v h c, J. D. Williams' Poodle.  
 Class 35.—Beagles, Straight-legged—First, J. E. Diehl's Fly; second, Geo. W. Norcross' Harry. Isaac R. Stayton's Rover and J. N. Dodge's Baiter, absent.  
 Class 36.—(Special) Beagle Dogs, American Bench-legged—First, Pottinger Dorey's Major; second, Dr. T. Clay Maddux and Gen. Frank A. Bond's Dyke.  
 Class 37.—Beagle Bitches, Straight-legged—First, Dr. T. Clay Maddux and Gen. Frank A. Bond's Lulu; second, J. A. Stovell's Nancy; v h c, Robert M. Baker's Dot and Pottinger Dorey's Venus; v h c, John E. Diehl's Lucy. J. N. Dodge's Spider, absent.  
 Class 38.—(Special) Beagle Bitches, American Bench-legged—First, Dr. T. Clay Maddux and Gen. Frank A. Bond's Delli; second, Chas. Hing's Jennie.  
 Class 39.—Beagle Puppies, Straight-legged—First, Robert M. Baker's Belle; v h c, John Dorey and Bro.'s Bonah; Chas. Hing's Nancy; c, Pottinger Dorey's Cloptrina. J. N. Dodge's Roly II, absent.  
 Class 40.—(Special) Beagle Puppies, American Bench-legged—First, Dr. T. Clay Maddux and Gen. Frank A. Bond's Delli; second, Pottinger Dorey's Lucy II; v h c, Dr. T. Clay Maddux and Gen. Frank A. Bond's Delli II.  
 Class 41.—Dachshunds—First, J. A. Stovell's Marguerite; second, J. A. Stovell's Gretchen; v h c, John Fawcett's Jim.  
 Class 42.—(Special) Saaberknack Dachshunds—Jacob Wielekner's Max and Fan divided first.  
 Class 43.—Fox Terrier Dogs—First, L. and W. Rutherford's Bowstring; second, James Mortimer's Shot; v h c, L. and W. Rutherford's Nador. James Mortimer's Vandal, absent.  
 Class 44.—Fox Terrier Bitches—First, L. and W. Rutherford's Tussle; second, James Hennessy's Vixen; v h c, Fred. W. Fleck's Gipp; v h c, L. and W. Rutherford's Chance; c, L. and W. Rutherford's Active.  
 Class 45.—Fox Terrier Puppies, Under 12 Months—First, L. and W. Rutherford's Allamandy Nell; v h c, L. and W. Rutherford's Jolly; v h c, Fred. W. Fleck's Prince, and L. and W. Rutherford's Sally; c, Dar Gardner's Susie G.  
 Class 46.—Greyhounds—Entries absent.  
 Class 47.—Scottish Deerhounds—No entries.  
 Class 48.—Mastiffs—No entries.  
 Class 49.—St. Bernards—First, Fred. George's Tiger; second, William L. Jones's Snowball.  
 Class 50.—Newfoundlands—First, J. D. Williams' Lion; second, W. O. Meyer's Pinto; v h c, Alfred Jessup's Lion.  
 Class 51.—Siberian or Uim Dogs—No entries.  
 Class 52.—Shepherd Dogs or Collies, Rough-coated—First, Dr. J. W. Dwyer's Tweed II; second, Dr. J. W. Dwyer's Lass o' Govrie; v h c, Robert Bell's Shep, Geo. S. Houghton's Stella; h c, Geo. S. Houghton's Nell, Jacob Drake's Lucy; c, David Foster's Ring.  
 Class 53.—Bull Dogs—First, James Mortimer's Dog; second, Geo. W. Moore's Turk.  
 Class 54.—Bull Terriers—First, James Mortimer's Sisk II; second, R. O. Elliot's Rose; v h c, W. E. Garing's Bell; c, Wm. Veal's Belle.  
 Class 55.—Skye Terriers—First, Gilbert Raftery's Mack; second, A. H. Moore's Tuck; v h c, A. H. Moore's Scottish Queen; v h c, A. H. Moore's Nip; c, Paul H. Hacke's Isola.  
 Class 56.—Pugs—First, A. H. Moore's Young Sooty II; second, A. H. Moore's May; v h c, A. H. Moore's Jack. J. Fred. Oross Tinsy, absent.  
 Class 57.—Scott Terriers—First, Gilbert Raftery's Captain; second, E. H. Gillman's Sir Walter Scott.  
 Class 58.—Black and Tan Terriers—First, Daniel Bittner's Nell; second, Jacob Drake's Prinnie.  
 Class 59.—Yorkshire Terriers—First, A. H. Moore's Jimmy; second, A. A. Hutchinson's Flint; v h c, James Hennessy's Sport.  
 Class 60.—King Charles or Blenheim Spaniels—No entries.  
 Class 61.—Italian Greyhounds—First, A. H. Moore's Cream; second, A. H. Moore's Pearl; c, Wm. Montgomery's Criside.  
 Class 62.—Miscellaneous and Foreign Class—First, John Bittner & Bro.'s Tip (Cuban-Poodle); second, Geo. W. Moore's Flash II (Beullington Terrier); v h c, Daniel Bittner's Daisy (Cuban Poodle); Dar. Gardner's Bess Dickson (French Poodle); J. D. Williams' North (Buck Hound); James Hennessy's Pete (Blue Tan Terrier); v h c, Daniel Bittner's Nell (French Poodle); Daniel Bittner's Sarah Bernhardt (Cuban Poodle); Dar. Gardner's Royal Jim (French Poodle).

## SPECIAL PRIZE LIST.

Class A.—For best Setter dog or bitch, of any strain—Parker Brothers Breech-loading Gun, value \$150. Prize, A. H. Moore's Berkley.  
 Class B.—For second best Setter dog or bitch—J. J. Snellenburg, New Brighton, Pa., Hunting Suit, value \$50. Prize, A. H. Moore's Leicester.

Class C.—For best Irish Setter dog—Schuyler & Dunne, 189 Broadway, New York City, Photograph of Erie and Biddy, value \$10. Prize, A. H. Moore's Berkley.  
 Class D.—For best Pointer dog—Schuyler & Dunne, 189 Broadway, New York City, Photograph of Kenrick and Jessamine, value \$10. Prize, Edmund Orgill's Bush.  
 Class E.—For best Gordon Setter dog—Ladlin & Rand's Powder, value \$10. Prize, A. H. Moore's Bob.  
 Class F.—For best English Setter dog—Ladlin & Rand's Powder, value \$15. Prize, A. H. Moore's Leicester.  
 Class G.—For largest collection of non-sporting dogs exhibited by one person—The Bear Creek Co., barrel Water White Oil. Prize, A. H. Moore, Philadelphia, 10 dogs.

PENNSYLVANIA FIELD TRIALS ASSOCIATION.—A meeting of this most excellent organization was held at Pittsburgh, Pa., on January 19, the following members being present: Messrs. W. H. Brown, J. W. Orib, S. S. D. Thompson, J. R. Henricks, J. J. Snellenburg, Dr. Graham, William A. McIntosh, Isaac H. Stayton, C. B. Whitford and E. Satterthwaite, of the FOREST AND STREAM. Mr. J. R. Henricks, of Philadelphia, was unanimously elected a member of the association. Mr. McIntosh referred to the clause in the minutes censuring Captain William Rochm, of Quarryville, Pa., for breaking faith with the Lancaster County Game Protective association, and shooting and allowing to be shot the quail that he had promised to preserve for the Pennsylvania field trials of last year. Mr. McIntosh went on to say that as he had seen in FOREST AND STREAM a notice of a meeting in December last of the Lancaster Game Association, at which Captain William Rochm had been exonerated from the charges preferred against him, he desired that the secretary be instructed to communicate with Mr. P. A. Dillendorfer, of Lancaster, a member of said Lancaster Game Association and treasurer of the Pennsylvania Field Association, and request that the association be informed the reasons for such action. Carried.

Mr. J. R. Henricks moved that the association purchase at once one hundred dozen quail, for the purpose of stocking the grounds on which this year's trials are to be run, the price not to exceed \$2 per dozen.  
 Mr. McIntosh offered an amendment to the above, by suggesting that \$200 be expended for the purchase of quail. Carried.

Mr. Snellenburg moved that a committee of three be appointed by the Chair to revise the field trials' rules of the Association. Carried.

Mr. Stayton asked the expression of the meeting to substitute a field trials Derby in place of the puppy stakes at the next trials, and after lengthy discussion it was decided to do so.

Mr. McIntosh, in this connection, moved that puppies whelped on or after January 1 of the previous year to the running of the trials be eligible for entry. Carried.  
 Mr. Snellenburg moved that the association open its trials to the world, and that a special meeting be called to consider the advisability of so doing. Carried.

The Chair then named February 2, 2 p. m., as the date and hour when the special meeting would be held, and the meeting then adjourned.

THE STERLING DOG-SHOW.—The first annual exhibition of the Rock River Valley Poultry and Kennel Club is to be held in Farwell Hall at Sterling, Illinois, on the 10th, 11th and 12th of February. The dog show will have classes for all the strains of setters, for pointers over and under 50 lbs., and for setter and pointer puppies. Also for collies, Newfoundlands, St. Bernards, English mastiffs, bloodhounds, bulldogs, bull terriers, Dalmatians, all varieties of spaniels, all varieties of hounds, Scotch terriers, Siyu terriers, black and tan, spitz, Italian greyhounds, poodles, King Charles or Blenheim spaniels and other toy dogs.

Mr. C. A. Keefe has been chosen judge. The entry fee is \$1. Entries close February 8, and all dogs must be at the hall by February 10. The premiums are: To the best dog in any class, 75 per cent. of the entrance fees; to the second, a ribbon v. h. c.; to the third, a ribbon h. c. There is also a list of special prizes, among which are included a Scotch terrier pup; for the best dog of each of the following breeds, from Mr. J. F. Strecker, a year's subscription to FOREST AND STREAM for the best Irish setter puppy; another for the best pointer puppy; and another for the best Llewellyn setter bitch, all from The FOREST AND STREAM Publishing Co. The American Express Company have agreed to return free of charge all dogs that have paid full rates to the show.

THE NEXT NATIONAL TRIALS.—Memphis, Tenn., Jan. 15.—Editor Forest and Stream: Grand Junction, Tenn., fifty miles east of Memphis (crossing of the Memphis and Charleston and the Mississippi Central Railroads) has been selected for holding the N. A. K. C. trials for 1881. After personal inspection, I am of the opinion that no place yet selected will equal Grand Junction for extent and adaptability of the grounds, the number of birds, accessibility of grounds from hotel and hotel accommodations. In drawing a field between the two railroads we found forty coveys of quail, averaging ten birds to a covey; in this less than three miles of the hotel. These grounds have been placed at the disposal of the N. A. K. C. for the trials this year by Mr. Gaither, representing 5,000 acres. Others will give the same privilege if necessary. Mr. Gaither will post and protect his lands from shooters. In the day's inspection I did not see five acres that would be objectionable to any man running dogs. I would have thought that the new large lands to be diminished trapped birds will be turned down in March—ample time for raising birds this year.

P. H. BROWN.

Pres't N. A. K. C.

DR. STROTHER'S KENNEL.—A nice little kennel than that belonging to Dr. W. A. Strother, of Lynchburg, Va., can scarcely be met with anywhere. To begin with, there is his prize bitch Frost, noted for her great beauty and fine nose. Then comes a brace of English setters (Gladstone II and Leah), the former especially taking after his sire (Champion Gladstone) in speed and dash. It is quite a treat to see these dogs at work, they have so much pace and style about them, and though under perfect command are quite free from that frightened, cringing way that bespeaks harsh training. Frost has at present another beautiful litter by Gladstone, about two months old, a brace of which are, I believe, for the first time, a dog for Capt. McMurdo, and used as the balance will be retained by the Doctor. I must not forget to mention his fine red Irish setter dog Flint, who was awarded third prize at the last New York bench show. He is a remarkably intelligent dog and much resembles his sire, Elcho. M.

MORAWE KENNEL.—Chatham, Ont., Jan. 18.—Editor Forest and Stream: I have entered into partnership with Mr.

Joseph Kime, V. S., of this place, and we have organized a kennel to be known as the "Morawe Kennel." We are starting under very favorable auspices, with the very best stock procurable, and as there is an abundance of game here of all kinds, we are very hopeful of the results. My partner is a thorough sportsman, an excellent shot, and has been accustomed to the handling of setters and pointers for many years. We have this day added to our kennels the imported setter bitch Princess Belle by Rufus out of Blinckhorn's (now Dodge's) "Rose." She is a handsomely made belton, and shows the best of field qualities. A. B. CLATTON, M. D.

ENGLISH HARE BEAGLES.—In a late issue of the FOREST AND STREAM I notice the announcement of (to me) a new breed of beagles, the English hare beagle owned by Mr. N. Elmore, of Granby, Conn. Will Mr. Elmore, through the medium of your paper, kindly inform us as to their appearance, size, hunting qualities, etc., as compared with the ordinary English beagle, and also in what part of England they originated? LUTHER.

COUNTRESS BEAR.—In the absence of our Kennel Editor at Pitts' urch last week an absurd error found its way into our columns, the celebrated Llewellyn setter bitch, Countess Bear, being referred to as a pointer. Such a mistake, though much to be regretted, would fortunately not mislead many of our readers, to most of whom this celebrated bitch is so well known.

NOVA SCOTIA KENNEL CLUB DOG-SHOW.—Halifax, N. S., Jan. 13.—Editor Forest and Stream: At a meeting of the Nova Scotia Kennel Club, held on January 11, in this city, it was decided to postpone the dog-show in view of the fact that the Dominion Exhibition is to be held in Halifax next autumn, and we think it better to throw all our energies into making a dog-show in connection therewith. JOHN NAYLOR, Hon. Secretary.

REMOVAL OF CAPT. MCMURDO'S KENNEL.—Capt. McMurdo has removed his kennel from Evinston to Shadwell Depot (on the C. and O. R. R.), five miles from Charlottesville, Albemarle County, Va. His kennel is a small but select one, chiefly composed of Llewellyn setters.

LOST.—A very handsome pure black setter dog, of medium size, who strayed away on January 20 from No. 9 East Thirty-fourth street. Twenty-five dollars will be paid for his return to his owner, Mr. Gilbert M. Speir, Jr. The dog's eyes are clouded.

PHILADELPHIA DOG SHOW.—Nothing definite as yet has been determined upon regarding the time for holding this show, but in all probability the Quaker City will be the next dog centre early in April.

LOST.—A pug dog of large size and good type, strayed from 50 East Thirtieth street, this city, on January 18. He was without a collar. Any information regarding him will be thankfully received by the Kennel editor of this paper, who will liberally reward the finder for his return.

## KENNEL MANAGEMENT.

47 A CONSTANT READER.—1. My dog, that had the distemper so badly, does not eat much. I think his stomach is out of order. 2. He has had a sort of tumor under his elbow joint of foreleg, 3. He has still a little canker in his ears. 4. What is the best book on dog breaking that you know of? 5. What do you think of Vero Shaw's book? 6. Who gives good information how to condition a dog for the bench? Ans. Want of space will oblige me to answer as briefly as possible your queries in their successive order, but a treatise might be written on each. The old saying that "it is much more easy to ask questions than to answer them" holds good here and in all cases where the description of the dog's ills are not clearly diagnosed. 1. Try a little sulphur from time to time in your dog's food, and, if not successful, give two grains of quinine three times a day for several weeks. Feed good wholesome food, and avoid giving meat until you have mastered the canker. 2. It is simply impossible to recommend a treatment for the tumor until its character is known. Either a seton or rubbing it with compound iodine ointment should be adopted. 3. For the canker continue to use the lead water, and by feeding no meat, and attending to the dog's general health, you will soon end this trouble. 4. Hutchinson's "Dog Breaking" we can furnish it. 5. Excellent; it is the best compilation of the kind ever produced. Its value is in its being a compilation of articles written by the most eminent authorities of the day. No one man can write understandingly upon all the different breeds of dogs, and it is about one man's work to understand three or four breeds intelligently. Although Mr. Shaw kindly furnishes us exclusively with the advance sheets of his serial, which we publish from week to week, yet the book itself should be in the hands of every sportsman. Its colored plates add greatly to its charm. 6. "Book of the Dog," Parts I. and II., price 40 cents each.

48 V. S. L., Asheville, N. C.—The inflammation between the toes of your dog's feet is one of the different varieties of mange. Use Glover's Mange Cure and give five drops of Fowler's solution of arsenic twice a day with food. Avoid feeding meat. His diet should consist of cooling food mixed with vegetable matter.

49 A. J. N., Anna, Ill.—I have a Gordon setter who is continually scratching himself in the sides and near the forelegs. Ans. You should have given more particulars, such as age of dog, habits and manner of feeding. He probably has mange. Stop feeding meat. Give him a few doses of sulphur and a mild purge of sulphate of magnesia with plenty of exercise. If the mange is pronounced some external application will also be necessary. Read the Kennel Management column.

50 ABSENCE OF DOGS.—Editor Forest and Stream: Seeing in a late copy of a sporting journal an article highly commending the use of arsenic in cases of dog distemper induced me to give my own experience with it in the same way. I had been an industrious reader of the papers advising as to the treatment of distemper, and was inclined to place great confidence in arsenic given persistently and in small doses. Perhaps I had more faith in it from knowing that it was much and successfully used in the same way as a febrifuge on the human subject. Previous to the past spring I relied on arsenic with varying results. When it seemed to fail I placed the blame on some other unfavorable circumstance, as too

much confinement or something else wrong. But last year I had a young dog taken with distemper and used acetic for about a week without any perceptible improvement, when suddenly I remembered seeing arsenic placed by a high authority as next in reliability to quinine in the treatment of fever and ague. At once I gave a small dose of Fowler's solution of arsenic, and within five minutes the dog brightened up and began to eat, and went on steadily improving until entirely well. I afterward learned that quite a number in Wilkesbarre had used arsenic and with the best success.

A. GOODWIN.

[The FOREST AND STREAM has repeatedly put itself on record as to the value of Fowler's solution of arsenic in the treatment of dogs, and also as pertaining to acetic. Both agents are violent poisons and should be given with great caution and good judgment. We deprecate the use of acetic even by experienced persons, because paralysis and other evil results of its poisoning power are apt to ensue if carelessly given. The ancients considered it the most deadly thing in nature, and modern experience almost justifies this opinion. Acting directly through the nervous system, it has great power in diminishing excessive action of the heart, and is thus of use in some fevers; but great care is required at the same time that loss of vital power does not also follow. Again we say that there is no specific for distemper; the disease must be treated in the various stages rationally in accordance with the symptoms.]

51 G. D. P., Baltimore, Md.—My setter bitch has had all the hair and skin on the end of her tail worn off by whipping it against the briars, and now that the skin has healed it looks as if the hair would never grow again. Ans. If worn off for the first time the hair will probably grow again, but when the hair follicles are destroyed by repeated whippings the hair will not grow and there is no remedy. Give the dog's tail a rest. Many pointer's tails are docked for this reason.

52 Thir, New York City.—My pug dog, about six months old, is sick. She suffers from loss of appetite, depression and very often throws up violently. I notice also a twitching of the limbs when asleep. The pug is carefully fed on milk, etc., and well cared for. Will you kindly prescribe for her? Ans. At her age it is quite possible she is about to have distemper. A mild purgative, such as castor oil, or sulphur followed by sulphate of magnesia will be of use to her in any case.

53 H. D. C., Laconia, N. H.—I have a Gordon setter puppy, nine months old, that I would like you to prescribe for in your next issue. Her nose has always been hot and dry and she now runs at the eyes very badly. Has a good appetite and is in good spirits—appears well, with these exceptions. The discharge from her eyes is thick and yellow, and a quantity of it. Please answer in next issue. Ans. The symptoms are those of the first stage of distemper. Give an emetic of salt and then sulphur, a few hours followed by sulphate of magnesia; then two grains of quinine three times a day will probably do good. Keep the eyes and nose cleansed with tepid water.

54 O. O. U., Ulica, N. Y.—I have a friend who wishes me to get some remedy for his puppy who has, as near as I can find out from the description given in "Hallow's Gazetteer," the splenic fever. His symptoms serve the description exactly. Ans. As you fail to mention the breed of dog it is impossible to give exact treatment. Give every few hours castor oil and injections of warm spondula and oil, and from two to five grains of iodide of potash three times a day.

55 J. C. R., Salem, Mass.—I have a Newfoundland dog about four years old which last summer had the mange and now it has left him. He is very stiff in his hind-quarters and seems after running to be unable to get up when he has lain down to sleep. Can you tell me what I can do for him? Ans. The dog is suffering from partial paralysis of the hind-quarters. The following treatment will probably be beneficial: Administer infusion of digitalis, one teaspoonful combined with fluid extract of nuxvomica; one drop doses, to be gradually increased until followed by beneficial results.

56 T. A. S., Etina Green, Ind.—The duration of oestrus is usually from ten to twenty days.

# KENNEL NOTES.

\* \* \* Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes.

## NAMES CLAIMED.

Dan—Mr. Austen Mann, of Brownsville, Tenn., claims the name of Dan for orange and white setter puppy, seven months old, out of Nellie by Flash.

Elcho—Mr. Austen Mann, of Brownsville, Tenn., claims the name of Elcho for black and white setter out of Nellie by Flash.

Guy—Mr. S. McKnight, of Taylorville, Ill., claims the name of Guy for dog puppy out of Nell by Prince purchased from Mr. O. F. Cromwell.

Bessie—O. F. Cromwell, of Taylorville, Ill., claims the name of Bessie for bitch puppy out of Nell by Prince.

Jack and Judy—Mr. J. C. Jordan, of Portland, Maine, claims the names of Jack and Judy (Hake-Rose whelps) for Chesapeake Bay puppies, whelped June 4, 1880, purchased from G. G. Hammond, New London, Conn.

Nancy—Mr. William Allison, of West Seaside, Mass., claims the name of Nancy for Irish setter bitch, puppy out of May by champion Berkeley purchased from Mr. J. A. Rockwood, Boston, Mass.

Carlovitz—Mr. John C. Higgins, of Delaware City, and is in the hands of Mr. T. D. Gladstone, who is now in Virginia giving his attention exclusively to the field dogs belonging to the extensive kennel owned by the Mosers, Goodells.

Poachontas—Mr. Wm. B. Banks, of New York City, claims the name of Poachontas for his fox terrier bitch, whelped August, 1880, out of imported Tip by imported Viper.

Toker, Jr.—Mr. John M. Forbes, of Virginia, claims the name of Toker, Jr. for liver and white terrier puppy, whelped September, 1880, out of Nymph by Beaufort purchased from Mr. George H. Nixon, of Leesburg, Va.

Lucy—Mr. Chas. E. Scott, of Schenectady, N. Y., claims the

name of Lucy for liver and white cocker bitch puppy out of Mr. Hobt. Walker's Nellie by Rex.

Frank Foster—Mr. J. N. Carpenter, Washington, D. C., claims the name of Frank Foster for setter dog puppy, whelped September, 30, 1870, out of Mr. C. W. Foster's Kirby by Druid.

Belle's Pride—Dr. Allen B. Clayton, of Chatham, Ont., claims the name of Belle's Pride for his blue Belton bitch puppy by Paris (Leicester-Dart) out of Mr. Harrison's Belle (Pride of the Border-Kirby).

Marshall Duroc—Dr. T. B. Legare, of Camden, S. C., claims the name of Marshall Duroc for lemon and white setter dog puppy, whelped October 27 by Scout (Rock-Kirby) out of Mr. F. H. Andrew's Vashli (Rake-Fanny).

Nixie—Dr. T. B. Legare, of Camden, S. C., claims the name of Nixie for lemon and white pointer bitch puppy, whelped September 10, 1880, by Beaufort (Bow-Beaulah) out of Nymph (Viscount-Sidmore's Dolly).

Marshall Ney—Mr. F. H. Andrews, of Charlotte, N. C., claims the name of Marshall Ney for liver and white ticked pointer dog puppy, whelped September 10, 1880, by Beaufort (Bow-Beaulah) out of Nymph (Viscount-Sidmore's Dolly).

Tallulah—Mr. F. H. Andrews, of Charlotte, N. C., claims the name of Tallulah for lemon and white pointer bitch puppy, whelped October 28, 1880, by Judge Legare's Rab (Rush-Romp) out of his Helona (Bow-Beaulah).

## BRED.

Moll S-Bue Drake—Mr. Sherwood's (Shucates, N. Y.) setter bitch Moll S-Bue, Jr. H. Whitman's three-quarter Laverack setter dog Blue Drake.

Flora-Carlo—Mr. J. H. Whitman's (Chicago, Ill.) cocker spaniel bitch Flora to same owner's Carlo.

Lady-Bue Dash—Mr. Stafford's setter bitch Lady (Royal Duke-Git) Blue Dash.

Norah-Mike—Mr. E. B. Hall's Norah to the Excelior Irish Water Spaniel Kennel Club's champion Mike. The club to have one-half the progeny.

## WHELPS.

Ruby—Mr. Howard Hartley's (Pittsburgh, Pa.) black and white imported English setter bitch Ruby, whelped January 1, 1881, nine pups, six dogs and three bitches, by owner's Rake.

Lady Trustine—Mr. R. G. Sylvester's (Carbondale, Ill.) Irish setter bitch Lady Trustine, whelped January 16, 1881, eight puppies, four dogs and four bitches, to Dr. Jamell's Elcho II.

## SALES.

Joe, Jr.—Fannie Whelps—Mr. G. W. Campbell, of Carter's Creek Station, Maryland, sold to Mr. G. W. Campbell, puppy with white points to Mr. G. W. Jones of Florence, Ala.; one white dog puppy with lemon marking on head and ears to Mr. F. Bates, of Marion, Ala.; one white dog puppy with lemon about head and ears to Mr. Marion Smith, of Jackson, Miss.; one white dog puppy with lemon about head and ears to Mr. G. A. Wilson, of Lexington, Miss.

Pat—Mr. G. W. Campbell, of Carter's Creek, Tenn., has sold to Mr. Albin Omburg, of Rome, Georgia, red Irish setter dog Pat out of his imported Ruby.

Erin III—Hush Whelp—Mr. H. W. Cory, of St. Paul, Minn., has sold to Mr. J. O. Leary, Jr., a red Irish setter pup out of Hush by Erin III.

Mack Laverack—Mr. J. S. Snellenburg, of New Brighton, Pa., has sold his ten-month-old pure Laverack setter Mack Laverack (Thunder-Peeres) to Mr. D. McKay Lloyd, of Pittsburgh, Pa. Mack Laverack won first prize in native setter and puppy class at Pittsburgh, 1881, and will be sent to H. M. Short to be broken for the N. A. K. C.

Carlitz—Nests, Von Culin have sold to Mr. James H. Goodsell, New York City, the celebrated pure Laverack setter dog Carlitz favorably known as a prize-winner in England before he was imported, and the sire of very many prize-winners and crack field dogs in this country.

Dave—Mr. C. Du Tour, of Cincinnati, Ohio, has sold to Mr. Harry Hill, of same city, the Irish setter dog Dave out of imported Dansee by champion York.

Juber—The Essex County Hunt, Montclair, N. J., have sold the young English bitch Juber to Mr. T. E. Kendrick, Lebanon, New York. Juber, although hardly two years old, hunted down this season no less than 186 rabbits.

Marshall Duroc—Mr. H. Andrews, of Charlotte, N. C., has sold this season and white setter dog puppy Marshall Duroc by Scout out of his Vashli (Rake-Fanny), sister sister to Sanborn's Dan to Dr. S. B. Legare, of Camden, S. C.

Belle—Mr. Robert M. Baker, of Detroit, Mich., has sold to Mr. J. R. Staylor, of Pittsburgh, Pa., black, white and tan beagle bitch puppy, four months old, out of Pan by Rattler. Belle won first in beagle puppy class at Pittsburgh, 1881.

Croxteth-Bliss Whelps—Mr. Geo. N. Beckwith, of Latrobe, Pa., has purchased from Mr. N. Boyd, Richmond, Va., a brace of and whelp out of Bliss (Ben-Dean) by Croxteth. This brace is an unusually fine one.

## PRESENTATION.

Charm-Blue Duck Whelp—Mr. J. H. Whitman, of Chicago, Ill., has presented a liver and white ticked setter bitch puppy out of Blue Dash by Charm to Mr. J. C. James, chief engineer of Chicago and Grand Trunk Railway, Battle Creek, Mich.

Joe, Jr.—Fannie Whelps—Mr. G. W. Campbell, of Carter's Creek, Tenn., has presented a white bitch with lemon about head and ears to Mr. J. M. Williams, of Columbia, Tenn.; one white bitch with lemon about head and ears to Mr. M. C. Campbell, Springfield, Tenn.

Tom-Lola Whelp—Dr. George A. Foote, of Warrenton, N. C., has presented Mr. Charles Richards, of Brooklyn, N. Y., a handsome white and liver pointer puppy out of his Lola (Reubene-Dora) by Hon. John S. Woe's Tom (Sensational-Columbia's Belle).

Ree-Sele Whelp—Mr. Robert Walker, of Franklin, N. Y., has presented Mr. Charles E. Scott, of Schenectady, N. Y., with a finely marked liver and white cocker bitch puppy out of Nellie by Rex.

## DEATHS.

Cora—The Lachine Kennel Club's liver colored spaniel bitch Cora on January 19. Cora was whelped April 28, 1879, out of Old Brown by Holly. She was a well-known winner on the bench, and a careful worker in the field.

# The Rifle.

## RANGE AND GALLERY.

Boston, Mass., Jan. 11.—The annual meeting of the Massachusetts Rifle Association was held at 608 Washington street this evening. The reports of the various officers showed the association to be in a fine condition financially. The following officers were elected for the ensuing year: Vice-Presidents, Salem Wilder and A. H. Hardy; Secretary, H. T. Rockwell; Treasurer, J. N. Fry; Directors—J. F. Brown, W. Gerrish, E. B. Souther, H. T. Rockwell, A. C. Gould, H. O. Harris, C. W. Himm, F. J. Rabbeth, Z. T. Hubbard, J. N. Fry, Salem Wilder, R. D. Archer, E. F. Richardson, I. B. Fellows and T. H. Gray. These officers will choose the President. At the close of the meeting the members were entertained by W. W. Newton at the Mammoth Gallery, No. 655 Washington street.

At the Magnolia Gallery the stormy weather added many to the list of shooters and some fine work was accomplished. Mr. B. Edwards was the champion of the week and only failed of the gold prize for ten straight bullseyes by a single point. Mr. Dunn's 129 with the pistol is the best on record in the city. Ellsworth for

127 shows capital holding and nerve. The summary gives the result of the week in all matches:

Match No. 1.									
B Edwards	47	49	48	48	49	48	48	49	248

MAMMOTH RIFLE GALLERY.—Boston, Jan. 21.—The third week in the New Year rifle match at the Mammoth Gallery has been a busy one and the shooting has been of high standing. Mr. J. H. Williams was successful in getting a clean score of eight consecutive bullseyes and received the extra prize of \$15 for this splendid holding. He has also added a fine 39 and 38, which places him well to the front. Mr. J. Merrill is still in the lead, with 194 out of a possible 200. Mr. J. H. Williams is second with 191, outstriking Mr. E. F. Richardson, who also has 191. Mr. N. W. Arnold is fourth with 190; Mr. J. Ames is fifth, with 184, outstriking Mr. Elfin Wilden, who is sixth, with 184. Next month will commence a new set of rifle matches. The first on the list will be the Every-body's Rifle Match, open to all comers, with six cash prizes, as follows: \$7, \$6, \$5, \$4, \$3, \$2, \$1, also an extra prize of \$10 to any one making a clean score of eight consecutive bullseyes. Conditions are: Any 22 calibre rifle; rounds, 8; possible 40; five scores to win, or possible 200; position, off-hand; distance, fifty yards; the rifle to be three pounds pull. Match No. 2 will be called the Silver-vare Rifle Match. This match is gotten up as an incentive to stimulate practice and is open to all who have never won a prize in the gallery. The first prize will consist of an elegant silver pitcher and salver, the second prize will be \$12 in cash and the third prize \$1 in cash; also, an extra prize of \$15 to any one making a clean score of eight consecutive bullseyes. Conditions are: Any 22 calibre rifle, three pounds pull; position, off-hand; rounds, 8; possible 40; five scores to win, or possible 200; distance, fifty yards. In addition to the above matches, the Forest and Stream Rifle Match, for the elegant meerschaum pipe, which continues until May 1, making in all three rifle matches. Following are the leading competitors, with their scores to date, in the New Year Rifle Match—fifty yards; rounds, 8; possible 40; five scores to win, or possible 200: J. Merrill, 38 38 39 39 40—194 L T Folsom, 35 35 36 36 38—178 F H Richards, 35 35 36 36 39—177 J J T, 35 35 36 36 39—177 A C Goodspeed, 35 35 35 35 36—177 N W Arnold, 35 35 36 36 39—176 F S Fogg, 35 35 35 35 36—176 E H Wilden, 35 35 36 36 39—174 J H Poland, 35 35 35 35 36—175 C R Bartlett, 35 35 36 36 39—175 O W Warren, 34 34 35 35 36—173 C R Bartlett, 35 35 36 36 39—172 O H Hart, 34 34 35 35 36—174 C Gould, 35 35 36 36 39—171 B H Day, 34 34 35 35 36—174 G E Kistner, 36 36 36 36 39—173 H K Knowles, 34 34 35 35 36—173 S Fogg, 35 35 35 35 36—178

Forest and Stream Rifle Match.—The Forest and Stream Rifle Match, began January 1, to continue until April 30, inclusive, the prize being an elegant meerschaum pipe, has had few entries, it being early in the match, although an increasing interest is shown from week to week. Mr. D. N. Sherburne leads this week with a good 38, but the conditions are the best aggregate of five scores made during the match. Following are the leading scores to date—fifty yards; rounds, 8; possible 40:

D N Sherburne	5	5	5	5	5	5	5	5	45
S Fogg	4	4	4	4	4	4	4	4	36
F H Richards	4	4	4	4	4	4	4	4	36
O H Bartlett	4	4	4	4	4	4	4	4	36

Pistol Practice.—Practice with this arm this last week has been lively and some of the finest shooting ever done in the gallery has been recorded. Mr. Elfin Wilden has increased his score two points over last week, when he had surpassed all previous efforts, and he now leads with the fine record of 115 out of a possible 120. Mr. S. Souther follows very close in Mr. Wilder's steps with 114 and Mr. J. J. Dunne and Mr. F. J. Rabbeth are tie for the third place with 112. In shooting of the tie for the third prize in last month's match Mr. Wilder defeated Mr. Ames. Following are the leading scores to date—fifty feet; rounds, 8; possible 40; three scores to win, or possible 120:

Elfin Wilder	38	38	39	39	41	41	41	41	336
S Souther	37	37	38	38	41	41	41	41	334
J J Dunne	37	37	38	38	41	41	41	41	333
F H Richards	37	37	38	38	41	41	41	41	333
J Ames	36	36	37	37	40	40	40	40	332
J H Williams	34	34	35	35	41	41	41	41	331

N. R. A. PRESIDENT.—The Executive Committee of the Board of Directors of the National Rifle Association on the afternoon of January 20, at No. 35 Park row to elect a president, Mr. E. A. Buck, who was chosen to the position, being obliged by business engagement to decline. There were present General George W. Wingate, Colonel J. H. Cowperthwaite, Captain W. Murphy, Mr. F. H. Holton, Mr. David W. Judd, Mr. Frank J. Donaldson. Mr. Donaldson nominated General Hancock and was seconded by Captain Murphy and Mr. Judd. The latter referred to the condition of the association and said he hoped that those who are now understood from hearsay to be unfriendly to rifle practice would be less so when they had held their offices a longer time. General Hancock was then elected unanimously. General Wingate said that General Hancock had already rendered many services to the association; it was through his personal solicitation that the Hilton Shield for the international matches was given, and it was on his application that the Federal Government sent teams from the army to compete at Creedmore. He has also given advice to the directors on many occasions. The board before nominating him had received a letter from him in which he promised to accept the office. After the election the board adjourned.

CONLEY'S GALLERY.—The second week's contest of the pistol shooting tournament for the championship of bullet shooting, end-

FLORIDA.

Revised Descriptive Circular

—OF—

DeLAND, FLORIDA.

JANUARY 8, 1881.  
The village of DeLand is located five miles east of our landing, on the St. Johns River, where all river steamboats pass; very near the geographical centre, north and south, of Volusia County, and almost exactly in the centre of the

GRAND ORANGE BELT.  
This place is about twenty-five miles from the Atlantic Ocean, and is almost constantly favored with a tempered

SEA BREEZE,  
and from its elevation above the river, its location among the pines, and its isolation from all standing water, it is peculiarly adapted to the necessities of invalids.

This belt of land is about twenty miles long, and averages about five miles wide, is gently undulating, and, in our immediate vicinity, somewhat hilly. Our lands are

UNSURPASSED IN FERTILITY  
by any pine region in the State. In our village, which is only four years old, we have a

FINE SCHOOL BUILDING,  
used also for union Sunday School and church services.

We have daily mails. Three general merchandise stores, one of the largest in South Florida, a drug store, millinery and notions store.

"THE FLORIDA AGRICULTURIST,"  
a large eight-page weekly paper. A railroad from our landing, via DeLand to the Atlantic coast, is chartered and works commencing; also material on which affords good fare at reasonable prices.

For the information of invalids we will add that several good physicians are settled in our midst, cultivating oranges as a business, but affording excellent medical aid when required. They report the following

REMARKABLE HEALTH RECORD:  
"During the years of 1878, 1879 and 1880, within a circuit of six miles diameter, DeLand being the centre, with a population averaging over 250, many of whom came here invalids, there have been but four deaths. Two were infants under six months, and two were men who came here sick."

A CHAIN OF LAKES  
northwest of us affords protection from frost so perfect that the extreme cold of Dec. 29, 1880, did not injure our orange trees; and, should the winter be severe, we are offering these choice lands to actual settlers at from ten to thirty dollars per acre. Village lots and improved property for sale also. For further particulars call on or address

J. Y. PARCE,  
DeLand, Volusia County, Fla.  
H. A. DeLAND,  
Palmyra, Monroe Co., N. Y.

HENDERSON'S

Hotels and Routes for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

FOR THE

Trout, Grayling, and Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed if equaled, in the abundance and great variety of fish contained. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. The BROOK Trout season begins May 1 and ends Sept. 1. The GRAYLING season begins June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL, and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home. Care for packing fish can be had at many points.

TAKE THE FISHING LINE WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing those of any other countries near enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and extensive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Freight Free.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book, 148 pages), containing full information and accurate maps of the Fishing Grounds and Lake Caris, address A. B. LEET, Gen'l. Pass. Agent, Grand Rapids, Mich.

Chesapeake & Ohio R.

The Route of the Sportsman and Angler to the West Hunting and Fishing Grounds of Virginia and

West Virginia.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, and Kanawha Valley, and including in its varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, quail, woodcock, mountain trout, bass, pike, pickerel, etc. Guns, fishing tackle, and one dog for each sportsman carried free.

The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to their most famous watering places and summer resorts.

The Only Route via White Sulphur Springs.

Railroad connections at Cincinnati, with the West, Northwest and Southwest; at Gordonsville with the North and South; at Alexandria and Charlottesville with the South. All modern improvements in equipment.
